London agent for advertisements, R. J. Bush, 92 Fleet St., E. C.

Schools.

Alphabetized, first, by States; second, by Towns.

CONNECTICUT, Greenwich.

MRS. BEECHER'S FAMILY SCHOOL in the town of Greenwich, Conn., for girls from the age of seven to fourteen, commends itself to those who seek a happy and healthy home combined with a good school. It is located in one of the pleasantest villages on the Sound, and offers special advantages to girls who are too young or too delicate for ordinary schools. Address Bayport P. O., Fairfield Co., Conn.

MASSACHUSETTS, Belmont.

*THE BELMONT SCHOOL. — PRE-*paratory boarding-school for boys. For information address B. F. HARDING, A.M., (Harv.), Head Master.

MASSACHUSETTS, Berkshire.

CRESTALBON FARM.—Home School for six boys. For circulars apply to ED. T. FISHER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School, Address the Dean,
EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (62d Year). For boys and girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive and is very near the Institute.
Preparation also for college (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

*HOME FOR BOYS.—DR. ABBOT AD-*mits not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Duxbury, Powder Point.

*POWDER POINT SCHOOL. — PRE-*pares for scientific school, college, or business. Laboratories. The boys are members of the family.
FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-third year begins Oct. 1, 1889. Mrs. Knapp, Principal; A. M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Quincy.

*ADAMS ACADEMY, PREPARA-*tory and Boarding School for Boys.—Boarding-house entirely reorganized; a few good rooms still vacant. For all information apply to
WILLIAM EVERETT, Ph.D.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 18, 1889. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, TEN MILES from Philadelphia. A College for Women. The Program, stating the graduate and undergraduate courses of study for the academic year, will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

JAMAICA, Potsdam School, Sta. Cruz Mts.

THE REV. W. D. PEARMAN, M.A. (Cambridge), prepares for Business and Universities. In the Cambridge University Local Exams., 1884, a Potsdam boy stood 2d in Greek and 10th in Latin, of all England. For terms apply as above.

Teachers, etc.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality.
A. M., care of the *Nation*.

ALFRED MITCHEL WILL GIVE A course of lectures on English or German literature to a small class during the winter. This course is equivalent in value to the post-graduate course in Johns Hopkins University. It is designed to devote special attention to the progress of individual students. For full particulars in regard to course and terms, address,
A. MITCHEL,
Westminster Hotel, New York City.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut Street, Boston.

*HOLMES HINKLEY, A.M., 11 EVE-*rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

WANTED.—A LADY WISHES TO correspond with parties desiring an experienced private teacher, or to take charge of pupils wishing to go South. Qualifications English, French, German, and Music. Address MAGNOLIA, office of the *Nation*.

"An excellent short cut to a knowledge of Shakespeare's works."—*Times.*

A Compendium and Concordance OF *Shakespeare's Dramatic Works.*

It is the aim of the editor to make this compendium such a summary of Shakespeare's Dramas as will enable the reader to get, in ten minutes for each play, an intelligent knowledge of the whole of the plot and characters therein.

The treatment is after the style of Mary and Charles Lamb's Tales from Shakespeare, only, of course, more condensed.

This arrangement will be found a great advantage to the general reader, and a still greater boon to the theatre-goer who may be about to witness on the stage a play of Shakespeare's which he may not have read, or read so long ago as to need refreshing his memory thereon.

The chief features of the work are as follows:

1. Prefacing each play is a HISTORY thereof, telling whence Shakespeare drew his plot, when first acted, and when first published; 40 pages. (No Donnelly-Bacon claims admitted after reading these Histories.)

2. Each of the plays abridged in a plain and simple manner, and the relative importance of each character in the play indicated. The whole of the 37 dramas, *in prose*, occupying 180 pages, illustrated with 37 outline full-page drawings (one to each play) by Frank Howard.

3. A full CONCORDANCE of Shakespeare's Complete Works, with additional copious index of *catchwords* thereto, occupies 170 pages.

4. An Alphabetical record of the 1,039 Characters in Shakespeare's (37) Dramas, describing the characters and indicating the play in which each appears.

SHAKESPEARE MADE EASY.

"There is doubtless no royal road to learning, but the intellectual labor-saving devices, now so common and so rapidly multiplying, should make the way to a certain very useful information much smoother than of yore. For example: It has till the present time been regarded as a matter of course that the man who aspired to a knowledge of the plays of Shakespeare, or wished to impress others with the idea that he had such knowledge, would read the plays. Now we have changed all that and one may be glib, if not really learned, in the discussion of the works of the greatest dramatist, at small expense of time or money. The benefactors who have made the great saving of brain force possible are George A. Smith, B.A., author, and Gebbie & Company of Philadelphia, publishers.

"It gives, in the space of little more than two hundred pages, compendia of all of the plays of Shakespeare, comprising an historical sketch, an abstract of the plot, and a list of the dramatis personæ of each, all supplemented by a condensed concordance and and Index (two hundred pages more)."—*Detroit Free Press.*

"The plan of the volume, which is both handy and useful for ready reference, is to give *seriatim* an account of the sources and plot of each play, such as one might look over hastily to refresh the memory before going to the theatre. This division is followed by a 'Concordance of Familiar Gems,' more than a hundred pages in length, arranged by catchwords; and an index to the quotations and one also to the characters of Shakespeare are added. The style and type of the volume are excellent."—*The Nation.*

Bound in fine cloth, gilt, crown, 8vo, $1.50.

GEBBIE & CO., Publishers,
PHILADELPHIA.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S
Breakfast Cocoa
Is absolutely pure and it is soluble.
No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

RANCH LIFE AND STUDY FOR Boys.—A graduate of Yale University with experience in teaching will receive two or three boys of any age on his fruit ranch in the Ojai Valley in Southern California and give particular attention to their instruction and to their health. The ranch is most healthfully and conveniently situated on the foothills, 1,200 feet above the sea, 15 miles inland, being 35 miles from the city of Santa Barbara, and near post-office, churches, doctors, and hotels. Plenty of riding, hunting, and fishing. The ranch houses are large and newly built. Correspondence is cordially invited. References will be given and required.
SHERMAN D. THACHER,
Nordhoff, Ventura Co., California.

THE BOSTON, NEW YORK, AND Chicago Teachers' Agencies. Circular free. EVERETT O. FISK & Co., 7 Tremont Place, Boston; 6 Clinton Place, New York; 106 and 108 Wabash Ave., Chicago.

*THEODORE MUNDORFF, OPTI-*cian. Care of the sight. Brazilian pebbles, eyeglasses, opera-glasses, field-glasses, etc.
1167 Broadway, New York,
under Coleman House.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

THE NATION will be sent to new readers for examination, two months for 25 cents.

AN EXTRAORDINARY NOVEL.

A Far Look Ahead;

OR,

"THE DIOTHAS."

16mo, paper, 50 cents.

*** *A new and cheaper edition of this extremely thoughtful and ingenious volume has just been issued. It should be noted that 'A Far Look Ahead' was first published in 1883.*

WHAT THE CRITICS SAY:

"A fiction like this, which is characterized by so much thoughtfulness, so much ingenuity, so much playfulness, fancy, and imagination, together with a dash of poetry, and which, moreover, is written in so lucid and pleasing a style, ought to be a very great success."—*New York Evening Telegram.*

"The book is devoted to customs, habits, and love in the misty future, and for pure, genuine imagination, most charmingly worked out, is unexcelled."—*Boston Evening Transcript.*

"Very thoughtful."

"Extremely ingenious."

"Full of poetry and imagination."

"An extraordinary picture of New York and New York society in the *ninety-sixth century.*"

"There is nothing in the way of imagination so universally attractive, yet so completely mysterious, as is this speculation concerning what the progress of civilization in the coming centuries is to be."

*** *For sale by all booksellers and by the publishers,*

CONTENTS FOR JANUARY:

THE TARIFF AND THE FARMER. JOHN G. CARLISLE. The protectionists' "home-market" fallacy; a reply to Senator Cullom.

PREHISTORIC MAN IN AMERICA. MAJOR J. W. POWELL of the Smithsonian Institution. No scientific evidence of a people preceding the Indians.

THE ETHICS OF MARRIAGE. W. S. LILLY, the eminent English essayist.

WOMAN'S PLACE IN THE STATE. Prof. GOLDWIN SMITH. An argument against Woman Suffrage.

DEMOCRACY IN ENGLAND. HENRY LABOUCHERE, M. P., editor of (London) *Truth.* A democrat's review of present English politics.

THE PROBLEM OF AIR-NAVIGATION. Prof. R. H. THURSTON of Cornell. A scientific review of experiments which promise results.

ABUSES OF THE VETO POWER. FREDERICK A. CONKLING. A review of the granting and of the growth of this power; how it has never been approved by a popular vote; abuses of it at Washington and at Albany.

MAGNETISM AND HYPNOTISM. Dr. J. M. CHARCOT of Paris. Statement of the author's interesting scientific experiments; their physical and psychological significance.

THE WRONGS OF THE UTE INDIANS. GEORGE T. KERCHEVAL.

HORACE GREELEY'S CURE FOR POVERTY. Prof. RODNEY WELCH. What a Western farmer's chances now are; a skilled laborer who does not get a common laborer's pay.

SUPPLEMENT, containing sketches of writers and portraits.

Charles Scribner's Sons'

IMPORTANT NEW BOOKS.

Said in Fun.

By PHILIP H. WELCH, author of 'The Tailor Made Girl.' With a Preface by Robert Gordon Butler. Square 8vo, $1.25.

Illustrated with full-page drawings by W. A. Rogers, E. W. Kemble, O. Herford, C. G. Bush, Albert E. Sterner, C. D. Gibson, W. T. Smedley, F. G. Attwood, W. P. Snyder, C. Jay Taylor, J. A. Mitchell, W. L. Sheppard, W. S. Van Schaick, A. B. Frost, F. Opper, "Chip," M. Woolf.

The brightest of Mr. Welch's witty paragraphs and sketches have been gathered from all quarters, and some unpublished matter has been added, the whole making a book full of the rarest fun in picture and text.

"Of all the funny books of the season, we have seen none so upsetting as this. The illustrations could hardly be better."—*N. Y. Independent.*

Among Cannibals.

An Account of Four Years' Travel in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ, M.A. Fully illustrated. 8vo, $5.00.

"The account of life amongst those savages is most interesting. The climate, customs, weapons, and manner of passing their time are fully described, and the copious illustrations add greatly to the value of the book."—*Boston Traveller.*

"The volume is handsomely and profusely illustrated, and throws a light upon the conditions under which the human race lived in its early stages, scarcely to be equalled in the whole range of scientific literature."—*Boston Beacon.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo. $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—*N. Y. Observer.*

The Poetry of Tennyson.

By the Rev. HENRY VAN DYKE, D.D. 12mo, $1.50.

"This volume, in its estimate of Tennyson as a literary artist, and in its keen analysis of his deeper processes of thought, is a really masterly effort."—*Boston Sat. Eve. Gazette.*

"It is a pleasure to read Dr. Van Dyke's book, so complete and well balanced is it, so marked by common sense and critical acumen."—*N. Y. Sun.*

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00 net.

"This sumptuously made and illustrated volume consists of essays by specialists upon every branch of the American railway system. While the work is one for permanent instruction, its artistic side gives it all the attraction of a special Christmas publication. Its matter is most valuable, while the manner of presenting the matter is attractive and interesting."—*N. Y. Tribune.*

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"The stories will take an enduring place in literature, both because of the exceptional interest of their matter and the rare charm of the manner in which they have been given to the public."—*Boston Beacon.*

"Mr. Cable knows well how to select his materials and he is a master in the use of them. The stories are as romantic as they are picturesque and brilliant."—*N. Y. Independent.*

The Nation.

NEW YORK, THURSDAY, JANUARY 2, 1890.

The Week.

THE immigration to this country during the year just closed is likely to prove about 100,000 smaller than it was during 1888, when it was a little more than half a million. There has been a pretty steady decline since 1882, when the tide reached its highest point, bringing into the country in that year about 720,000 aliens. Germany continues to send the largest number coming from any single country, nearly 100,000. England, Scotland, Ireland, and Wales combined send about 140,000. From Norway and Sweden the tide is still strong, as it has been for many years, about 45,000 coming this year. The totals for 1889 will complete the record for seventy years, during which accurate statistics have been compiled. These will show that the United States has received from foreign countries since 1820 an aggregate of about 15,000,000 of people, of whom Great Britain has sent about 6,000,000, Germany about 4,500,000, Norway and Sweden about 800,000, and France about 350,000. Ireland alone has sent nearly 3,500,000.

Congressman McCreary of Kentucky is quoted as expressing the opinion that the Republicans in Congress will drop both the Sherman and the Chandler Federal Election Bills, and concentrate their strength on a bill which will practically give the control of Congressional elections to United States district judges. But it will prove as impossible to unite the party in favor of such a bill as it has proved to be in the case of the Sherman and Chandler bills. The trouble is, that a number of the United States district judges, both North and South, are Democrats; and instead of putting Congressional elections under the control of Republicans, the proposed change would intrust power to Democratic judges in Michigan, Illinois, Iowa, Wisconsin, Minnesota, and California at the North, and in South Carolina, Georgia, Alabama, and Texas at the South. The Republicans will not pass such a bill when they find out what it really means.

It is alleged by colored Republicans of Birmingham, Ala., that there is "an attempt to reverse the results of the late war, and to nullify the Constitution and laws of the United States under which we hold our civil and political rights." The attempt is not made by wicked Democrats, but by white Republicans, who have organized what they call the White League in an effort to establish a Republican party with which the negro shall have nothing to do. The leader in this attempt is Lewis A. Parsons, who has been appointed by President Harrison United States District Attorney for that portion of Alabama, and whose nomination is now pending before the Senate. The colored Republicans of Birmingham have held a mass-meeting, and adopted resolutions declaring "that the appointment of said Parsons was a mistake, that his confirmation by the Senate would be an insult to the colored voters of the United States, and would produce a serious loss of voters to the Republican party in all the States"; and praying the Senate to reject his nomination. There is abundant food for reflection in this incident.

A list of "commercial headstones" in the wool and woollen trade (manufacturing and mercantile) is given by *Bradstreet's* for the years 1888 and 1889, together with the assets and liabilities of the failed concerns, which foot up as follows:

	No. of failures.	Liabilities.	Assets.
1888.			
Wool-dealers.....	8	$536,000	$253,000
Manufacturers	49	3,101,000	1,723,000
Total	57	$3,637,000	$1,976,000
1889.			
Wool-dealers.....	11	$2,293,000	$1,381,000
Manufacturers	61	8,149,000	5,651,000
Total	72	$10,442,000	$7,032,000

It appears from this that the number of woollen failures under the Harrison Administration has been about 15 per cent. greater than under that of Cleveland, while the liabilities of the failed concerns have been about 150 per cent. greater, and the actual losses (difference between assets and liabilities) 100 per cent. greater. It is not supposed that a mere change of administration has caused the difference or had any influence one way or the other, but the facts may serve to induce reflection and a becoming reserve on the part of those orators and editor men who predicted great business prosperity, especially in manufacturing industry, in case Mr. Harrison should be elected. The effect of Secretary Windom's worsted decision to restore prosperity does not seem to have been anything remarkable.

The steel bark *Fong Suey*, sailing under the Hawaiian flag, arrived at Philadelphia the other day, from the harbor of Manila, with a cargo of 1,680 tons of raw sugar, which she discharged at the Harrison refinery. She was then towed around empty to New York, although she might have carried 1,680 tons of coal as easily as not, and would have done so had such carrying not been prohibited by our navigation laws. The *Fong Suey* will load at this port with petroleum for Manila, and in due time come back with another cargo of raw sugar. She is owned by an American, but since he cannot obtain an American registry for her (the vessel having been built in England), he sails her under the flag of King Kalakaua. There is no law against that. She is probably as fine a specimen of sailing craft as can be found in any part of the world, requiring for her proper handling and navigation no more men than were required for a 300-ton vessel forty years ago. Her captain is an American citizen. In fact, she is altogether American except as to her colors and her registry, for, although built in England, she ceased to be English when she was turned over to her present owner. That she is earning money for him may be inferred from the fact that she keeps going. He is not moved by patriotic feeling to fly the Hawaiian colors on the high seas, as he is not a subject of that country. He accepts the hospitality of Hawaii because his own country denies him the privilege of flying the American flag. He would be better off, and the United States would be better off, if he could have an American registry, in which case the *Fong Suey* would perhaps be known to Lloyds as the *Benjamin Harrison* or the *Grover Cleveland*. Meanwhile, a lot of people in Washington city and elsewhere are bewailing the decline of American shipping and the disappearance of the stars and stripes from the ocean, and wondering whether a subsidy or a bounty from the Treasury would not be a good thing for ships.

The Washington correspondent of the Topeka *Capitol* has been taking the opinions of the Kansas members of Congress on the subject of the duties on sugar and salt. Mr. Peters says that he is opposed to any change in the duty on salt, and that he is waiting to hear from the sugar industry in Kansas before deciding the other question. He is opposed to the bounty on home-grown sugar, because he thinks it could not be permanently maintained. If the duty on sugar were repealed and a bounty substituted in place of it, and if the bounty should prove unpopular, and Congress should repeal that also, where should we be? No, you will not catch Peters with any such chaff as that. Major Morrill believes that Kansas can produce salt as cheaply as any State or country, and therefore he is in favor of repealing the salt duty, and in this Gen. Kelley and Mr. Turner agree with him; but Senator Ingalls and Judge Perkins and Mr. Funston are, for the same reason, in favor of retaining the duty. Senator Plumb and Mr. Anderson were not prepared to express any opinion on either question. All the members who said anything said that they should be governed as to the sugar duties by the wishes of the sorghum-producers. Regarding salt, one member said that Kansas was now producing the article at 56 cents per barrel profitably and paying 27 cents of that for the barrel itself. This means that the salt is produced profitably at 29 cents per barrel. Is not this a good reason for maintaining a duty of 12 cents per hundred pounds at the seaboard, 1,500 miles distant? There were plenty of Congressmen last year

who could prove to you that the less the cost of producing salt, the greater was the need of a duty on the foreign article, and we doubt not some such will turn up in both House and Senate this year when that schedule of the tariff is reached.

Mr. Herbert Root, a Dakota banker, has written an open letter to Secretary Windom, making a strong plea, in behalf of North Dakota and northeast Minnesota, for the use of wheat as a basis for paper currency like the certificates which Mr. Windom proposes to issue against silver. He shows that wheat was the earliest Anglo-Saxon measure of value; that it regulated rents in England down to a very recent period; that its value has not in 3,000 years varied more than that of silver; that, unlike silver, it has never in any country or age been discredited or thrown out of use; and that it is always and everywhere in demand, as one of the necessaries of life, which silver is not. He proves the superiority of wheat to silver as the basis of a circulating medium by the following undoubted facts: (1) the universal usefulness of wheat as compared to the limited usefulness of silver; (2) the possession by wheat of a special market value at every town, city, and hamlet, while silver has a market value only at the great financial centres; (3) the consumability of wheat, preventing its inordinate accumulation, as compared to the indestructibility of silver; (4) the production of wheat by the people instead of, like silver, by a few millionaires, thus making a monopoly in it impossible; (5) the possibility of always finding a market abroad for the Government wheat when its store becomes excessive; (6) the great security against robbery offered by wheat, owing to its bulk and the difficulty of transporting it. The objection that a wheat currency would require large storehouses, he meets by asking what better use Government could make of its money than building large storehouses; that the national wheat product must be stored somewhere, and the Government can store it to better advantage than anybody else; and that in any case such granaries would be a more useful public possession than the silver vaults. There is no doubt that Mr. Root makes out a strong case, and Mr. Windom will find it very difficult to answer him, especially if he is backed up, as he doubtless will be, by the Great Northwest. But he has not apparently perceived the suggestion which his plan contains for the iron-men and the copper-men. Will they not also demand the use of their commodity as a basis for Government certificates?

The absorption by English capitalists of American breweries, grain elevators, flouring mills, etc., has been looked upon with disfavor by nearly everybody except the sellers of the property. On the other side of the water, too, the purchases have been deprecated by so high an authority as the *Economist*, on the ground that the transactions represented a craze similar to that which has periodically seized the British investing public ever since the days of the South Sea bubble. Meanwhile the absorbing goes on without any signs of satiety. A class of promoters have taken the field, and it is quite certain that their activity will not cease as long as John Bull has any appetite for American property. They scour the country to find dividend-paying plants that the owners are willing to part with at some price, and then they go to London and organize syndicates to take them up. These syndicates are promoters in the second degree. They take the property in a lump and sell it out in the form of shares to small investors. Both sets of promoters get a commission.

There is nothing new or alarming in these transactions. British capitalists have been investing in our railroads, our silver mines, and our cattle companies for a long time past. Before the days of railroads they invested largely in our canals. These later investments are merely a variation on the old tune, and, unless we are prepared to say that the introduction of new capital into the country is a bad thing for us, we cannot say that it is a disadvantage that the breweries of Newark or the mills of Minneapolis should be bought by Londoners. The fact that the price paid is satisfactory to the sellers is conclusive of the whole question so far as *we* are concerned. It is presumed that the sellers will know how to invest their money so that it will bring them at least as great a return as they were getting before. Whether the buyers will get as much profit out of the things bought as their predecessors obtained, is more doubtful, but that is their lookout. The mainspring of the whole movement is the fact that capital is accumulating in Great Britain more rapidly than it can be employed there. The island cannot contain it.

South Carolina's law-makers meet every year towards the close of November and adjourn the day before Christmas. The session just closed was chiefly notable for the defeat of two or three attempts by reactionists to change the policy of the State towards the education of the negro. One such attempt was a movement to secure a Constitutional amendment repealing the clause which requires the imposition of a certain minimum school tax, and another a motion to strike out of an appropriation bill an item of $5,000 for Claflin University, an institution where several hundred negroes are being trained in the class-room, the workshop, and the field. Each proposition was defeated by an overwhelming majority, the vote in the latter case being 99 to 9. The cause of popular education makes steady progress in South Carolina, as in every other State, although it has suffered much from the agitation of the policy of Federal aid, which has furnished an excuse for failure to increase school taxes as much as could and should have been done.

What has the Baltimore *Sun* in mind when it says: "Few men in public life have been more persistently misrepresented and traduced by political opponents than Gov. Hill"? Specifications upon this point would be interesting. The remark indicates that Gov. Hill's political opponents, and not he himself, are responsible for the general estimation of him as a statesman which prevails in all parts of the country. That estimation puts him down as an opponent of pressing reforms, as a supporter of undesirable public measures, and as a politician who relies mainly upon patronage and political trickery for his advancement. Who is responsible for these views of his character? Is he or is he not an opponent of such pressing reforms as high-license and improved-ballot laws? Has he not vetoed three successive high-license bills, the second of which was drawn to meet as nearly as possible all the recommendations which he made when he vetoed the first? If he has a bad reputation on that point, it is due to his own acts. Has he not also vetoed two ballot-reform bills, though they contained the same principles as are embodied in the laws which nine other States have enacted? If he stands to-day as the leading opponent of that reform, it is because of his own acts. Did he not enter into a "deal" with the Republicans of the Legislature to turn over the building of our new aqueduct to an unprincipled adventurer, whose character was perfectly well known to him at the time, and did he not sustain him and refuse to remove him until forced to do so by public opinion? Can even political opponents traduce a Governor who permits himself to engage in such performances as this was? As for the use of patronage, does he ever give office to any one except a Hill man, or look upon it otherwise than as being primarily a means for advancing his personal ambition? There is no man in the country to-day who better deserves his reputation than Gov. Hill does, for he has earned every particle of it by his own exertions.

The doubts which continue to be expressed as to the stability of, and indeed as to the existence of the Brazilian Republic, are largely based on the wide extent of its territory, the want of real community of interest between the provinces, the heterogeneous character of the population, and the ignorance and barbarism of a large portion of it. It is not enough, as every one knows, to get rid of a monarch in order to set up a republic. There must be enough community of ideas and aims among the people, and enough political capacity among their leaders, to reorganize the Government after the monarch has gone. Whether these things exist in the case of Brazil, time only will tell, and time must be allowed to tell. Everybody for this reason recognized the indiscretion of Mr. Henderson in trying to push the Pan-American Conference into a vote of welcome to the Brazilian Republic, and the great discretion of the Senate in resisting the attempt of Mr. Morgan to force a recognition of the Fonseca Government by ours. Any such haste would have come with probably worse grace from the United States than from any other Power in the world, considering the warmth with which we insisted on the importance of delay on the part of

England and France in recognizing the Southern Confederacy. It takes a good while to ascertain the real results of a revolution. Any one who doubts this should recall the history of the first and second French republics, of the Spanish Republic of 1874, of the most of the South American republics, and of the Southern Confederacy.

But there is one element in the Brazilian problem which is more important than any, and which does not seem to have attracted all the attention it merits. No matter how widespread republican feeling may have been, or how slender the hold of the monarchy on popular affection, the fact is that the revolution was wrought by the army. It was "troops" that did the work. It was a general in full mutiny against his superior officer who gave the old Emperor notice to quit. It is this same mutineer who is now at the head of the Government. He holds the capital by military force. As far as we can make out, he issues orders to himself and is only answerable to himself. Has any permanent constitutional government, either monarchical or republican, been set up by such an instrumentality? We can recall none, unless the restoration of Charles II. by Gen. Monk can be called by that name. Human nature must, in fact, have undergone considerable change in Brazil if a parliamentary republic issues all at once from a military revolt, under the auspices of a general who gave a sovereign of fifty years' standing only twenty-four hours' notice to leave the country, and put him on shipboard as a prisoner. Everybody's head is more or less turned on all subjects by the possession of overwhelming physical force. Gen. Fonseca may prove an exception to this rule, but the presumptions are against it, and there is nothing disrespectful in a great distrust of him. The difficulties that are feared or expected about bringing the provinces into the republican line, will furnish him with plenty of excuse for maintaining a strong military force at the capital, and using it unflinchingly to repress what all saviours of society call "incendiary language."

President Celman has sent a special message to the Argentine Congress on the financial crisis through which the country is passing. In a preliminary statement, he maintains that the cause of the trouble is not to be sought in the depreciated currency, but that it is inherent in the nature of the case. Any new and rapidly expanding country, he says, has to go through the same thing. With a sudden development of all resources, the inflow of a great immigration, the building of extended lines of railways which have to be, for a time, comparatively unproductive, there must be, he argues, a demand for capital beyond the power of the country itself to supply. Hence came the flood of paper money and its consequent depreciation. As a clincher, he says that the present crisis is no worse than that experienced in 1872–76, when the country was on a gold basis. That the President perceives this to be rather hollow reasoning appears from the fact that he goes on to admit the state of things financially to be very bad, and to propose some measures to remedy what he had declared to be inevitable. He asks Congress to prohibit the further issue of paper money, as also of *cédulas* of the Mortgage Bank. He also wants the outstanding circulation to be called in and destroyed, until the total shall be reduced to $100,000,000. He would have the Government maintain a gold reserve of $80,000,000, recommends higher taxes on luxuries and lower on necessaries, and advises the suspension of public works voted but not actually begun. It is essential, he says, that the Government should be administered as economically as possible, and the surplus applied to the purchase and refunding of the outstanding 5 per cent. bonds. It is reported that this message itself has had the effect of bettering affairs somewhat, though foreign exchange still remains high, and gold continues to be quoted at a dizzy figure—considerably over 200.

The reassembling of the Cortes and the reopening of party struggles in Spain bring Sagasta no end of troubles. His effort to reorganize the Cabinet and to conciliate disaffected Liberals has thus far proved fruitless. Martos still resents his deposition from the Presidency of the Chamber, and declares that his honor forbids him to have any communication at all with the Prime Minister. Gamazo and his band of protectionist Liberals decline to make any alliance with Sagasta until the latter is prepared to surrender unconditionally to their programme. In like manner, Gen. Cassola insists upon the adoption by the Government of his scheme of military reform before he will give in his adhesion. Still, the situation is favorable to the continuance of Sagasta in power. He has the prestige of the bit of national glory won during the summer in the collision with the Sultan of Morocco. He has apparently the unlimited confidence of the Queen Regent, and can call upon her for any assistance within her power. Then he is pushing the universal-suffrage measure so as to win all possible popularity from that popular movement. The Opposition, it is true, have taunted him with insincerity in the matter, pointing to the empty Government benches as the debate goes on, but, sincere or not, Sagasta urges the bill, and has a great hold on the people in consequence. The greatest difficulty he has to face is the bad financial situation of the country. The deficit has been piling up for several years, at the rate of about $20,000,000 per annum, and shows no sign of falling below that figure. The Government is reaching out for every peseta in sight, proposing tobacco monopolies and suggesting the sale of the public salt works, but has nothing except such temporary shifts to propose, though the need of some thorough and comprehensive measure is urgent.

The action of the Italian Government in so soon repealing the differential duties laid on French imports in 1887 is a marked display of international good sense, at the same time that it is a rather conspicuous eating of humble pie. The measure was distinctly foreshadowed in the speech from the throne, and the Minister of Finance, Signor Seismit-Doda, at the time of introducing the Government bill into Parliament, made a long speech in explanation of the sudden reversal of policy. He frankly admitted that the original legislation had not been intended as permanent, but only as a move to bring France to terms in several pending disputes between the two countries. The scheme had failed disastrously, the Minister acknowledged. There had been a very great loss of trade to Italy, and smuggling had been enormously stimulated. The Government had seen its mistake, and now proposed to retrace its steps, and to do it without any haggling with France. The latter nation might or might not repeal its own retaliatory legislation; Italy was sick of the commercial warfare, and was going to end it so far as she was concerned. This decision has been received very favorably on both sides of the Alps. The French press—so far at least as it is represented by the *Republique Française*—is pleased at the situation, and says that France may be counted upon to go as far as Italy in removing the barriers to trade. The German press, on the contrary, is not altogether happy over the prospect of a reconciliation between two nations that Prince Bismarck has been trying to set by the ears.

The materials are evidently accumulating for an Anglo-German row between Stanley and Emin when the latter gets well and gets back to Europe, somewhat like that in which Sir Morell Mackenzie figured around the Emperor Frederick's deathbed. The Berlin *Tageblatt* severely criticises Stanley for his stories about Emin's vacillation, and threatens him with exposure when Emin comes home. Stanley's theory is that, after reaching Emin, through incredible hardships, he found him surrounded by mutinous troops, whom he (Stanley) had to thrash into subordination, and that for months Emin was unable to make up his mind whether to come away with him or stay behind, thus causing the whole party great delay and danger. The German theory is, that when Stanley reached Emin's territory, instead of commanding a real rescuing force, he was at the head of a small band of worn-out ragamuffins whose assistance seemed a mockery, and that Emin was naturally reluctant to abandon a province which he had ruled for years to go off with such a party. It will be seen that there are in these two opposing views wherewithal to make a journalistic controversy of considerable length and great bitterness. The sympathy of the world we think, however, will be with Stanley. To have reached Emin with any kind of force, even with a single follower, was the exploit of a hero, and no want of welcome from Emin can diminish his glory. It is one of those cases in which each side may be right without discredit to the other; but we fear the newspapers will not be satisfied with any such solution of the difficulty.

HEARINGS ON THE TARIFF.

THE hearing of the Committee of Ways and Means on the iron-ore question is the first of a series intended to embrace the whole tariff before it comes up for general discussion in Congress. These hearings will attract more attention than has been given usually to such inquiries because of the great awakening of last year. When a man comes forward, as Mr. Geo. H. Ely did on Thursday, and advocates a duty of seventy-five cents a ton on iron ore because he is a producer and seller of the article, his opinions will be subjected to a more rigid scrutiny than they were in 1883, when the present duty was imposed, because more people are now familiar with the subject. But probably few know how great an outrage this duty on iron ore is, or remember the swindle by which it was enacted.

There was no mention of iron ore in our tariff from the beginning of the Government until the year 1874. Prior to that time it had been classed with unenumerated raw materials at a nominal duty of 10 per cent. ad valorem. In that year it was lifted to 20 per cent., in order to accommodate the mine-owners of the Lake Superior region. This step was taken in pursuance of the principle adopted in the copper tariff, that if an American producer of any article has peculiar advantages in the production of it, he ought to have a Government subsidy in addition. This principle had been applied so extensively to other things that when the great deposits on Lake Superior were brought to profitable working, and the demand for ore was increasing from year to year, the petition of the mine-owners for 10 per cent. more could not be resisted. The Tariff Commission of 1882-3 found that, notwithstanding this duty of 20 per cent., the importation of ores adapted to the making of Bessemer steel was rapidly increasing. These were ores from Spain and the Mediterranean described as "low in phosphorus." The rate of 20 per cent. ad valorem they found to be equal to 54 cents per ton average. They recommended that it be changed from ad valorem to specific and fixed at 50 cents per ton.

This rate was agreed to by both House and Senate, but when the bill went to a "Committee of Conference on the *disagreeing* votes of the two houses," it was reported back with a clause fixing the rate of duty on iron ore at *seventy-five cents per ton*. This was most unquestionably a swindle upon Congress and upon every industry in the United States dependent upon iron or steel—and what industry is not so dependent? It was a swindle upon Congress, because Congress had already decided that it should be fifty cents per ton. There were no disagreeing votes on that question for a conference committee to harmonize. But since a conference report must be adopted as a whole or rejected as a whole, the swindle was ratified, and American industry has been suffering the consequences, as depicted by Mr. Tobey of Massachusetts, ever since. In the same bill the House had fixed the duty on steel rails at $15 per ton and the Senate had raised it to $15.68 per ton. The Conference Committee reconciled these disagreeing rates by fixing it at $17 per ton.

Mr. Ely, the President of the Western Ore Association, in his argument before the Committee, contended that the duty of 75 cents per ton had been beneficial because, under that stimulus, the production of ore had risen from 10,000,000 to 15,000,000 tons within the short space of three years. This was for the benefit of the country according to his view. Mr. Tobey of Massachusetts held, on the other hand, that it was no benefit to him as a manufacturer to pay 75 cents per ton tax on an article indispensable to his business. Leaving Mr. Ely and Mr. Tobey and their respective claims for the present, is it not worth asking whether it is an advantage to the country to be rapidly deprived of one of the most important treasures with which Divine Providence has endowed it, and which, when once extracted and used, can never be replaced? At the recent meeting of the British Iron and Steel Association, the shortage of Bessemer ores in the United Kingdom was the principal subject of discussion. The approaching exhaustion of the most accessible mines of Spain and the Mediterranean was considered, and the means of reaching the deposits further inland, involving of course greater expense to the smelter, was somewhat anxiously debated. The recent rapid advance in pig-iron in England, leading to large importations of pig from the United States, has undoubtedly some relation to the deficiency of Bessemer ores in the Old World. At such a time as this, some persons already enriched by the possession of an article limited in amount, the demand for which is in excess of the supply, have the effrontery to demand seventy-five cents per ton more than it is worth in order that they may be stimulated to dig it out of the earth faster than ever, and deprive future generations of Americans of one of the prime necessaries of life!

MR. M'KINLEY'S REMARKABLE BILL.

THE third section of Mr. McKinley's bill "to *simplify* the laws in relation to the collection of the revenues" declares that an invoice shall be presented to the consular officer of the *district* whence "exported," and must be made at the *place* of exportation. But if a traveller buys an article in Russia, carries it in his portmanteau to France, and sends it thence to New York, which is the country of exportation? Must he return to Russia to make an invoice?

The law now requires the manufacturer sending his goods hither on consignment to his agent, to invoice them at their actual cost at the time of *manufacture*. The proposed bill requires the manufacturer to affirm that he has inserted the market value at the time of *shipment*

"That such actual market value is the price at which the merchandise described in the invoice is freely *offered* for sale to all purchasers in said markets, and that it is the price which the manufacturer or owner making the declaration would have received, and was willing to receive, for such merchandise sold in the ordinary course of trade, and in the usual wholesale quantities."

But what if the manufacturer consigns the whole product of his factory to this country, and never sells at home?

In another section, such a manufacturer is required to declare as follows:

"The invoice which I now produce contains a just and faithful valuation of the same, at their *actual market value or wholesale price* at the time of exportation to the United States, in the principal markets of the country from whence imported for my account [or for account of myself or partners]; that the said invoice contains also a just and faithful account of all the *cost* of finishing said goods, wares, and merchandise to their present condition."

But what if the *cost* of manufacture is unlike the *wholesale price?*

Section 7 permits one who has *purchased* abroad to add, on entry, to the invoice value in order to make market value, but does not permit such addition in case of consigned goods. Why not? If, according to the McKinley bill, the appraised value exceeds the entered value by 10 (it is now 20) per per cent., then a penalty of 20 per cent. follows as an additional duty. And if the difference between the entered and the dutiable value is more than 20 per cent., then, declares Mr. McKinley:

"Such entry may be held to be presumptively fraudulent, and the collector of customs may seize such merchandise and proceed as in cases of forfeiture for violations of the customs laws; and in any legal proceedings which may result from such seizure the fact of such undervaluation shall be *presumptive evidence of fraud*, and the burden of proof shall be on the claimant to rebut the same, *and forfeiture shall be adjudged unless he shall rebut said presumption of fraudulent intent by sufficient evidence.*"

Which means that if an appraiser differs from the importer in regard to value by 20 per cent., the latter is to be by law taken to be a defrauder of the revenue and required to prove a negative. The importer must deposit the estimated regular duties on entry, and, if he cannot establish a negative, he will lose his goods and his deposit for duties besides.

Section 8 of the McKinley bill declares that when a manufacturer or his agent makes an entry, there shall be presented,

"in addition to the certified invoice or statement in the form of an invoice required by law, a statement, signed by such manufacturer, declaring the *cost of production of such merchandise*, such cost to include all the elements of cost as stated in section 34 of this act."

Why require the *cost* of manufacture, in addition to the price or value at time of shipment? The goods may have been made years before shipment. Why compel the manufacturer thus to disclose the secrets of his business? How can such cost of manufacture aid the appraiser to ascertain dutiable value?

Mr. McKinley's section 10 requires appraising officers to ascertain and report to the collector,

"(any invoice or affidavit thereto or statement of cost or of cost of production to the contrary notwithstanding), the actual market value and price of imported merchandise, *as bought and sold in usual wholesale quantities*, at the time of exportation to the United States, in the principal markets of the country whence the same has been imported."

But what will happen if the importer bought in *retail* quantities? Will the appraiser appraise *below* the entered value?

Section 11 then declares that if the ap-

praiser cannot ascertain the market value, he shall ascertain the *cost* of production, and add a "reasonable profit," which sum shall be the dutiable value. And then if the appraiser's sum exceeds the entered sum by 20 per cent., confiscation is to follow as provided in section 7. Are such barbarism and despotism possible?

Section 12 sweeps away all merchants from participating in reappraisements, and declares that the dutiable *value*, as finally fixed by the new Board of General Appraisers, shall be final, but the collector shall nevertheless fix and levy the *rate*. If the importer, however, finds the rate unlawful, he can protest as now, but the protest shall go to the new Board of Appraisers (not to the Treasury, as now on appeal), and thus the appraisers may decide both the value and the rate. If the importer believes the appraisers' *rate* to be unlawful, he can apply to the Federal Circuit Court "for a review of the questions of *law* involved in such decision." What of the *facts?* it will be asked, The section declares:

"Thereupon the court shall order the Board of Appraisers to transmit to said Circuit Court a certified statement of their findings of the *facts* involved in the case and their decision thereon; and the *facts* so found and certified *shall be final and conclusive upon the court.*"

Have the Secretary of the Treasury and Mr. McKinley gone mad over protective taxes? The rate depends on the *facts*, and the facts make the case, but the facts the importer cannot try! If the bill shall become a law, the Harrison Administration will select the members of the new Board, and, whether nominally Democrats or Republicans, they will all be protectionists, or opposed to taxation reform, and confederates of the manufacturers seeking the highest rates of tariff taxes. And such a partisan board is to be supreme over dutiable values and the facts which lead up to rates.

Section 19 furtively restores taxes on packing-boxes and coverings, and will enormously increase customs taxes.

But the climax of protectionist deviltry in this McKinley bill is in the twenty-ninth section, where a sly and stealthy effort is made, by reducing non-enumerated articles down to a minimum, or none at all, to inflict, in every ambiguous case, and where Congress has not spoken distinctly, the very highest possible rate. It is a furtive attempt to nullify the decision of the Supreme Court that the lowest rate shall be levied in all cases of reasonable doubt. One sees in that section the fine Roman hands of Tichenor and Hepburn, who put through the worsted decision. The section must be read to be appreciated. No synopsis or abridgment can do justice to its cunning devices intended to mislead the average Congressman.

We do not doubt that this bill will, in order to give it popularity, be heralded as the Hewitt-Manning bill, which it resembles as an Hyperion does a Satyr. And yet one having a sense of humor can but laugh who sees that this McKinley bill is the thin edge of an entering wedge to be driven home in order to prepare for the Republican tariff revision that is to follow. By this McKinley bill the protectionists hope, first of all, to get partisans of theirs to fix values and rates—always the highest possible rates—and fix them without interference by juries who now decide the facts, and then to manipulate new tariff schedules with ambiguities which will enable the schedules to slip through Congress unobserved. In the presence of such a peril, now that the Republicans have both branches of Congress and the Executive, the friends of lower tariff taxes will need to do something more effective than debate the relative advantages of internal and external taxes respectively, or discuss the relative orthodoxy of Mills or Randall.

OUR ALASKAN SEAL ROOKERIES.

It is quite impossible for one to read the letters that have recently appeared in the London *Times* on the habits of fur-seals, and not feel a deep interest in the questions respecting them now under discussion by the Governments at Washington and London, and in the questions growing out of the expiring contract of lease by our Government of our seal islands and fisheries to the Alaska Commercial Company. Mr. Flower, of the London Natural History Museum, writing apparently from a professional point of view, says:

"Scarcely a century ago fur-seals existed in numbers which appear now almost incredible on many coasts and islands of the Southern Ocean. Juan Fernandez, Chili, the Falkland Islands, South Georgia, South Shetland, Prince Edward Island, the Crozets, some parts of Australia, Antipodes Island, and many more, mostly within our dominions or within British influence, all possessed 'rookeries,' or breeding-places of seals, which, if protected, might have been still as populous and valuable as those on the Pribyloff Islands in the Bering Sea. Every one of these, however, has, owing to the ruthless and indiscriminate slaughter carried on by ignorant and lawless sealers, regardless of everything but immediate profit, been totally annihilated, or so reduced in numbers that it is no longer worth while to visit them. The only spot in the world where fur-seals are now found in their original, or even increased, numbers is the Pribyloff group, a circumstance entirely owing to the rigid enforcement of the wise regulations of the Alaska Commercial Company, which are based on a thorough knowledge of the habits of the animals. But for this, the fur-seal might before now have been added to the long list of animals exterminated from the earth by the hand of man."

Mr. Staveley Hill, a member of Parliament, writes from a different point of view. He looks at the subject as an Englishman, and as a partisan of the Canadian sealers who kill seals in Bering Sea and not on the rookeries, which all belong to us or to Russia. What he says should be read by the aid of a large and accurate Coast-Survey map of the region, in order to appreciate the precise locality of the two islands—the Pribyloff and St. Paul's—on which are our rookeries, and the relation of the Aleutian group of islands to the peninsula of Alaska, and the distance between the westernmost of our islands (Attou) and Kamtchatka, on the one hand, and between Attou and the Komandorski islands, which belong to Russia. It is some five degrees of longitude from our westernmost island to the easternmost islands of Russia, and that is the width of the wide channel which is the entrance there, at the south, to Bering Sea. Our rookeries are on the line of longitude 172° and of latitude 57°. They have been leased to the Alaska Commercial Company till May 1, 1890, for $55,000 a year and $2.62½ a skin. All the skins go to London to be dressed. The company is limited to 100,000 skins a year.

The most competent experts estimate the entire annual yield of fur-seal fisheries in the world to be only 192,457 skins, or less than double the limit which we prescribe to the Alaska Commercial Company. The world's catch is thus classified:

Pribyloff Islands, Bering Sea	94,967
Commander Islands and Robben Reef	41,893
Islands belonging to Japan	4,000
British and American sealing fleets on northwest coast of America (including catch at Cape Flattery and Bering Sea)	25,000
Lobos Islands at mouth of Rio de la Plata	12,385
Cape of Good Hope, including islands in Southern Indian Ocean	5,500
Cape Horn region	8,162
Falkland Islands	550
Total	192,457

To Mr. Staveley Hill's letter the London agents of the Alaska Commercial Company replied that it is forbidden to that company to kill *female* seals, and it does not. Another writer, Mr. J. R. Baillie, sent the following to the *Times:*

"Mr. Hill makes a serious mistake in charging the company with 'killing on the nest.' In point of fact, the breeding seals are never molested, and the only ones killed are the young 'bachelors,' which occupy a separate portion of the island. As they roam about considerably, they fall a prey to the outside hunters, and the company's position is like that of a man who sees his cottage neighbor shooting the pheasants that have been bred in his own preserves."

Mr. George Baden-Powell, a member of Parliament, enters into the discussion to say that the Canadian sealer's main catch "is almost entirely composed of *females*"; that it is made only twenty-five miles from land; that Canadians begin in December and seal till August. Mr. Hill makes a very lame rejoinder. It appears to be quite clear, on Mr. Hill's statement, that the Canadian sealers do kill the *female* seals when getting food for their young there on our islands, or on the Russian islands, the *male* and the full-grown seals being also chiefly on the islands. Nobody denies that the Pribyloff and St. Paul Islands are as completely ours as is Staten Island in New York Harbor.

It is to be borne in mind that we have leased all our seal-fishery rights to the Alaska Commercial Company till next May; that the Treasury is asking for bids for another long lease; that the value of the lease will depend on the exclusion from Bering Sea of Canadian marine sealers described by Hill and Elliott, and that Canadian rights in that part of Bering Sea included in the boundaries of what was ceded to us, and described in the first article of the Russian cession to us, should be defined by the Harrison Administration before a new lease is sold, if we are to get the full and proper value of the concession.

There are two pending questions to be decided by the Administration:

(1.) Should we, and can we, make an international agreement between ourselves, Great Britain, Russia, and Japan, to "prevent the citizens of either country from killing seal in Bering Sea at such times and places and by such methods as at present are

pursued, and which threaten the speedy extermination of those animals and consequent serious loss to mankind," as Mr. Bayard proposed?

(2) If not, then can we, under the rules of public law applicable to our Alaskan possessions, and shall we, "solitary and alone," police one side of Bering Sea, and keep out Canadian and alien sealers who kill the female seals, and threaten the destruction of the great value of our rookeries—always taking care that by such policing we do not prevent or disturb anybody's right of navigation in Bering Sea, or any other innocent use thereof?

PEEL AND BLAINE.

THE Providence *Journal* sees indications that "Mr. Blaine may be meditating a sort of *coup d'état* on the tariff question similar to that master stroke of statesmanship which makes the best reputation of Sir Robert Peel"; and it believes it "among the possibilities that he may presently come forward with a grand scheme of reciprocity treaties with South American countries under which freedom of trade between them and ourselves would be established." It adds, after describing Peel's achievement: "Mr. Blaine can do much the same if he chooses. The conditions surrounding him are almost exactly a duplication of those that beset Peel. The opportunity before him is fully as great, if not greater."

There is likeness and unlikeness in the situation of Peel in 1841-'46 and of Blaine in 1889. Peel was First Lord of the Treasury and Prime Minister, with a seat in the House of Commons; but Blaine is only Minister for Foreign Affairs, with no speaking or voting power in our Congress. Peel, as chief of the Ministry of his day, had more power over English legislative and executive affairs than President Harrison has to-day over American legislative and executive affairs. Blaine is, in law, little more than his clerk. If the President permits, and he can negotiate treaties to that effect with the foreign governments represented by the Pan-American Congress, which treaties the Senate ratifies, he can, nevertheless, make free trade with those countries which will be "the law of the land." So much for personal similitude.

There is similarity and there is dissimilarity in the currency, the taxation, and the finances of Great Britain in 1841-46 and of the United States in 1889. Then England had a deficiency of income; now we have a surplus. Her revenue was sinking; ours is rising. Then the British Union was threatened; ours has been secured. Peel succeeded a discredited government; Blaine follows after an honorable and honored Administration. Peel came to power with a large majority in the House of Commons. Blaine has now a slender one in Congress. In 1841 the great Whig party of England had been "muddled away," but, in 1889, the Democratic party of America is more compact and vigorous than ever. Currency reform and taxation reform were in the air in England in 1841, and they are to-day in the United States. It was true of Peel that he went back and adopted the free-trade ideas of Huskisson set forth twenty years before, and accepted the recommendations of the House of Commons Import Duties Committee of 1840. Disraeli said in 1846 of Peel: "He is a burglar of others' intellect. There is no statesman who has committed petty larceny on so great a scale." Blaine cannot appropriate free-trade plans from any leader of his own party who has gone before him, but he can use the ideas set forth by Manning in his Treasury reports as Peel did the ideas of Huskisson and of Hume's Import Duties Committee. Peel had a brief experience as Prime Minister in 1834 (to be followed by Melbourne) before he came to power in 1841, just as Blaine had in 1881. The Tory party which carried Peel back to power in 1841, was not a free-trade and anti-corn-law party any more than the Republican party of 1888 was a tariff-reform party.

As in England, before Peel's day, a protective tariff was tempered by smugglers and undervaluers, so it is now among us in Blaine's day. The British tariff of 1841, like ours of 1889, was a barbarous system. It had a thousand different rates, and more than as many has ours of 1889. But Peel had to face a falling revenue: income less than outgo. England then had export taxes; we have none, thanks to the men of 100 years ago. Peel had to invent or enlarge another tax to supply the place of customs taxes reduced or abolished; Blaine has no such necessity. Peel reimposed the income tax on *property*, in order to release trade and industry from taxation. England had in 1841 a Chinese war on hand; we are in 1889 at peace. English deficits were then chronic as is now our Federal surplus.

These are some of the similarities between 1841 and 1889. In England the limit of taxation on consumption had been reached, and so has it to-day, in effect, in our country. What Peel did, Blaine can and should endeavor He should, as Manning advised, put an end to tariff taxes on imported raw materials, including wool and all ores. He should sweep away innumerable vexing little customs taxes, as Peel did. He should foster American manufactures as Peel did British manufactures. In 1842 Peel, at one blow, abolished 520 British tariff taxes, all vexing and costly of collection. In 1841 there were in England 1,046 articles subject to tariff taxes; Peel retired from office leaving less than half that number, having reduced duties on 1,035 and repealed duties on 605 articles, chiefly the food and clothing of the people. And finally, in 1846, a House of Commons chosen on a protectionist platform condemned the corn laws by a majority of 97.

And now for a future which may give Mr. Blaine pause! The division of his party on the Corn Laws was fatal to Peel. "He had forfeited the hearts of his Tory adherents," and had to turn to his opponents, as Blaine might have to turn to Democrats. The Tories could not maintain the Corn Laws or forgive Peel. Many loved the treason, but yet hated the traitor. So it may be with Blaine. Peel's Government did a noble work, but fell "in the light of day, with their face to the enemy." He hit protection a right-hander, and so can Blaine. *He* triumphed, but without his Tory army. Within six years a protectionist Ministry in England declared for "unrestricted competition," and the protectionist party vanished. The Tory party, having lost its great leader, wandered in the wilderness for twenty-eight years. But the glory of Peel to-day: how he "fills the sounding trump of fame"! Blaine should think of *that!* The cause of protective taxes is a falling cause.

A TEST OF NATIONALISM.

EDWARD BELLAMY, in his recent lecture in Boston, laid down very clearly under different headings what the Nationalists demand. Here is one of his declarations:

> "(4.) We demand that the coal-mining business, which is at present most rapaciously conducted as respects the public, and most oppressively as regards a great body of laborers, should be nationalized, to the end that the mines may be continuously worked to their full capacity, coal furnished consumers at cost, and the miners humanely dealt with."

It is always very satisfactory to get from the advocates of any new system of government, religion, or philosophy an exact statement of their aims and expectations, since it enables us to test their theories by experience and practice. Applying this test to Mr. Bellamy's coal platform, what is the result? He begins with the assertion that "the coal-mining business is at present most rapaciously conducted as respects the public." This would seem to be a very difficult proposition to prove. If the public are the victims of the coal-producers' rapacity, it must be in the way of prices for coal. But coal is, as every consumer knows, very cheap. The natural law of supply and competition has made it so. Rapacity on the part of the owners of any necessity of life is also associated in the public mind with large profits to its purveyors. But the coal companies in the last twenty years have had their full share of financial tribulation. Look at the history of the Reading and New Jersey Central Companies, and count the years in which the stronger coal companies have skipped their dividends. It is true that we have had "coal combinations" which sought to fix the price of coal arbitrarily, and succeeded for a time. But the final outcome was the disruption of the combinations, with disastrous results to the combiners. With the vast amount of capital now invested in coal lands and coal-carrying roads, the investors in such enterprises would seem to have more to fear from competition than the public has from combination.

Next Mr. Bellamy asserts that "the coal-mining business is at present conducted most oppressively as regards a great body of laborers." In making this assertion he evidently means that the miners are underpaid and irregularly employed. Any industry employing the vast number of men engaged in coal-mining must be subject to the disturbances which come from overproduction, decreased consumption, strikes, etc. The skill required in getting coal out of mines is of so low an order and so quickly acquired that the companies have no trouble to add to

their force when demand is good, and this force has to be decreased when demand becomes less.

This, however, is no practice peculiar to corporate or private employers. The same thing is done, for instance, every year in the Government navy-yards. The careful statistics of the coal trade now attainable are destructive of Mr. Bellamy's generalities. Thus, side by side with the present announcement of decreased time in the anthracite mines of Pennsylvania, are the figures showing a decrease of 1,866,994 tons in this year's shipments compared with last. The Secretary of Internal Affairs of Pennsylvania devotes a large part of his last annual report to coal-miners' wages. He shows that the average daily earnings of 710 "most skilful" bituminous miners in the year 1888 were $1.96, and of 450 similar anthracite miners $2.98. The smaller earnings of the bituminous miners are due to a regulation of their union limiting the daily "cut" to four tons per man, in order to secure employment for a larger number. These wages would not seem to be "oppressive," and as the wages of the Pennsylvania miners are regulated by the price of coal, the miners profit by any advance from which the public may suffer in the way of "rapacity." There have been pitiable scenes in some of the Western coal districts during the last year because of strikes against low wages. But the reason seems to be that those districts are at so great disadvantage as regards others that, if coal is mined there, the miners must accept the smallest pay. A report of the Illinois State Board of Labor Statistics on the year's coal operations in that State, made public last week, gives fifty cents a ton on the track as the average value of coal in several places in St. Clair County. The only remedy seems to be for these miners to seek different employment.

In the way of remedy, Mr. Bellamy would have the Government own and operate all the coal mines in the country: first, "to the end that the mines may be continuously worked to their full capacity, and coal furnished consumers at cost." The predicament into which this scheme would plunge the Treasury Department may be seen from the present situation in the Pennsylvania coal regions. The corporations owning the mines have had the demand on them for coal curtailed by two very mild winters and the stagnation of the Eastern iron trade, and have in consequence been obliged to lessen their production. This reduces the miners' incomes, or, according to Mr. Bellamy, "oppresses" them. The companies have every motive to continue production if they can find a market. The Government would be no more successful a seller than are the corporations. How would the Bellamy plan work? Mining would go on to "the full capacity" of the mines; there would be no reduction of wages and so no decrease in the cost of production, and there would be a vast accumulation of mined coal for which there would be no present market, and which would remain to glut the market of the future, while the expense of the work at the mines would go steadily on. The present accumulation of silver dollars in the Treasury would be nothing to the accumulation of coal at the Government mines, and a future Windom would probably propose as a cure the issue of coal certificates to serve as additional currency.

Finally, Mr. Bellamy would have the Government operate these mines in order that the miners be "humanely dealt with." Here he descends abruptly to the humorous. Prescribing, as "humane," employment by a government which rewards a dying Pearson's almost unexampled efficiency with removal to make a place for a "worker"; which dismisses an employee like Burt for a similar reason with a brutal lack of delicacy; which has filled the country with expostmasters whose only offence was the ticket they voted; and which gauges the fitness of its day laborers by their politics! Think of the Bellamy kind of coal mines under a Harrison as President, with a Quay as patronage-dispenser in the State where most of them were situated!

The Bellamy kind of reformers should beware of the danger of descending to particulars.

MILLIONAIRES.

THERE was probably nothing in the morning papers on Friday which interested so large a public as the account the *Times* gave of the fortune of Mr. John D. Rockefeller. It amounted in all to $129,000,000, as reported by "a gentleman who knows as much of inside Standard Oil affairs as any outsider can possibly know, and who has a closer personal acquaintance with John D. Rockefeller than is usual even among those counted his friends." This goes far to confirm the rumors, which have been for some time afloat, that John D. Rockefeller was the richest man in America. The amount is probably exaggerated, because the tendency of popular rumor to-day is to magnify all fortunes above $2,000,000. Great fortunes are perhaps the thing about which the American imagination most loves to play; and in order to make the play as exciting as possible, it always makes the fortunes as large as popular credulity will possibly bear.

The millionaire is in fact the Paladin of our day. He is to American youth what Roland and Amadis de Gaul were to the youth of the middle ages, and what the wicked Marquis used to be in England in the last century—a powerful, mysterious person, *capable de tout*, whose ways and thoughts and even manners and customs are different from those of the rest of the community, and have a fascination of their own, sometimes terrible, but always overpowering. Not long ago a very rich man was killed in a railroad accident. He was caught in the débris of a broken car and burnt to death before he could be rescued. The reporter who recorded it could not get over the mystery of such a death. He was bewildered by the inability of the victim to extricate himself by drawing a check. So he headed the accident, "A Millionaire Roasted Alive—All His Millions Could Not Save Him." More recently three millionaires were together in a carriage in Minnesota when the horses took fright and ran away. Had there been only one millionaire in the vehicle, the spectacle would have been almost more than the nerves of an ordinary newspaper man could stand. To have three millionaires involved in such a catastrophe was to fill the cup of horror to the brim. So the editor headed the accident, "Three Millionaires in Danger"; a sight so appalling that probably no one who witnessed it would like to gaze on it again.

Some time ago an editor was describing the wedding of some rich people. After expending all his powers of rhetoric on the bride and groom, and the decorations of the church, and the social distinction of the guests, he reached a carefully prepared climax by exclaiming, "That little group in front of the altar represented at least $20,000,000!" The practice of mentioning the sum of money people "represent," no matter in what character they are spoken of, is in fact becoming almost a regular feature of popular parlance. The delegation which presented the petition to the Mayor in favor of the retention of Mrs. Agnew and Miss Dodge in the School Commission was described to us in one word as "representing, at a moderate estimate, $400,000,000." It is quite within the bounds of probability that we should see an astronomer or a chemist commended to popular confidence by the mention of the amount of his fortune—so deep a hold on the public mind has the idea secured that the moneyed man must necessarily be a being of infinitely varied capacity. The very servant-girls seeking places now occasionally mention the fact of having lived with "Mr. Smith the millionaire" as a certificate of every sort of competence.

The habits of millionaires probably to-day excite as much interest and curiosity as those of European royalty. The public is touched by learning the precise way in which a certain thing is done by a man who could, if he pleased, do it in so many other ways without exciting criticism. The American rich man differs greatly from his European brother in avoiding eccentricities, and leading, on the whole, an unostentatious life; but he need not do this out of any respect for public opinion, for the public really does not care to have him quiet and commonplace. It likes him to do queer things with his money, if only it can hear all about it. It does not like to think that a creature so interesting is not peculiar in some way. For there is nothing which men look for with so much eagerness as outward signs of the money-making capacity, although such signs hardly ever exist. But few observers can bring themselves to believe that they do not exist, that the millionaire does not carry somewhere in sight the traits which enabled him to make his fortune. They therefore watch him with never-dying interest, with a sort of sub-conscious hope of getting at his secret. The truth is, however, that there is no capacity so frequently concealed or invisible as the capacity for making money—the "sense of values," as some one has called it. The great financiers of all countries look and act like all sorts of people—old-clothes dealers, peddlers, colonels of cav-

alry, dukes, professors, dancing-masters, divines, and New England deacons. Nobody can tell a millionaire when he sees him, but there lies all the while, in the popular mind, an ideal millionaire whom people expect every owner of millions to resemble, and are disappointed when he does not.

One secret of this fame is, that so many people are trying for the success which millionaires have achieved. Most other sorts of eminence excite the envy or interest of a comparatively small number. Very few people think, as a possibility, of their becoming great soldiers, or statesmen, or poets, or orators, or scientific men themselves. But everybody thinks of the ownership of millions as among the chances of his own life, and now and then occupies his mind with the consideration of the things he would do with a great fortune if he had it. In other words, the life of a millionaire has a human interest for great multitudes because they often dream of leading it themselves. It is the one form of greatness to which they consciously and hopefully aspire. The results of this state of the public mind are such that a millionaire who has no sense of humor doubtless misses a great deal of innocent fun. Probably no class of men in the community, not even doctors, find their way into such unfrequented nooks of human nature as a conspicuously rich man. There is no favor so extravagant or grotesque that somebody does not ask it at his hands. His acquaintance with the base and mean side of humanity must be nearly as great as his acquaintance with its weak and silly side. His experience, too, is nearly the same in every country. If he dies with undiminished respect for his kind, it must be because his own nature is one of extraordinary simplicity.

THE LATE PROFESSOR FRIEZE.

ANN ARBOR, Mich., Dec. 20, 1889.

PROF. HENRY S. FRIEZE, who died at Ann Arbor on Dec. 7, for many years exerted a moulding influence in the development of the University of Michigan, an influence which was indirectly felt also in the work of other educational institutions. Several aspects of his career are of interest, especially when viewed in connection with the problems of the higher education.

Henry Simmons Frieze was born in Boston, in the year 1817. He received his first schooling mainly at Pawtucket, where his father, then a minister of the Universalist denomination, was settled from 1827 to 1830. At the age of thirteen he was forced to shift for himself. Six years later, with barely one year of preparatory study at Newport, he succeeded in gaining admission to Brown University. During his collegiate course he supported himself by his skill in music, and graduated in 1841 at the head of his class. He remained at the University as tutor till 1844, when he became associate principal of the University Grammar School at Providence. Among his pupils here were President Angell of the University of Michigan, Dr. H. L. Wayland of Philadelphia, the late Gen. Underwood of Boston, and many others who have gained positions of prominence, especially in Rhode Island life and affairs.

In 1854, through the influence of Prof. J. R. Boise, Mr. Frieze was called to the chair of the Latin language and literature in the University of Michigan, a position which he held till death. In 1855, and again in 1871-3, he was in Europe on leave of absence. After the resignation of President Haven, in 1869, Prof. Frieze was acting President of the University for two years. His administration was eminently successful. He suggested to the Regents the election of President Angell, then at the head of the University of Vermont, who was finally secured for the position. He was acting President again in 1880-1882, during the absence of President Angell as United States Minister to China. After 1875 he was dean of the department of Literature, Science, and the Arts. The degree of Doctor of Laws was conferred upon him by four different institutions.

In the administration of the Latin department, Prof. Frieze was a pioneer in the present so-called "advanced" methods of instruction. He was one of the first American teachers to break with the traditional treatment of the Latin classics chiefly as illustrating grammatical rules. From the very beginning of his work here he supplemented the reading of texts with lectures on the antiquities, literature, and history of Rome. He never slighted grammatical work where it was necessary, but his power lay in the interpretation and presentation of the classical masterpieces as literature. In his hands they became living and real, a means of inspiration and rare culture. Finding that the current pronunciation of Latin failed to bring out the phonetic genius of the language, in 1859 he adopted and recommended the Continental method. This was not altogether satisfactory, and in 1873 he abandoned it in favor of the Roman pronunciation. The University of Michigan was thus among the first to adopt the new system of pronouncing Latin.

One of the most important of the new features which Prof. Frieze made prominent in the work of his department was a special course for advanced students who purposed to teach Latin "in union or high schools." This course comprised both the theory and practice of instruction in Latin, together with careful drill in the minute points of the language, and was first announced in 1860. In following years other departments offered similar work. This has led to the establishment of a system of teachers' courses in special branches, supplementing the work of the Chair of Pedagogy. Students who complete a specified number of these courses receive a teacher's diploma. The far-reaching importance of such a system, especially in a State university, is obvious.

The extent of Prof. Frieze's influence upon the general organization and administration of the University can be more easily perceived than described in exact terms. He came to the institution when it contained 288 students taught by eighteen professors; when it offered to undergraduates only the conventional classical course and a new scientific course introduced by President Tappan, and provided facilities for professional study only in the Department of Medicine. He lived to see the University with an attendance of 2,100 students; with a faculty of a hundred professors and instructors; with an undergraduate curriculum offering the widest range of elective studies; and with five professional schools in successful operation. In his thirty-five years of service he worked for the interests of the University as a whole, with a practical wisdom and untiring devotion that contributed in no small degree to its rapid and permanent growth.

The ideal of the State University as distinguished from the typical college, and as the capstone of the State system of public education, had been impressed upon the University of Michigan by its first President, Dr. Tappan; but no one connected with the institution ever worked towards that ideal more persistently or more consistently than Prof. Frieze. With his peculiar grasp of educational principles he united a breadth of intellectual sympathy which enabled him to appreciate fully the claims and needs of departments other than his own. Among the important measures of which he was a prominent advocate, two are worthy of special mention—the transition from the system of compulsory to that of elective studies, which reached its culmination in 1878; and the conferring of the Master's degrees only on examination. He maintained that "the Masters' degrees should never be given for existence merely," a position which the Eastern institutions are coming more and more to adopt. He was influential in bringing about the abolition of speeches by members of the graduating classes at commencement, an exhibition which he considered inconsistent with the dignity of a real university. During the first period of his service as acting President, in 1869–'71, the pressure of public opinion led to the admission of women to all departments of the University. This rendered necessary a readjustment of many existing relations, which was skilfully and happily accomplished. When acting President in 1880, he warmly supported the project of the establishment of the "Michigan University School of Political Science," and the adoption of what is known here as the "University System" of studies for undergraduate students.

There remain two important matters connected with the University the inception of which may be credited to Prof. Frieze alone. The one is the introduction of studies in art and music on the same basis as other studies, with the bringing together of a valuable collection illustrating the history of the fine arts; the other is the "diploma" system of admission.

The nucleus of the art collection was obtained by Prof. Frieze when in Europe, in 1855; funds being furnished for this purpose by the Board of Regents. As the result of constant effort, this beginning has been supplemented by means of further appropriations and private gifts until now, when the "Museum of Art and History" contains one of the largest and best collections of the kind connected with any American institution of learning. The latest acquisition of note comprises the original plaster casts of all the works of Randolph Rogers, presented by the sculptor himself.

The diploma relation between the University and preparatory schools is an arrangement by which the University, once in a stated period, sends to any school desiring it a Committee of Inspection. The school, if approved by the Faculty, then has the privilege, for a limited period, of sending its students for admission to the University on presentation of their diplomas, without examination. This plan was originally suggested by the relations of the German gymnasia to the universities, and was first tried in 1870. It has been increasingly successful. It was so carefully formulated at the start that no essential change in its provisions has been found necessary, although there are now 71 schools sustaining the diploma relation, and about half of the students (nearly 200 this year) entering the literary department are received in this way. The plan "has been widely imitated both in the East and in the

West, though sometimes with modifications which have diminished its efficiency." Of its operation here President Angell says (Report to the Board of Regents for 1889, p. 9):

"No other system of coöperation of school and university has been found which brings them into so harmonious relations, and which impresses both so deeply with the fruitful truth that their interests are in large part identical, and that in order to discharge their full duty to the public, they must work heartily together."

It is not surprising that, endowed with a mind so alert, cultured, and progressive, Prof. Frieze at times turned his attention to the making of text-books, and produced works of more than ordinary merit in his department. His 'Æneid of Vergil,' published in 1860, was one of the earliest illustrated American editions of the poem. It showed at the same time a delicate appreciation of the spirit of the original, and an insight into the nature of the student's difficulties, which won for it at once a warm reception. A second edition was called for in 1866, followed later by a complete edition of the works of Vergil on the same plan, with a vocabulary. In 1865 he put forth an edition of the tenth and twelfth books of Quintilian (previously a *terra incognita* to American students) which immediately gained a place among the best-edited college Latin books. A second edition appeared in 1888. His last book appealed to a wider public than the preceding, and was an outcome of the art studies which he had pursued with so much interest in his later years. It is entitled "Giovanni Dupré." It contains a biographical and critical sketch of this well-known sculptor and his works, followed by two dialogues on art translated from the Italian of Augusto Conti. The book appeared in London in 1885. A second edition soon followed.

Several of Prof. Frieze's published addresses and papers are of permanent educational value. Among these the best known are his memorial address on the "Life and Works of Henry Philip Tappan, First President of the University of Michigan," 1882; "The Relations of the State University to Religion," 1887; and his report as acting President to the Board of Regents in 1881, in which he discussed the proper sphere of university education with much skill, and recommended that the period of study required for the Bachelor's degrees be reduced to three years.

From the fact that several of the younger State universities, in greater or less degree, have looked to the University of Michigan as their model, the influence of Prof. Frieze as an educator has been extended together with that of the institution which he so faithfully served. A careful statement of his work, however, can give little conception of the power of his life in the University itself. He left everywhere an inspiration for whatever is genuine and good, and a personal impress of refinement upon all who came in contact with him. His rare qualities of mind and character, his kindness to all, and finally the simplicity of his daily life, and the modesty which led him to shun even the prominence that naturally fell to his lot, increased the regard of students almost to veneration. It has been the fortune of few men in his position to be mourned by so wide a circle.

FRANCIS W. KELSEY.

DAUDET'S "STRUGGLE FOR EXISTENCE."

PARIS, December 13, 1889.

OUR novel-writers are all possessed at present with a dangerous mania: they are anxious to transfer their novels, in a dramatic form, to the stage. The reason is only too obvious: the most successful book brings little money in comparison with a successful comedy or drama. The "Monde où l'on s'ennuie" has been played nearly three hundred times, and a single representation at the French Theatre represents for the author a good round sum. There is besides in the triumphs of the stage something which flatters the vanity much more than the quiet success of a book read by the fireside. The emotions of the first representation, the applause of a large public, the emotions of the actors—all this almost intoxicates an author; if he is successful, his name is immediately in everybody's mouth, he is discussed in every drawing-room, in every newspaper.

There is much to be regretted in this tendency of our modern writers, for the qualities which make the dramatist are very different from those which make the good novelist. The drama, in its present form, is a coarse and rapid development of events, it excludes a fine analysis; it is a series of pictures, it has none of the charms of a good novel, which makes us acquainted with the most minute details of moral life. A lady friend of mine, who never goes to any theatre except when she can hear music, once said to me, as I was asking her why she so disliked the small theatres: "Well! the theatre seems to me the latest doll; I long ago ceased to play with dolls." This judgment seemed to me severe at the time, but I have always remembered it; and how often, on leaving a theatre, after having heard a new vaudeville, or operetta, or some piece even which went under the nobler name of comedy or drama, have I not said to myself: "Yes, it is but the latest doll. This is not life, it is but a poor semblance of it." I did what the children so often do—I cut my doll in pieces, to see the inside of it, and I found nothing better than what the children find.

M. Alphonse Daudet has been tempted, like many others, by the theatre; and surely neither his qualities nor his defects had marked him for a theatrical writer. The great charm of his novels is in his descriptions, which are as minute and as exact as photographs, and in his subtle analysis of character. The stage requires something shorter, more clearly defined, more simple. Daudet has tried several times to write dramas; if he did not fail in the "Arlésienne," he owed it to the charming music of Bizet; I will not speak of one or two unsuccessful attempts. This time he has met with a half-success in the "Lutte pour la vie" (The Struggle for Existence).

A curious article might be written on the introduction of scientific words into literature. In the second act of Dumas's "Étrangère," our best dramatist has introduced a doctor of the Pasteur school, who explains at length all he knows about the microbes, the vibrios, etc. The wicked Duke of the piece is compared by him to a vibrio, who fulfils his mission till the stronger vibrio shall kill him—and surely there comes M. Clarke, the husband of the Étrangère, who kills the Duke de Septmonts. I have often heard the "Etrangère," and I have always wondered why Dumas had all this talk about the microbes. There were wicked dukes before our time, and wicked people were killed in duel before Pasteur made his discoveries.

It is the same with the "Struggle for Existence." What would Darwin say, if he came to life again and saw to what uses his theories have been put, and what our ignorant literary men make of his "Natural Selection," and "Survival of the Fittest," and "Struggle for Existence," and the laws of heredity? Our "Darwinians" all think themselves little Bismarcks, and stand by his "beati possidentes" and some other famous aphorisms; the right of the strongest is the only right. They are not in the old boat of their ancestors; in the new boat, says one of the actors in Daudet's new piece, "There is nothing left." "Why," says another, "not even a gendarme?" The young men of the new school speak with contempt of all the old institutions, of religion. Another bids him not to abolish religion altogether. "It is like the banister of a staircase: you don't often use it, but it reassures you."

Such is the tone of the "strugglers for existence" in M. Daudet's piece. They pretend to be strong men, without a prejudice, without an unnecessary emotion, born to satisfy their instincts just as a lion or a fox or a hawk; they are men of prey. This is not a new idea. If you read Mme. Sand's first novels, you will see the constant development of the idea that all is good in man's nature, that the satisfaction of all his instincts is legitimate, and that all the misfortunes of the world arise only from the opposition of the wicked laws of society to the instincts and aspirations of the natural man. You can go further: you will find this doctrine, in its rudimentary form, in the 'Nouvelle Héloïse' of Rousseau, you find its systematic development in his 'Émile.' Scientific words, taken from Darwin's works and perverted from their natural sense, have found their way into our modern literature, but there is nothing new in human nature: there have at all times been men without principles, without religion, unruly creatures whom nothing can bind. The peculiarity of such creatures is that they are really unconscious and that they do not act according to any theory; and here is the great mistake of Daudet and of M. Bourget (who has recently told, in the 'Disciple,' the history of a man who ends by becoming a murderer because he believes in Darwinism). They try to prove that a man imbued with the doctrine of evolution is capable of any crime. In reality, the murderers obey no theory whatever, they follow a blind passion; they are not the slaves of an idea, they are the slaves of a desire, the slaves of the hour. It is almost painful, for those who have known Darwin, to think that he has been so much misunderstood, not only by many of his admirers, but also by his adversaries; but, after all, the storm of the present hour will pass, and whatever truth there is in his writings is independent of all the discussions, quarrels, and misrepresentations of the present time.

The 'Struggle for Existence' is the sequel of the novel 'L'Immortel.' At the end of the book Paul Astier, the ambitious young architect, has succeeded in marrying the rich Duchess Padovani. She is a great lady, much older than he, and she loves him; he only looks upon her as an instrument of his ambition. He enters the political arena; he becomes a Deputy and Under-Secretary of State. He is a strong man, but this strong man is a poor financier; in two years he has succeeded in spending twelve millions. The Duchess is ruined, she is obliged to sell the old historical Château of Mousseaux; that would be nothing if Paul loved her, but she has found him out; she knows him, though she still loves him: she knows that he has two intrigues, that he has seduced the innocent daughter of one of her own dependents, called Vaillant; that he wants to be divorced from herself and to marry a rich Austrian Jew girl, one of those foreigners who are drawn to Paris as butterflies are drawn to a light. She refuses to be divorced; she will not give him his liberty, and go through the farce which might procure him a separation.

We find them together in the third act in

Paris. Twenty-five guests have been invited to a great dinner; the Under-Secretary, Paul Astier, has not yet arrived. His two secretaries are waiting for him, and while they wait, they develop at leisure their fine theories on modern progress. They are cynical and amusing; they speak of their master with admiration mixed with some contempt. Paul Astier comes. He remains alone with his first secretary, and tells him, while he is rapidly dressing for dinner, how he was detained by Mlle. Vaillant, who wanted to poison herself. Mlle. Vaillant is the poor girl whom Astier has seduced at the same moment that he is looking for a new wife; she has discovered that Astier loves another woman, and tried to kill herself with a bottle of strychnine. Astier had taken the little bottle from her; there it is—he puts it on a table. He dresses hurriedly, talks with his secretary about his troubles, complains of the opposition of the Duchess to a divorce; he is a ruined man if he cannot marry his Austrian Jew girl. The secretary goes, and then, suddenly, in view of the small bottle of strychnine, a poison which leaves no trace, the thought of a crime darts through Astier's mind. The criminal man becomes conscious; he says nothing; we see him put the bottle aside; we understand at once that the Duchess will be poisoned.

The great official dinner has been followed by a concert, and during the concert the Duchess comes a moment to her bedroom to have a little rest. Paul Astier follows her; she is nearly fainting—wants a little air, a little water. Astier goes himself to get it, and he brings her a poisoned glass. As she is lifting it to her lips this strong man has a moment—shall I say of conscience? of revulsion? He stops her, takes her arm and hand. What has come across his mind? Is it a vision of the scaffold, or has he only a little pity on his victim? She understands him: she tells him all that she has in her heart; but this pathetic scene ends in an unexpected manner—she consents to be divorced from him. He is free; he can marry another woman. Of course the day of retribution will come. At the very moment when Paul Astier, now free, is going round the gardens of Mousseaux with his Jewish bride, old Vaillant arrives, with many other people, as the auction is going to take place. He has his daughter to avenge; in a few moments the happy Astier will be again the possessor of Mousseaux, as his young bride will bid for it; Vaillant meets him, and says to him quietly: "The strongest must kill the weakest," and he kills him with a revolver's shot.

Such is this new drama, which does not differ from any melodrama except by its pretension to deal with the philosophical questions of the day, and by the unfortunate introduction in the literature of the boulevards of scientific terms and theories which are not made for the public of our theatres, and which this public is entirely incapable of understanding.

Correspondence.

CLEVELAND'S REFORM LEADERSHIP.

To the Editor of The Nation:

Sir: So far as one may correctly judge from a slight acquaintance, ex-President Cleveland sincerely wishes, I think, to go his own way, and be no more a "public character" than events compel. He cannot, however, avoid a certain amount of public consideration; and it is certainly with no purpose towards him of personal laudation that attention is called to the rather exceptional representative position he has come to occupy with reference to the two most important questions of the hour, namely, civil-service reform and tariff reform.

There are strong indications that the cause of tariff reform will almost take care of itself. The logic of politics has solidified the Democrats upon it, until the prominent, influential Democratic leaders who do not openly favor a material reduction and thorough reform of the tariff, in the direction of a tariff for revenue only, could be loaded into an omnibus. Events have made Mr. Cleveland the leader and exponent of his party upon that question. Equally significant seem the indications that if the Republicans do not, in this Congress, substantially follow the same lead, and at least make a start in the work of reforming the tariff to a revenue basis, the next general elections will go overwhelmingly against them. In either event Mr. Cleveland conspicuously leads the way.

But civil-service reform does not fare so well. Its enemies have evidently "got their second wind"; and the Farwell-Gorman element in both parties is coming to the front with propositions for repeal or emasculation of the law, by withholding appropriations, etc. What is wanted is a courageous leader who can hold the *Democrats* to the principle of that reform. Mr. Cleveland's speech at the Mercantile Club banquet in Boston shows that he can be relied upon. In other words, if the Democrats, sincerely determined to reform and lower the tariff as they undoubtedly are, follow where Cleveland leads on that question, they must follow him also on the other; and it is the other which most needs leadership within the party organizations.

Upon the single question of civil-service reform, it is almost certain he could not carry his party with him; but, uniting the two, as he seems determined shall be done, if his voice is to be potent, the strength of his party organization upon both these great questions may be substantially cast in the line of the truest public interest. As a matter of practical politics, this would mean not only that the reform law will stay, but that the only material changes in it which time will bring will be in the direction of its greater efficiency. If the Democrats can be held only half-way right, that reform is not in serious danger. B.

Burlington, Iowa, December 21, 1889.

OBJECTIONS TO THE AUSTRALIAN BALLOT.

To the Editor of The Nation:

Sir: Here in Massachusetts, where the Australian balloting system has been tried with marked success in the State and municipal elections of the year, there are still some grumblers among the honest portion of the people. The principal causes of dissatisfaction are two: one present, the other future. The first cause is the fact that, under the present system, many do not vote for minor officers. The second cause is the probable number of mistakes that will be made in 1892, when fourteen electors will have to be selected from an alphabetical list of at least forty-two.

To these objections we, who are believers in the law, answer, that the first is an argument for rather than against the system, and that the remedy for the second can be easily found.

The first objection means that the Australian system has introduced a standard higher than the mere ability to read and write—the standard of intelligent interest. The voter of former years took a printed ticket that was handed him, made sure that it was headed Republican or Democratic, and voted it. In nine cases out of ten the voter in a municipal election cared little about the nominees for School Committee. Under the present system the voter takes, as a rule, some interest in the officers for whom he votes. To-day the School Boards in our cities are more likely to be chosen by those taking an intelligent interest than ever before. No better illustration can be given than the city of Newton. There a nominee for the School Board on the Republican ticket was defeated by a majority of over 600, notwithstanding the election of the Republican nominee for Mayor by over 200. Under the old system such a change in results would have been well nigh impossible. Under the present one the parents, alumni, and scholars by arousing an interest were able to elect an able man in the place of a poor one. Any one would declare absurd a proposition to allow the people of Massachusetts to help the citizens of New York elect a Governor. A little thought will show that it is just as absurd to regret that residents who care and know nothing about minor offices neglect to vote for men to fill them.

The objection based on a probable confusion in the choice of Presidential electors is more formidable in fancy than in fact. The remedy is easily found and as easily applied. Each State has the right to fix the manner in which its electors shall be chosen. At present each voter votes for the entire number. It would be much simpler to have each voter vote for three—two at large and one from the voter's Congressional district. This would give a much fairer and better index of the popular wish than we have at present. It would naturally be opposed by selfish politicians, but to be adopted it needs only the support of the people who believe in fair elections whose results shall voice the popular wish untainted by corruption. Samuel Alden Granson.

Boston, Mass., December 23, 1889.

PARTIES AND YOUNG VOTERS.

To the Editor of The Nation:

Sir: That the trend of young voters is to the Democratic party may be true; but will you permit one "constant reader" to express what must be the thought of many others—that any increase in power of the Democratic party is something earnestly to be deprecated rather than welcomed, as your article implies? This is not to say that your strictures on the Republican leaders and their policy are not all well founded, but the pot is not made whiter by calling the kettle black. Nor should I deny that it is sometimes advisable to vote for the Democratic candidate, whether for President or for selectman; indeed, without an occasional victory of the opposition, the most virtuous party leaders become corrupt. What can fairly be claimed is, that the patriotic and well-informed part of the community have no use for the Democratic party except as a check upon the anti-Democratic party, under whatever name this may figure; from which it is evident that any permanent increase in Democratic strength will be a misfortune.

I am aware that the claim of the Republicans to superior virtue is often laughed at; yet, leaving the South out of the question, it seems to me that the truth of the claim is obvious. The Republican party will very likely perish through the selfishness or folly of its leaders, as the Federalists and Whigs did before it; but whatever is good in the political future must come from the kind of men who have formed the body of these parties. What is the strength of the Democrats is precisely what should cause it to be regarded with unceasing distrust, suspicion, and fear. It is the

party of the "Residuum." It is that to which the ignorant, the unscrupulous, the criminal inevitably gravitate. Its strongholds are the abodes of the illiterate or vicious, and its usual weapons are appeals to ignorance and prejudice. That occasionally its leaders are men of high character and sound sense does not prove the contrary any more than the performances of the Republican office-holders under Grant and Harrison show the corruption of the rank and file.

What is needed is that the trend of young voters be towards independence, and it is in the sons of Republican fathers that will be found those qualities which make independence valuable; not among those who have grown up in a Democratic atmosphere. W: M. G.

CAMBRIDGE, MASS., December 27, 1889.

[Our correspondent will not suppose that we have welcomed the accession of fresh and youthful blood to the Democratic party any further than this has been brought about by the natural gravitation of life to that which is living. That the party of the "Residuum" is now, rather than its rival, a vital organization, controlled (in the main) by patriotic and reformatory elements, we firmly believe. That it is so in every State or lesser locality, or that it will always remain so, we do not believe, nor do we conceive that the genuine Independent ever votes with it for the party's sake, or wears its name as a badge of party fealty. And why should we "leave the South out of the question," with its sad and vast "Residuum" of ignorance, venality, and barbarism which slavery has bequeathed to the Republican party? The voter who would choose aright can safely confine himself to the question, Which party is, at this epoch, dominated by leaders who point away from the Residuum, however much they must depend upon it for majorities?—ED. NATION.]

BACHE, NOT DUANE.

TO THE EDITOR OF THE NATION:

SIR: Had Mr. Duane waited one more week he would have received satisfaction without laying himself so open to criticism on the score of the very charge of "careless literary or publication work" that he brings against me. For he would not then have been compelled to condemn half of my account of the Washington letters (forged), because of a single misstatement, or to have committed such a glaring and incomprehensible error as to affirm the impossibility of the publication of an article, which a mere reference to a file of the *Aurora*, March 6, 1797, would have shown was printed in type as cold as the malignant spirit of the writer. My error was in attributing that article to the pen of Duane, a statement made first, I believe, by John Park, who published the *New England Repertory*, issued at Newburyport, Mass., and repeated again and again without any public contradiction or denial of authorship. I had collected some half-dozen references in which Duane was denounced as the writer, and it was not until two weeks ago that, by mere chance, I found a letter from Duane to Rev. Mr. Bentley of Salem, Mass., in which he denies the authorship, and gives an interesting account of his connection with the *Aurora*. As I still appear to know somewhat more of the subject than his namesake, my critic, I send you two paragraphs that bear upon this particular libel, really the only point worthy of notice raised by Mr. Duane:

"Allusion is made in a late *Repertory* to a publication in the *Aurora* of 6 March, 1797, relating to the resignation of Genl. Washington. On the subject of that article my opinion now is of no importance, but as the use of it shows that the cunning and falsehood of Dr. Park are alike adverse to the end which he proposes to obtain, I think it proper to inform you that I was not concerned with the *Aurora* at the time of that publication. Mr. Bache (Dr. Franklin's grandson) was then the editor of the *Aurora*, and I was at that time the editor of the paper now published by Bradford. Mr. Bache died of the yellow fever in September, 1798, and I became editor on the first of November following. So that Dr. Park has either wilfully passed the bounds of veracity or servilely adopted the imposture offence of his coadjutor. I noticed this imposture before in a Connecticut paper, published by a clergyman who formerly edited the *Balance*. I forget his name, but he introduced a letter of Genl. Washington's to Mr. Humphreys, in which allusion is made to Bache's paper; yet this Mr.—aye Mr. Lampper has thought it fit to transfer all the acts of Mr. Bache upon Duane's head. By-the-bye, I have no objection to accepting all the censure that my predecessor was liable; but it is fit that it should not be done in this disingenuous way.

"Let me have the merit of what I do; and when the question is put to me as to the acts of my predecessor, let me have the manly privilege of showing why and how I undertake to become responsible for them.

"You may not, perhaps, know that the family of Dr. Franklin, and the Doctor himself during his latter years, had not been treated by Genl. Washington as he and they appear to have merited. Indeed after the Doctor's death his family was in a virtual state of proscription even in the midst of this city, and this state of things too palpably countenanced by the General himself; from what cause it may be in vain to premise, but such was the unpleasant fact, and Mr. Bache who was in a manner the favorite of Dr. Franklin was one of those who felt proscription in his family—his industry, and his fortune, it was marked and pointed against him to a degree that you could not conceive without some intimacy with the affairs of the day, and on the spot. Mr. Bache, who next to idolized his grandfather, felt all the culpability that belongs to virtuous minds, and all the indignation of a generous spirit; and he had a right to exult when Genl. Washington felt in his turn the 'slings and arrows of fortune.' He certainly did exult, and with good cause."

So, on Duane's own statement, I transfer the credit (?) of having penned this "classic of unseemly libel" from his shoulders to those of Bache, leaving a warm sympathy in the sentiments expressed in that libel to Duane. I do this gladly in justice to the memory of Duane, and trust his namesake, who conceives the publication of the libel an impossibility, will be satisfied with this correction. As he protests against careless historical writing, I protest against the carelessness of critics who, seizing upon a single error, use it to damn an entire work. If Mr. Duane will read Carpenter's history of the Jefferson Administration, he will be better able to judge of the character of one who was by no means the least of a clique of scurrilous journalists—William Duane. WORTHINGTON C. FORD.

WASHINGTON, December 26, 1889.

POOR FARMING.

TO THE EDITOR OF THE NATION:

SIR: In southeastern Ohio, along the Ohio River, is a tract of hilly land in which the soil was originally a loose black loam, of varying depth, with a substratum of clay. When first cleared, it would produce abundant crops of almost any farm product suited to that climate. The one great drawback is the steepness of the hillsides, which renders cultivation laborious and causes the loose soil to wash badly.

The most of this land has been farmed for two or three generations, and a passage through it during the summer will readily indicate to the close observer some of the leading reasons for the present depression in agriculture. If you were to stand with me on one of these hills, about the first feature to attract your attention would be hillsides on every hand seamed with deep ravines, so numerous as to be almost indistinguishable, showing the underlying red clay even for a distance of several miles. In some places whole acres will be so badly washed that scarcely a green thing can find sufficient nourishment for existence. Here and there the ruins of an old tobacco-house loom up in the midst of these waste places, telling of productiveness in days gone by, and telling, too, to the well-informed, the reason why, in many cases, that productiveness has passed away.

But your eye will not long dwell upon the scene until, here and there, an oasis in this dreary desert will appear. On some level hilltop or "flat," lower down, stands a modest but comfortable farm-house, a barn, less modest sometimes, and scarcely less comfortable, than the house and other outbuildings, in proportion. The fields around are green, the fences are in good order, and the signs of comfort, if not of actual prosperity, are unmistakable. Now, what makes the difference? Simply the manner in which the natural advantages have been used. This man's land was no more fertile when first brought under cultivation than the lands surrounding, and the rain torrents have passed over his steep hillsides just as often and as copiously as over those of his neighbors. He has calculated his disadvantages in advance, and has guarded against them; they have not. They were tempted, years ago, by the high price of tobacco to clear off their woodland and put it to tobacco again and again until tobacco and washing rains together have left none of the virgin fertility behind to tell the tale. He, on the other hand, has kept his steep hillsides almost constantly in grass, so that exhaustion by washing has been reduced to the minimum. And so we might continue enumerating points which have come to our notice again and again, showing the widest divergence in agricultural results where the natural conditions are substantially identical.

No reasonable man can doubt, after investigation, that taxation, and much else which passes by the name of taxation, has placed agriculture at a decided disadvantage in comparison with many other pursuits; but the person who desires to do anything towards the general elevation of farming industries must not for a moment lose sight of the wretchedly inadequate methods almost universally employed by the farmers themselves. We have often asked men of personal experience in such matters how many farms they could name which yield an amount of produce reasonably approximating their full capacity, and have never met a man who could name one such instance. Wheat and corn are two of Ohio's staple products; and yet it is true that the average yield of neither, in a good year, is one-half what reasonably good soil with fair cultivation has often been known to produce.

With such facts as these everywhere in view, it is plain that there is a sufficient basis of hope for a revival of agricultural prosperity. It will come whenever farmers as a class become sufficiently imbued with the scientific spirit of the age to conduct their operations upon scientific principles. The old notion that a farmer needs no other training than to have been born under the roof of a farm-house must be thoroughly eradicated, and a science of farming must be developed and placed where it be-

longs, far above many of the most honored sciences of the day. How much longer shall it be said, to the reproach of one of the oldest and most honorable occupations, that the intelligent young men of the land all turn away from it because it gives no exercise to the higher faculties of their nature? There is scarcely a more promising field for scientific investigation in existence than is offered by agriculture, if those who are directly interested in its development can only be induced to employ the proper scientific methods. If a fair proportion of the earnest and industrious college-bred men who are yearly going out into the world will only turn their attention in this direction, they will occupy a higher position in the opinion of posterity two or three generations hence than there is any prospect of gaining in the crowded ranks of politics, law, or mercantile pursuits. Ceres has no lack of good things to bestow if American farmers will only lay the required sacrifices upon her altar, but she will not brook neglect. W. H. Johnson.

THE EASTERN FARMER ONCE MORE

To the Editor of The Nation:

Sir: A few words more about the decay of the farming interest and the proposed remedies. I cannot quite agree with Mr. Clarence Gordon in his assignment of causes. His first cause is the lack of quick capital. He says: "Farming, contrary to the practice in other businesses, is, in the majority of cases, taken up or inherited without any other capital than that dead in a plant rigorously taxed. . . . Other businesses providently lay by some art or grace, but this boasts no surplus save nature's alms." This is the first time I ever knew the New England farmer to be accused of spendthrift and improvident habits. The reverse seems to me the truth. Twenty years ago a very large proportion of New England farmers had money in the savings banks, invested in United States bonds, or loaned out at interest. From these stores were drawn the moderate sums necessary to educate the boys for future college presidents and legislators; on the income of such accumulations many an old age of comfort has been spent; and on the capital advanced by the "old folks at home" have been built the fortunes of many of the boys who went to the city. Even to-day I know a few—a *very few*—farmers who hold Western mortgages. The lack of capital cannot have been the cause of failure in farming.

Moreover, capital is *never wanting* where good returns are promised. Loans on farm mortgages have always been a favorite investment. If farming were profitable in New England, a hundred millions would be at command here more readily than in Minneapolis or Kansas City. The great majority of business enterprises are carried on largely by means of borrowed capital. The farmer who has a farm two-thirds paid for is relatively as well capitalized as four-fifths of the merchants and manufacturers. The trouble has not been lack of capital to invest, but rather that the capital invested has been sunk. If Judge Nott's Mr. Foster had invested what he has spent on buildings and in improving his farm, at 4 per cent. interest, and had worked as a common laborer, he would probably be a richer man than he now is.

I am frank to admit that it might be difficult to borrow capital for farming *now*, and for very good reasons—the chances are that it would be lost. Two years ago, when trying to dispose of an excellent New Hampshire farm, I was somewhat disconcerted when my desired customer showed me a letter from the treasurer of a savings bank, to which he had applied for a loan, reading: "We decline to loan one dollar on any farm in the town of ——." Furthermore, farmers have not been backward in investing their own capital or in borrowing of others when they saw a fair chance to obtain good returns. The men who now are managing the great business interests of the country would, many of them, have been New England farmers had not circumstances driven them from the farms; such men are not from a class that fails to see the opportunities for gain if such there be. The farmer who has *saved* his "quick capital" instead of investing it in his farm, is the only comfortable one to-day.

Again, Mr. Gordon says the farmer has no well-defined system of finance, by which he seems to mean that the farmer has not been an elaborate bookkeeper. Perhaps the farmer would have stopped farming sooner had he had the black-and-white results of his labors before him; but good business methods on a farm do not need anything like the system necessary to the merchant. The New England farmer has generally—to his praise be it said—done business on a *cash basis*; the credit system is the cause of bookkeeping. Who ever knew a farmer that could not tell what he paid for that cow, and whether she proved well or not? I remember one farmer who was an elaborate bookkeeper: he could tell by reference the pedigree and age of every hen and pig; he knew how much they ate, how much income he got from them; he could prognosticate their future as well as Venner can Boston weather. He spent his father's fortune, his wife's fortune, failed twice, and finally went West, leaving his unscientific neighbors to mourn for the money he owed them. Red tape will never save farming.

Probably the farmer does not "study the *world* of trade," nor, for that matter, does the groceryman nor the manufacturer. Our foreign trade does not show that any one in America is much given to such study. The farmer may not be quite so well posted as the business man of the city; he tries to raise something that will sell, and, if he doesn't succeed one year, tries something else the next. Certainly he has not learned to "work" the Secretary of the Treasury so as to have the national Government guarantee him a good market for all he may produce.

I find nothing in Mr. Gordon's reasons that satisfactorily explains why farming should decay while other industries flourish. I am driven back to my three causes—of Western competition, direct taxation, and indirect taxation. I had thought of the first as mainly natural and unavoidable until Judge Nott pointed out that that, too, results from Governmental interference; the farmer has more reason to curse his legislators than I thought.

As to Mr. Gordon's remedy, I find one fatal objection, besides the apparent impracticability of the scheme: it is not a remedy at all. The alarming feature of the situation under discussion is *not* an impending lack of farm products, or even the entire desertion of New England, though that would be a calamity. We shall have food enough, and the world will not suffer because it is not produced in New England. The real cause for anxiety is, that the economic conditions are now such as to make the *farm home* impossible. It has not been merely the occupation of tilling the soil that has made the country population of New England so robust and so active in mind and spirit; it has been the combination of that occupation with the *peculiar environment and influences of the farm home.* The deplorable aspect of the situation is not the industrial, it is the social and moral. What great people have not been continually reinforced and revivified from the mass of small farmers? *Latifundia Italiam perdiderunt.* Joint-stock farming has no greater virtue than joint-stock lumbering. Invoke "associated capital" and centralized administration into agriculture, and our interest in it becomes purely an economic one. Such a scheme misses the whole point of the discussion. Who cares whether a *company* for wheat-raising or cattle-raising succeeds or not? The very isolation of the farm home has been one of its advantages. On the farm, the *family* have gone into business together; from this, it seems to me, have come most of those results which all recognize as so valuable. To substitute a huge industrial machine, with president, directors, superintendents, and laborers, for the old farm home is revolution, not remedy.

Moreover, it would accelerate the present decay. Suppose such a plan to succeed: it would necessarily put forth a large product; competition would be increased, the small farmer would feel another turn of the screw. One of the most intelligent men I know, who is putting more brains and energy into his farm than go into most manufactories, said to me the other day that he thought Commissioner Bachelder's scheme of colonizing New Hampshire with Swedes, if it succeeded, would injure the Yankee farmer greatly: it would mean simply more competition, and competition from a class whose tastes and habits allow them to live on very little outlay. The analogy of the Chinese in California is in point.

It must be admitted that farming "by wholesale" is probably inevitable; my point is that such a change is no equivalent for the old method. I see no reason to doubt that the small farmer is sentenced as surely as the small manufacturer is executed. Possibly we shall do very well without any small industries in which a large number are trained to self-reliance, independence, and individual responsibility. History gives little ground for such a belief.

One point more: Both "G. B." and Mr. Gordon propose the old method of Government favoritism to promote their remedies. "G. B." would relieve the overtaxed farmer by putting *all* taxes on land, and exempting personal property entirely. By some unexplained process, as mysterious to my untutored mind as that of transubstantiation, the acute farmer is to find himself greatly benefited, while the stupidly pleased owner of personal property will unconsciously bear the burden he supposes on the land-owner's shoulders. Mr. Gordon thinks his farming corporation would so benefit the neighborhood that it could "well afford to exempt the company's personal property from taxation." Somebody must pay taxes; if one kind of property is exempt, other kinds have the greater burden. If it is not good policy for the farmers that manufacturing corporations be exempt, much less that farming corporations should go free. Our railroad companies think themselves much abused that the Canadian Pacific is not subjected to the same burdens, and yet is allowed to compete with them.

Had the farmer been fairly dealt with, his decline would have been gradual, and slight compared with his actual experience. Would it not be well to try Nature's laws awhile, to give *laissez-faire* a chance? One need not be excessively devout, nor possess faith sufficient to remove mountains, in order to believe that Providence would have directed the industries of America as well as have our legislatures,

national and State, for the past generation. Thirty years ago we had a flourishing foreign trade, with a large merchant marine; we had a large and prosperous class of small farmers; we had a fairly homogeneous and thoroughly American population throughout our Northern States. We entered on an era of governmental interference; we adopted protection; gave away land and built railroads to it; fostered emigration in all artificial ways. We have now very little foreign trade, almost no merchant marine, a ruined yeomanry, and a heterogeneous population composed largely of the dregs of Europe, many of them without an American instinct or idea. This is not purely a case of *post hoc, propter hoc.* As well take quinine for a ringing in the head as apply the same method to remedy existing evils.

Take off the oppressive tariff, equalize direct taxation; then, if "farming don't pay," let it go. G. W. A.

Boston, December 24, 1889.

SHORTENING COLLEGE COURSES.

To the Editor of The Nation:

Sir: In a recent issue you published several letters on rigidity as to time of university and college courses. I write to call the attention of your readers to the fact that, under the able administration of Dr. S. S. Laws, this "premium upon the qualities which should characterize a real student" was offered by the Missouri State University. Also, the disadvantage suggested in the letter from "Teacher" is counteracted precisely as he would have it done. It was a saying familiar to my college days that special examinations were much harder than regular ones; that if a student "made up" a subject, more work would be required of him than of the class. I remember one instance: A classmate asked me how much Greek we had read the previous year, saying he had been out of school for a year, and must do the work out of class-room; when we compared what I had read in class with what he was required to read, we found his task double mine, perhaps three times as great. As I write, the names of many bright or faithful students present themselves to mind who have taken the four years' course in less time, or who have done extra work.

An Alumna of the Missouri State University.

AARON'S ROD.

To the Editor of The Nation:

Sir: In your last issue (No. 1277, p. 505) the reviewer of Adams's 'Administration of Jefferson,' in describing a Boston banquet of Federalist chieftains, says the following toast was volunteered in honor of Aaron Burr: "Aaron's rod: May it blossom in New York, and may Federalists be still and applaud while the great serpent swallows the less!" Regarding this effusion the reviewer says: "The volunteer symposiarch had strangely forgot that the rod which blossomed in the Biblical story was not the *same* with the rod that swallowed serpents." In truth, however, the strange forgetting was all on the side of the reviewer. It is written in Exodus (vii., 11), that "the magicians cast down every man his rod, and they became serpents, but Aaron's rod swallowed up their rods." Again, it is written in Numbers (xvii., 6) that "the rod of Aaron was among the twelve rods laid up before the Lord," and that on the morrow it was found that "the rod of Aaron was budded, and brought forth buds, and bloomed blossoms, and yielded almonds." No Biblical text, revised version, or various reading countenances the notion that Aaron did not in both cases use the same, the self-same rod, or that he ever used more than one rod.

It is recorded in both Old and New Testaments (Hebrews ix., 4) that after the second miracle that rod was most carefully preserved. We have hence a right to infer that such care for it had been inspired by the first miracle.

This latest escapade confirms a conviction to which many others have pointed—that when nurslings of our Sabbath-schools with all modern improvements essay to show Scriptural ignorance on the part of Puritans trained a century ago, they attack their adversaries in their strongest point, and their failure is foreordained. They repeat the experience of Æsop's viper who bit the file. The blood they draw will be all their own.

A Western Minister.

[It appears from the Biblical narrative that the rod which swallowed serpents was really the rod of Moses (Exodus iv. 2-4), and that it was wielded by Aaron for miraculous purposes as the vicegerent or "prophet" of his brother (Exodus iv. 17; vii. 1-12). The rod which "budded" was one of twelve rods, selected to be representative of the twelve tribes of Israel, with the understanding that the high-priesthood should belong to him whose rod was found to have "blossomed" over night, after they had all been placed "in the Tabernacle of the Congregation" (Numbers xvii. 1-9; Hebrews ix. 4). In order to make the test perfectly fair in the eyes of the people, Moses was commanded to write Aaron's name "on the rod of Levi," but our reverend censor thinks that Moses took his own rod (which he knew to be of miraculous power) and substituted it for the "rod of Levi," after having written the name of Aaron on it! Such supposed trickery on the part of the great Hebrew lawgiver is supported by nothing in the Bible, and the suspicion of it is a pure "escapade" of the Western commentator, who seems to be more familiar with the Fables of Æsop than with the miracles of the Old Testament. Certainly, if he had ever read the seventh, eighth, ninth, tenth, fourteenth, and seventeenth chapters in the Book of Exodus he could not have fallen into the mistake of supposing that the miracle of the "blossoms" was the "second miracle" recorded in connection with "Aaron's rod."—Ed. Nation.]

BE DONE AND *HAVE DONE.*

To the Editor of The Nation:

Sir: While complimenting me on my acquaintance with English usage in the matter of language, Mr. J. R. Lowell applies the epithet "pedagogic" to the expression "be obliged and *have done* with it," which still seems to me, as it seemed when I recommended it, unexceptionable. That one has credit for knowing even the dialect of schoolmasters ought, however, to be encouraging, I suppose.

Of his unprepense "be obliged and *be done* with it" Mr. Lowell holds that the fault lies in "the awkward repetition of the 'be.'" But, if it is only the resumption of the "be" that blemishes the phrase, the "done," no imperative, is short for "be done," which, in the interest of syntax, had certainly better be allowed to stand.

With the like of "be obliged and *done* with it," which Mr. Lowell calls "the conversational form," I am perfectly familiar, as a property of the uneducated. Used by any one else, otherwise than humorously, such a vulgarism would surprise me not a little.

Nearly everybody, when speaking rapidly, says, for instance, "I shouldn't *'a* believed it," "I wouldn't *'a done* so." Yet, so far as England is concerned, none but the illiterate, to my knowledge, say "do it and *'a done* with it," often broken down, by them, to "do it and *done* with it." Of the reputableness of "be obliged and *done* with it" my estimate, as compared with Mr. Lowell's, is, therefore, peculiar.

Your obedient servant, F. H.

Marlesford, England, December 9, 1889.

Notes.

Longmans, Green & Co. will publish immediately the papers of Sir George Bowen, edited by Stanley Lane-Poole. Glimpses of Washington society during Grant's Administration appear in them.

T. Y. Crowell & Co. have nearly ready translations of Anatole France's 'Le Crime de Sylvestre Bonnard' and Valdés's latest novel, 'La Hermana San Sulpicio'—the latter by Mr. N. H. Dole.

The circular of the admirable Librairie des Bibliophiles announces that the works of Villon and Pascal will be included in the excellent "Nouvelle Bibliothèque Classique," and also, in due season, those of Stendhal, Chateaubriand, and Gérard de Nerval. To the series of "Curiosités Historiques et Littéraries," M. Monval, the librarian of the Comédie-Française, will contribute a collection of the letters of Adrienne Lecouvreur.

The author of "Le Monde où l'on s'ennuie" has just published a brief eulogy of the author of "L'Aventurière" and "Le Gendre de M. Poirier," but we do not think that 'Émile Augier, par Édouard Pailleron' (Paris: Calmann Lévy; New York: F. W. Christern), is quite worthy either of its writer or of its subject. M. Pailleron is warm in his admiration and hearty in his eulogy, as becomes a man who praises the friend scarcely cold in his grave, but the tribute is a little disappointing in that it does not contain a vigorous portrayal of Augier. Of course M. Pailleron's little pamphlet is pleasantly written, with all the charm of style we look for in the prose of a French dramatist, and it contains an anecdote or two which give us a further insight into Augier's character.

Mr. Austin Dobson has followed up his editions of 'Gay's Fables,' 'Eighteenth Century Essays,' and the 'Vicar of Wakefield,' in the Parchment Library, with a volume of selections from the poems of Matthew Prior.

Anything that tends to spread abroad the technical knowledge which is the foundation of any art, is always to be welcomed, and we therefore recommend 'Bookbinding for Amateurs,' by Mr. W. J. E. Crane (London: L. Upcott Gill), a manual which will explain to the novice every step of the process of "forwarding" and "finishing," with the aid of more than a hundred and fifty illustrations. It may be doubted whether the amateur is as likely to be as successful as a bookbinder as he has been in some of the other arts—photography, for example; but there can be no doubt that an understanding of the principles of bibliopegy would be useful to all book-lovers. As far as the "forwarding" is concerned, Mr. Crane's manual seems excellent—clear in its explanations and sensible in its advice. When it comes to the "finishing," that is to say, to

the ornamentation of the bound book, Mr. Crane does not rise above the rather low average of contemporary British taste in bookbinding. His designs (pp. 152–176) are none of them beautiful—indeed, most of them are positively ugly. Unless the binder has really studied the principles of decoration, he had best confine himself to the modest task of reproducing the designs of the best binders of the past.

The preface to the *Almanach de Gotha* for 1890 (New York: B. Westermann & Co.) begins with noting not changes of dynasty, but two substitutions in its own editorial staff, which it pronounces eminently satisfactory, and a guarantee of continued excellence in both departments of this veteran work. The genealogical portion has been rearranged, revised, and extended. The house of Braganza remains untouched, but the revolution in Brazil is recorded among the addenda, where the most important other items are censuses of Chili (estimated pop. 3,115,000) and Greece (official, 2,187,208). The Crown Prince of Greece and his Prussian bride are two of the *Almanach's* four portraits, and President Harrison makes a third, although his appearance in the White House caused the editors the greatest trouble in respect of alterations in the administrative personnel. The rubric Central America has been abandoned pending the renewal of the federation. In many other ways which we cannot specify, the *Almanach* has undergone a vigorous and intelligent overhauling.

Macmillan & Co. have issued a 'Supplement to Annals of Our Time,' edited by Joseph Irving for the period from July 22, 1878, to the Jubilee, June 20, 1887. It is a diary of events throughout the world, with special attention to the British. The paging is continuous with that of the 'Annals of Our Time.' The index is fairly comprehensive, but for names of persons it is complete only under Obituary, which is a very convenient list, although the accuracy of the several notices must by no means be taken for granted. In one of these (American), consisting of six lines, there are at least six errors, beginning with the date assigned to the death.

The *American Annual of Photography* for 1890 (New York: Scovill & Adams Co.) will be valued for the customary amount and variety of contributed articles, as well as for its lists of photographic societies in all parts of the world, of photographic periodicals and current publications, and for its examples of "process" engraving, beginning with a portrait of Mr. Edison, which forms the frontispiece. The oddest of all the subjects selected is undoubtedly the strolling negro-minstrel performance in front of "John Brown's Fort" (the old engine-house of the Armory), at Harper's Ferry. The lower part of this historic building has had to be boarded up in order to prevent chipping of the bricks by relic-hunters!

A very handsome affair is 'The Book of Wedding Days' (Longmans), devised to commemorate the silver-wedding anniversary of the Prince and Princess of Wales (March 10, 1888). It is a quarto volume, consisting of poetical selections for every day in the year, set beside a blank space for the recording of marriages. These quotations have been supplied by three ladies, and Mr. Walter Crane has furnished decorative borders for every page without repeating the design. The whole is printed in red. Mr. Crane's cupids, which form an integral part of every conceit, get a little cloying at last, it must be confessed. As a rule, there are four blank spaces to each page, but sometimes fewer, and a whole page is given up to the royal date of March 10. It must be said for the quotations that they are not wholly honeyed, but take account of the discordances of married life. In such a record, however, the malapropos is as amusing as the nice fit is gratifying.

Miss Kate Sanborn's 'Rainbow Calendar' (Boston: Houghton, Mifflin & Co.) is a duodecimo volume of 366 pages, without pagination, each day and page being furnished with poetical and prose extracts having occasional reference to the season, but without other unity except the idea of a cheerful spirit. The pages are left unfilled in the lower portion, that the purchaser may insert what pleases him from his own reading.

'Schiller Immortellen' (Philadelphia: I. Kohler) is a little birthday and remembrance book for young and old—a page of selections facing a blank page bearing two dates. A few engravings serve the purpose of adornment. Schiller's prose is quite as freely drawn upon as his verse.

The second volume of Prof. Masson's edition of De Quincey's Collected Writings (Macmillan) continues the autobiography from 1803 to 1808, and follows this with "Literary and Lake Reminiscences" in eleven chapters—a perfect mine for the tourist of the lake district, as for the student of literature. The illustrations consist of a steel engraving of De Quincey, and wood-cut youthful portraits of Coleridge and Wordsworth from originals in the National Portrait Gallery.

It is in keeping with the foregoing to mention the latest edition of the 'Essays of Elia' (London: David Stott; New York: Macmillan), in two of the companionable pocket volumes of the "Stott Library." They are reprinted without introduction or notes, but are embellished with photogravure illustrations of Lamb's tableted cottage at Edmonton and of his tomb.

That the world grows younger is evidenced by the curious facsimile reprint of the sole copy known to exist of the first edition of John Bunyan's 'A Book for Boys and Girls; or, Country Rhymes for Children' (A. C. Armstrong & Son). It is true that "J. B." intimates, in his epistle to the courteous reader, that he writes for old as well as young; but on the other hand, he starts off with a sort of horn-book "to learn children" to read English, spell Christian names, and to know figures and numeral letters, and passes on to a rhymed version of the Ten Commandments. After this, it must be a very mature youngster indeed that could comfort himself by the perusal of Bunyan's rhymes, or that could pick from the rough mass of them the nuggets of genuine poesy. The reproduction has been very well carried out. The preface is by Bunyan's capable biographer, the Rev. John Brown, and he tells us that the original volume, now finally at rest in the British Museum, was once owned by a collector in this city.

The announcement of *Scribner's Magazine* for 1890 includes a number and variety of attractive features altogether too great to be summarized; but we may select as of especial interest two articles upon Ericsson by his biographer; the sketches of "Life on a Modern War-Ship," by Mr. Zogbaum, who accompanies the Squadron of Evolution on its cruise; the series upon City, Suburban, and Country Homes, with collateral papers on the results of Building Associations; that on "The Citizen's Rights," which will deal with those rights and privileges which he is entitled to as a householder, traveller, user of streets, etc., but which he suffers himself to be deprived of; and that upon the Continent of Africa, which is to be presented in many interesting phases. A new serial by an anonymous author is promised, and large claims are made for it by the editors; while literature is to be represented by articles on Lamb, Mme. de Staël, and others. The papers which we do not name include the subjects of our own ethnography as affected by physical environment; mining, electric roads, caricature, landscape decoration, psychology, picture sales, opera, hunting; and many others.

The *New England Magazine* for December has a paper, which seems authoritative and final, on the "Origin of the John Brown Song," by George Kimball, who was in at the birth. This, as is well known, took place at Fort Warren in Boston Harbor, and it is also notorious that Fletcher Webster's regiment (Twelfth Massachusetts) was the first to sing it in the streets of Boston. Mr. Kimball shows how the words were improvised to fit the tune of a Methodist revivalist hymn, "Say, brothers, will you meet us?" He prints two facsimiles of the earliest broadsides of the song, the second (1861) giving the music, and bearing the inscription, "Origin, Fort Warren."

The *Scottish Geographical Magazine* for December opens with a paper, read before the British Association by H. B. Guppy, descriptive of a foot-journey along the south coast of West Java. In it he shows the strong probability "that Java and Sumatra have never been united in the past, but that they probably will be joined in the future," since they lie in the same area of upheaval. This is in opposition to the tradition that the two islands were disrupted during some ancient eruption of Krakatoa. Mr. J. P. Thomson gives an account of Kadavu, one of the Fijis, the most noteworthy statement in which is that the natives had from the earliest times such a knowledge of astronomy as to regulate their agricultural operations by the stars. "Even now," he says, "the times for sowing and for reaping are generally indicated by the apparent positions of the constellations, that of the Pleiades, *Vrusa;* Crucio, *Na Iri;* and Orion, *Na Ga*, being prominent." A word of special commendation should be given to the excellent index to the volume which is completed by this number. It is remarkably full and well-arranged for the purposes of reference.

We have received from the auctioneer, Thomas E. Kirby, the catalogue of the library of Americana of the late S. L. M. Barlow, which is to be sold at the American Art Galleries on February 3, 1890. As Mr. Henry Harrisse says, the collection contains "the invaluable first printed letters of Columbus, Vespuccius, and Cortez; the rich series of colonial pamphlets, English, French, and Dutch, and the largest set of Jesuit Relations ever offered for sale." Add to these a precious body of MSS., including Arnold's Journal of the Quebec Expedition, the Dinwiddie papers, Paul Jones's log-book, and the correspondence with Gov. William Livingston of New Jersey, etc., etc.

—*Scribner's* for January opens with a valuable paper upon the problem of water-storage in the arid districts of the extreme West. The geographical and climatic conditions are described with sufficient clearness, the necessary combination of local peculiarities to make large reservoirs possible and useful is explained, and an account is given of the four leading examples of successful works of the sort. The writer shows in some detail the difficulties and the dangers to the public which attend private enterprises in reclaiming these lands, and intimates an opinion that Government must finally step in and supplement the present hydrographic survey by vast public works undertaken in accordance with the results of this ex-

amination. The article covers a very important and interesting subject, with just enough of fulness and detail. Mr. Brownell contributes some notes upon the Paris Exposition, marked by intelligent criticism and a liberal spirit, and not without practical suggestions for our own forthcoming work of 1892. His remarks upon the Eiffel Tower in particular, upon American painting, and upon the achievements of the French artists during the century, and his strictures upon the Oriental element in the Exposition, are of an interesting character. Tripoli and Spain are treated of in a sympathetic way by Mr. Jacassy and Mr. Finck, the latter of whom confines his attention to the beauty of Spanish women, whom he analyzes and classifies in a minute manner. The electrical article is upon the application of the power in the household, and exhibits an optimistic spirit with regard to the changes to be worked in daily comfort by the extension of the inventions already made. Fiction is well represented; and the number concludes with the new department—"The Point of View"—in the place of the old "end-paper," which we are sorry to part with. The discussions in the "Point of View" are not materially different in spirit from the similar editorial departments in other magazines, and in the present number leave something to be desired.

— The December Proceedings of the Royal Geographical Society contains a valuable account of Cyprus by Gen. Sir R. Biddulph, late High Commissioner of the island. In it he dwells especially upon the rapid destruction of the forests, partly by reckless wood-cutting, partly by the goats, which are to be found there in greater numbers than in any other country in the world. The denudation of the hills causes disastrous floods, and the soil washed away from the hillsides chokes the river beds and forms malarious swamps in the great central plain. Then "the locust at once took possession of the barren ground," but against this scourge the English Government has recently waged a successful war of extermination by means of pits lined with zinc. Cyprus "is emphatically a land of peasant proprietors, with the result that there are no wealthy persons and no beggars. Property is universally divided among the children, and again subdivided, so that one hears of a man owning the sixteenth part of a hovel that is not worth as many shillings. To such an extent is the subdivision carried that there are no less than 600,000 registered holdings of real property—*i. e.*, more than three for each inhabitant." This paper is followed by Mr. Stanley's letter to the Society, dated August 17, 1889, and written from Uzinja, a district on the southwestern shores of the Victoria Nyanza. It briefly describes his discovery of the Lake Albert Edward (it is a pity the native name could not have been retained), apparently about 50 miles long and 900 feet above the Albert Nyanza, with which it is connected by the river Semliki. To the east of the river and the lake lay "a lofty range of mountains, the central portion of which is covered with perpetual snow," without doubt Ptolemy's Mountains of the Moon. Accompanying this letter is Lieut. Stairs's account of his unsuccessful attempt to climb one of the snow-capped peaks of this range, which the natives call Ruwenzori. Mr. W. W. Rockhill, formerly Secretary of the American Legation in Peking, gives a short account of his adventurous journey last winter in eastern Tibet. He wore the Tibetan dress, and, as he spoke both Chinese and Tibetan, he had strong hopes of reaching Lhassa; but he was unable to escape the vigilance of the lamas, who compelled him to return to China.

—Under the word *Bourbon*, the New English Dictionary gives the meaning, "a Democrat behind the age and unteachable," with a suggestion that this sense originated not more than five years ago. Another meaning assigned is, "the name of an island in the Indian Ocean, so named in 1642 in honour of the French royal family; whence *Bourbon Palm*, a common name of the genus *Latania*." We naturally expect to see as the next definition, "a county in the State of Kentucky, so named, August 8, 1788, in honour of the French royal family; whence *Bourbon whiskey*, a common name of the genus *intoxicants*." This signification, however, we do not find, nor any approach to it, and it was evidently unknown to Dr. Murray and his contributors. This ignorance speaks well for their temperance, but it ought to be enlightened. It has occasioned an omission which, at least in Kentucky, will be considered a *hiatus maxime deflendus*, and may there stop the sale of the book altogether. The Dictionary, if better informed, would have backed up its amended definition with citations like the following: 1860. Frankfort *Commonwealth*, December 18. Advertisement, "Bourbon whiskey, a large stock of all ages." The name Bourbon was early used without adding "whiskey," as commonly as piano without adding forte. In the self-same issue of the newspaper there is a story of early times in the State where we read, "The Dr., setting down a half-gallon bottle of *old Bourbon*, said," etc. 1873. *Collins's Annals*, January 15. "A barrel of Bourbon whiskey, fifteen years old, was sold at Lexington for $11.55 a gallon for transportation to Hartford, Conn." 1882. *Perrin*, Hist. of Bourbon Co., p. 65. "The manufacture of whiskey is one of the most extensive and valuable interests. It is the universal opinion abroad that all the Bourbon whiskey shipped to every point is the product of Bourbon Co. alone, whence it receives its name. Of all early industries that of whiskey alone has kept pace with the times."

THE MORTE DARTHUR.

Le Morte Darthur. By Syr Thomas Malory. Faithfully reprinted from the original edition (1485) of William Caxton. Edited by H. Oskar Sommer, Ph.D. Vol. I. Text. London: David Nutt.

THE 'Morte Darthur' is the most familiar by name of all early English books; perhaps the most familiar to the general reader of our time of all prose romances before those of Walter Scott. But it has been one of the rarest of well-known books. It is but a few years since it was not known at the New York libraries that there was a copy in America. Now, however, the one perfect copy of the original edition in the world is owned by Mrs. Abby E. Pope of Brooklyn, N. Y. Only one other copy, imperfect, is known. It is in the library of Earl Spencer, bought long ago for £320. This edition was printed by Caxton, who finished the printing, as he tells us, in the Abbey of Westminster on the last day of July, 1485. A new edition was printed by Wynkyn de Worde in 1498, and another in 1529. Only one copy of each is known to be in existence. There are other black-letter editions, four at least; the last, Stansby's, printed in 1634. All are rare. It was not printed again till 1816. In 1817 an edition appeared under Southey's name. A good edition in its way, by Thomas Wright (1856), and a later Globe edition made the old romance accessible to general readers who read for the story and the style. But for students who wish to be sure of the exact words, the spelling and punctuation, and all that, it has remained inaccessible. Here at last is the very thing that was wanting—a faithful reprint of the original of Caxton, page for page, line for line, word for word. It is printed with clear large types—Roman types, however, in place of the black letter. There are 861 pages on heavy white paper, with ample margins, and it makes a royal volume. The editing and printing give good promise of accuracy. It is from the Ballantyne Press, and edited by H. Oskar Sommer, Ph.D.

Dr. Sommer's special attention was drawn to this book in his Spenser studies. It is used very freely in the 'Faerie Queene.' He found that a new and scholarly edition was needed, and made up his mind to undertake it. Now see how they do such things in Germany. He communicated his intention to his Excellency the Royal Prussian Minister of Public Instruction, Herr Dr. von Gossler, and requested leave of absence for six months. This request was readily complied with, and a grant besides was made him from the public funds to enable him to prosecute his labors. Thus armed and equipped from the Prussian treasury, Dr. Sommer proceeded to the British Museum and set to work upon Earl Spencer's volume. He copied it with his own hands, and read the proofs and revises with the original. Twenty-one pages also had to be collated with Mrs. Pope's volume in Brooklyn. This work occupied the full time of his leave of absence, and we have the result of it in the noble volume now published by Mr. Nutt. A second volume is to contain the apparatus which German scholarship deems necessary for a critical edition of such a masterpiece—an Introduction, dealing with the language and the like, a Treatise on the Sources, Various Readings, an Index, etc. As a compliment and guerdon, perhaps, to English buyers, an essay on Malory's prose style by Andrew Lang is to be added.

This book is a sort of Iliad of Chivalry. The adventures in it had been separately told in ballads and metrical romances, and chanted in baronial halls, for two or three centuries. Coleridge said that he would engage to compile twelve books with characters as distinct and consistent as those in the 'Iliad' from these metrical ballads and other chronicles about King Arthur and the Knights of the Round Table. It was safe to say. It had been done already by Sir Thomas Malory in the 'Morte Darthur.' There is very much such a plot and unity in it as in the 'Iliad.' Arthur grows up, the Round Table is fitted with knights who have glorious adventures of fighting and of love, then the sin of Launcelot and Guenever sets the knights against each other, and they perish in two bloody battles. The "passing of Arthur" after the battle is familiar to every one in Tennyson's versification of it. Every one who likes it there should read it in Malory. The Queen and Launcelot retire to houses of "religion" and die in the odor of sanctity. "So whan syr Bors & his felowes came to his bedde they founde hym starke dede & he laye as he had smyled & the swettest sauour aboute hym that euer they felte." Like the 'Iliad,' the 'Arabian Nights,' and all great folk stories, the 'Morte Darthur' has its interest for persons at any age. A boy is ready for it when he is in the early foot-ball stage, reading the 'Lay of the Last Minstrel,' and 'Ivanhoe,' and 'Tom Brown.' There is rushing and tackling of the most vigorous kind at almost every turn. This is the way Sir Gareth and Sir Ironside go on:

"And thus they foughte tyl it was past none and neuer wold stynte tyl att the laste they both lackt wynde, and thenne they stode wagging, staggering, panting, blowing, and bleeding, so that all that beheld them for the most part wepte for pytie. So whan they had restyd them a whyle, they yede to battle againe, tracing, racing, and foyning as two bores. And at sometime they toke their renne as hit had ben two wild rammys, and hurtled to gyders that somtyme they felle to the erthe groveling; and their armour was so sore hewen that men might see their naked sydes."

Most of the jousts and encounters of adventure do no more damage than a university foot-ball game. Sir Launcelot in one of his adventures "had the better hand of five hundred knights, and yet," exults the chronicler, "there was none slain of them"; to be a murderer, to kill men in jousting, is the greatest shame that a knight may have. The knights can bear any amount of "smiting, racing, tracing, foyning," and the like. Sir Launcelot, for example, fights all day with a spear-head in his side, smites and pulls down more than thirty knights, and then rides off and gets well in a few days. The leeches are often women, and do wonderful cures. The attention of the young reader is held by a rapid succession of adventures, told in the briefest, simplest, and most realistic fashion. If there is any way in which a knight, or a knight and his horse, can be turned "up-so-down," or otherwise put *hors de combat*, which is not here described, it must be some later evolution. The variety of wounds can hardly be matched from Homer. There are some combats with monsters and giants, mostly in foreign countries. When Arthur was subduing the Romans, he met the giant Galapas: "He shorted hym and smote of bothe his legges by the knees, sayenge, Now arte thow better of a sise to dele with than thow were." And he does not leave him to fight upon his stumps like Witherington, in similar doleful dumps, in "Chevy Chase," but smites off his head forthwith; "and the body slew six Saracens in the falling downe," says Wright's edition, but that was not known to Caxton. Sir Servanse is contemptuously described as one "that had neuer courage nor lust to doo batail ageynst no man, but yf it were ageynst gyants & ageynst dragons and wylde beestes." There are also a thousand and one love stories, and as many tricks of magic, and much mystic lore of religion, especially in the quest of the holy grail.

It must be confessed that to an unsympathetic reader there may be something monotonous in the succession of adventures, and the knights and their combats seem all alike, as babies do to bachelors. The shifting figures have something of the Punch and Judy aspect. All the world is a stage—no seasons, no weather, no nature; everybody is always in character, serious—no humor, no laughter, except now and then, when a knight is tumbled up-so-down in jousting, the "queene" or the "haute prince," perhaps, will laugh so sore that they may not stand. But if the old critic, or the philosophic student, is not fascinated by the stories, the book has other charms. It is a vivid picture of the ideals, the characters, the manners, the life of the age of chivalry. Courage, strength, size, activity are primary heroic qualities. "Sir Tristram was called the strongest and biggest knight of the world, for he was bigger than Sir Launcelot, but Sir Launcelot was better breathed." Meekness and gentleness are eminent moral qualities; Sir Launcelot was "the meekest man and the gentlest that ever eate in hall among ladies." Sir Galahad is "demure as a dove." Truthfulness and hatred of treason are among the vows of knighthood and continually shown in remarkable ways. Every knight should be a lover. "Why," said La beale Isoud, "are yee a knight and bee yee no lover? It is a shame unto you." The knights are all fair riders. "What is a knight," says Sir Launcelot, "but when he is on horseback?" Sir Tristram is a "curious harper." They learn hawking, hunting, chess playing, carving. Surgery, medicine, magic, and music are common accomplishments of the ladies; they sometimes compound love potions, but they are wholly unversed in coquetry; they speak their love right out for the heroes who please them. Chastity is the crowning virtue of a knight. Sir Galahad needs be a "pure maide" to win the holy grail. A gentle piety pervades the book, a contrast with 'Piers Ploughman' or Chaucer. The men of "religion," often hermits or "white munks," are pious, good leeches, good confessors. The language of piety is simple and tender: "Faire, sweete Father, Jesu Christ," "Mild mother Mary," "Faire father God." Nice touches abound. Sir Gareth "knightly ate his meat and egerly"; he had "the fairest and the largest hands that ever man saw." "The King wept and dried his eyes with a handkercher." "These Britons brag as though they bare up all the world," says the Roman Emperor's cousin.

For the student of language no English book is more fascinating. It is packed with the most expressive words and idioms just strange enough to stimulate interest, piquant, picturesque, gentle, as well as queer combinations of words which offer grammatical problems as inviting as the particles of Homer. But to the discussion of such matters we shall be introduced by the apparatus of the second volume.

RECENT NOVELS.

Sant' Ilario. By F. Marion Crawford. Macmillan & Co.

Near to Happiness (*À côté du Bonheur*). Translated from the French by Frank H. Potter. D. Appleton & Co.

Baldy's Point. By Mrs. J. H. Walworth. Cassell & Co.

In the Wire Grass. By Louis Pendleton. D. Appleton & Co.

The Berkeleys and Their Neighbours. By Mrs. M. Elliot Seawell. American News Co.

Dernier Amour. Par Georges Ohnet. Paris: Paul Ollendorff. New York: F. W. Christern.

The Time of the Cherry Viewing. By Margaret Peale. G. P. Putnam's Sons.

Mito Yashita: A Tale of Old Japan. By Arthur Collins Maclay. G. P. Putnam's Sons.

In 'Sant' Ilario' Mr. Crawford continues the story of those noble Romans who, at the end of 'Saracinesca,' triumphant over enemies, were revelling in peace, wealth, and love. Such bliss never lasts. Though, from an eminence of slain dragons, we look down upon a clear and fragrant path, who may know that there is not a monster behind the rose bushes, biding his time to squirm out and spit sarcastic defiance in streams of fire? Even while Giovanni Saracinesca (Sant' Ilario) and his wife, Corona, were enjoying their honeymoon in the hills, down in the valleys dragons, venomous and resolute, held conclave, and devised a concerted attack, holding themselves ready to strike whenever the too happy pair should reassume the ways and burdens of common mortals.

The dragons' plan of campaign does not entirely conform with that forecast in 'Saracinesca'; it shatters an expectation, founded on inference, that the principal characters are to be involved in those stirring events which brought about the disintegration of Roman society and the unification of Italy. Anastase Gouache, alone of the old set, has anything to do with the insurrection of 1867 and the rout of the Garibaldians at Mentana. The Saracinesca family stands safely aloof from political confusion and historical tragedy, but is plunged in a sea of domestic trouble so stormy that the difficulty in paddling its own canoe excuses indifference to dangers menacing the ship of state. Two calamities, different in kind, yet equally terrible, threaten its prosperity and felicity. The first (and for this the train is laid in 'Saracinesca') is the claim made upon its titles and estates by Giovanni Saracinesca, innkeeper of Aquilla, that stalwart Giovanni whom Donna Tullia Mayer and Ugo del Ferice tried, and tried in vain, to use for evil purposes. The claim is worked up by Prince Montevarchi and his tool, Meschini, with a skill that does credit to unimpeachable ability for roguery of the subtler sort. Here is no discrepancy between imputed character and conduct, but in the management of the secondary intrigue the author takes pains to destroy a character which he had previously constructed with careful elaboration. It is possible that Sant' Ilario might have become insanely jealous of his wife, but a solider foundation and more formidable rival than Anastase Gouache should have been provided to give his jealousy more dignity than appears in the raging of a hot-headed boy, or of an uninstructed savage. Not all the author's explanations and accumulation of circumstantial evidence can make the situation seem to be anything except what it is—spice for half-a-dozen numbers of a magazine—spice apparently so grateful to the public palate that familiarity never breeds disgust. Yet the ingenuity with which the case against Corona and the little French painter is developed is incontestable, and offers cumulative evidence of what has long since been proved, that Mr. Crawford's greatest strength lies in the construction of plot untrammelled by probability.

In this novel, as in its numerous predecessors, there are pages packed full of information concerning phases of life which it is not everybody's luck to see; there are also the usual paragraphs of abstract reflection which it is everybody's misfortune to make for himself, should he not die young. Both instructive and speculative passages have the merit of being almost completely detached from the story, and are frequently irrelevant to the action of the moment. Mr. Crawford promises a third appearance of the Saracinescas. Unless he is prepared to place them in situations that the Smiths could not fill equally well, he should never again disturb that luxurious tranquillity in which for the second time he leaves them.

The name of the French novelists who can be pure without being infantile is not legion. That sentiment which, in literary expression, elevates the passion of love above grossness, while preserving its strength, is an almost exclusive possession of Teutonic races. The lack of this sentiment, at once delicate and rapturous, partly explains why France has produced even less poetry than fiction that for higher spiritual quality is worthy of consideration. Only on the ground of racial defect can one excuse the contempt and insult poured in never-ending torrent by the literary Frenchman upon his countrywomen. The realist who prides himself on reproducing nature and fact is far worse than his frankly conventional predecessor. In the whole world of women he sees nothing but soulless wantons and mindless saints. Some few of the moderns who have imbibed the spirit of other nations have, indeed,

partially succeeded in delineating a woman who, subjected to the temptation of passion, keeps her self-respect and reputation without appearing as an image of superhuman virtue or a terrible example of maudlin sentimentality. The author of 'Near to Happiness'—whoever he may be—is not in the thin ranks of the redeeming minority. Mme. Sténie d'Ericey, his heroine, was born immaculate, her secure virtue being properly supplemented by a dollish intelligence. The devil is as attentive to her as he is supposed to have been to St. Anthony, and by this assiduity greatly damages his reputation as a judge of human character. The dullest reader can predict that Madame d'Ericey will never fall, and can feel nothing but wonder that the tempter should waste so much time. The people who surround Madame d'Ericey share her mental flabbiness, though not always her moral worth. The movement of the story is slow and broken, and the author seems to be quite devoid of that sense for form and literary proportion which often begets charity for his monotonously indecent compatriots.

The three Southern stories, 'Baldy's Point,' 'In the Wire Grass,' and 'The Berkeleys and their Neighbours,' have no rank as literature, and are inferior specimens of sectional fiction. Yet in all there is attraction for intelligent attention, if intelligent attention should happen to fall upon them. In three widely distant localities people are shown taking up life after everything that made life worth living had been swept away, facing an absolutely new array of facts, and, harder still, submitting to new ideals of right and wrong thrust upon them at the bayonet's point. One impression, conveyed forcibly and dispassionately, is that the Northern ideal of the negro's equality with his white brother has never been accepted by the South. As the years go by, calm judgment seems to confirm bitter prejudice, and the realization of that ideal assumes pathetic hopelessness. In the sanest Southern fiction the negro is individually a brute, or a buffoon, or a slave still in his behavior and feeling; *en masse*, negroes are no more like rational mature whites than a child decked in her mother's bonnet and gown is like a woman.

Mrs. Walworth, whose book is, in style, construction, and grasp of character, much the best of the three under consideration, presents the negro individually as a revengeful brute, an impertinent wench, and a superstitious heathen. In groups they appear as hordes of children or lunatics, intrusted with dangerous weapons, and possessing the physical power of men to use them with deadly effect.

Mr. Pendleton dwells upon the faithful though free-tongued servitor who has clung to the "Ole Mars," or to the "Ole Miss," through so many volumes of fiction, and who here displays no original characteristics. The family life of his Uncle Tony, Maum Chloe, and their wiry-haired daughter Silvey has none of the dulness of assured respectability, and Uncle Tony's answer to an inquiry about Silvey fairly ilustrates the negro's practice of social morality:

"Who Silvey? She 'way down een Flur'dy now. She done mai'ed, an' gone away long ago. She been mai'ed six er seben times; *she* call it marryin'. She mai'ed Cæsar Brown fust, but she wa'n't deh een dat town tree munse fo' she got tired uv him, an' quit 'im. Dat de way wid niggers. Yer can't larn um nut'n. Many's de day I beat dat gal tell she couldn' see straight, an' yit she went right 'long an' done dat-a-way."

Mrs. Seawell's leading negro, the Colonel's body-servant, Petrarch, is a pure buffoon, characterized by genuine fun. Petrarch regards himself as the Lord's elect, his preferred spokesman. He overflows with caricature of Biblical parable and phrase, from which he cannot refrain even when his choleric master is raging about the defeat of a favorite horse.

"Ole Marse," he cries, "I done tole you Dashaway warn't fitten to run at de very startment. He been a mighty good hoss, but he c'yarn snuffle de battle fum befo' an' say hay! hay! like de hoss in de Bible, no mo'."

Hitherto the possession of so dramatic a subject as the war and its consequences has saved Southern writers from romanticism and cheap sensation. It is not encouraging to find them deliberately adopting these showy expedients for creating interest. Mrs. Walworth is the most culpable because she knows and has done so much better. The main plot of her 'Baldy's Point' is well conceived, and its culmination verges closely on logical tragedy. There is no excuse for the injection of such sentimental nonsense as Van Dorn's self-sacrifice for the sake of a crazy child.

The plot of 'In the Wire Grass' is a succession of extravagances carried on by people devoid of common sense. The poor whites have indeed a little of that desirable property, not entirely hidden by their outlandish dialect. Mrs. Mathis is a person of marked originality, and with a fine perception of the punishment that would fit the crime. Her daughter having run away with a peddler of lightning-rods, and died in consequence, maternal wrath, and grief, and shame cried aloud: "I wish I had a hold o' him—*I'd* show 'im—I'd do 'im worse'n ef one of his own lightnin'-rods was jammed down his throat—so I would!"

The absurdity of the later development of plot in 'The Berkeleys' destroys the hope inspired by the first chapters, and fills one with distrust of the author's capability for better things. The faults of erratic grammar and amateurish composition which are conspicuous throughout the story might easily be corrected, but the wild excursion into the arena of politics betokens an absence of that critical faculty without which no solid literary reputation was ever made.

'Dernier Amour' is the title of M. Georges Ohnet's latest novel, which ran as a feuilleton in *Figaro* during the past summer and fall, and now appears as a volume. It is not quite clear how M. Ohnet means his title to be taken. The only time he uses the phrase in his book he applies it to that afterglow of tenderness which sometimes succeeds a passion. But there is none of this feeling in the book. Everybody in it is rent and torn by emotions of quite another sort, although they express them with much decency of speech, and with a great effusion of generous and noble sentiments. 'Dernier Amour' cannot be said to be markedly above or markedly below M. Ohnet's usual level. It fatally lacks distinction. It does not really touch life at all, or anywhere. Its action passes not on earth, but in novel-land, on the continent of Nowhere. Its characters are heroes and heroines, not men and women. Its drama runs not as life does, or true love, but with the smoothness of a machine, and, of course, it "ends well."

Such books as this may, perhaps, find excuse for being—they help an idle hour to pass when one is in a mood to be not over-exacting; they are crowned by the Academy; they sell in two hundred and fifty editions; but, after all, they are "books that are no books." To look for art in them is as vain as to look for life. They show no perfection of style, no research of phrase, no careful observation, no originality, nothing that is alive or has been lived. Even in point of morality not all that is asserted in their behalf can be readily granted. There are people, not wholly depraved, who feel that the atmosphere of the stables and dung-heaps of the latest realism, of which the world seems now to be growing weary, is in truth healthier than the stuffiness of M. Georges Ohnet's furnished lodgings.

In Japan a picnic is called *hana-mi*, or flower-viewing, though the idea of the flowers and the outing is as much associated with trees as with garden plants. The procession of the flowers continues from January to December, and the popular divisions of the year are usually named after the particular bloom of the month or season—plum, cherry, azalea, chrysanthemum, camellia, etc. Upon this background of fact, added to that of the national wealth of bric-à-brac, art products and instincts, harmonies of costume and color, an æsthetically inclined Boston lady has projected a bright little story which culminates in a proposal of marriage ('The Time of the Cherry Viewing'). Nagasaki, Kobé, Yokahama, and Tokio are the places visited; and this feminine admirer of tiny tea-pots, her sister, a missionary made usefully "tactless" to fit well into the story, and a supposed mercantile tourist and cold-blooded debaser of Japanese art, are the characters. Fortunately for the purpose of the novelist, the "drummer" turns out to be one who at heart lives up to his old Satsuma, and is withal wealthy. After much bright conversational fencing, many charming bits of chat about keramics, and not a few feminine episodes, it issues that the two souls with but a single thought as to Japanese porcelain become potentially one for marriage. The proposal comes just as the breeze shakes down upon the heads of the lovers in Uyéno "pale petals of tender bloom," "like faint rosy drops for the christening of love," and her "ungloved right hand" is yielded "with a sigh of supremest content." The story is told with striking truth to the far-Oriental background and environment.

Mr. Maclay, the author of 'A Bundle of Letters from Japan,' has attempted the writing of "a feudal romance descriptive of the decline of the Shogunate, and of the downfall of the Tokugawa family, in a neat duodecimo of four hundred and twenty-six pages. Mr. Maclay's method of writing books will, if persisted in, always expose him to just fault-finding by critic and reader, for his book is really a "three-volume novel," though not of the English sort. He begins his "romance" with an encyclopædia, and ends it with a volume of metaphysics. His really good story occupies, strictly speaking, the middle third of the book. The central incident, around which all others are grouped, is the assassination of the regent Ii Kamon no Kami, the daimio of Hikoné, by a party of Mito *ronins* on the 23d of March, 1860. He pictures the conditions of life in Japan at the coming of Perry, and, with remarkable knowledge of the feudal era and system, lifts the veil to show the plots and counter-plots which the dual system produced. His characters, indeed, are all drawn in external outline, and differ only in superficies. His English, abounding in colloquialisms, slang, violent changes of tenses, and slovenly use of adverbs, detracts from the dignity and pathos of his theme. Wonderfully accurate in many nice or obscure points of Japanese history, he yet makes some curious slips. The word *bakufu*, used in modern days usually by critics or opponents of the old Yedo Government, he puts in the mouth of its servants and admirers. In his eyes, Ben-ten, the goddess of mercy, a female, is always a he, the author probably meaning Ebisu. He writes *hattomotos* for *hatamoto*.

He follows Sir Rutherford Alcock, a rather uncertain authority, for his history. He makes the common route to Echizen by way of Shinano, instead of the Tokaido. Yet, notwithstanding these slight and unimportant slips, he has told a story of singular and fascinating interest. The duel between Junzo and the spy, the tortures once so common and now abolished in Japan, the sojourn of the family in Kii, the marriage of the lovers, and many other incidents, are related with skill and power. Very few pictures of feudal Japan have as yet been made available to the Western world, and this sketch by Mr. Maclay is the best yet drawn by a foreigner.

Christopher Columbus and the Discovery of the New World. From the French of M. le Marquis de Belloy. With eight illustrations on steel and fifty-one drawings on wood, by Léopold Flameng and others. New edition. Philadelphia: Gebbie & Barrie. 1889. 8vo.

THE original work, published about twelve years ago, of which this is a translation, was written for the instruction of the author's nephew; and the publishers of this English edition inform us "that it has been universally pronounced the best history of the voyages of Columbus that the world has seen." Those, however, who have read Irving's 'Life and Voyages of Columbus' and the compendious life of Columbus by Helps, being chapters from that author's 'Spanish Conquest of America,' with additions, will find nothing new of importance in this compilation by the Marquis of Belloy. His narrative is diffuse and often fanciful, many of its incidents being as mythical as some of those related of Washington by Weems, or of Napoleon by John S. C. Abbott.

Humboldt has said that "the majesty of grand recollections seems concentrated on the illustrious name of Columbus." His originality, his genius, his misfortunes, his patient endurance under long-continued injustice, have placed him among the consecrated few whose lives and actions should be considered seriously and respectfully. The Marquis has written his book in the modern French hysterical style, and, while the facts given are in the main authentic, much that is imaginative is mingled with them, so that an unreal effect is produced, and the whole work seems like a romance. The arrival of Columbus in Spain and his object in going there is referred to as follows: "Why did Columbus go to Spain? Because he thought he should find there what he had not found elsewhere; he scented the woman from afar." The "woman" thus inelegantly referred to was Queen Isabella. His first meeting with the Queen is described as follows:

"At last his eyes beheld the wondrous being who was the glory, the honor, the salvation of Christendom. And she was all that his fancy had pictured, as fair as she was great, etc., etc.; her hair auburn inclining to red, her eyes of a clear blue, like Columbus's own, with a benign and earnest expression. Once their gaze had met, once those two souls had exchanged mutual recognition, the miracle was accomplished, the unity of the world was achieved."

Later he found a second Isabella, the beautiful and confiding Anacoana—the name signifying "Golden Flower"; and the author, assuming that the lost portions of the journals of Columbus must have contained a good deal that related to her, goes on to weave much romance about the part this fascinating savage *may have played* in the discoveries of the great navigator.

There are many portraits of Columbus, none of them authentic or bearing close correspondence to the description of his person given by his son. The Marquis has prefixed to his volume an entirely new portrait, invented by his artist, following the indications furnished by Fernando Columbus and others. This picture presents a fine-looking cavalier, whose appearance might account for his success with susceptible queens, but who is quite unlike the typical Christ-bearing Saint Christopher whose face is believed by many to have been a portrait of Columbus.

Notwithstanding systematic and extended researches, few additions of importance have been made to what was discovered about Columbus by Navarrete, upon whose collections Irving's work was mainly based. The admirable life by Helps contains some matter not in Irving, but the charming work by our own countryman is not likely to be superseded for English readers. Had the publisher of this translation placed it in competent hands to be shorn of extraneous matter, revised, with additions readily accessible, it might have filled a place which in its present form it is not likely to occupy. The illustrations in the original work formed its chief attraction; the reproductions in this edition are not successful.

A Handbook of Descriptive and Practical Astronomy. By George F. Chambers, F.R.A.S. Oxford: Clarendon Press; New York: Macmillan. 1889.

AMATEUR astronomers and a circle of general readers will naturally welcome the fourth edition of what might be called 'Chambers's Encyclopædia of Popular Astronomy,' which will expand to more than double the size of the preceding edition if the present volume, treating of the Sun, Planets, and Comets, which is the first of three, to be followed shortly by the second and in a twelvemonth by the last, can be taken as a criterion.

Mr. Chambers is a barrister-at-law of the Inner Temple, whose literary productions, as cited on the title-page of his astronomy, range from an English, French, and German dictionary to a digest of laws relating to the public health. We might fear that the treatment of so great a subject as astronomy by an author so prolific in other fields would be quite superficial. But if we measure depth by extent of reading and quantity of information, no such charge can be brought against him. No other English work on the subject approaches his in the number of its citations or the encyclopedic character of its contents. Moreover, the beauty of the typography is such as to produce, at first sight, a most favorable impression. The author writes so like an enthusiastic devotee of his subject that one wonders how he could ever have worked upon anything else. The reader finds, in sumptuous typography and clear, vigorous language, what astronomers of many generations have observed and thought upon celestial phenomena of every kind, and what conclusions investigators have reached in every part of the field. And yet he may find himself disappointed at the end of nearly every chapter. This will be the case if he wishes to know, authoritatively, which of the numerous conclusions passed in review are established, what are doubtful, and what disproved by more recent researches. In fact, the book is as uncritical as it is exhaustive. The blunders of the inexperienced observer, the fancies of the enthusiastic one, and the speculations of the undisciplined one all go in with the established results of the profound and careful investigator.

Although astronomy is, in certain of its branches, the most exact of the sciences, its literature teems with unscientific or inexact conclusions. An uncritical observer, with a small and imperfect telescope, may see, or think he sees, an endless variety of things which are really due to the badness of his instrument, his failure to adjust it for good seeing, the undulations of the atmosphere, or his own misinterpretations, and, above all, his own fancy. The more improbable the result of his observation, the more attention and discussion it may excite among amateurs, and the better chance it runs of being quoted by uncritical writers. It is a part of the business of a popular writer to separate the wheat from the chaff in such cases, and this is what Mr. Chambers fails to do. Thus he devotes eleven pages to the supposed planet or planets "Vulcan," between Mercury and the Sun, although the negative evidence that no such planet was ever seen is conclusive to every astronomer who gives it due weight. Saturn, its rings and satellites, take up forty-two pages, illustrated by numerous views by observers of all classes using telescopes of all sizes up to the great Lick instrument. But the observations with the latter are the only ones in fine print, and no statement or criticism of general conclusions is found. In cases like these, which are characteristic of the whole book, the experienced astronomer can take everything at its true value, but how shall the general reader be able to reach a conclusion?

The Sun receives hardly his share of attention; some new cuts and material have been added, but one looks almost in vain for reference to much of the recent work in this line. There is a promise to treat of spectroscopy in a subsequent volume. In connection with the Planets we have a good résumé of interesting data arranged with care, while the full descriptions of recent eclipses are of value as presenting verbatim reports from many observers, fully illustrated with new cuts. The subject of Comets has been considerably amplified, and is perhaps the best feature of the book. It is supplemented by convenient and full tables, which are the most complete of any accessible to the majority of readers.

The Reconstruction of Europe: A Sketch of the Diplomatic and Military History of Continental Europe from the Rise to the Fall of the Second French Empire. By Harold Murdock. With an Introduction by John Fiske. Boston: Houghton, Mifflin & Co. 1889. 12mo, pp. 421.

THERE is a scarcity of English books on the eventful period extending from 1850 to 1870, a period well worthy of study and commemoration. Hardly ever before in the world's history have two decades witnessed such widespread and far-reaching upheavals—political, social, intellectual, and moral. The caldron is still seething, and no man can foresee the last outcome; but it is safe to prophesy that the latter half of the nineteenth century will stand out in future histories as an era of momentous events in both hemispheres, a time of great progress and emancipation, not unmixed with humiliating episodes. The theme is well fitted to inspire some great writer to produce an immortal work; but for such a work the time is, perhaps, not yet ripe. For the present we must content ourselves with fragmentary and partial recitals, compiled with more or less literary skill from contemporary records.

Mr. Murdock's book will be welcome to readers who are not familiar with any language but the English, although it treats of only a section of history. By his title he confines him-

self to the continent of Europe, and in his treatment he confines himself still further to an almost exclusively military point of view. What he has really written is a history of the European wars from 1850 to 1870, with brief remarks on intervening events. His descriptions of battles and campaigns are accurate and lucid; but their length and minuteness are out of proportion to the scale on which his book is laid out. As a natural consequence, he is compelled to relegate the political development to a secondary place, and to despatch it with a meagreness that can hardly satisfy a reader who has no access to other sources of information. Mr. Murdock's style is not easy or elegant, nor even always correct. What he is especially to be commended for is the closeness with which he has studied and followed his authorities. In a "bibliographical note" he gives a list of these authorities, in which there are many omissions, and some important ones. Thus, while he mentions the Prussian staff reports on the wars of 1866 and 1870, he seems to know nothing of the staff report on the Danish war of 1864, which was published in 1886 and 1887. Again, Moritz Busch's 'Our Chancellor' is mentioned, but not his more notable book on 'Bismarck and his People during the War with France.' A number of other works are conspicuous by their absence, such as Lowe's 'Bismarck,' Édouard Simon's 'Emperor William,' Taxile Delord's 'History of the Second Empire,' to say nothing of recently published memoirs and journals which throw light on the period, or of reprints from newspapers, like the two volumes entitled 'International Relations,' in which the Berlin correspondent of the London *Times* collected his letters from 1866 to 1870.

Portraits of Friends. By John Campbell Shairp. With a sketch of Principal Shairp, by William Young Sellars, and an etched portrait. Boston: Houghton, Mifflin & Co. 1889.

THIS little volume gathers up the reminiscences of a half-dozen eminent friends which Principal Shairp contributed to the material used by their biographers, and is introduced by recollections of Shairp himself (from the pen of Mr. Sellars) incorporated in Prof. Knight's memoir of the essayist. The material is therefore not new, but the collection of it in a volume by itself makes a charming record of friendship to which the personal feeling and taste of Principal Shairp give not only unity but a touch of intimacy, of modest and half-concealed autobiography, delightful in both style and matter. Mr. Sellars's sketch describes Shairp's life and character, places him in the same class as Christopher North among his countrymen, illustrates his temper and pursuits, and brings out prominently his local attachment—so great that he counted a summer wasted that was not spent in Scotland. The following papers by Shairp himself, however, are the heart of the volume. They are upon Thomas Erskine of Linlathen; Cotton, Bishop of Calcutta; Dr. John Brown; Norman Macleod; Campbell, the leader of the sect cut off from the Scotch Church; John Mackintosh of Geddes, and Clough. The closeness of most of these men to Scotland, and the fact that the background of these friendships was the Scotch landscape, give a prevailing local tone. The Scotch genius—its severity and seriousness on the one hand, its spirituality and speculative bent on the other, in religious matters—the glow of feeling which in some of these men reached almost a poetical pitch, and particularly their serviceableness to their times, are the moral traits that make their characters of interest; and, winding in and out with all this is the cord of kind and affectionate feeling which united them one with another. Thomas Erskine especially is a man of whom those who feel the charm of a pure and gentle nature cannot learn enough, and the quality of his manhood is rendered by Principal Shairp with great felicity. He and Norman Macleod are most fully drawn, but in the former the age and in the latter the youth of their days are dwelt upon. Cotton, too, who was Shairp's associate at Rugby, is sympathetically described. Little incidents of common life, walks and visits in the Scotch hills and along the rivers, scenes of college days at Glasgow and Oxford, are the humble background on which the private character of these "laborers in the vineyard" is relieved; and the combined effect of all this piety, sincerity, high aim, and performance answering to it, friendly helpfulness in youth and sober friendship in manhood, gives a peculiar and fine pleasure. It is a chapter of Scottish life in the middle of this century which, it seems to us, could hardly be better told than in this brief and unpretending way.

Foggerty's Fairy, and Other Tales. By W. S. Gilbert. London: George Routledge & Sons.

TWENTY years ago half-a-dozen clever young men gathered about the late Tom Hood, who was then editing *Fun* and issuing the early numbers of *Hood's Comic Annual.* Among them were Mr. Clement Scott, now an adapter of French plays and the theatrical critic of the London *Telegraph;* the late T. W. Robertson, author of "Caste"; the late Jeff Prowse, whose "Nicholas's Notes" is yet a delight to the few who recall its pleasant humor; and Mr. W. S. Gilbert, who was then contributing the "Bab Ballads" to *Fun*, and writing fairy tales for *Hood's Comic Annual.* From the "Bab Ballads" and from these fairy tales Mr. Gilbert has derived the characters and the plots of most of his later plays. In the present volume may be found the narrative originals of "Foggerty's Fairy," the "Sorcerer," the "Wicked World," "Creatures of Impulse," and "Comedy and Tragedy." Although often humorous in conception, and full of whim and fantasy, these tales are obviously artificial, and they are wholly lacking in the delicate art by which Mr. Stockton, for example, makes his impossibilities seem possible. They were apparently written hurriedly to meet an unexpected demand; and in manner most of them are injured by the tone of factitious and confidential jocularity which is the bane of most contemporary British humor, and which is not far removed from artistic vulgarity.

Of the score of pieces in this book, there are here and there four articles not to be classed as "Tales" by any possible stretch of the word, and these are perhaps the best things in the book. Two are Shaksperian in subject—one an inquiry into our real acquaintance with the unacted plays of Shakspere, and the other a lively skit, "Rosencrantz and Guildenstern," on certain of the peculiarities of my lord *Hamlet* as he is acted. The other two papers—"A Stage Play" and "Actors, Authors, and Audiences"—have to do with the writing and production of a play. The account of the making of "A Stage Play" is slightly exaggerated with humorous intent, but essentially it is exact, and it may, therefore, be recommended to all who desire to see how a professional dramatist works. The paper on "Actors, Authors, and Audiences" is a dramatized discussion, in which the author sets forth the difficulties of the writer of an original play. Incidentally it is recorded that the author of the "Wedding March" made £2,000 by his two days' labor in adapting "Le Chapeau de paille d'Italie" of the late M. Labiche. This statement may be relied on, as the adapter was Mr. Gilbert himself.

And this suggests a curious inquiry. A few years ago a New York publisher chose to reprint in a cheap pamphlet the librettos of certain of Mr. Gilbert's amusing comic operas. This act is permissible under American law, although morally indefensible. In recognition of the English author's moral right, the American publisher sent him a check for a small sum of money. This Mr. Gilbert indignantly gave to a hospital, issuing a most sarcastic letter. But Mr. Gilbert's adapting of M. Labiche's play was also an act permissible under the British law (as it then stood), although morally indefensible. So far as we know, Mr. Gilbert has never expressed any contrition for this violation of the ethics of literary property. So far as we know, the English author never offered to pay the French author even the smallest sum for the use of the play, although, by his own showing in the book before us, the adapter made a profit of $10,000 from two days' labor on M. Labiche's comedy.

London: A Pilgrimage. By Gustave Doré and Blanchard Jerrold. Harper & Brothers.

THIS reissue of Doré's strange rendering of what he saw in London affords an inexpensive and sufficiently complete specimen of this artist's later style, which indeed was not so very different from his original style as the change in the character of the subjects would have made appropriate and desirable. The singular exaggeration, not exactly in the line of caricature, but partaking of the same nature; the theatrical force obtained by deliberately ignoring many of the most important characteristics of the object represented, and insisting upon one only; and a certain pessimistic tone, which makes the hideous, the foul, the brutal unduly prominent, even in subjects where it is naturally strong—all these, which were in place in the books which gave Doré his reputation, such as the 'Contes Drolatiques' and the 'Wandering Jew,' seem singularly ill-adapted to the representations of life in a modern city. In the way of portraiture, whether of the buildings of a city or the vehicles, steamboats, and the like in which its traffic is carried on, or the crowds which fill up its streets, or the individuals composing those crowds, Doré is weak. Nothing can be more absurdly unlike the objects represented than his drawings. Moreover, he is monotonous beyond belief—twenty strong men at work with shovels are but twenty sketches of the same strong man; and his fashionable ladies are all cut out from the same pattern, which pattern has served, also, in its time, for his flaunting dames of the Renaissance. He is perfectly indifferent, too, to the comparative nature of the objects that he represents. In the large plate, "Inside the Docks," opposite page 26, the shrouds of the near ships are as massive as the distant warehouses, and the sailors standing among them seem as if they were grouped on the peaks of an iceberg, while the yards of the shipping are made to resemble heavy cannon. In short, there are few of those qualities which one would say *à priori* were needed for a book-illustrator that Doré does not visibly and most strikingly lack. That, in spite of these many faults, his work still has force, and is capable of exciting interest, is proof of its having some transcendent qualities of its own which it is

as hard to describe as to admit, when one feels the full force of its falsity and ugliness.

The text, by Mr. Blanchard Jerrold, though evidently written to the illustrat ons, and on that account without much system, and not very consecutive, has still a certain value as giving a Londoner's idea of London, high and low, in the fourth quarter of the nineteenth century.

The Poetry of Tennyson. By Henry Van Dyke. Charles Scribner's Sons. 1889.

SOME chapters of this study of Tennyson have appeared in magazine form, but the greater part is new, and the whole is a rationally arranged survey of the poet's entire work, relieved by a few episodical chapters upon special questions, such as his resemblances to Milton and his use of the Bible. The author's reverence for Tennyson is very great, but it does not prevent his recognizing the pungent justice of Lockhart's criticism on the poet's early faults of taste, or his denominating "Maud" and "The Princess" "two splendid failures," or his occasionally indulging himself in phrases more noticeable for cleverness than for respect. The most interesting portion of his criticism is in the examples he gives of the alterations in the poems which illustrate Tennyson's refinement of taste increasing with years and practice; these are well selected and afford in some instances amusement. In the more original portions, however, as in the attempt to liken Tennyson to Milton, the critic is less successful. The argument from the use of double words by the two poets is exceedingly weak; the comparison of Tennyson's experience in losing his friend Arthur Hallam to Milton's experience in going into the service of England, is altogether superfine and in the air; and even in the love of natural and ideal beauty which they shared, the differences far exceed the similarities in their genius. Certainly, too, the attitude of the two towards woman is a point which only a critic with a case would have attempted to reconcile. It is true that, in the case of "The Princess," its "length is greater than its excellence," but we hesitate on that ground alone to call the poem a "failure"; it is a "failure" only in the sense that it falls short of Tennyson's most noble work, though it will be readily admitted that it suffers from faults inherent in its conception and structure. On the other hand, we cannot follow the critic in the high estimate he puts upon the three dramas which he names an historical trilogy. In all this there seems something of the eccentricity of individual preference.

In fact, the more we examine the volume, the more we find in it to question in points of detail; but the spirit is excellent, the treatment displays intelligence and attention in a part of literature where these qualities are not common, and we welcome any volume which directs the mind of the public to Tennyson's great poetical achievement, so inadequately realized now, which is in itself so true in feeling, so fine in art, so various and high-spirited, and, in our judgment, with a wisdom not inferior to its commanding beauty. The work of Tennyson is the single literary glory of his age in the region where art and thought are blended into one; and study of it, even if occasionally marred by superficiality and eccentricity, can only result in good.

BOOKS OF THE WEEK.

Aldrich, H. L. Arctic Alaska and Siberia. Chicago: Rand, McNally & Co. $1.50.
Allen, T. W. Notes on Abbreviations in Greek Manuscripts. Oxford: Clarendon Press; New York: Macmillan.
Almanach de Gotha. Gotha: J. Perthes; New York: B. Westermann & Co.
Anecdotes Nouvelles: Lectures faciles et amusantes. New York: Charles E. Merrill & Co. 40 cents.
Armstrong, W. Cleopatra's Daughter: Romance of a Branch of Roses. Boston: De Wolfe, Fiske & Co.
Babyland. Boston: D. Lothrop Co. 75 cents.
Bal', V. Travels in India by Jean Baptiste Tavernier, Baron of Aubonne. 2 vols. Macmillan & Co. $12.
Banning and Blessing. Thomas Whittaker. $1.05.
Björnström, Dr. F. Hypnotism: its History and Present Development. New York: Humboldt Publishing Co. 75 cents.
Brandt, Prof. H. C. G. German Reader for Beginners. Boston: Allyn & Bacon.
Bryant, W. C. Ulysses among the Phœnicians. Boston: Houghton, Mifflin & Co. 15 cents.
Buchheim, Emma S. German Poetry for Beginners. Oxford: Clarendon Press; New York: Macmillan. 50 cents.
Bunyan, John. A Book for Boys and Girls; or, Country Rhymes for Children. A. C. Armstrong & Son. $1.50.
Burnett, Frances H. A Quiet Life. Philadelphia: T. B. Peterson & Bros. 25 cents.
Church, A. J. The Story of Early Britain. G. P. Putnam's Sons. $1.50.
Cicero on Friendship and Old Age, literally translated by C. R. Edmonds. Scribner & Welford.
Common-Sense Arithmetic for Common Schools. Part I. A. Lovell & Co.
Cook, J. An Eastern Tour at Home. Philadelphia: David McKay.
Coppée, F. Henriette: or, A Corsican Mother. Worthington & Co.
Craven, Mrs. D. Guide to District Nurses. Macmillan & Co. 75 cents.
Crusader Programs. For the Loyal Temperance Union, &c. Chicago: Woman's Temperance Publication Association. 25 cents.
Culver, Amelia J. Every-Day Biography. Fowler & Wells Co. $1.50.
Curtis, Emma G. The Administratrix. John B. Alden.
Dabney, W. D. The Public Regulation of Railways. G. P. Putnam's Sons.
Davies, N. E. Foods for the Fat. Philadelphia: J. B. Lippincott Co. 75 cents.
Day, Hester. A Snow Flower. James Pott & Co. 35 cents.
Döring, A. Philosophische Güterlehre. Berlin: R. Gaertner.
Dunton, L. The World and its People. 2 vols. Boston: Silver, Burdette & Co. 36 cents each.
Ely, Prof. R. T. Social Aspects of Christianity, and Other Essays. T. Y. Crowell & Co. 90 cents.
Fontaine, C. Les Poètes Français du XIXe Siècle. Wm. R. Jenkins. $1.50.
Fresneau, Mme. A. Theresa at San Domingo: A Tale of the Negro Insurrection of 1791. Chicago: A. C. McClurg & Co. $1.
Ganong, W. F. The Economic Mollusca of Acadia. St. John, N. B.: Barnes & Co. 50 cents.
Gilman, Mrs. B. Saint Theresa of Avila. Boston: Roberts Bros. $1.
Gordon, Anna A. Songs of the Young Woman's Christian Temperance Union. Chicago: Woman's Temperance Publication Association. 25 cents.
Graham, Dr. D. Massage: Kort Framställning. Lund: C. W. K. Gleerup; Boston: Carl Schoenh f.
Green, S. M. Crime: Its Nature, Causes, Treatment and Prevention. Philadelphia: J. B. Lippincott Co. $2.
Griffis, Rev. W. E. The Lily among Thorns: A Study of the Biblical Drama entitled the Song of Songs. Boston: Houghton, Mifflin & Co. $1.25.
Heatley, Kingdon, Scudder. Gradatim: An Easy Latin Translation Book for Beginners. Boston: Allyn & Bacon.
Henry, Mrs. S. M. I. The Unanswered Prayer; or, Why Do So Many Children of the Church go to Ruin? Chicago: Woman's Temperance Publication Association. 50 cents.
Henry, Mrs. S. M. I. Frances Raymond's Investment; or, The Cost of a Boy. Chicago: Woman's Temperance Publication Association. 50 cents.
Herrick, Christine T. Cradle and Nursery. Harper & Bros.
Holberg, L. Niels Klim's Wallfahrt in die Unterwelt. Boston: D. C. Heath & Co.
Hugo, V. Bug Jargal. Boston: D. C. Heath & Co.
Irving, J. Supplement to the Annals of Our Time, 1878–1887. Macmillan & Co. $2.75.
Kempis, T. Musica Ecclesiastica: The Imitation of Christ, in Rhythmic Sentences. A. D. F. Randolph & Co. $1.
Lamb, C. Essays of Elia. 2 vols. London: David Stott; New York: Macmillan. $1.50.
Lanza, Marquise C. Basil Morton's Transgression. Minerva Publishing Co. 50 cents.
Latch, E. B. Indications of the Book of Job. Philadelphia: J. B. Lippincott Co. $1.50.
Lowell, Rev. R. The New Priest of Conception Bay. New ed. Boston: Roberts Bros. $1.50.
Macfarlane, Prof. A. Elementary Mathematical Tables. Boston: Ginn & Co. 85 cents.
Macgibbon, D., and Ross, T. The Castellated and Domestic Architecture of Scotland from the Twelfth to the Eighteenth Century. Vol. III. Edinburgh: David Douglas.
May, Dr. C. H. Anatomy, Physiology and Hygiene. Wm. Wood & Co.
Mead, Prof. C. M. Supernatural Revelation: An Essay concerning the Basis of the Christian Faith. A. D. F. Randolph & Co. $2.50.
Menger, R. Countess Loreley: A Novel. D. Appleton & Co. 75 cents.
Mitchell, Dr. Kate. The Drink Question. London: Swan Sonnenschein & Co.
Morgan, T. J. Studies in Pedagogy. Boston: Silver, Burdette & Co. $1.75.
Moulton, Louise C. In the Garden of Dreams: Lyrics and Sonnets. Boston: Roberts Bros.
Murray, G. G. A. Gobi or Shamo: A Story of Three Songs. Longmans, Green & Co. $1.25.
Myers, P. V. N. The Eastern Nations and Greece. Boston: Ginn & Co.
Palgrave, Mary E. In Charge: A Story of Rough Times. Thomas Whittaker. $1.05.

"An excellent short cut to a knowledge of Shakespeare's works."—*Times.*

A Compendium and Concordance

OF

Shakespeare's Dramatic Works.

It is the aim of the editor to make this compendium such a summary of Shakespeare's Dramas as will enable the reader to get, in ten minutes for each play, an intelligent knowledge of the whole of the plot and characters therein.

The treatment is after the style of Mary and Charles Lamb's Tales from Shakespeare, only, of course, more condensed.

This arrangement will be found a great advantage to the general reader, and a still greater boon to the theatre-goer who may be about to witness on the stage a play of Shakespeare's which he may not have read, or read so long ago as to need refreshing his memory thereon.

The chief features of the work are as follows:

1. Prefacing each play is a HISTORY thereof, telling whence Shakespeare drew his plot, when first acted, and when first published; 40 pages. (No Donnelly-Bacon claims admitted after reading these Histories.)

2. Each of the plays abridged in a plain and simple manner, and the relative importance of each character in the play indicated. The whole of the 37 dramas, *in prose*, occupying 150 pages, illustrated with 37 outline full-page drawings (one to each play) by Frank Howard.

3. A full CONCORDANCE of Shakespeare's Complete Works, with additional copious index of *catchwords* thereto, occupies 170 pages.

4. An Alphabetical record of the 1,039 Characters in Shakespeare's (37) Dramas, describing the characters and indicating the play in which each appears.

SHAKESPEARE MADE EASY.

"There is doubtless no royal road to learning, but the intellectual labor-saving devices, now so common and so rapidly multiplying, should make the way to a certain very useful information much smoother than of yore. For example: It has till the present time been regarded as a matter of course that the man who aspired to a knowledge of the plays of Shakespeare, or wished to impress others with the idea that he had such knowledge, would read the plays. Now we have changed all that and one may be glib, if not really learned, in the discussion of the works of the great dramatist, at small expense of time or money. Among benefactors who have made the great saving of brain force possible are George A. Smith, B.A., author, and Gebbie & Company of Philadelphia, publishers.

"It gives, in the space of little more than two hundred pages, compendia of all of the plays of Shakespeare, comprising an historical sketch, an abstract of the plot, and a list of the dramatis personæ of each, all supplemented by a condensed concordance and and Index (two hundred pages more)."—*Detroit Free Press.*

"The plan of the volume, which is both handy and useful for ready reference, is to give *seriatim* an account of the sources and plot of each play, such as one might look over hastily to refresh the memory before going to the theatre. This division is followed by a 'Concordance of Familiar Gems,' more than a hundred pages in length, arranged by catchwords; and an index to the quotations and one also to the characters of Shakespeare are added. The style and type of the volume are excellent."—*The Nation.*

Schools.

Alphabetized, first, by States; second, by Towns.

CONNECTICUT, Greenwich.

MRS. BEECHER'S FAMILY SCHOOL In the town of Greenwich, Conn., for girls from the age of seven to fourteen, commends itself to those who seek a happy and healthy home combined with a good school. It is located in one of the pleasantest villages on the Sound, and offers special advantages to girls who are too young or too delicate for ordinary schools. Address Bayport P. O., Fairfield Co., Conn.

MASSACHUSETTS, Belmont.

THE BELMONT SCHOOL. — PRE- paratory boarding-school for boys. For information address B. F. HARDING, A.M., (Harv.), Head Master.

MASSACHUSETTS, Berkshire.

CRESTALBON FARM.—Home School for six boys. For circulars apply to ED. T. FISHER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School, Address the Dean, EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (62d Year). For boys and girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive and is very near the Institute.

Preparation also for college (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

HOME FOR BOYS.—DR. ABBOT AD- mits not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Duxbury, Powder Point.

POWDER POINT SCHOOL. — PRE- pares for scientific school, college, or business. Laboratories. The boys are members of the family. FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-third year begins Oct. 1, 1889. Mrs. Knapp, Principal; A. M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY, PREPARA- tory and Boarding School for Boys.—Boarding-house entirely reorganized; a few good rooms still vacant. For all information apply to WILLIAM EVERETT, Ph.D.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 18, 1889. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, TEN MILES from Philadelphia. A College for Women. The Program, stating the graduate and undergraduate courses of study for the academic year, will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.

Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

Teachers, etc.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality. A. M., care of the *Nation*.

ALFRED MITCHEL WILL GIVE A course of lectures on English or German literature to a small class during the winter. This course is equivalent in value to the pos-graduate course in Johns Hopkins University. It is designed to devote special attention to the progress of individual students. For full particulars in regard to course and terms, address, A. MITCHEL, Westminster Hotel, New York City.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., 11 EVE- rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

RANCH LIFE AND STUDY FOR Boys.—A graduate of Yale University with experience in teaching will receive two or three boys of any age on his fruit ranch in the Ojai Valley in Southern California and give particular attention to their instruction and to their health. The ranch is most healthfully and conveniently situated on the foothills, 1,200 feet above the sea, 15 miles inland, being 35 miles from the city of Santa Barbara, and near post-office, churches, doctors, and hotels. Plenty of riding, hunting, and fishing. The ranch houses are large and newly built. Correspondence is cordially invited. References will be given and required. SHERMAN D. THACHER, Nordhoff, Ventura Co., California.

TEACHER OF SCIENCES WANTS a position. College and Normal School Graduate. Understands German and French. Experience. References. Address P. O. Box 1388, Ypsilanti, Mich

School Agencies.

THE BOSTON, NEW YORK, AND Chicago Teachers' Agencies. Circular free. EVERETT O. FISK & Co., 7 Tremont Place, Boston; 6 Clinton Place, New York; 106 and 108 Wabash Ave., Chicago.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

KNABE

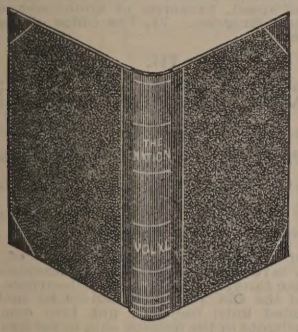
UTICA, N. Y.

J. M. BELL & CO., 31 Broadway, New York.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,



in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XLVIII., *i.e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering, state the volume-number wanted.

Address

THE NATION, Box 794 New York.

The Mother's Register.

*In any family, whether large or small, but es-*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation.*

*TO LIBRARIES AND BOOK COL-*lectors.—The London *Times* bound, for year 1812, for sale. Apply TIMES, care B. F. STEVENS, 4 Trafalgar Square, London, England.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

COLLEGE NEWS

IN THE

NEW YORK EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

THE

EQUITABLE

LIFE ASSURANCE SOCIETY.

Send for Illustrations of the Society's Twenty Year Tontine policies showing at maturity cash surrender values equal to a return of all premiums paid with compound interest of from 3 to 5 per cent. per annum, added.

The Free Tontine

policy is a simple promise to pay, and is without conditions on the back.

The Society also issues a

Bond

which at maturity may be drawn in cash, or extended at interest.

It combines a safe and profitable investment with the most liberal form of life assurance extant.

Surplus, - $22,500,000

Charles Scribner's Sons'

IMPORTANT NEW BOOKS.

Said in Fun.

By PHILIP H. WELCH, author of 'The Tailor Made Girl.' With a Preface by Robert Gordon Butler. Square 8vo, $1.25.

With full-page illustrations by W. A. Rogers, F. G. Attwood, C. G. Bush, "Chip," A. B. Frost, C. D. Gibson, O. Herford, E. W. Kemble, J. A. Mitchell, F. Opper, W. L. Sheppard, W. T. Smedley, W. P. Snyder, A. E. Sterner, C. J. Taylor, W. S. Van Schaick, M. Woolf.

The brightest of Mr. Welch's witty paragraphs and sketches have been gathered from all quarters, and some unpublished matter has been added, the whole making a book full of the rarest fun in picture and text.

"Of all the funny books of the season, we have seen none so upsetting as this. The illustrations could hardly be better."—*N. Y. Independent.*

Among Cannibals.

An Account of Four Years' Travel in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ, M.A. Fully illustrated. 8vo, $5.00.

"We have seen so many records of travel put forth by men whose sole qualification for exploration was physical courage that we welcome with uncommon satisfaction the work of a thoroughly equipped observer. This book is at once interesting to the general reader and useful to the scientist. It is one of the books of travel which, like those of Darwin and of Wallace, are certain to be preserved."—*N. Y. Sun.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo. $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—*N. Y. Observer.*

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00 net.

"The first satisfactory popular account of the American Railway. The whole work is a striking example of thoroughness and judgment. In the general design, in the selection of writers, in the illustrations, and in the arrangement of the matter the book is a model."—*Christian Union.*

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"The stories will take an enduring place in literature, both because of the exceptional interest of their matter and the rare charm of the manner in which they have been given to the public."—*Boston Beacon.*

The Poetry of Tennyson.

By the Rev. HENRY VAN DYKE, D.D. 12mo, $1.50.

"This volume, in its estimate of Tennyson as a literary artist, and in its keen analysis of his deeper processes of thought, is a really masterly effort."—*Boston Sat. Eve. Gazette.*

History of the United States.

By HENRY ADAMS. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. 12mo, 2 vols., $4.00.

"A memorable addition to American historical literature, which will take rank with Bancroft's and above Hildreth's, and which is likely to long remain without a rival in the field that the author has marked out for survey."—*N. Y. Sun.*

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

Scribner & Welford's

NEW BOOKS.

By CAPTAIN the HON. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

The First of the Bourbons. 1589—1610.

By CATHERINE CHARLOTTE LADY JACKSON, author of 'Old Paris,' 'Court of the Tuileries,' etc., etc. 2 vols., crown octavo, with illustrations, $9.00.

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. SEELEY, author of 'Horace Walpole and His World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

The Life of Benvenuto Cellini.

Newly translated into English by JOHN ADDINGTON SYMONDS. With portraits. Revised and cheaper edition. 2 vols., crown 8vo, handsomely bound in cloth, $3.00.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. FRANCIS HUEFFER. 2 vols., large crown 8vo, cloth, $5.00.

The Book:

ITS PRINTERS, ILLUSTRATORS, AND BINDERS. From Guttenburg to the Present Time. By HENRI BOUCHOT of the National Library, Paris. With a Treatise on the Art of Collecting and Describing Early Printed Books. Edited by H. GREVEL. Containing 172 facsimiles of Early Typography, Book-Illustrations, Printers' Marks, Bindings, etc., etc. *Limited edition.* Royal 8vo. Cloth, $7.50 *net.*

Patience Games.

With examples played through. Illustrated with numerous diagrams by "Cavendish." Square 8vo, $6.00.

Whist, With and Without Perception.

Illustrated by means of End-Hands from actual Play, by "B. W. D." and "Cavendish." 16mo, limp cloth, gilt edges, 60 cents.

*** *The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD

743-745 Broadway, New York.

D. Appleton & Co.

PUBLISH THIS WEEK:

I.

An Epitome of Herbert Spencer's Synthetic Philosophy.

By F. Howard Collins. With a preface by Herbert Spencer. One vol., 12mo, cloth, xviii-576 pages, price, $2.50.

"The object of this volume is to give in a condensed form the general principles of Mr. Herbert Spencer's Philosophy as far as possible in his original words. Each section has been systematically reduced. The Epitome consequently represents *The Synthetic Philosophy* as it would be seen through a diminishing glass; the original proportion holding between all its varied parts."

II.

New Volume in International Scientific Series.

The Physiology of Bodily Exercise.

By Fernand Lagrange, M.D. International Scientific Series. 12mo, cloth. Price, $1.75.

CONTENTS: I. Muscular Work—The Organs of Work, Movements, Heat, Combustion. II. Fatigue—Local Fatigue. Breathlessness, Stiffness, Overwork, etc. III. Habituation of Work—Power of resisting Fatigue, Modification of Organs by Work, etc. IV. Different Exercises—Violent Exercises, Exercises of Strength, Exercises of Speed, Exercises of Endurance, etc. V. The Results of Exercise. VI. The Office of the Brain in Exercise.

III.

The Religion of the Semites.

THE FUNDAMENTAL INSTITUTIONS. By Prof. W. Robertson Smith, author of 'The Old Testament in the Jewish Church,' 'The Prophets of Israel,' etc. 8vo, cloth, 488 pages. Price, $4.00.

"A right understanding of the religion of the Old Testament is the only way to a right understanding of the Christian faith, but . . . the doctrines and ordinances of the Old Testament cannot be thoroughly comprehended until they are put into comparison with the religions of the nations akin to the Israelites."—*From the Preface.*

IV.

James G. Birney and his Times:

THE GENESIS OF THE REPUBLICAN PARTY, WITH SOME ACCOUNT OF ABOLITION MOVEMENTS IN THE SOUTH BEFORE 1828. By William Birney. 12mo, cloth, with portrait. Price, $2.00.

"The abolition of slavery in the United States was neither an accident nor a miracle; it was a result of evolution. Upon the issues made the author invokes the impartial judgment of the men who write American history."

V.

Practical Hints for Teachers of Public Schools.

By George Howland, Superintendent of the Chicago Schools. International Education Series, edited by William T. Harris, LL.D. 12mo, cloth. Price, $1.00.

VI.

The Town Dweller:

HIS NEEDS AND HIS WANTS. By the late J. Milner Fothergill, M.D. With an introduction by B. W. Richardson, M.D. 12mo, cloth. Price, $1.00.

For sale by all booksellers; or any volume sent by mail on receipt of price.

1, 3, & 5 Bond Street, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 9, 1890.

The Week.

THE question of the proper duty on hat-trimmings was before the Supreme Court in the Langfeld case, and the Treasury officials should have heeded what was then said. It was again presented, in 1888, to the Federal Circuit Court in Philadelphia (in the Wanamaker case), and again the judgment was in favor of the importer, but the Treasury refused acquiescence. On October 5, 1888, Assistant Secretary Maynard asked Mr. Cheney of the Silk Association of America for his advice in regard to further resistance of the judicial power. Of course, he advised the continued levy of 50 instead of 20 per cent., the rate judicially ascertained, and the levy was made. And now comes a second decision by the Supreme Court, which, the telegraph says, will take six millions from the Treasury, which is doubtless an overestimate. But the sum will certainly be large, and by it Postmaster-General Wanamaker will greatly benefit. The 50 per cent. rate should never have been exacted. If the law was ambiguous, the lowest rate (20 per cent.) should have been assessed. The women of the country have paid the excess of 30 per cent., which will never be refunded to them, but all will go to the importers, who will have got the 30 per cent. twice, once on sale of the goods and again by the refund.

We shall see a similar result when the worsted case is reached in the Supreme Court. In fact, there are a lot of judgments piling up against the Treasury in this sinister fashion. A decision has been rendered lately by an appraiser in Chicago that the article called "degras," imported for tanning purposes, is dutiable as an expressed oil at 25 per cent., instead of a grease dutiable at 10 per cent. Degras is the grease obtained from wool in the process of removing its impurities and preparing it for spinning. It is used for the purpose of softening the upper leather of boots and shoes. The Boston *Commercial Bulletin* protests strongly against this decision, and intimates that it has been made in the interest of the producers of menhaden oil, who think that the demand for their stuff would be increased if they could get the duty on degras increased. In fact, they did get it increased in the Senate bill last year to one cent per pound. This was done on the motion of Senator Allison, without a word of explanation. It was not even stated what degras consisted of. The presiding officer of the Senate asked the Senator from Iowa how the word should be spelled, and the latter replied that it should be "de gras," as though it were two French words. No other notice was taken of the amendment. The *Commercial Bulletin* tells us there is an annual importation of ten million pounds of degras. The duty of one cent per pound, therefore, means a tax of $100,000 on the leather-manufacturers of the country. As the Senate bill did not pass, the Chicago Appraiser has lent his aid to the protection of American industry by raising the duty to 25 per cent. ad valorem. If his decision is sustained by the Treasury Department, we may look for another reversal and a fresh restitution.

Mr. Saxton has made some minor changes in his ballot bill, and has drawn a corrupt-practices bill to follow it as a companion piece of legislation. The principal change in the ballot bill is the adoption of a blanket ballot, or rather two blanket ballots, one general and the other municipal, in place of the several ballots provided for in last year's bill. He now proposes to group all the names of all candidates for national, State, and county offices upon the general ballot, and all those for municipal offices upon the other. In Presidential years the names of Presidential Electors will be put upon the general ballot. The names of the candidates are to be placed in the same party order in all the groups, with the politics of each placed after the name. He also thinks of favoring the proposal to have the voter indicate his choice by crossing off or erasing the names of all the candidates save those for whom he wishes to vote, instead of by placing a cross opposite those of his choice. Erasure is the method required under the new Missouri law, and it is favored by the Albany *Argus* and other Democratic authorities as being preferable to that of marking. As a matter of fact, the change amounts to nothing one way or another in principle, though it may facilitate both the preparation of the ballots and the counting of the vote. Mr. Saxton is wise to make it if by so doing he can get votes for the bill. His substitution of blanket ballots is also a wise one, for the practical test in Massachusetts has demonstrated their usefulness.

It is obviously the determination of all the advocates of genuine ballot reform to adhere to the requirement of exclusive official ballots as the fundamental principle of the system. Mr. Saxton declares that he will never abandon that, as "it is the vital issue of the bill," and in that position he is impregnable. His present bill, so far as we can judge of it from the brief synopsis published, is an adequate one. Under it bribers and those who accept bribes are to be punished, those who make bets or resort to violence to restrain voters from the polls, and all employers of labor who, within ninety days prior to the election, threaten to reduce wages or to discharge from employment those who may not vote as the employer directs, are subject to punishment of not less than three months' nor more than one year's imprisonment, and the forfeiture of any office to which the offending person may have been elected, with the loss of suffrage for five years. Within ten days after election every candidate must file an itemized account of his expenses, accompanied by an affidavit that it is correct. Every candidate is ineligible to office until he does this, and in the event of his failure to comply is guilty of misdemeanor. The person who accepts a bribe is made a competent witness against the person who offers a bribe. He shall testify the same as any other person at a hearing, trial, or investigation, and such testimony shall not be used against him in a criminal prosecution. If he turns State's evidence, he shall not be subjected to prosecution for such offences.

Gov. Hill pays a striking tribute to the importance of the ballot-reform question by giving more than one-half of his annual message to the discussion of it. As sent to the press, his message fills thirty-six printed pamphlet pages, and no less than twenty of them are devoted to electoral reform—five-ninths of the whole. The tone is explanatory and apologetic, and in decided contrast with that of the Governor's former official utterances upon the subject. He had the difficult task to perform of inventing an almost entirely new set of objections to the Australian system, for the complete success of the Massachusetts law destroyed all his old ones. The only one of them which he retains in its entirety is the claim that an exclusively official ballot is "unconstitutional," and he is obviously conscious that this does not carry much weight, for he puts it forward at the close in rather a half-hearted manner. Nearly all of what he says has no application to the present situation. He dwells, for example, at much length upon the point that the Australian system cannot be applied to American institutions without material modifications—a complete waste of mental energy, since nobody has said that it could, and since the necessary modifications have been made, and the modified system has been tried with entire success, and is now the law in nine American States. He recommends the secret-compartment method of voting, as effectively reaching the "two great evils of bribery and intimidation," but insists upon the use of both official and unofficial ballots, though experience has shown that the use of the latter makes the perpetration of bribery and intimidation not only easy but more systematic than ever. He repeats in a modified form some of his old objections to the official ballot as putting too much power in the hands of the county clerks and other officials, about delays in distribution, and about the disfranchisement of the illiterate voters, but fails to mention that the experiment in Massachusetts has shown them to be wholly imaginary.

Next to ballot reform, the Governor devotes more space to the subject of a new census and reapportionment of the State than to any other single topic. He begins his message, in fact, with this subject, and

very naturally, as it is one which has caused him more trouble than any other save ballot reform. Nothing that he has done as Governor has injured his party more than his veto, in 1885, of the bill providing for a new census. He thus prevented a reapportionment of the State, and, as the Democrats believe, made it impossible for them to get control of the Legislature. His pretence, which he repeats now, that he was in favor of an enumeration and not of a census, on the ground of economy, has never struck his party as adequate, and never will. But his veto, and that of the Constitutional Convention Bill of 1887, were assailable on higher grounds than those of party expediency. In both cases he usurped power which it was never intended that any Governor should exercise. Both measures were intended to set in motion governmental machinery that had as much right to move at the proper time as the Legislature has to meet annually, for both were authorized by the Constitution of the State. Continuous action of the kind on the part of a Governor would destroy free government in the State. Gov. Hill labors now, as he has done in the past, to put all the blame on the Legislature; but he cannot explain away the fact that it was his veto which prevented the constitutional requirement in each case from being carried out. The "outrageous abuse of power" which he denounces was committed by himself. It has always seemed to us that his course in regard to a constitutional convention was impeachable.

The most interesting feature of Gov. Brackett's message to the Massachusetts Legislature, so far as outsiders are concerned, is the passage devoted to the subject of liquor legislation. For many years the State has had a local-option law, which allows each city or town to decide for itself each year whether or not the sale of liquor shall be permitted. Under this law during the past year no less than 288 of the 351 towns and cities voted against licenses, so that, if the towns vote this year the same as last, after the 1st of May there will be absolute prohibition in more than four-fifths of the towns and cities of the commonwealth. When a municipality decides to license the sale of liquor, it can be carried on only under very restrictive conditions. The last Legislature passed an act by which the license fee is fixed at $500, while only one license can be granted in Boston for every 500 inhabitants, and in other cities and towns only one for every 1,000 inhabitants. Sales in these towns and cities are prohibited between the hours of eleven at night and six in the morning on every week day, at all times on Sunday, on all election days, and on legal holidays, except, in certain cases, by druggists and by licensed innholders to their guests. They are prohibited in any building within 400 feet of a public school, and in any building within 25 feet of any real estate the owner of which duly objects to the granting of a license therefor. Every license to sell liquor to be drunk on the premises is subject to the condition that the licensee shall not keep a public bar, and shall hold a license as an innholder or common victualler; and this latter he is not entitled to hold unless actually carrying on the business specified. "The meaning of the law," says the Governor, "clearly is that, while liquor may be sold by a licensed dealer, like other merchandise, to be carried away, it shall not be sold to be drunk on the premises except in hotels and restaurants. The obvious intent is to do away with the dram-shop and the public bar, and only to allow the licensed proprietors of hotels and restaurants, as incidental to their business as such, to furnish liquor to their bona-fide guests."

The result of all this is that, under the local-option system, prohibition prevails in those towns and cities where public sentiment demands it, being 82 per cent. of the whole number, while severe restrictions are placed upon the sale of liquor in those places where the voters decide to license its sale. Each community, if it chooses, can absolutely forbid the sale, while license by no means signifies liberty to start a liquor-saloon anywhere. The Governor heartily endorses this system, and in so doing simply represents the public sentiment of his State.

The wool-growers last year went to Washington and pushed and pulled for higher duties on wool, and got what they asked for because there was no effective resistance to them. Their bill did not pass, because one branch of Congress, being Democratic, was committed to free wool. The Senate yielded to the outlandish demand, but the House did not. This year both branches of Congress are Republican, and it has been assumed that the Senate bill of last year would be taken up and passed without much modification, and without any so far as the wool schedules are concerned. So confident were the wool-growers of this result that they demanded a special session of Congress last October expressly to act upon their measure, and it was thought at one time that they would get it. But another class began to take an interest in the subject of wool duties. The manufacturers prevented the special session, and now they have appeared at the tariff hearings of the Committee on Ways and Means in sufficient force probably to defeat the Senate wool schedule altogether. The petitions presented or to be presented by Mr. Frank P. Bennett of nearly one thousand manufacturers, most of them in favor of free wool, and the others in favor of lower duties, are the most weighty demonstration against robbery by tariff that the present generation of Americans has seen. To us it seems to mark the turning of the tide, since it betokens the rising of an interest strong enough to make itself heard and felt at the seat of Government in opposition to the practice of letting everybody rifle his neighbor's pockets as much as he likes. When the practice is once checked —it makes no difference at what point on the road—the opposite policy will begin to make headway.

The *Manufacturer* of Philadelphia publishes without comment a letter from Mr. F. B. Crawford *against* bounties and subsidies for shipping, in which the *reductio ad absurdum* is pretty effectively employed. It would be desirable, Mr. Crawford thinks, that the bounty system, if adopted, should result in giving us at least one-half as much steam shipping as Great Britain now enjoys. If it should have that effect, then "if each steamer traversed 30,000 miles per annum, a low estimate, and received thirty cents per gross ton (as proposed by the bounty bill) per 1,000 miles, the annual cost would be about $44,000,000. If this were to come from the national surplus," he continues, "owners would doubtless conclude, after the third dividend, that they had been induced to build their vessels under false pretences, for by that time a reaction in the public mind might be expected." As a method of getting rid of the surplus, this would surpass any new pension law now contemplated.

A correspondent inquires why we cannot have a permanent tariff commission to take the tariff question out of politics, in the same way that the Inter-State Commerce Commission has taken the railroad question. The answer is, that there is no objection to such a commission except its uselessness. The existence of such a commission presupposes that Congress, after creating it, will let the tariff alone, or only meddle with it when and as the commission shall advise. But we all know that Congress will do nothing of the kind. The reason why Congress will not let the tariff alone, either before or after creating a commission, is that the people, who elect Congressmen, will not let it alone. In other words, the desideratum of a tariff that nobody will attack is not to be found short of the kind of tariff that Great Britain has—*i. e.*, one from which the protective element has been wholly eliminated. Even that kind of a tariff would be exposed to the attacks of the Henry George men, who want to have all taxes imposed upon land values. In short, the proposition in question is to have a free people abdicate for the time being the exercise of self-government touching the particular branch of government which most nearly concerns their welfare. The analogy of the Inter-State Commerce Commission fails in this, that the latter body simply interprets and enforces an existing law subject to appeal to the regular judicial tribunals. It stands towards the Inter-State Commerce Law exactly where the collectors of customs and the Secretary of the Treasury stand towards the Tariff Law.

To any who think that a permanent tariff commission would be a useful adjunct to our Government, the example of the last Tariff Commission should serve as a warning. No body of men ever worked more diligently, few ever worked more conscientiously. It was composed of protectionists of a pronounced type. It possessed the confidence of the Republican Administration then in power and of the Republican party generally. Yet its work was treated with no more civility or consideration by Congress than that of any college debating society.

If it had been a permanent instead of a temporary commission, the members must have tendered their resignations in a body if they had preserved any notions of self-respect.

Very slight attention has been paid to the recent investigation by a Senate committee of our relations with Canada. There is no election pending now, and consequently no occasion for lashing ourselves into fury respecting the fishery question or the encroachments of Canadian railways. The testimony of ex-Collector Babson of Gloucester, Mass., however, seems to call for some notice. According to the newspaper reports, Capt. Babson contended that American fishermen had a grievance in "the denial to them of the right to buy anything that is lawful and proper in every Canadian port, or the denial to them of rights that are accorded other commercial vessels. The witness advised as a remedy that proper legislation in Congress should be taken, and advocated retaliation as the very best way to obtain the end sought for." The "anything" which is denied to American fishermen in Canadian ports (which means Newfoundland) is bait, which is caught only in the bays and inlets of Newfoundland, and which gives to that island all the territorial value which it has in respect to its fisheries. To surrender this privilege is equivalent to surrendering its shore rights and its territory, and this Collector Babson knows full well; but he talks in a way to give a popular impression that the Dominion of Canada is denying to the United States something contrary to international comity. The Dominion of Canada might as well allege as a grievance against the United States that its fishermen are not allowed to collect oysters in Chesapeake Bay or in the inland waters of Virginia. The authorities of Newfoundland have as indisputable a right to say how this bait, caught only in her inland waters, shall be collected, and how it shall be used, as the United States have to deny to Newfoundland fishermen the privilege of selling their fish in our markets. And yet Collector Babson would try and persuade our people that we have a cause of grievance against Canada worthy of such retaliatory proceedings as might occasion war; and in so doing his conduct is open to the most serious animadversion.

Whatever opposition is made to the confirmation of Gen. T. J. Morgan as Commissioner of Indian Affairs when his name comes before the Senate will rest on two grounds, viz., the result of his trial by a court-martial during the war, and his alleged unfriendliness to the Roman Catholics in his government of the Indian schools. The weight of evidence as regards his court-martial, presented since his nomination by the President, favors the assumption that he was the victim of one of those unjust verdicts which are recorded during every war either by military tribunals or by individual commanders. Of the first of these the case of Gen. Fitz-John Porter is an example; of the second, the case of Gen. G. K. Warren. As regards the complaints of the Catholics, recently published statements by Bishop Ireland and Mr. Herbert Welsh, giving both sides of the matter, lead only to the conclusion that the Indian Commissioner views the Indian schools in the light of public schools, holding that Government money should not go to those that are strictly sectarian; while the Catholics would demand a share of the Government funds for their Indian schools, just as they are constantly contending for a share of the school money in the States for their parochial schools. We think that public opinion will sustain Commissioner Morgan in his treatment of this question. It is a strong argument in favor of his confirmation to find him zealously supported by the organizations which make the welfare of the Indians their special study, and have fought so long to divorce Indian government from party spoils.

The account of the shabby treatment which our Government has accorded to the foreign delegates to the International Marine Conference is very unpleasant reading for Americans. As a people we are generous in our hospitality, and it is humiliating to learn that we are not so as a nation. The Conference was called by our Government; the delegates came to it at our solicitation and as our guests. Foreign governments, as is their custom in such cases, sent to us their most eminent representatives of the profession whose rules and general practice were to constitute the subjects under discussion. If the same men had come to our houses as private guests, they would have received the most cordial and lavish hospitality which it had been in our power to give. Yet, chiefly through the niggardliness of Congress, as a nation we showed ourselves to them both stingy and ill-mannered, not even furnishing suitable quarters for their deliberations, though our chief problem in government is to know how to dispose of our enormous surplus.

Immediately upon the passage of the French military law of the 15th of July, 1889, M. de Freycinet appointed a commission to consider and report upon the question of dispensations from service, and to draw up a body of rules under which the article 23 of the law, which concerns exemptions, should be put in force. This commission performed its delicate and difficult task with as much despatch as was possible, and its report was sent to the Conseil d'État, where it was debated, and the *règlement d'administration* which was its result was signed by the President and published on the 23d of last November. There seems to be no doubt that it has created a good deal of discontent among the French middle classes. One regulation especially gives them trouble, namely, that which permits certain classes of students at the École Normale Supérieure to get off with one year's service with the colors, in case they anticipate conscription and voluntarily enlist at the age of eighteen.

One result of the law, which very likely was not expected, will be to crowd the favored schools with aspirants for degrees and exemption from service. As the *Journal des Débats* says:

> "It is impossible to conceal the fact that the French *bourgeoisie* regards with the gravest concern the prospect of its sons being doomed to spend three years of their life in barracks. It will do all it can to avoid that misfortune. To obtain a reduction in the time of his military servitude, the young French *bourgeois* will use every effort to gain a diploma, even if it be that of an apothecary or a veterinarian. Those who despair of obtaining one will go in for the study of music, and if fugue and counterpoint are beyond their reach, they will attempt to excel on the trombone or the cornet."

"Culture," it appears, will become general. The land of *la gloire* will be filled with Sanskrit scholars and trombonists who have become such in order to avoid the path to glory. But the *Débats* really seems to think the case serious, and urges the Conseil d'État to revise the law, and at least to give to the commercial schools the benefit of the reduction of time of active service which is now enjoyed only by the École Normale.

Early in the sessions of the Austrian Reichsrath, the question of the national aspirations of Bohemia, and the proposal of the Young Czechs that Francis Joseph should be crowned King of Bohemia at Prague, had an airing. A German Liberal deputy, Herr Plener, interpellated the Government about the whole matter, asking Count Taafe what he meant to do in the premises, and fiercely denouncing the national movement and the new Governor of Bohemia. A Czech orator replied, asserting that the Bohemian Diet was the place for such discussions. As the German members of that Diet have abandoned their seats, as a last and desperate protest against the Young Czech party, this thrust was a deserved one. The representative of the Czechs went on to say that his party had come to power in Bohemia in the face of a constitution and electoral law expressly designed to keep them in the minority, and that now the Germans were demanding that the majority should surrender to them. The President of the Council, who is supposed to be not averse to such displays of national animosities, since he is playing one party off against another, declared that he should continue in his course of conciliation and regard for the interests of all parties, and promised to give a full answer to the interpellation in January. But he concluded to do it sooner, and, a few days after, stated that the Government had no idea of consenting to the crowning at Prague, or of taking any other imprudent step which might stimulate race prejudice and seem to impair the unity of the empire. Still it was not hostile to the proper national spirit of Bohemia, which it would consult and favor in all legitimate ways. He advised the Germans to go back to their seats in the Diet. Those seats, by the way, have been declared vacant, and new elections ordered to fill them. The Germans will stoutly contest the elections, but will not occupy the seats, so it is said, even if they win them again.

THE OPPORTUNITY OF THE DEMOCRATS.

At the present juncture the Democratic party occupies an exceptionally favorable position. Its accession to power was generally dreaded, but, whatever it failed to accomplish, it at least proved that its policy involved no marked injury to the country, and most of the arguments *in terrorem* that were used against it have lost their force. The immolation, so to speak, of Mr. Cleveland kindled a fire that burns much fiercer now than it did a year ago, and is causing obvious consternation in the Republican forces. Their majority is very small, and they can scarcely adopt a measure that will not make it smaller. The country is aroused about the tariff; it demands a reduction, but the Republican party cannot offer one. The talk of a tariff bill is idle. The interests that suffer under the present high duties will not tolerate an increase, and the interests that have profited by them have grown too arrogant to permit a reduction. With a large majority it would be possible to offend some of the members of the party for the sake of placating the country; but with a small majority this policy is impossible, for the majority would disappear in the process.

The trouble is, that the party is no longer held together by any proper tie of loyalty, or by devotion to any lofty ideal. It is controlled by a ring of wealthy and corrupt men, whose bond of union is greed, and who regard government in modern times as an instrument of plunder much superior to the mediæval contrivances. It would be adding insult to injury for these men to ask one of their number to relinquish his share of the booty in order that the rest of them might continue their operations with greater safety. What are the interests of the party to him if he is to make no money by its success? There is a certain precarious honor among thieves, but it has never been carried to the quixotic extreme of expecting loyalty from a brother who was omitted in the division of the spoils. In short, the Republican ring is not strong enough to dispense with the support of any of its members, and it cannot touch the tariff without alienating some of them. The party is fairly caught between the devil of protectionism and the deep sea of popular odium. Apparently it is bound to work out its own destruction without assistance.

It is, however, in the power of the Democrats to accelerate the catastrophe materially. While they were in power they were hampered by responsibility. They had the whole matter of the tariff to deal with, which was very nearly the same as having to undertake the regulation of all the business of the country. Their policy, although creditable to their courage, inevitably united the opposition. It brought out the whole of the forces of the protected interests and illustrated the maxim, *Beati possidentes*. But now that the Democrats are in opposition they can fight with a freer hand. It would be folly for them to attempt to bring forward the Mills bill again. The country would understand that there was no hope of passing it, and would regard it as an idle manœuvre. What they should do is to unite, as they easily can, upon some simple measure which will divide their opponents. It is a question for careful consideration, but probably a bill for the abolition of the duties upon wool would be most difficult for the Republicans to face. A number of their Representatives would see at once that opposition to such a measure would mean for them a quick return to the obscurity of private life, and would be tempted to manifest an independence that would be personally advantageous. Some even of their Senators might feel that, in the course of human events, a record of opposition to such a measure would stand in the way of a re-election.

While it is perhaps hardly probable that the Democrats could force such a measure through Congress (although a great many Republicans would be secretly delighted to see their despised and detested leader compelled to assume the odium of vetoing it), yet the mere attempt, if boldly and skilfully managed, would be extremely demoralizing to their adversaries. The example of the overthrow of the quinine tax should not be forgotten. But the principal advantage to the Democrats would be derived from the popular interest which would be aroused in the struggle. The general subject of protective duties is altogether beyond the comprehension of most people. It does not interest them, and it is too vast and intricate a matter for them to grapple with. The number of persons who have sufficient mastery of political economy to discuss it intelligently is extremely small, and without this mastery of principles it is impossible to accomplish anything by an appeal to facts. A system of customs duties is intrinsically dry, difficult, and complicated; common people cannot understand it and do not want to be bored with it.

A tax upon a single article of universal use is a very different matter. It seems to be a very concrete thing, although it is in reality abstract enough. It is to be remembered that the reform of the tariff in Great Britain began with the overthrow of the corn laws. There was a tax upon food, and there were people starving; from these simple premises every one felt competent to draw a conclusion. It is true that a tax upon clothes does not arouse the same degree of indignation as a tax upon bread, but, after all, there is, perhaps, no greater blessing to the poor in such a climate as ours than woollen clothing. Many a sturdy fellow has fallen a victim to consumption or been crippled by rheumatism who would now be in vigor if the laws of his country had allowed him to use one of the most beneficent gifts of nature. This wonderful fibre is an indispensable protection to all whose toil is attended with exposure to cold or wet or heat. It makes the warmest clothing in winter and the coolest in summer. It is the only safe covering for the human body by day and the only suitable covering by night. There is something hideously mean and contemptible in the avarice of our woollen-manufacturers, who have succeeded in depriving the toiling millions of this country of wholesome clothing and compelling them to swelter and shiver under wretched mixtures of cotton and shoddy, all for the sake of maintaining a tax that has been as often ruinous as beneficial to those who imposed it. They took advantage of the generous outburst of patriotism at the beginning of the war to pocket enormous bounties, and manifested their gratitude by furnishing our gallant volunteers with clothing that left them a prey to diseases more fatal than the bullets of the enemy. The lofty words of Mr. Cleveland's speech at Boston should shame them into abandoning their sordid policy.

But whether they are likely to be affected by such considerations or not, they would be extremely likely to discern that free wool would be to their immediate advantage. They would be aware that the bounty upon their own products would be next done away with, but they are sufficiently astute to see that it is already doomed, and to reason that if they can have two or three years of large profits before retribution overtakes them, they would be very foolish to refuse them for the sake of suffering as much as their companions. Some of them, also, are wise enough to see that if they could have free wool, they would need no more protection than they would be quite sure to get. Altogether it is highly probable that the opposition of the woollen-manufacturers to a bill for the immediate abolition of the duties upon wool would be of a feeble character, and it is certain that they would be justly or unjustly suspected of lukewarmness. As it is only with the greatest difficulty that discipline is at present enforced in the Republican ranks, such an occasion would probably lead to open mutiny.

As to the employees in the woollen mills, there can be no doubt that they would heartily support such a measure if it were once proposed. In addition to the gain in better clothing, they would see that free wool would set thousands of idle spindles turning, and that increased production would bring increased wages. The remote consequences to the sacred principles of protectionism would weigh little with them against such immediate advantages as these. There is good reason to suppose that the common people of the country would take the same common-sense view of the matter. If the issue were made plain to them—and such an issue could be made plain—that they were to choose between the solid and tangible advantages of good shirts and coats and blankets and carpets at prices now paid for wretched substitutes, and the remote and abstract blessings of a protective tariff, they would not long hesitate. Let the Democrats identify themselves with a measure of this kind, and their success is assured. Every advantage of discussion would be with them, and their opponents would be restricted to labored and sophistical generalities. Whether the bill were carried or not, the gain to the Democrats would be the same. Such a measure is by no means the ideal of tariff reform, but it is a safe prophecy that it would be followed by such a bound of prosperity as to make systematic revision easy. Once let us have a concrete in-

stance of the advantages of free trade, and the terrors that surround the name will lose their power to affright our people.

PROMOTING MENDICANCY.

THE renewed attempt by Senator Blair to secure the passage of a bill for Federal aid to education in the South requires a renewal of efforts against this pernicious scheme by all friends of the public-school system. Happily the opponents of the project have now abundant assurance that public sentiment throughout the country is with them, and that Congress will be heartily supported by the people of the South as well as of the North in defeating the bill.

It is now eight years since the Blair bill was introduced in the Senate. It was brought forward upon the plea that the South was "impoverished by the war," that she was then raising all the money for the support of schools which it was possible for her to raise, and that no improvement could be expected for years to come unless aid were given from Washington. It was therefore proposed to pass a bill "to aid in the establishment and temporary support of common schools," such aid to cover a period of eight years.

The eight years have now passed, and it has been conclusively shown that there was no necessity for the passage of such a bill Not one cent of money has been voted from Washington, and yet the amount of money expended for the support of schools in the South is now many millions more than eight years ago, when the advocates of the Blair bill claimed that the limit had been reached. The New Orleans *Times-Democrat*, which has for years made a specialty of collecting the statistics of Southern progress, published a statement last September which showed that the school revenues in the Southern States (excluding Delaware, Maryland, West Virginia, and Missouri) were only $6,145,706 in 1880, and had much more than doubled in 1889, amounting last year to $13,905,304.

A recent letter from the Superintendent of Public Instruction in Florida gives the school statistics for the year preceding the passage of the Blair bill and for the eighth succeeding year. During this period the number of schools increased from 1,131 to 2,249, the number of scholars from 39,315 to 82,323, and the expenditures for schools from $114,805 to $484,110. Superintendent Russell shows how this increase has been the outgrowth of public interest in the school system, and points out how normal and healthful this development has been.

Florida has perhaps made the most rapid progress in this matter of all the Southern States, although she is hard pressed by Arkansas, where within a period of three years there was an increase in the number of teachers from 2,462 to 3,691, in the number of pupils from 112,233 to 175,935, and in the expenditure for school purposes from $479,471 to $866,892. The Superintendent of Public Instruction in the latter State reports that "there is no State in the Union which pays more for education in proportion to her taxable property than is paid by Arkansas," and he calls attention to the significant fact that "this constant increase in our revenue is due to the district tax voted by the people. This constant increase is conclusive evidence of the increased interest in public schools, and of the fact that all prejudice is fast giving way, and public sentiment is outspoken in favor of public education."

The educational progress of Florida and Arkansas is not due to their exceptional wealth or prosperity, but simply to the fact that the dominant sentiment in those States became early impressed with the necessity of securing good schools, and that the people went to work to get them, without waiting to see if they might not get the necessary money from Washington. The example of Florida and Arkansas has done much to stimulate progress of late years in other Southern States which have been more backward, and they are constantly held up as models before the people of such States by their Superintendents of Education. Thus, Superintendent Palmer of Alabama says: "Florida, with taxable values amounting to only $86,000,000—much less than one-half of ours—pays for public schools $447,000," being more than Alabama has raised up to last year. Superintendent Finger of North Carolina shows that, if all the school expenditures were raised from tax on property, the rate would be only thirty-one cents in North Carolina, against fifty-nine cents in Florida and sixty cents in Arkansas.

The plea that the South is too poor to provide good schools can no longer be urged. The whole Southern press is constantly celebrating the rapidly growing prosperity of all that section. The New Orleans *Times-Democrat* showed last September that the assessed wealth of the South, which was only $2,164,792,795 in 1880, amounted to $3,759,053,367 in 1889—an increase of almost 75 per cent.; while the value of agricultural products had risen from $611,679,048 to $868,979,523, and of manufactures from $315,924,000 to $651,202,000, with a growth of railroad mileage from 17,808 to 36,686. No wonder that, after such an exposition of the progress of the South in material prosperity, Southern people are growing disgusted with the talk about their being still "impoverished by the war" and too poor to support their schools. The Louisville *Courier-Journal* vigorously expressed the prevalent feeling when it said not long ago: "The Southern people are becoming weary of the assertion that they are too poor to educate their children. It is not true, and it is not creditable."

The evidence that the South is able to support her schools, and that the readiness to support them grows with the ability, has caused nearly all of those who once favored Federal aid to oppose any attempt to carry out this project now. The New Orleans *Times-Democrat* well expressed the feelings of many such people in the South when it said it had been "shown that if the Southern people will really exert themselves, they can solve this problem. After calling, like the carter, for Hercules for years, we have discovered that, if we put our shoulders to the wheels, we can get our cart out of the ruts." This change of attitude has been most striking in the case of those educators who are especially devoted to the elevation of the negro, among whom Gen. S. C. Armstrong of the Hampton (Va.) Institute is most conspicuous. He was formerly a supporter of the Blair bill, but has come to oppose it strongly, on the ground that the South does not now need such aid, and that under such circumstances the aid would do more harm than good.

The passage of the Blair bill now would simply promote mendicancy. Left to themselves, the Southern people are building up school systems of which they are proud. As the Savannah *News* has put it, "the more the schools cost, the more they will be appreciated." But if the Federal Government were now to interfere, as the *News* says, "the people would feel less like taking money out of their pockets to support them." Moreover, the inevitable effect of receiving assistance from Washington temporarily would be to make the Southern people feel that they must have such aid permanently. As the Charleston *News and Courier* says, the proposed plan is only a makeshift, and "would leave the States and the schools in a worse condition than they are at present or ever have been since the system of public schools was established." At the end of the eight years "the States would find it to be impossible to get along without Government crutches, and we should have the mendicant policy of education fastened upon the country for eighty years or for ever."

The sober second thought of the nation condemns this scheme. The leading educators and newspapers of the South earnestly protest against it. Nor has the project any more strength at the North than at the South. The representative journals of both parties condemn the bill, and it has hardly an advocate of any sort left in the press. This rejection of the bill by public sentiment should be reflected in its rejection by the Senate. At first it passed that body by a vote of three to one. In the last Congress it secured only ten majority, so that a change of five votes would have prevented its passage. This year there ought to be a good majority against it. Its further agitation only harms the cause of education in the South. Much greater progress would have been made if it had never been heard of. The Macon *Telegraph* declares that "there is no doubt that the movement to improve our schools, now so well under way, would have become effective sooner but for the prospect that the school funds of the States would be increased by Federal appropriations." Let not the Congress of the United States any longer put such obstacles in the way of Southern schools.

MR. LOWELL ON BEHALF OF THE MODERNS.

IN another column will be found a short account of the recent convention of the Modern Language Association at Cambridge. The chief attraction of the meeting was the ad-

dress of James Russell Lowell, who has been for some time and continues to be the President of the Association. The general spirit of the occasion was purely scientific, but a formal public address by Mr. Lowell is a literary event which may properly claim our attention by itself.

The speaker began by recalling the fact that when he last stood before a university audience, it was at a festival of a college founded to perpetuate sound learning chiefly through the instrumentality of the Latin, Greek, and Hebrew languages. Among the founders of Harvard were doubtless many who thought that nothing written in any living language could itself live. Latin was for them the only "infallible pickle." Thence came the predominance of the classics in the older education, and the contempt in which the modern languages (if they were ever heard of at all inside college halls) were held by both students and teachers. "I confess," said Mr. Lowell, "that I was a great while in emancipating myself from the formula that prescribed the Greek and Latin classics as the one true church of culture outside of which there can be no salvation. I am not sure that I have wholly emancipated myself even yet." The speaker then dwelt for a while upon the value of the old formula, its historical import to mankind, and the tenacity with which it clung to life after its exclusive claim had been discredited by the upspringing of a new modern literature of no less power and vitality than the old. He disclaimed any intention of renewing the "Battle of the Books," and did not wish to be understood as in any sense undervaluing the old classical culture; but on this occasion "he held a brief for the modern languages, and was bound to put their case in as fair a light as possible."

Mr. Lowell next proceeded to consider the benefits of literary study in any foreign language, whether ancient or modern. To know another literature than that of one's own tongue, he urged, broadens the mind, enlarges its range of comparison and strengthens its judicial faculty. The usefulness of translation was touched upon. Through the effort to translate we first really learn the secret of the word we have been using all our lives, and are gradually made aware that to set forth even the plainest thought as it ought to be set forth is a very difficult thing, and, moreover, an affair of conscience. In fine, translation helps us to a right feeling for style in the deeper sense—the style which is not merely the form, but the very life, of literature. It is to style in this sense that we give the name of genius, that "insoluble ingredient which kindles, lights, inspires, and transmits impulses to other minds; which awakens in them energies hitherto latent, and makes them startlingly aware that they too may be parts of the controlling purpose of the world." "The day will come," Mr. Lowell continued, "when it will be understood that the masterpieces of all languages are not to be classed by any arbitrary standard, but stand on the same level by virtue of being masterpieces; that the poets of all climes and ages sing to one clear lute in many keys, and that the masters of prose in whatever tongue teach the same lesson and exact the same fee."

In concluding, the speaker said that he rejoiced in the progress of modern philology, but held that philology, good as it is in itself, should lead to something better, namely, literature. The blossoms of language should not be neglected for their roots. He deprecated, too, the setting of ancient and modern literature over against each other as adversaries; rather should the feeling prevail that each can be fully understood only in the light of the other.

"What I urge," said he, "is that no invidious distinction be made, as sometimes used to be and sometimes is, between the ancient and the modern to the disadvantage of the latter, but that students should be encouraged to take the course in modern languages as being quite as good in point of discipline as any other, if pursued with the same thoroughness and to the same end; and that end, as I have said, should be literature, in which alone language attains to a full consciousness of its power, and the joyous exercise of it. It is only through literature that we become complete men; for there, and there only, can we learn what man is and what man may be. For it is nothing else than the autobiography of mankind."

This epitome reflects as well as an epitome can the general drift of the address. To its style our report does but meagre justice. We have quoted from the best of the reports in the Boston papers, but this only gives here and there an adumbration of the captivating literary workmanship which delighted those who heard the address. It was a classic of its kind, and some of its phrases, we dare predict, will prove to be lastingly "pickled" for future use. It is not hard to imagine our epigoni in some remote generation as exercising themselves over the authorship of the "quotation," "Dante was a genius, and language courtesies to its natural king."

If we were to animadvert upon any point in the address as one that might bear putting in another light, it would be Mr. Lowell's antithesis of philological and literary study. We do not mean by this merely an objection to the use of "philological" as a synonym of "linguistic," though there are certainly reasons for liking Prof. Whitney's broad definition of philology as "that branch of knowledge which deals with human speech and all that speech discloses as to the nature and history of man." But whether we understand philology to include all that pertains to literature or not, is it not better to refrain from pressing the antithesis of literary and linguistic study? Is it not better to insist that the study of literature and the study of language are not two studies whereof the one is nobler than the other, but one and the same study, the worthiness of which depends upon the spirit in which it is carried on? Mr. Lowell's intention was, doubtless, to raise his voice against that which he long ago characterized as the *teredo* method—that is, against the scholarship which becomes absorbed in the letter that killeth, to the neglect of the spirit which giveth life. There is always a certain timeliness in this admonition. Beyond doubt the highest benefit that can come from the study of literary records is the getting of information such as can be related to life for the making of better and fuller men. Still, the truth is, that whether any particular line of study is capable of being so related or not, depends not so much upon any peculiar dignity inherent in the nature of the facts dealt with, as upon the character of the man who deals with them. Darwin breeding pigeons, Grimm puzzling at old German manuscripts, and Carlyle fuming over the rubbish-heaps of Dryasdust, were *teredos* to many who saw them at it, but they are imposing enough in the retrospect. Do we gain anything by conceiving literature as the soul, the essence, of which language is the body, the form? Is it not nearer the mark to say that literature *is* language, and that the student of it in any of its aspects has a right to feel that the pursuit of accurate philosophic knowledge, whatever be the field of his special interest, is one of the noblest of vocations, and that it is simply his own fault if he allows his better self to be submerged and smothered by his material?

NORMAL SCHOOLS IN SPAIN.

It was in 1839 that the normal-school system of Spain was founded. Beginning with the Central of Madrid, in that year, the establishment of such schools went on steadily throughout the provinces till 1849. Since that date things have remained nearly stationary. From two recent articles on the subject by Don Nícolas Díaz Pérez in the *Revista Contemporánea*, it appears that at the present day the number of normal schools for the training of male teachers is forty-seven, leaving but two provinces unprovided for, and for women teachers thirty-three. They are supported by the central Government at a cost—we quote from the estimates for 1889–'90—of $187,965. Up to 1886 the provinces themselves had paid the expenses of their own normal schools; but a decree of April 30, of that year, brought them all under the care and direction of the Government at Madrid. Something like one-quarter of the sum named above is expended on school appliances; the rest goes for the salaries of teachers.

As may easily be inferred, the remuneration thus provided is far from being luxurious. Great inequality and much apparent unfairness are displayed in the assignment of stipends to teachers who are supposed to be in the same grade and doing the same work. This is particularly true of the normal schools for girls. Thus, the head of one such institution receives the munificent salary of $150 per annum, and her assistants correspondingly less. From that amount the income of a directress of a normal school for females varies up to $1,000, the highest. There is more uniformity in the cases of the male professors. The law of public instruction fixes the salary of a director of a normal school of the first class at $600, and of the second and third classes at $500. Their assistant teachers receive from $350 to $400. So far the law, which is certainly in itself not calculated to throw a glamour about the life of a teacher; the salaries, in fact, remain precisely as they were in 1857, although the general scale of living and of earning has meanwhile advanced considerably. But the

law in Spain is subject to as much twisting and manipulation, and for the same reasons, as with us, and the professors with a "pull" are the ones to find their salaries strangely increased, and their exorbitant demands for "general expenses" promptly granted. Those not so happily circumstanced have, of course, to take the resulting pinch of economy, while all, owing to the frightful condition of the Spanish Treasury, often have to wait months for even their meagre stipends.

Spain's entire budget for education is painfully small, only $1,500,000 for everything — primary schools, normal schools, State Universities, and all. Yet it is estimated that two-thirds of the population are illiterate. It ought to be remembered, however, that a vast number of ecclesiastical schools, of all classes, exists without direct pecuniary aid from the Government. Nevertheless, in all together, public and private, no more than 1,769,602 scholars were registered in 1880. Even that number represents a gain of 300 per cent. since the establishment of the normal schools, and their advocates point with proper pride to such a result.

The course of study in the normal schools is, according to Señor Pérez, in a very chaotic condition. Strictly, they are still under rules devised in 1849, slightly modified by a law of 1857, and this fact alone is enough to prove that they are behind the times. But things are not everywhere so bad as they might be supposed from this, since independent initiative has done a good deal, in some places, to remedy a defective law. The two great normal schools in the capital, for example, display much teaching abreast of the best in any country. But there is crying need of a thorough revision of the whole system, with unification of the instruction given, and the introduction of modern methods.

Unfortunately, the reform proposed by the Government is in the direction of the suppression of a large number of the schools outright. The Count de Xiquena, Minister of Public Instruction, has recommended that sixty-one of the normal schools be abolished. He would leave but twenty in existence outside of Madrid. His argument is that the latter number, advantageously grouped and brought into relations with the universities, would be ample for the educational needs of Spain. It is not a motive of economy that actuates him, he maintains, but a desire to give a better equipment and efficiency to a few schools in the place of supporting four times as many to so little purpose. Probably neither the Count nor the straitened Administration would be averse to the saving of expense, which their political opponents allege to be their only aim; but they will find it almost impossible to get the provincial Deputies to consent to the abolition of local institutions in which the people take as much pride as they do in the normal schools.

RECOLLECTIONS OF ROBERT BROWNING.

ROME, December 17, 1889.

BY the death of Browning a circle of his old friends in Rome is sadly and unexpectedly bereft. He had, indeed, enthusiastic admirers in Italian circles. The Queen of Italy studies his poetry, and knows much of it by heart. The King feels that Browning belongs, in a sense, to this country, and has expressed his sympathies to the family. But Browning's English and American friends feel as if some near relative were lost. Lord Dufferin, the English ambassador here, and Lady Dufferin—who has made her début as an authoress—and the Stillmans, and the Storys, who were just rejoicing that Browning had returned to Italy, can hardly feel these skies so bright and kind as they shine on the grave of Browning. It was but a few weeks ago that Mr. Story, the sculptor, was rambling with him at Asolo, through the by-ways where dear "Pippa" passed. Mr. Story tells me that Browning seemed to preserve an immortal youth. "Fifty years ago," he said, "I rambled here, and wrote the poem, and now I have returned to see it again." "It is all beautiful," said his friend, "but will you please show me Pippa?" "I wish I could," said Browning; "Asolo is here, the Bishop's palace remains, but the girls —are gone!" As Mr. Story was about to drive away, Browning bent his face into the carriage window and said, "More than forty years of friendship, and never a break."

Although Browning was seventy-seven, he sat in the sunshine of life, like the old king in his poem, so happy, so beloved, that there seemed no reason he should ever die. But two weeks ago a friend of mine saw him in his box at the opera in Venice, listening to "Mignon," and a picture of serenity between his American daughter-in-law and a pretty young lady visiting her. One of his friends, however, Dr. George Bird of London, discovered at the close of November that all was not right. He was in a small company invited by Mr. and Mrs. Curtis, American residents in Venice, to hear Browning read some of his new poems, and on the following evening dined with him. After dinner Browning, in his merry way, boasted of his health and held out his pulse. Dr. Bird tells me that he discovered at once that degeneration of the heart had set in, though he did not so inform his friend. There is reason now to suspect that the two flights of stairs by which he had to mount to his rooms in his son's superb Palazzo Rezzonico were not helpful in his case. "Give me the happy man!" He who so wrote was happy to the last. Death did not touch him painfully. Shortly before his death a telegram from London came, telling him of the large subscription sales of his new volume, and the fine reviews. He smiled and said, "We have much to be grateful for." Notwithstanding his humorous remark to Dr. Bird, this new volume, and especially its epilogue—brave as pathetic—indicates a feeling that it would be his last word to the public. He wrote his own epitaph in the last line of the book: "Speed—fight on, fare ever, There as here."

Italy may well mourn. She has lost a constant lover, and one in whose development she may claim a large share. The blue sky bending over us to-day, while more northern regions are snowy and foggy, shines on his finest pages. He once told me, in England, that he missed some of his lyrical fire. Perhaps the sombre sky and sterner aspects of human life to which he had returned had something to do with it. His optimistic muse could not be so confident in London, and had to preach a good deal about the problems of Evil. It was comparatively easy to take the rosy view of Italian affairs, in which he was always deeply interested. He regarded the triumph of Italy as assured, and offended the Mazzinists—who are still irreconcilable—by exclaiming, in a circle of them at my house in London, "Poor Mazzini!" It must have been with a sense of relief that he left the embittered political atmosphere in England for his peaceful retreat in Venice, selected (a Roman paper states to-day) because of the great sorrow associated with Florence. But Florence mourns him, and, although a decree prohibits further burials where his wife lies, it is possible that an exception might be made in his case were it not understood that England will claim his dust for Westminster Abbey.

I enjoyed Robert Browning's friendship during many years, and have many letters from him; but I am far away from my papers at this moment, when I cannot forbear writing about him. When I first knew him, twenty-six years ago, he was living in Delamere Crescent with his father, sister, and son. The father was a notable man. Dante Rossetti always contended that there was something Semitic in Robert Browning's handsome countenance, and the fact that his father had been a clerk of the Rothschilds added plausibility to the supposition. The family were, of old, Congregationalists in creed, but the elder Browning, as I remember, did have a slightly Jewish complexion. It was an old family; the original name, Browning told me, being De Bruni. The old gentleman's brain was a storehouse of literary and philosophical antiquities. He was completely versed in mediæval legend, and seemed to have known Paracelsus, Faustus, and even Talmudic personages personally. He was modest with his learning, a perfect gentleman. Browning in those days petted a white owl, which his son had found somewhere. His memory lingered fondly in Florence. One day he went over with me carefully his wife's Bible, in Hebrew and Greek, containing her marginal notes and retranslations from both languages. "Think of such learning!" he said. He gave me some manuscripts to be sold in America for the benefit of the freedmen. One was the wrapper of some old MSS. on which was written, in his own hand, in Greek, Ἐνικῶμεν ὡς ἐβουλόμεθα. "Yes," he said, "we conquered as we wished." This was long before the honors heaped on him at Oxford (which fairly adopted this son of University College, London) and elsewhere, and, indeed, he was then but little read or admired. He used to talk much of the Hawthornes, who had lived near him in Florence, of Motley, of Margaret Fuller. From her plague-stricken ship poor Margaret had written his wife a letter. "It was so foul and blurred when it reached us that we could make out very little, and burnt it." By Emerson he was charmed. Carlyle was his constant friend, and when the Queen desired Dean Stanley to introduce Carlyle to her, Browning also was invited.

Carlyle loved to talk of Browning. He told me of their first meeting. He was riding on Wimbledon Common, I think, when this "beautiful youth," walking there alone, stopped him and asked for his acquaintance. The marriage of the Brownings was a well-remembered romance in the house at Chelsea. Miss Barrett had sent Carlyle her early poems, in manuscript, and the rhyme-hater at first discouraged her, *suo more;* but when he found that she was hopelessly couch-ridden, and furthermore fairly imprisoned by a tyrannous father, "whose lightest word stood out as a law of the Medes and Persians," he thought it fortunate that she could so beguile her days. Robert Browning received, as it were, his summons to her side in two lines of "Lady Geraldine's Courtship." The lady and her lover culled

"—from Browning some pomegranate which, when
cut deep down the middle,
Showed a heart within blood-tinctured with a veined
humanity."

I have not the poem beside me, and if I misquote, it is not half so badly as Carlyle did, who, I remember, raised Mrs. Carlyle's wrath by saying, "She compared him to a nectarine"! Browning, he said, had as much difficulty in making his way into the house as the knight who found Sleeping Beauty amid her thorns. And the effect was much the same. Elizabeth Barrett had not left her sofa for years, but now rose up, and followed him to Marylebone Church, and then to Florence, and through many years of happiness. He was "beautiful," Carlyle said, and had flowing black hair, although for so many years he has been so blonde.

When William Johnston Fox, M. P., died, it became my duty, as his successor in the ministry of South Place Chapel, to give an address concerning him. I consulted Browning, to whom Mr. Fox had been an early and useful friend. Mr. Fox was editing the *Monthly Repository* when Browning's first poem, 'Pauline,' appeared (1835), and was the first to recognize that a new poet had risen on the horizon. Subsequently, several of the earlier poems appeared in that magazine. Mr. Fox selected some lines from 'Paracelsus' as a South Place anthem:

"I stoop into a dark, tremendous sea of cloud:
it is but for a time: I press God's lamp
Close to my breast: its splendors soon or late
Will pierce the gloom: I shall emerge some day."

The lines were set to music by Eliza Flower, organist at South Place, "who had real genius," said Browning. He had been impressed by the eloquence of Mr. Fox (famed as the Corn-Law orator), and preserved affectionate memories of the memorable sisters of South Place Chapel, Sarah and Eliza Flower—the first of whom wrote, and the latter set to music, the hymn "Nearer, my God, to Thee" (whose heretical origin is so little known). But Browning, friendly as he was to thinkers of all views, had no scepticism in his nature. His picture in 'Christmas Eve' of the philosopher in the wretched conventicle with the vulgar worshippers—the woman with the horrible men next him—choosing, nevertheless, to fix his place there, has much truth in it. He was a pretty faithful attendant at a small and poor chapel, though the congregation were more respectable than that of the poem. He was a close listener and rather critical. On one occasion the minister preached a rather rhetorical sermon on "Nature," and, happening to meet him, Browning said, very pleasantly: "Your sermon might have satisfied me better had you, instead of describing Nature, told us the impression Nature has made upon *you*." The story was told by the minister himself, not by Browning.

Browning's "orthodoxy" brought him into many a combat with his rationalistic friends, some of whom could hardly believe that he took his doctrine seriously. Such was the fact, however; indeed, I have heard that he once stopped near an open-air assembly, which an atheist was haranguing, and, in the freedom of his *incognito*, gave strenuous battle to the opinions uttered. To one who had spoken of an expected "Judgment Day" as a superstition, I heard him say: "I don't see that. Why should there not be a settling day in the universe, as when a master settles with his workmen at end of the week?" There was something in his tone and manner which suggested his dramatic conception of religious ideas and ideals. At times his conversation had to my ear a tinge of the Swedenborgian idea of "Correspondences." In his excellent introduction to the spurious Shelley letters, he speaks of that best-beloved of his poets as representing the "Correspondency" between nature and the divine. But Browning's religion is too large and intricate a theme to be here discussed.

No American who knew Browning can write of him without remembering his cordiality for Americans. He met those who brought him letters of introduction with open arms. He enjoyed many of our writers, admired our ladies, and liked our sparkling Catawba—to which I had the pleasure of introducing him in the old days when Longworth made wine fit for any poet's palate. Not even memories of book-piracy could induce him to abuse America. During our Civil War he expressed to me surprise that the North had not identified its cause more fully with emancipation. It was at a time when abolitionists in America were complaining in the same way. He was much disgusted at Carlyle's diatribe, "Ilias in Nuce," and described it to me as "grinning through a horse-collar." I remember, by the way, asking him at that time whether he had in mind any particular person when he wrote 'The Lost Leader.' He said, "It was an idealized portrait of Wordsworth."

Most of my conversations with him were on walks. It was his custom to take a long walk at about five o'clock every afternoon, and, like Carlyle, he preferred the crowded street to the parks. When I called on him for one walk, he had just been visited by the poet whom he had celebrated as "Waring." After so many years of absence, Waring had returned with a fortune made by sheep-grazing in New Zealand, and bringing an enormous poem. Browning then told me the exact circumstances of the youth's disappearance, and I was astonished to find how little they were embellished in the poem which strikes so many as especially romantic.

I regret that I have not at hand some of the letters which I received from him. One is engraved on my heart. When I came from the fresh grave of a son, I found a letter from Browning, in which he said: "If I, who cannot, would restore your child, He who can, *will*."

MONCURE D. CONWAY.

FLORENCE, December 18, 1889.

MR. BROWNING arrived in Venice with his sister, from Asolo, a day or two after our arrival. The chief object of his visit (which, as I learned from him would be a short one, as he said he had much work to do in London) was that his son might finish a portrait of his aunt begun some time before—a companion portrait to one he had painted of his father.

I was privileged to see much of him during my stay in Venice (the latter part of October and the early part of November), visiting him at the Palazzo Rezzonico, and being visited by him a number of times. He was then engaged in reading the proofs of 'Asolando,' and in other literary work, devoting thereto a number of hours daily. In addition to this, he walked much—generally, he told me, two hours every day—and went frequently in his gondola, with his sister, to the Lido, a favorite resort with him. Though in his seventy-eighth year since last May, he stepped more briskly than most men do in the prime of life, and his look, like that of the poet described in his "How it Strikes a Contemporary," went everywhere. I walked with him one day "where St. Mark's is," and had to accelerate my usual pace, which is not slow, to keep along with him. He called my attention rapidly to this and to that interesting feature of this world-renowned place, and told me much of its strange history.

In the centre of the lofty ceiling of the room occupied by him, in the Palazzo Rezzonico, in which he slept and wrote, and in which he died, is the painting by his son of an eagle struggling with a serpent, illustrative of a passage in Shelley's 'Revolt of Islam.' It is on a canvas about six feet square, but it has the appearance, when looked at from the floor, of a fresco. It was originally designed, as I have understood, to be placed on the ceiling of a room in another palace in Venice which Mr. Browning once thought of buying—did buy, in fact, and pay for; but a difficulty afterwards arose, in regard to the title to the property, and the money was, after some legal action, returned. No more appropriate painting could have been over the poet, in his last days, than this. It is a fitting symbol of his voluminous poetry, in which, from the earliest to the latest, his soaring spirit holds and maintains the mastery over what strives ever to overthrow man in his weakness, as the eagle, in the picture, with beak and talons, holds and maintains the mastery over the struggling serpent.

The Palazzo Rezzonico is one of the most imposing on the Grand Canal, and it is also one of the most beautifully located, being a short distance above where the Canal abruptly turns to the east, at which turn the beautiful Palazzo Foscari is situated (once occupied by the Doge Francesco Foscari). It was built partly in the seventeenth and partly in the eighteenth century, and belongs, therefore, to the more modern of the Venetian palaces. It was once occupied by Cardinal Rezzonico, who succeeded Pope Benedict XIV. as Clement XIII. in 1758. Mr. Barrett Browning has had the frescoes on the walls and ceilings and other decorations restored to their original beauty. The stairways are among the finest in Venice, and the rooms and halls are of grand proportions. The statuary in the halls and elsewhere, and the large and elaborate chandeliers in the ball-room, date back to the earliest occupancy of the palace.

Mr. Browning made his last visit to us at our hotel on the day we left Venice, the 7th, I think, of November. He came between ten and eleven o'clock, and remained until near the time of our leaving for the one o'clock train for Bologna. I never knew him to be more communicative and cheery. He told us much about himself—about Asolo, where he wrote, or prepared for publication, the poems contained in his last volume, 'Asolando,' in the dedication of which, to Mrs. Arthur Bronson, he says: "I unite, you will see, the disconnected poems by a title-name popularly ascribed to the inventiveness of the ancient Secretary of Queen Cornaro, whose palace-tower still overlooks us—Asolare: 'To disport in the open air, amuse one's self at random.' . . . I use it for love of the place, and in requital of your pleasant assurance that an early poem of mine first attracted you thither, where and elsewhere—at La Mura as Cà Alvisi—may all happiness attend you!"

This last little volume was not the last in his mind then, for he talked as if he looked forward to many more years of productive work. My wife remarking that he could not be accused of letting his talents lie idle, he replied:

"It would have been quite unpardonable in my case not to have done my best. My dear father put me in a condition most favorable for the best work I was capable of. When I think of the many authors who have had to fight their way through all sorts of difficulties, I have no reason to be proud of my achievements. My good father sacrificed a fortune to his convictions. He could not bear with slavery, and left India and accepted a humble bank office in London. He secured for me all the ease and comfort that a literary man needs

to do good work. It would have been shameful if I had not done my best to realize his expectations of me."

I give his own words as nearly as I now remember them.

We referred to the historical palace which his son had bought for his home and was beautifying. "Yes," he replied, "it is a grand edifice, the palazzo, but it is not a place *I* should have bought. It is too vast." He expressed the hope that his son would not allow himself to be swallowed up in it. He showed a pride in what his son had done in art—spoke of his daughter-in-law as a happy choice his son had made in marriage—of his long courtship before he secured her affections. My wife remarked that Mrs. Barrett Browning had shown herself to her as quite content with making Venice her permanent home. "Yes," he replied, "when Barrett proposed it to her, she said she would go with him anywhere—to the Fejee Islands, if he liked, and," he added, with a merry twinkle in his eye, "Venice is certainly preferable to the Fejee Islands, isn't it?" He told us much of interesting out-of-the-way places in his beloved Italy, which tourists know nothing about; of what discoveries he used to make in his wanderings; of neglected and unknown pictures, and other works of art, etc.; spoke particularly of his visit to Pisa, with Mrs. Browning, in the early period of their married life; described the house and its situation where they had rooms. "When you pass along there," he added, "you must look up at the house, and think of us."

The talk turned upon Shelley. He showed himself the careful literary man (which many people have not thought him to be) in what he said of the text of Shelley's poetry; mentioned a number of errors (quoting readily, at the time, the passages in which they occurred) which he had pointed out in it when a certain edition was going through the press (I don't remember the edition he alluded to); spoke of Mrs. Shelley as having but very little understanding of her husband's poetry, as was shown in some of her readings and notes; spoke particularly of mispunctuations and other defects in the text of the "Ode to a Skylark." I asked him about the verse in the ode which is sometimes printed, "Like an embodied joy whose race is just begun," and sometimes, "Like an *un*bodied joy." He replied, "Oh, 'an *em*bodied joy,' certainly; 'an *un*bodied joy' is nonsense, in its connection." In his allusions to other poems he showed, by his ready quotations, how intimately he knew his favorite poet.

The talk turned upon Shakspere. He spoke of the strangely limited range of reading which even habitual readers of the dramatist give to the plays. They read, perhaps, "Macbeth" and "Hamlet," "The Merchant of Venice" and "Lear," and "Othello," and "Julius Cæsar," but know nothing about "Timon of Athens," "Troilus and Cressida," "Cymbeline," and other plays. Of "Titus Andronicus," he said he could find nothing of Shakspere in it—the whole play was in utter violation of his spirit and his art. He spoke of talks he had had with his friend James Spedding, the editor and biographer of Lord Bacon — the opinion which Spedding had expressed that the composition of the plays of Shakspere was entirely outside of Bacon's powers, great as those powers were of their kind. If, Spedding said, any doubt could be maintained of the authorship of the Shakspere plays, that Bacon could not have written them was an absolute certainty. He alluded to the complete demolition of Ignatius Donnelly's 'Cryptogram' by the Rev. Dr. Nicholson of Leamington, England—"if, indeed," he added, "it needed demolition."

A servant announcing that the gondola was waiting to take us to the railway station, he arose suddenly from his chair, bade us a cordial good-bye, with a "God bless you both," saying as he hastened off, "Now be sure to come and see me, next May, in London. You'll remember where my little house is, near the Kensington Gardens"—and was gone! We little thought then we should see him no more in this world. HIRAM CORSON.

TENDENCIES IN ENGLISH ART.

LONDON, December 18, 1889.

THOUGH in London the number of picture exhibitions with something worth looking at in each is large at almost all seasons, it is not often that three as interesting as those now to be seen at the Royal Academy, the Fine Art Society's, and the Goupil Gallery, are held at the same time.

As representative of the best side of the English art of to-day, first notice should be given to the exhibition, in one of the rooms of the Fine Art Society, of sketches and studies by Sir Frederick Leighton, Mr. Alma-Tadema, Sir James Linton, and several other prominent English painters. It would be useless here to describe this collection in detail; it includes chalk and crayon studies of the figure and of drapery on white or tinted paper, many of which are quite equal in execution to the work of the same kind of the old men. For one of the strangest facts about English art is, that artists who are not great as painters excel as draughtsmen. Many of these studies are simply masterpieces, and yet every year the large exhibitions testify to the weakness of the men who produced them. Twenty-five or thirty years ago Sir Frederick Leighton, chiefly in his illustrations for Dalziel's Bible, and Sir James Linton, in his work for *Once a Week* and the *Graphic*, showed themselves to be leaders of that school of English draughtsmen whose published drawings have not been approached in more recent times by any Englishman. One can but wonder why they gave up so entirely work in which they were and still are, as these studies prove, masters. Even the black-and-white reproductions of their paintings, the success of which depends almost altogether upon the drawing, are often far more satisfactory than the same pictures when seen in color.

Take, for example, the photogravure by the Berlin Photographic Company of Sir Frederick Leighton's "Captive Andromache"; in it the beauty of the composition, the masterly drawing, the knowledge revealed, strike you at once; yet the painting was one of the most unsuccessful Sir Frederick has ever exhibited. It is almost impossible to explain why this should be so, yet the fact is not to be disputed. Even Mr. Alma-Tadema, in his exquisite little studies for the "Roses of Heliogabalus," which must be counted one of his failures, shows that the shortcomings of this picture were certainly not due to his drawing. The only artist here represented whose work is really weak is Mr. E. Burne-Jones, and the weakness of his draughtsmanship is unfortunately all the more emphasized by contrast with the vigor of the surrounding drawings, while it is unredeemed by evidence of that sincerity of motive and search for beauty which Mr. Coffin (in the *Nation* of October 10, 1889) thinks is expressed in his painting, despite his curious methods. But Burne-Jones is an exception, and the collection of studies is of the utmost interest because it shows wherein lies the real strength of the English art of to-day, weak in only too many other respects.

For the outlook in the future of this art one naturally turns to the two days' exhibition at the Royal Academy, made up of studies, pictures, and statues of students competing for prizes. As this is the year when the gold medal and the travelling studentship are awarded, it is only natural to conclude that the work contributed is the very best of which the students are capable. Perhaps I might as well state at the outset that this latest exhibition is in no way exceptional, but fairly represents the average for the last six or eight years. A collection of work more wholly commonplace one would have to journey far to find. In the paintings of the historical subject—an "Episode of the Deluge"—for which the travelling studentship is the reward, the drawing is bad, the color worse, the perspective weak; but more hopeless than these positive bad qualities is the dreary commonplaceness of conception and execution. Of course, you do not want to find in the work of a pupil the completeness or cleverness of a master, but you do look for some signs that he has thought for himself, that he has some little artistic sense, that he has something to say for which he feels paint is the best medium, and not that he has taken up painting simply because it is a fashionable profession which holds out promise of a golden harvest for the successful.

And no less hopeless is the awarding of the prize: the only picture which shows a faint suggestion of something better has been passed over for one in which there is but a weak reflection of the work of the weakest English imitators of Favretto and De Blaas. And it is the same in the landscape rooms. Among the pictures of "Morning" competing for the Turner prize, two or three, though without decided originality, at least suggest that the painters have endeavored to look and see things for themselves; but the medal has been bestowed upon quite the most trivial composition in the room—a badly drawn barnyard filled with impossible light, and painted in the glaring chromo style so popular with the British public. The studies of figures and heads intended to win a prize would not, with few exceptions, have admitted students to the school of the Beaux-Arts. The cartoons are, if anything, worse, and this is all the more to be wondered at since the Royal Academicians whose marvellous drawings are now at the Fine Art Society's, are supposed to be masters in the Royal Academy schools.

Much has been said at times as to the inefficiency of these schools. That they cannot be compared with those on the Continent, or even in America, is frequently pointed out; and certainly students rarely, if ever, come to them from other countries, while all the leading English artists, in fact the leading Academicians—Sir Frederick Leighton, Alma-Tadema, Herkomer—owe nothing to Royal Academy training. The radical fault may be in the methods of teaching; and, indeed, when it is considered that students in the painting classes are one month under the instruction of Mr. Tadema, the next perhaps under that of Mr. Frith, or Mr. Marcus Stone, or Mr. Horsley, or other men whose style and methods are equally opposed, it is not surprising that the results of their academical studies are so wanting in style and quality. This seems the more likely since, at the exhibition, the only work of students which evinces the least life or character is the sculpture; and the sculptors among Academicians and Associates are few in number, and include such artists as Mr. Onslow Ford, Mr. Alfred Gilbert, and Mr. Hamo

Thornycroft, who have really the opportunity to bring their influence to bear upon students and to make their own strong individuality in their art felt, and the results here are remarkably good.

Of the theories of art that prevail at Burlington House, Sir Frederick Leighton's speech on the evening of the distribution of prizes was an interesting expression. It was one of the long series of which Sir Joshua Reynolds's discourses are still the most notable, and its subject was Spanish art. It was learned and scholarly, as is all the work of Sir Frederick; so much so that, according to the London papers, his audience could not follow him. But if this were so, perhaps it was as well, for as he himself has always sought in his art to carry out what he would call the idealistic traditions of the past, his one objection to the great work of the Spaniards—of the moderns he had not a word to say—was its realistic tendency, though that tendency led to the wonderful portraits of Velasquez and the scarcely less wonderful beggar boys of Murillo. To dwell on idealism to students when in art the terms idealism and realism are after all synonymous, to extol the poetic side of classic myth far above the beauty of intimate daily things, is apt to make them think what they see of too little importance—what they imagine, of too much. If the subject of the cartoon competition had been a female figure draped instead of *Lady Macbeth* in the sleep-walking scene, I doubt if one room at the Academy would have been hung with such abortions.

That which gives the third exhibition in the Goupil Gallery just now special significance is the fact that it shows the work of a set of young Englishmen who care for and paint only what they do see, who rely solely upon their eyes and mistrust the powers of their imagination. Only ten in number, and as yet almost unknown even in England, they call themselves the London Impressionists. Impressionism, in its modern sense, is generally understood to mean the rendering, after long and continuous study, of a transient event or occurrence, which, though it may be repeated frequently, only lasts for a few moments at a time. This is the impressionism of Degas's "Ballet-Girls" and Whistler's "Fireworks," of Cazin and Bosnard, of Jean Béraud, and De Nittis. But as the London Impressionists give their own definition of the term [illegible] it is only right to explain that by it they mean the acceptance of beauty as the sole legitimate aim of a picture, and the going to nature in search of it. For the return to nature has been, as it probably ever will be, the gospel of all artists who have endeavored to infuse new vitality into art, from the days when Cimabue and Giotto broke away from Byzantine tradition, to these latter times when Pre-Raphaelites made a virtue of journeying into the country to get backgrounds for their pictures. But what puzzles the sentimental story-loving British public is, that the London Impressionists believe they find this beauty, not in religion or mediævalism, but, with Mr. Sidney Starr, in a tired shop-girl or on the top of a London omnibus; with Mr. Walter Sickert, in the music-halls; or with Mr. Theodore Roussel and Mr. Paul Maitland, in the public-houses and plumbago works of Chelsea. But, though they prefer what Sir Frederick Leighton calls intimate daily things, these men refuse to be considered realists, since they disclaim any wish to record anything merely because it exists; and, in the academical interpretation of the word, they cannot be called idealists, since they would never be willing to paint that which does not exist.

Fortunately their work has been seen before, chiefly at the New English Art Club Exhibitions, and its honesty and freshness have made it known to all lovers of good work. I say fortunately, because in this show the influence of Claude Monet over all but two or three, most notably over Mr. Wilson P. Steer, is so apparent that though the first article of their creed is, each to paint in his own fashion, they here seem but so many imitators producing work which contains the quality they, in the introduction to the catalogue, call false, arising "from an effort to achieve without sufficient knowledge an execution like that of some one else." Mr. Steer, who, when he chooses to rely upon himself, has a strong individual style of his own, has carried this imitation so far that he has even appropriated Monet's subjects, and one or two of his pictures might be mistaken for landscapes by the Frenchman which hung in this very same gallery last spring. But it is because they are artists keenly alive to all that is strangest and freshest and most expressive, not only in nature but in art, that they have fallen so completely under the spell of Monet, whose influence is spreading over the entire Continent. None of them wholly original in aims or methods, they have at least the no small merit of having freed themselves from academical shackles, and to them in a great measure one looks for whatever hope there may be for the future of English art—to them and to the Newlynites, the little group of earnest workers who have colonized St. Ives and other villages on the Cornwall coast. At the Royal Academy exhibitions nowadays it is to their work, to the pictures of Stanhope Forbes, the two Fishers, Adrian Stokes, or to such men as Mr. Simmons, an American who exhibits here, that one turns rather than to the paintings of Academicians. For the very men who are true to that realism which Sir Frederick Leighton condemns in Spanish artists, and who seek to show the beauty in the world and life of to-day, alone can redeem art from the dulness and commonplaceness into which it is fast sinking, or rather has already sunk, in England.

Correspondence.

TARIFF REFORM.

To the Editor of The Nation:

Sir: The *Evening Post* of January 3 begins an editorial as follows: "Hearings on the tariff by the Committee of Ways and Means are usually monopolized by persons who want greater facilities for plucking the community. Every interest is presented except the public interest."

This seems to be put forward as a statement of fact and a sort of reproach towards somebody's negligence, whereas it is really an epitome of the way in which our whole Government is carried on, and of the whole tariff difficulty. We should never lose sight of this fact, that the public interest—that is, the nation—is absolutely unrepresented in Congress. There is no man in either house who can officially lift up his voice on behalf of the public. Every one represents a locality, either a State or a district, and if he takes upon himself to defend the public interest as against other localities, he is regarded by his fellows with contemptuous jealousy and as guilty of impertinence. At the same time he will get no thanks from the public, because all work is done secretly in the committees, and the public never see it at all. The little finger of his fellow-members is thicker than the loins of the public. We must remember, again, that the Speaker is elected by a party combination of localities—indeed, the party itself being made up in the same way; and the Speaker does and must pay his political debts by making up the committees from local representatives who have supported him. Is not the way fully prepared for the state of things described by the *Evening Post*?

Now approach the matter from the other end. Of course all private interests belong to localities. The capital they have embarked is so large that no money and no efforts are too great for them to expend to control legislation; and they find a state of things in Congress exactly suited to meet their wants. What chance has the public interest in such a struggle? The public cannot combine in any such way, cannot raise adequate funds or machinery; or, if they could, it would be of no avail against an organization so completely adverse.

The tariff leagues are trying to agitate public opinion by writings and speeches. It seems to me much like marching a large army towards Canada to resist an invasion from the line of Mexico. We have been pleading for ten years and more for free wool, and are apparently no nearer than at the beginning. How many centuries will it take to reform the whole tariff in this way?

I will quote here the closing sentence of an article in the *Nation* of January 2, which intensifies in the strongest manner what I have said: "In the presence of such a peril, the friends of lower tariff taxes will need to do something more effective than debate the relative advantages of internal and external taxes respectively, or discuss the relative orthodoxy of Mills or Randall."

What that something is or should be, is perfectly simple and clear. It is to set up, in the person of the Secretary of the Treasury, a representative of the public or national interest, and let him defend that side of the question in open debate on the floor of Congress; to take the whole business out of the secrecy of the committee-rooms, where negotiations are carried on between two sets of local and private interests, and transfer it to the open session of Congress, where the lobby will not have so complete a monopoly of the field; to place every member before the eyes of his constituents and the country in his attitude towards the national side of the question, and give him a chance to win reputation by defending it, and to give the public an opportunity to follow the development of the subject and its real bearing on the national welfare. G. B.

Boston, January 4, 1890.

FROM AN UNEXPECTED SOURCE.

To the Editor of The Nation:

Sir: Were you a resident of Philadelphia, you would of late have found much serio-comic encouragement for the cause of civil-service reform. Without going into the merits of the controversy, which, perhaps, has no merits, and does not concern you, it may be explained that one of our medical colleges, that had long been in undisputed control of the Philadelphia almshouse and hospital, suddenly awoke to a knowledge of the fact that members of other colleges had, by official action, been given a minority representation upon the medical staff of the institution. To a fair-minded and unprejudiced observer this would seem to have been a just and simple bit of equity and consideration. Not so to the friends of the bereaved. Immediately there arose such a chorus of moans and groans that one would have supposed the most

hideous of crimes had been committed. Almost every paper has sent up such a continuous daily wail at the desecration of civil-service principles that it would have melted the heart of almost any Mayor except our own. It has been chanted and reëchoed that no private business could be carried on under such ruthless changes of management, and that his Honor had previously declared the almshouse to have been excellently managed, etc., etc.

This brings me to the point I started out to explain. Not a single leader-writer seems to have suspected the hollowness of his groans at civil-service destruction. It is still clear in the minds of us all that a certain one of our shopkeepers was last year commissioned to inquire into the criticised administration of the Philadelphia Post-office. He proclaimed that said office, under Mr. Harrity, had been exceptionally well managed, and that all criticism was without justification or warrant. In the topsy-turvy of political life the shopkeeper became Postmaster-General, and proceeded to turn Mr. Harrity out before his term of service had expired, in order to give the position to his political and personal friend. Did these high-minded journals and conscientious guides of public opinion whisper a word of blame for this reckless smashing of civil-service ideals? Perhaps the shopkeeper's $10,000 advertisement-writer might answer the question. But if a good cause is honored in the false worship of its hypocrites, one may still take courage from the wailings and gnashings that daily reach our ears from every editorial sanctum of our solemn town at the few physicians who humbly ask gratuitously to care for the sick poor. DEMOCRITUS.

PRESIDENTIAL ELECTORS ON THE AUSTRALIAN BALLOT.

TO THE EDITOR OF THE NATION:

SIR: In referring to the possible objections to the ballot law now in use in this State and proposed in New York, the daily papers often mention the difficulty a voter would have in choosing, among the names of the Presidential Electors, the right number, and those of the party to which he belongs.

It does not seem to be generally known that the Massachusetts law provides a different arrangement of these names. Section 10 of the act (chapter 413, acts of 1889) provides: "The names of candidates for each office shall be arranged under the designation of the office in alphabetical order, according to surnames, except that the names of candidates for the offices of Electors of President and Vice-President shall be arranged in groups, as presented in the several certificates of nomination or nomination papers. . . ." This makes it easy to mark all the names of any one party without in any sense interfering with the spirit of the law. W. S. A.

BOSTON, January 4, 1890.

TEACHING IN THE COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: A few days ago I heard a group of college men, about ten years out, discussing the recent letter in the *Nation* on the subject of teaching in the colleges. They represented four colleges, three in New England and one in the South. All agreed that they had been better taught in secondary schools than in their colleges. Whether there be any general judgment to this effect I do not know.

Without doubt the teaching in secondary schools is stimulated by the competition into which their pupils must enter in going up for entrance examinations. Unless human nature be of a higher quality among college professors than among schoolmasters, a plan which would subject the work of the former to some immediate test of comparison would assuredly cause an improvement in their teaching.

If, for example, in a single State, or in a group of States intimately connected by geographical and other ties, there were a general examining board, composed of representative teachers and other capable men, which alone should have the power of conferring degrees, to which all candidates for degrees in the various colleges must apply, a healthy competition among the colleges would be created. Such a plan would have the additional advantage of giving a more definite value to the academic degrees. Good colleges, for their own protection against a debasement of standard, ought to coöperate in such a system, and if they should do so, colleges refusing to join the confederation would decline in reputation. J.

ST. LOUIS, December 28, 1889.

Notes.

SCRIBNER & WELFORD will publish in this country a volume containing three poems of Tennyson's, "To E. L.," "The Daisy," and "The Palace of Art," illustrated by twenty-two drawings by the late Edward Lear, Lear's portrait, and Watts's portrait of Tennyson. The reproductions are in photogravure, and each of the hundred copies printed for England and America will be signed by the poet.

Prof. Archibald Alexander's 'Theory of Conduct' and Dr. McCosh's 'Religious Aspect of Evolution' will be published this month by Charles Scribner's Sons.

Harper & Bros. will shortly publish Stanley's letters telling the story of the rescue of Emin Bey, with illustrations and route-map—a forerunner of the grand narrative which will be eagerly awaited.

Houghton, Mifflin & Co. are on the eve of putting forth 'The Diary of William Pynchon, of Salem,' a lawyer of the last century, edited by F. E. Oliver; 'The Bible and Modern Discoveries,' by the Rev. Henry A. Harper, an officer of the Palestine Exploration Fund; and a 'History of the Old South,' by Hamilton A. Hill. This house makes the important announcement of an exhaustive and authoritative work in preparation by Justin Winsor on 'Christopher Columbus,' being an examination of the historical and geographical conditions under which the Western Continent was disclosed to Europe, together with an inquiry into Columbus's personal history.

P. Blakiston, Son & Co., Philadelphia, have nearly ready a new illustrated book on 'Massage and the Swedish Movements,' by Kurre W. Ostrom. Apropos of this, we may mention the appearance on our table of a translation into Swedish of the article "Massage" in the 'Reference Handbook of the Medical Sciences' (Wm. Wood & Co., 1887). The author of the article is Dr. Douglas Graham of the Massachusetts Medical Society, and the translator who boldly carries coals to Newcastle, Nils Posse. The pamphlet is published in Lund, Sweden, by C. W. K. Gleerup; in Boston, by Carl Schoenhof.

Robert Clarke & Co., Cincinnati, publish directly 'Fort Ancient,' the great prehistoric earthwork of Warren County, Ohio, by Warren K. Moorhead of the Smithsonian Institution; and a 'History of the Girtys: A Life Record of Three Renegades of the Revolution,' by C. W. Butterfield.

An English edition of Mr. David A. Wells's 'Economic Changes' is to be brought out by the Messrs. Longman.

The late Prof. W. F. Allen had nearly completed, at the time of his sudden death, an edition of the first six books of the 'Annals' of Tacitus, which he was preparing for the "College Series of Latin Authors." The whole work, with the exception of the indexes, was in type, and his revision of the proofs, though incomplete, has left little for the editors of the series to supply. The book, it is hoped, may be published in a few weeks by Ginn & Co., Boston. Prof. Allen was admirably qualified, by his sound historical scholarship and his intimate acquaintance with Roman political institutions, for editing Tacitus. His view of the character of Tiberius, of which he had made a special study, deserves and will command attention.

The British Record Society has recently been formed to continue the work of the Index Library, which, during the last two years, has published several indexes to English records of peculiar value to genealogists, among them being indexes to Northamptonshire and Rutland wills, Lichfield wills, Berkshire wills, chancery proceedings, royalist composition papers, etc. The Society will commence work with the new year, and has issued an attractive programme, which includes Derbyshire and Gloucestershire records, besides an important new calendar to Sussex wills. The Society is supported by the Bishop of Oxford, Sir James Hannen, the President of the English Probate Court, and a strong committee of publication. The annual subscription is one guinea. Intending members in America can communicate with either of the local secretaries, Mr. W. H. Whitmore, P. O. Box 3478, Boston, Mass., or Mr. R. A. Brock, Richmond, Va. The English secretary is Mr. W. P. W. Phillimore, 124 Chancery Lane, London.

An effort is making to obtain more subscribers to the proposed Oriental Translation Fund II., and Mr. H. H. Howorth, Prof. T. W. Rhys-Davids, and F. F. Arbuthnot have been appointed a committee to that end, as well as to prepare a list of texts and translations in readiness for the starting of the Society. The annual subscription fee is £1, and adhesions may be addressed to Mr. Arbuthnot, at 18 Park Lane, Piccadilly, London.

The *Green Bag* concluded with the last year its first volume, which, bound up, makes an uncommonly handsome appearance (Boston Book Co.). It has justified its sub title as "a useless but entertaining magazine for lawyers" only in the case of the second epithet, for the profession must take a real interest in the accounts of the several law schools of the country, and in the lives of distinguished jurists, which have been among the prominent features of the year's editing. The portraits alone are enough to give a permanent worth to the volume, and we would suggest a special indexing of these and the other illustrations hereafter. Chief-Justice Fuller, Lord Chief-Justice Cockburn, Judge Lemuel Shaw, Jeremiah Mason, Rufus Choate, Sidney Bartlett, Judah P. Benjamin, are some of the most notable full-page plates; while the past glories as well as the present corps of instructors of the law schools are frequently portrayed in the text—*e. g.*, Joseph Story and John Norton Pomeroy. The monthly bill of fare has included, for the dessert, the retelling of a *cause célèbre*.

Volumes v. and vi. of *Scribner's Magazine* recall a goodly quantity of entertainment and instruction during the past year. The railway articles had not ceased, preparatory to their reappearance in a volume by themselves, be-

fore the electrical series began. The chief serial in fiction has been Stevenson's "Master of Ballantrae." Our readers will also remember Prof. Trowbridge's original paper on photography; Mr. Eugene Schuyler's on Tolstoi; Mr. Prout's on Emin Bey's whereabouts, since only too sharply defined; and Mr. Henry Drummond's on the great scourge of the African slave trade.

The lapse of twenty years has brought us so much nearer to a Columbian centenary that Mr. B. F. De Costa has thought it timely to put out a second edition of his 'Pre-Columbian Discovery of America by the Northmen, with Translations from the Icelandic Sagas' (Albany: Joel Munsell's Sons). It was, in its original conception and execution, a useful work, and it has been considerably enlarged in the editorial portion, as was inevitable in view of the discussions and discoveries of the past two decades. We miss, in the note on the old mill at Newport, a reference to what has been printed in the *American Architect* on the subject, and Prof. Horsford may feel aggrieved that his partisanship on behalf of the Northmen goes unrecognized by Mr. De Costa, who, by the way, identifies Norumbega with Nova Scotia. Our author stands by Leif Ericson as an historical personage and pre-Columbian voyager to New England, and approves of his Boston statue; and he is entirely in disaccord with Mr. Winsor, who holds that "there is not a single item of all the evidence" that attests archæologically the presence of the Northmen south of Davis's Straits. With regard to this critic, we think Mr. De Costa quite too formal and remote in only alluding to him in a footnote, and revealing him in the index.

A. C. McClurg & Co. add two pretty volumes to their series of "Laurel Crowned Tales" in reprinting Johnson's 'Rasselas' and Laboulaye's 'Abdullah, or the Four-Leaved Clover'—the latter in Miss Booth's translation, by arrangement with the Messrs. Harper.

A contemporary document of some interest and novelty is the 'Story of the Dockers' Strike,' by H. Llewellyn Smith and Vaughan Nash (London: T. Fisher Unwin). Sidney Buxton, M.P., who furnishes the introduction, regards the late strikes in the East London docks as having given an enormous impetus to the extension of old and the formation of new trades-unions. This he calls "perhaps the most important and satisfactory resultant," as tending to prevent strikes and lock-outs.

Why certain diseases, such as smallpox, measles, scarlet and typhoid fevers, generally grouped as zymotic, so seldom attack the same person the second time has never been satisfactorily explained. The procedures now collectively known as vaccinations, after the Jennerian operation, affording immunity against smallpox and rabies in man, and against anthrax and chicken cholera in the lower animals, are equally inexplicable. The most generally received explanation for both the natural and the artificial conditions has been that the disease-cause is a ferment, and that, once introduced, it exhausts the material within the system; hence there is no succeeding disease. Mr. Eusebio Güell Bacigalupi, a Spaniard, has proposed a novel explanation, which reaches us in an English translation, by Dr. R. F. Rafael, from the second French edition, of 'Immunity through Leucomaïnes' (J. H. Vail & Co.). Starting with the fact that the excreta of all organisms are poisonous to the excreting body, he assumes that the infecting bacteria die, not from starvation by using up their pabulum, but by being poisoned by the outcome of their own existence. To these products of elimination through the vital functions of micro-organisms the author applies the name leucomaïnes, first used by Wurtz to cover both the organic bases of putrefaction and those produced by living animal tissues. And he believes that it is the accidental introduction of these leucomaïnes, not the presence of the attenuated microbes, that gives immunity. The hypothesis is ingenious, and has elements of probability, but as yet it has not been demonstrated clinically nor in the laboratory.

The infinitesimal plants that we are beginning to know as bacteria have found a genial historian in Dr. T. M. Prudden, whose 'Story of the Bacteria' (G. P. Putnam's Sons) opens to the ordinary reader a fair insight into an underworld more wonderful than any fairy realm. Out of its invisible depths have been drawn, so lately that they still are curiosities, the evil agencies that cause various dire diseases, and this little volume explains, in plain and acceptable speech, how these germs are cultivated for study, how they probably work their mischief, and some reasons why we are not all daily victims to their ubiquity. When the author asserts (p. 91) that "to-day we know that Asiatic cholera is caused by a little curved bacillus," he is probably in advance of the fact. One German school does so teach, but equally qualified observers are not sure which is cause and which is effect. But his statements in all other respects seem to be up to the last advance, and his comments on such practical subjects as consumption, bacteria-laden ice, and the impurities of water are worthy of careful reading. This is a scientific book, not written down to popular taste, but popularly written and well worth a popular reception—despite an occasional lapse of style, as where (p. 5) the amœba "crawls off on its own hook"; "hook" being a figure of speech and not a microscopic attachment.

In the September number of the *American Journal of Archæology*, the American School of Classical Studies at Athens furnishes the two leading papers, viz., on the excavations at the theatre of Sikyon, and on the discoveries in the Attic deme of Ikaria. The plates of the first named include a photograph of the mutilated colored statue of a youth.

To the number of the *Revue Illustrée* for December 15, M. Coquelin contributes a paper on "L'Art du Comédien," which has already been read in English in an American magazine. In the French review will be found all the drawings made for *Harper's* by M. Duez, and many more by M. Vibert, M. Madrazo, M. Friant, and Mme. Madeleine Lemaire. There are in all thirteen portraits of M. Coquelin in different characters and twenty-one of other actors. We may note that the portrait of Mr. Irving really represents him as *Vanderdecken*, and not (as its legend declares) as *Hamlet*.

The *Bulletin* of the French Geographical Society contains an account of the Structure and Origin of the Banks of Newfoundland, by T. Thoulet. It is accompanied by a chart and several bathymetrical and geological maps, constructed from French Government surveys made in 1886. The other papers are on the Khmer ruins in Cambodia, and the first exploration of the valley of the Ogoway on the west coast of Africa, made in 1862 by M. Serval and Lieut. du Bellay. The gold medallist of the Society for 1889 was Lieut. Caron, who explored in a steamer the upper Niger from its headwaters to Timbuktu.

At a recent meeting of the Royal Meteorological Society, an interesting paper was read by Mr. Marriott, discussing the distribution of days in which thunder-storms occurred throughout England and Wales, from 1871 to 1887. The years of greatest frequency were 1880, 1882, 1884, and 1872. Those of least frequency were 1887, 1874, 1879, and 1871. The average yearly number of thunder-storms is about 39. The south of England and the extreme northern counties are most frequently visited by these storms, and Cheshire, Lancashire, and Yorkshire the most seldom. July is the month in which the greatest number occur, and the least in February and December.

In 1890 will occur an annular eclipse of the sun, June 16–17, in which the central line passes through northwest Africa and southern Asia; a partial eclipse of the moon, November 25–26; and a total eclipse of the sun December 11, in which the central line lies wholly in the Antarctic Ocean. A partial eclipse will be visible in Australia and New Zealand.

During 1890, too, several comets of short period will return to the sun. Among these is Brorsen's comet, the period of which is so nearly five years and a half that the perihelia fall alternately in the spring and autumn. When the return takes place in the spring, the conditions for observing are more favorable, and, as the perihelia may fall in February, 1890, good observations are hoped for, more especially as this comet was missed at its last return in 1884. Its orbit approaches very closely that of Jupiter; and at intervals of ninety-five years the comet encounters the planet, making a decided change in the orbit. The last time this approach occurred was in 1842. Before that time the comet's motion had been hyperbolic, but was then changed to the elliptical form in which it now moves. This proximity will again take place in 1937, when the comet will probably resume its former curve and become lost in space. Denning's comet, D'Arrest's comet (which also was not seen on its last return), and Barnard's comet, of whose orbit further discussion is much needed, will likewise return to perihelion.

A copy, in twenty-one volumes, of the collection of the engravings of Roman antiquities by the eminent engraver of the last century, Piranesi, comprising 1,501 subjects from the Roman ruins, sculpture (antique), and paintings of the great Italian masters, is offered to the public. It was the presentation copy to Gregory XVI. As there is not probably in existence another such copy, and the impressions are all in first-rate condition or proofs, it is worth the notice of some of our great libraries. It belongs to Dr. J. G. Van Marter, Rome.

—The most noteworthy article in *Harper's* is a pleasantly written paper upon American Art. It begins with a sketch of the life of Thomas Cole, and describes with some detail the home of this artist on the Hudson, his manner of work, and the life of the students under him or in the neighborhood. The same locality later became the haunt of the American Pre-Raphaelites, and with a notice of them the paper concludes. The larger part of the number is occupied with foreign topics and fiction. The Russian Army is elaborately described, and the narrative lighted up and made more interesting by a number of anecdotes of the conduct of the soldiers upon the march or in battle. Jamaica is the subject of an artist-travel paper, well illustrated with sketches, by Howard Pyle. The Smyrna Fig Harvest and St. Andrew's University are next treated of, with several striking cuts. Nothing else calls for mention, unless it be a paper upon horseback riding by women, which is devoted to advice upon all points connected with the subject.

—The *Atlantic* begins the new year with Mrs. Deland's new novel, "Sidney," making the third striking serial now running in this

magazine, and giving, with Miss Jewett's excellent short story, a full allowance of good fiction. The miscellaneous papers are of inferior interest; one upon the Pension Office is valuable for its statistical views, and one upon John Dickinson revives a notable Revolutionary reputation. The longest is upon Milton's obligation to Avitus, and is somewhat rambling and spun out. It is no new thing to learn that 'Paradise Lost' was written by some other and much more obscure person than the great Puritan, but when brought to book the evidence is not convincing to those who are familiar with the common material of literature, and the normal amount of coincidence to be found in all great writers treating the same theme. It appears that Avitus had been used by other precursors of Milton, and had helped to shape the legend of Paradise in its extra-Biblical form. It seems probable that Milton knew the poem, but it is by no means certain from any proof here given. The coincidences are certainly too slight to sustain a case of real obligation, and, in fact, the parallelism between Avitus and Milton seems to lie most often in their common indebtedness to the classics. Dr. Holmes returns to his serial, "Over the Tea-Cups," which was broken off some months ago, and discourses, in his accustomed vein of pleasant reminiscence, upon old age; at the end he gives a new poem.

—The *Century*, like the other magazines, requires but brief mention. The leading article, by Miss Edwards, introduces us to the find at Bubastis, and is most valuable for its cuts, in which we see the sculpture for the first time. Mr. Jefferson continues his autobiography with much detail in regard to the old theatres and the life in them. Daumier, the caricaturist, is the subject of a sketch which is made the occasion for reproducing several bits of his characteristic work. The Lincoln biography rehearses the familiar story of the death of Lincoln. The two semi-religious papers are upon the Family and the Gradual Nature of Revelation, and both of them contain valuable suggestions in a temperate form. James Bryce, a portrait of whom opens the number, is made the subject of a biographical sketch, in which his political life is but scantily treated, but his literary and scholastic achievements are justly characterized.

—The last number of the *Zeitschrift für Biologie* contains Sophie Handler's paper giving an account of her investigation of the reduction of the oxygen of the blood on its passage through the heart. She establishes the fact that it is not the work done by the heart, but simply the number of beats, irrespective of the resistance to be overcome, that determines the amount of oxygen used up. This result, which seems strange at first, becomes very natural when it is remembered that in each contraction of a muscle certain chemical changes first set free a definite amount of force (dependent only upon the condition of nutrition of the muscle), and if this is not all used up in performing the contraction, it can only be wasted—there is no possible means of recovering it or of storing it up. The experiments which show this were exhibited (on the heart of the turtle) before a meeting of the Scientific Society at Berlin a few years ago. The discussion applies, of course, only to those muscles which work automatically.

—We hear on good authority that Trübner & Co. have in hand and will soon publish an English translation of Prof. Leopold von Schroeder's 'Indiens Literatur und Cultur in historischer Entwicklung.' This book appeared first at Leipzig in 1887, and is perhaps the very best history of Sanskrit literature that has been written. It is full and accurate, and, moreover, very interesting, being in this regard in marked contrast to the dull and heavy work of Weber on the same subject. The book was reviewed and highly praised by Oldenberg in the *Deutsche Rundschau* in September of the year 1888. As Prof. von Schroeder is possibly less known in America than some of his fellow-Sanskritists, it may be worth while to say that he holds the chair of Sanskrit in the University of Dorpat, and is the author of several books. More or less outside of his own special line of study, he has written upon Esthonian customs, upon Buddhism, and upon philological questions. The first part of his book 'Griechische Götter und Heroen' is a really good discussion of the possible derivation of the name "Aphrodite" from the name of an older deity, from which also some minor Sanskrit divine beings take their names. This treatise was highly praised by Kuno Meyer, who has himself done work of the same sort.

— The recent convention of the Modern Language Association was, even aside from Mr. Lowell's address elsewhere spoken of, a highly interesting and helpful meeting. About eighty scholars and teachers were in attendance, the most of them naturally from New England and New York, though the Western and Southern States were also thinly represented. The proceedings were indicative of the fact that a growing number of well-trained young scholars are devoting themselves to high-class work in modern philology. Of the papers read upon the first day, in accordance with the programme already printed in these columns, that of Prof. Francke of Harvard, upon "A Forerunner of Bunyan in the Twelfth Century," probably excited the most general interest. It was followed by an animated discussion relative to didactic poetry and fiction. The introduction to Dr. Primer's paper upon the English of Fredericksburg, Va., and its vicinity, seemed to promise an interesting account of local survivals from a remote past; in reality, however, the paper showed rather how thoroughly the various levelling influences that are all the time at work upon American pronunciation have done their work. There proved to be but very few of Dr. Primer's Virginia localisms which were not entirely familiar to members of the convention from other parts of the country.

—On the second day it was thought best to combine the general session with the phonetic and pedagogical sections. Mr. Melville Bell, President of the Phonetic Section, delivered an address upon the importance of phonetic science —a matter which, we should say, philologists of the present epoch are in no imminent danger of forgetting. An excellent paper was read by Prof. Grandgent of Boston, describing a method of vowel-measurement which, if experience proves it generally practicable, will do much to free that subject from the uncertainties resulting from individual peculiarity and doubtful nomenclature. In the Pedagogical Section Prof. Joynes of South Carolina read a suggestive paper, of which the general thesis was that college students should be required to read very much more French and German than they now read, to the end that they may learn to love such reading and so may keep it up after they leave college. We fear the proposed remedy is inadequate. The mass of college graduates do not keep up the reading of good *English* literature, though the language is familiar to them.

VON HOLST'S HISTORY.

The Constitutional and Political History of the United States. By Dr. H. von Holst, Professor at the University of Freiburg. Translated from the German by John J. Lalor. 1856–1859: Buchanan's Election—End of Thirty-fifth Congress. Chicago: Callaghan & Co. 8vo, pp. 352.

Dr. von Holst's sixth volume covers only a little more than two years, but they are years that count for a great deal in the political history of the country. They include the last session of the Thirty-fourth Congress and the whole of the Thirty-fifth: the end of Pierce's Administration and the first half of Buchanan's. In these three sessions of Congress came the full development of Douglas's doctrine of "squatter sovereignty" and its consequences; the insane effort of the Administration party to force the Lecompton Constitution upon Kansas; the Dred Scott decision of the Supreme Court; the rise of Lincoln as a political leader through the Lincoln-Douglas debate; the split in the Democratic party by reason of the refusal of Douglas and his followers to accept the iniquity of forcing slavery into Kansas by means of the Lecompton Constitution and without submitting it to a popular vote.

Those of us whose memory goes back to the Kansas struggle may find the author's treatment of these topics calmer and more judicial than we expected; for it is hard to keep down the hot indignation which everybody but the partisans of slavery extension then felt against all who did not openly denounce and oppose the audacious wrong. The blood tingles again, even at the historical recital. Von Holst's treatment of these chapters will doubtless seem vigorous enough to men of the younger generation and to European readers; though he makes liberal allowance for the honesty of prominent actors, when it is possible to do so, by giving fullest consideration to their education, habits of thought, and partisan zeal.

The volume opens with the victory of the Democratic party in the election of Buchanan, though he received only a minority of the actual vote cast. The success had been won upon the specious platform of popular sovereignty, in which the repudiation of the Missouri Compromise had been sugared over with the pledge that the people of the Territory should themselves decide whether it should be a free or a slave State. If the game had been fairly played, it is quite possible that Douglas's doctrine might have been accepted by a majority even of the Northern States. The faith in the superior vigor of free-State communities and in their better adaptation for planting new colonies, made many men willing to trust to a free competition for the new Territories if the balance were steadily held by the national Government, and immigrant slave-holders would honestly abide by the risk that their slaves would be freed if a majority of the settlers in any Territory should choose a free-State constitution on its admission as a State. The ultimate result would not have been changed, for we can now see that slavery was inevitably doomed, because it was contrary to the progress of the age and essentially hostile to modern civilization. There was, however, plausible reasoning in the contention of the more liberal Douglas men that the teeming free communities of the North might swallow the wrong of the repudiation of the Missouri Compromise, might accept the competition in the creation of new States, and beat the slave-power at its own game. To this extent there was worldly wisdom in the squatter-sovereignty doctrine, as it tended to make the more

timid and conservative classes at the North acquiesce in the Southern aggression, in the faith that time would bring things even.

Leading politicians of the South themselves began to fear that Douglas's doctrine would prove a gift of the Greeks. Looking about for the means of making their victory fruitful, the Dred Scott case in the Supreme Court was utilized for the purpose of bringing the weight of that great tribunal to bear upon the political question. If the reverence for its decisions which was so nearly universal among the people, could be made to reinforce all the other influences which checked the growing anti-slavery sentiment of the North, new and strong vantage ground would be gained. Especially would this be so if, besides justifying the repeal of the Missouri Compromise on the ground that it had been unconstitutional, the Court should take the further step of declaring that the fundamental law secured the right of property in slaves to every slave-holding immigrant who entered the Territories not yet admitted as States. This was exactly what was done.

Von Holst's handling of this part of the subject is both judicial and strong. He recognizes the fact that judges are determined by the same mental and moral forces as other men. Their early associations, their education, their political predilections, their standards of right and wrong, are not changed when they are appointed to the bench, and they must needs view all questions through the medium thus created. It was neither strange, nor in itself morally reprehensible, that the convictions of a lifetime in regard to such a matter as that of asserted property in slaves, should show themselves in the judicial opinions of the eminent lawyers who formed the Court, if questions involving those convictions were fairly before the Court. Because the common sense of the people clearly recognizes this fact, it is often more logical than the perfunctory advocates of judicial independence, in drawing the conclusion that the Court, even of last resort, may be overruled by a settled popular judgment, and the Court may rightfully be brought into harmony with the spirit of the age by changes in its *personnel* as vacancies occur. This also is what was ultimately done in the Supreme Court on the question of slavery.

The author very clearly points out the broad difference between a popular acquiescence in the judgment in a case and acquiescence in the doctrines of the judgment. Buchanan was quite right in expecting the people of the United States to acquiesce in what the Court should do with Dred Scott. He was quite as plainly wrong in expecting them to acquiesce in the contradictions of history and extravagances of sophism on which the judgment was based. They would enforce the judgment, but they would reform the Court. This became at once a proper political issue because the decision was a political one.

The cumulation of historical evidence enables Von Holst to assert with positiveness that the Supreme Court had agreed upon the decision of the Dred Scott case on grounds of jurisdiction alone, and had appointed Justice Nelson to deliver the opinion, the same which he subsequently gave as his dissenting opinion. By remanding the case to the Circuit Court, to be dismissed there for lack of jurisdiction, the suit would be disposed of and Scott would be left where the judgment of the State court had placed him—a slave. This would have left untouched the political questions of the constitutional protection to slave property in the Territories and the power of Congress to exclude it. In this juncture Justice Wayne moved that the scope of the decision be reconsidered, and that the Court pass upon the political questions which were agitating the country. He has left it clear that he did this for political effect, to settle, as he vainly hoped the Court's decision would settle, the public ferment on the Territorial question. The determination of the Court to do this made mere *obiter dicta* of the only important things in their opinions. They attacked questions which they had before agreed were outside of the case, for a political effect, and only more fiercely embroiled the strife they had hoped to allay.

Von Holst also very neatly points out the sophism of their plea that it was the custom of the court at times to decide all questions argued in a case, for the guidance of the court below. This cannot apply to the case of Dred Scott, for if it were dismissed for lack of jurisdiction, the Circuit Court *could* have no further need of guidance in regard to it. To say that the points thus decided were to guide the courts in *future* cases would be the plainest confession that the decision was *obiter*—an academic political address in the guise of a judicial opinion.

The curiously inconsistent attitude of Buchanan in regard to submitting the Lecompton Constitution to the popular vote is brought out with equal certainty of touch. Both personally and through Cass as Secretary of State, the President had assured Gov. Walker that he would be sustained in insisting that that Constitution should not be imposed upon the Kansas people except by their consent freely given by a popular vote upon it. Buchanan had himself written Walker, "On the question of submitting the Constitution to the bona-fide resident settlers of Kansas I am willing to stand or fall." Two things became notorious: first, that the Lecompton Constitution was framed by a convention elected by invaders of the Territory, most of whom never had or pretended to have a residence in it; and, second, that the "bona-fide resident settlers" would surely vote it down with practical unanimity if it were submitted to a direct and fair vote.

Southern politicians (not without protest from fair men among themselves) now insisted that Kansas should be immediately admitted as a State under this pro-slavery instrument. The President surrendered and joined his power and influence to theirs, while the Mississippian Walker threw up his Governorship in disgust, rather than be party to so dishonorable a breach of faith. Then came the election of a new Legislature, demonstrating the overwhelming majority of the free-State men. The lower house of Congress began to show the influence of growing indignation in the free States, and an admission without any pretence of a popular vote was defeated. The subterfuge known as the English bill was adopted, and a bribe of a large land grant was offered to the Territory if it would organize under the hated Constitution. Kansas rejected the proposal by a vote of over 11,000 against 1,700. The battle was won for freedom, though the people were yet for a time remanded to the condition of a Territory.

The author does not neglect the subordinate questions of the time, but devotes a chapter to the economic crisis of 1857, the Mormon question, and the Clayton-Bulwer treaty. Throughout the whole he keeps fully alive the feeling with which his readers have followed him through each successive volume. Our wonder grows that a foreigner, whose visits to the country have been not greatly prolonged, could so well master not only the philosophy of our Government and the broader characteristics of the struggle over slavery which has been the great constitutional question of our history, but also the subtler shades of character, and the limitless mass of facts, the study of all of which is necessary to a comprehension of our national development. The book is sure to remain an eminent authority in general history.

Believing this of it, one is forced to add that it is a great pity the translation is not more satisfactory. Such a book deserves to be rendered into lucid and idiomatic English. The American reader ought never to be made to pause a moment in doubt of the author's meaning. His thoughts may give reason for hours of profitable pondering, but the words should be no hindrance to fullest understanding of the thought. Instead of this, the translation is mechanical and careless. Long sentences which, in the German, may rightly develop the meaning through numerous modifying clauses, are rendered into strange complications of part and of phrase abhorrent to every good English standard. Errors in idiom abound, and it is a duty to say that hardly a page is free from glaring faults. To make the book really useful to ordinary readers, or at all satisfactory to any, a thorough revision of the translation is, from a literary point of view, a necessity.

MRS. STOWE.

Life of Harriet Beecher Stowe. Compiled from her letters and journals by her son, Charles Edward Stowe. Boston: Houghton, Mifflin & Co. 1889.

THIS is a subscription book, and while its externals generally are of much better quality and in much better taste than those of most books of its class, it has, in common with these, the generous margins and expansive letter-press which make a little much. The contents of this bulky octavo of 530 pages could easily have been compressed into a duodecimo of as many or fewer pages, and so have been a much more convenient book to read and much more likely to be read by many who would appreciate it most heartily—poor people who read 'Uncle Tom's Cabin' with great joy and pain, and some for whom it was preëminently written. But this is not the final life of Mrs. Stowe. There is as much room as ever for a brief popular life of her, and the "American Men of Letters" series, which has already taken in one noble woman, will certainly, some day, find Mrs. Stowe a place, if only for that critical estimate of her writings of which there is here nothing from the biographer and only a very little in the letters of her friends.

Mrs. Stowe has been an invalid for many years, but from her introduction, which is given in facsimile, it is evident that Miss McCray's 'Life-Work of the Author of Uncle Tom's Cabin,' which we lately noticed, grossly exaggerated the failure of her mind. The introduction, though brief, is happily conceived, and one who has been ever "valiant for truth" might well choose for her last public words the words of him so named in Bunyan's allegory of the Christian life. The introduction was written September 30, 1889.

There is little in the account of Mrs. Stowe's childhood and youth which has not been made familiar by the biographies of her father and her brother, Henry Ward. Of her father we are told next to nothing. The picture of her mother, Roxanna Foote, is so beautiful that it is easy to believe all the praise her husband and her children gave her was not more than she deserved. She died when Harriet was less than four years old, and Henry less than two, and he not the youngest of the eight, of whom the oldest, Catharine, came in with the cen-

sailing out of the mouths of the Weser, the Elbe, and the Eider, who afterwards extended their excursions across the Channel and ravaged the shores of Roman Britain. Although Du Chaillu, to prove differently, has again brought to light an argument apparently long since laid to rest, *Limes Saxonicus* and *Littus Saxonicum* mean not the country the Saxons occupied, but the marches they harried. Earlier accounts of these Teutonic maritime tribes there are none. Cæsar's description of the Suevi only applies to the people adjacent to Gaul or the Empire. Tacitus mentions the Angles, to be sure, by name, but only incidentally as a North-German tribe with whom he manifestly did not come in contact. As regards the actual settlement of England from 449 on, there is, as has been intimated, no reason to doubt the main facts of the traditional account contained in the *Anglo-Saxon Chronicle* and in Bede. No good evidence has thus far been brought forward to disprove it, and the evidence of institutions and of language is unmistakably in its favor.

If the Saxons were a Continental Teutonic tribe, or, what is most likely, a congeries of tribes, the generalizations of Tacitus, as contained in the 'Germania,' ought manifestly to apply to their institutions, even after the lapse of more than four centuries and the transference to a new environment, provided, of course, that those institutions have been left to pursue a development as unimpaired as may be by foreign interference. In point of fact, there is not a general, but a most particular coincidence between the institutions of the Teutonic tribes of the Continent in the time of Tacitus and the Anglo-Saxons of early England. Such writers, for instance, as Stubbs, in his 'Constitutional History,' have pointed out in detail and incontrovertibly the links of the connecting chain. That it is possible, on the other hand, to prove not only a multitude of fundamental correspondences, but numerous striking coincidences between English and Scandinavian institutions, is a result presupposed by the commonly accepted Teutonic origin of both people. Such a proof, nevertheless, in the absence of historical or other data to substantiate it, establishes nothing more than the original consanguinity that is now no longer a matter of doubt. To cite, however, as illustrative of the early institutions of the ancestors of the English the laws contained in those sagas specifically Icelandic, no one of which could possibly have had its action until the tenth century, is an unpardonably careless use of terms. In old Icelandic literature we have a storehouse of detail as to primitive conditions of society and state that is utterly lacking to any such extent elsewhere among the Germanic peoples. While no one, therefore, will dispute the exceeding and especial value of the sagas for the light they shed upon ancient Teutonic life, there is, nevertheless, here an interval of nearly five centuries from the usually accepted date of the settlement of England; a new environment that has necessitated, to no small extent, new conditions; and a direct descent from Norway which had already established itself as a nationality over against the other Scandinavian tribes.

If an appeal is made to the phonology or to the lexicographical elements of the languages of the people here brought into question, the fact of identity that Du Chaillu assumes becomes more than ever hopelessly incapable of proof. The assumption of identity at the late day that our author affirms the languages to have been the same, presupposes in the first place a subsequent differentiation which, under the known circumstances of historical development in each dialect, is unparalleled elsewhere and utterly impossible here. Mr. Du Chaillu leaves this point, however, wholly outside of his argument, although this one fact alone is quite enough to disprove his whole elaborate reasoning. The claim to community of language as here presented is based upon two or three extracts from Old Norse writings that are, however, capable of an entirely different interpretation from that which the author puts upon them. The principal statement in Old Norse literature directly bearing upon the case is that contained in the 'Gunnlaugs Saga,' whose action falls between 983 and 1009. This statement is, however, not a constituent part of the original saga, but was added by the saga-writer, in all probability at least a century and a half after the events with which it is here placed in juxtaposition. It is as follows: "The tongue was one in England and Norway before William the Bastard conquered England. But thenceforward French was current in England, since he was thence [*sic*] descended." The true explanation of this simply is that here were two Teutonic people speaking kindred dialects, which had differentiated themselves, at the time the writer has in mind, generically but little. There is, at this time, free intercourse between the Anglo-Saxons and the people of the North. The Icelanders, particularly, in their character of merchant, soldier of fortune, or wandering scald, were readily understood not only in Norway, Sweden, and Denmark, but also in England, as numerous instances from the sagas incontestably prove. The fact, however, that the language of one land was intelligible in the others by no manner of means precludes differentiation. Compared with the language brought into England by the Normans at the Conquest, it is up to that time one language that is spoken over the whole Teutonic territory. There is, besides, plenty of Anglo-Saxon from this very time that is not Old Norse, as the most cursory comparison of the very scaldic strophes that were recited by Icelanders in England with the English language of that day will prove. A point that Du Chaillu has lost sight of corroborates this theory: the first definite knowledge that we have of the North is that contained in the narratives of Ohthere and Wulfstan, who came to the court of Alfred the Great in 871. Alfred apparently had no previous knowledge of the North, and eagerly accepted their information, which he appends to his translation of Orosius. These two Northmen, in the ninth century, so far as can be seen, have no difficulty in communicating with the King, but the language of Alfred's Orosius is very far from being Old Norse of this or any other period.

Mr. Du Chaillu further raises the point that nowhere in the sagas is "Saxon" applied to England or its inhabitants, thus leaving the inference that the Northmen were themselves the so-called Anglo-Saxons. If the term "Saxon," however, as applied to the people or the language of England does not appear in the North, neither, as Freeman shows in his 'Norman Conquest,' does it occur from a true Teutonic source in Anglo-Saxon literature itself before the Conquest. The Chronicles use "Engle" of the followers of Hengest and Horsa, while the people as a whole are "Angelcynn," and the language is "Englisc." In the same way Old Norse has "Enskirmenn," Englishmen, "Enskr," English, "Enska," the English language. "Saxon," however, appears frequently enough in the sagas with its own signification, being there invariably applied to Germany.

The greater and by far the more valuable and satisfactory part of Du Chaillu's book is that formed by the translations from Old Norse originals, which have been judiciously selected so as to form, as nearly as may be, a connected account of the details of ancient life in the North. As a whole, they are extremely well rendered. This is particularly true of the prose, which includes extracts from the Younger Edda, from the early Norwegian and Icelandic laws, and almost the whole range of the saga literature. As much, perhaps, cannot always be said of the Eddic and scaldic poetry, which, although it is usually true to the letter of the original, yet often falls far short of being felicitous, and is frequently entirely lacking in the peculiar essence that gives it its distinctive character, and which a mere translation of words is entirely inadequate to reproduce.

As for the book as a whole, while its critics have for the most part taken it too seriously, as if it were, or pretended to be, a scientific and not a popular exposition of the subject which it treats, it is none the less a record of persistent and ingenious research, and of extraordinary literary zeal. If Mr. Du Chaillu has not proved the startling assumption of the title-page, he has, nevertheless, made a most noteworthy addition to the English literature of the history, manners, and customs of ancient Scandinavia.

BOOKS ABOUT THE STAGE.

Memories of Fifty Years. By Lester Wallack. With an introduction by Laurence Hutton. Charles Scribner's Sons.

The London Stage: Its History and Traditions from 1576 to 1888. By H. Barton Baker. London: W. H. Allen & Co. 2 vols.

Our Recent Actors: Being Recollections Critical, and in many cases Personal, of late Distinguished Performers of both Sexes, with some Incidental Notices of Living Actors. By Westland Marston. 2 vols. in 1. Boston: Roberts Bros.

Le Théâtre en France: Histoire de la Littérature dramatique depuis ses origines jusqu'à nos jours. Par L. Petit de Julleville. Paris: Armand Colin; New York: F. W. Christern.

La Comèdie en France au XVIIIe. Siècle. Par C. Lenient. 2 vols. Paris: Hachette; New York: F. W. Christern.

Mr. Lester Wallack bore an honored name; he came of good theatrical stock; he was a comedian with great breadth of humor and abundant dash; he was a kindly man in private life; but he had an overwhelming self-consciousness—an egotism almost incomparable even in the history of the stage. Thus it happened that, succeeding to the finest theatrical property ever passed from father to son, he saw it slowly crumble and decay in his hands, until at last he gave up the theatre founded by his father on a rock, and he was reduced to taking a benefit like any other theatrical wreck. Moreover, after having associated all his life with clever people, he left a book of reminiscence absolutely devoid of value. From the perusal of these 'Memories of Fifty Years' we rise with no addition to our knowledge of the stage, its art, or its history, except a sharper impression of the author's extraordinary egotism. The publishers have done all that need be done for an author. The cover of the book is neat; the typography is elegant; there is an abundance of illustrations. The editor has treated the actor with the utmost care, having provided a list of parts and an index, and written a biographical sketch which is a model of brevity, complete-

ness, and courtesy, such as we may fairly expect from Mr. Laurence Hutton.

The only fault to be found with either editor or publisher is that they have allowed to appear the needless and pointless mention of the domestic difficulties of Hamblin, whose relatives survive to be wounded by Wallack's careless chatter. It is Wallack himself who did the least for his book. We quite understand the feeling of the old soldier and old playgoer who said that this volume of 'Memories' "was the biggest give-away since 'McClellan's Own Story,'" and it is like that in so far as the hero is condemned out of his own mouth. As an instance of the blindness which allowed Lester Wallack to see only himself, we may call attention to pp. 205-7, from which it appears that the actor was very intimate with Thackeray, whom he met night after night when the novelist was in this country, and the one fragment of the novelist's talk that lingered in Wallack's memory was a compliment on his acting with Blake in "A Cure for the Heartache." The book is bare even of amusing anecdotes of his fellow-players, a class quick to see a joke and prompt to tell it, and adroit in setting it off to best advantage. Almost the only jest the reader can recall readily is Blake's rather vulgar practical joke on the name of the unimportant actor whom he caused to figure on the playbill as "Mr. B. Hind." It remains to be recorded only that Lester Wallack was born in Varick Street, in this city, and that he dwelt here at least two-thirds of his life; yet, according to his own declaration, he remained all his days an Englishman, and he died at last a foreigner in the country of his birth.

Mr. H. Barton Baker is already known to readers of theatrical books as the author of 'Our Old Actors,' a pleasant, gossiping, uncritical, and often inaccurate series of biographical sketches of the more distinguished British comedians and tragedians. His present book is misnamed; it is in reality a series of histories of each of the London theatres as they have come and gone during the past three centuries. As such it is very welcome indeed. We know not where else to look for such an account, the utility of which will be apparent at once to all who have ever had occasion to pursue any original investigation in theatrical history. Especially to be commended is the chronological list of the London theatres from the earliest period to the present time, beginning with the theatre built in 1576 and ending with the Shaftesbury and the Lyric, opened only last year. It is to be hoped that some such similar list may soon be prepared of the theatres of New York, tracing the history of each house through all its successive changes of name. The present Daly's Theatre, for example, has been known as Banvard's, Wood's, and the Broadway; and other Broadway Theatres have existed near Broome Street and opposite Waverley Place before the present theatre at Forty-first Street.

Mr. Baker considers first the Elizabethan and then the Restoration play-houses. Then, in two chapters each, he gives us the annals in outline of Drury Lane and of Covent Garden. A single chapter suffices for the Haymarket and for the King's Theatre (Her Majesty's). In the second volume separate chapters are given to the Olympic, the Lyceum, the Adelphi, the St. James's, the Princess's (with its memories of the Keans), Sadler's Wells (the scene of Phelps's triumphs), and the former Prince of Wales's (where Mrs. Bancroft brought out the Robertsonian comedies). The other minor theatres are more briefly considered. Mr. Baker is not as precise or as accurate as the late Mr. Blanchard, who covered some of the same ground in briefer articles in the successive "*Era* Almanacks," but, for the most part, his work is done fairly enough. His English is execrable; he dislikes Americans; he thinks the late Mr. Sothern was a bad actor; and he approves of one of the most outrageous acts ever committed by a literary pirate, Fitzball's dramatization of Cooper's 'Pilot,' in which the nationality of the heroes was changed, and Long Tom Coffin was made to appear as an Englishman. It is perhaps characteristic, also, that Mr. Baker accepts Mr. Burnand as the author of "Proof" (a bald adaptation from the French), and that he thinks that Scribe wrote "Don César de Bazan."

Dr. Westland Marston is a dramatic author of high repute and wide experience, and he ought, therefore, to be a dramatic critic of nice discrimination. The present volume of theatrical reminiscence is almost an autobiography, and, with but a few sparse exceptions, it is a critical record of things seen. It would be better were it wholly so, for a first-hand report has always its own value. We felt a certain doubtfulness as to Dr. Marston's disinterestedness, or acumen, when we read in his preface a flattering reference to Mr. T. Thorne, who is one of the poorest of contemporary English low comedians, but who happens also to be the manager of a London theatre. For the most part, however, the criticism is sound, although we cannot but think that Dr. Marston overpraises the late Adelaide Neilson, an actress of limited gifts, unduly lauded during her life, and nearly always overestimated since her death. He is more moderate in his praise of Fechter, also an overrated performer. His appreciation of Charlotte Cushman is hearty and discriminating. Among the others whom he considers are Macready, Phelps (from whom he quotes an opinion absolutely in favor of the Diderot-Coquelin theory), Charles Kemble, and Charles Kean (and of the latter he tells several amusing stories, indicating a keener sense of humor on the actor's part than the feeble but authorized biography would have suggested).

Although there is no lack of fairly good histories of French dramatic literature, M. Petit de Julleville's excellent compendium is welcome. It is greatly to be wished that we had as good a history of English dramatic literature; Prof. Ward's is not altogether satisfactory, and it stops with the reign of Queen Anne. M. de Julleville is already known to those interested in the French drama by his careful study of the rude stage literature of the middle ages; and in the early part of the present volume he does little more than summarize the results set forth at length in his larger treatises. Like most French writers about dramatic literature, M. de Julleville considers plays strictly from the theatrical point of view; in France a play is something to be played, and the heresy of the "closet-drama" has never taken root there. The non-theatrical point of view is one of the chief defects of Mr. George Saintsbury's histories of French literature; to Mr. Saintsbury it seems to make little difference whether or not a play had been acted or was intended to be acted. Of course, no critic with a real understanding of the principles of the drama would ever make a blunder like that. While the account of the early French stage, its origins, its growth, and its development, is perhaps what is freshest in M. de Julleville's history, he is perfectly at home in the other divisions of his subject. The chapter on Molière is wholly adequate. The discussion of the contemporary French dramatists is pertinent and acute. Note, for example, his tracing (pp. 358-9) of the possible connection between the ruder melodrama of Pixérécourt and the splendidly rhetorical plays of Hugo.

One point which M. de Julleville brings out clearly is, that, frequent as were the French imitations of the Spanish drama in the seventeenth century, they were not more in number than the French imitations of the English drama in the eighteenth century. He shows, for instance, how the plot of "Venice Preserved" was used in La Fosse's Roman tragedy of "Manlius" (see, also, pp. 286, 303, 305, and 306). This same point is repeatedly brought out in M. Lenient's history of French comedy in the last century. In view of the ampler richness of French dramatic literature in the days of its great trinity, Corneille, Molière, Racine, and seeing the vigorous revival of French dramatic art in our own day, with Hugo and Scribe, Dumas, father and son, Augier and Sardou, we may sometimes overlook the value of French comedy in the eighteenth century. But a book like this of M. Lenient's forces us to acknowledge the vitality and vivacity of the dramatists of that day also. Regnard, Dancourt, Destouches, Marivaux, Sedaine, and, greatest of all, Beaumarchais—these are names not to be neglected. M. Lenient's account of their comedies is an honest and conscientious work, lacking a little in originality and in personal impressions, but orthodox and trustworthy.

A New England Girlhood, Outlined from Memory. By Lucy Larcom. Boston: Houghton, Mifflin & Co. 1889.

It is difficult to convey by brief notice the charm of this simple autobiography of early years in New England, which is the last issue of the Riverside Library for Young People. It is written for the young, and that fact has influenced both the style and the contents; but it has an interest for older readers who may enjoy an exceedingly truthful and unvarnished picture of life in an humble New England home, typical of thousands of such hearths, in which the virtue and power of New England lay.

Miss Larcom has obtained some repute as a minor poetess by graceful verses of local interest, and was at one time an object of curiosity as one of the literary mill-girls of Lowell, who made such a collection of factory hands as the world never saw elsewhere, at the time when Lowell sprang up as a centre of manufactures. She was born at Beverly, on the Massachusetts coast, and grew up with just such training and amid the same traditions and circumstances as then were the common lot of New England birth, although the sea-faring influence prevailing in Massachusetts Bay gave a peculiar local color to her childhood. She describes in homely phrase and without reservation the persons of her girlhood, the family and relatives, the country scenes, the school and the church, the foreign touches in the community arising from a world-wide trade which took a sailor from every family; and mingles with this trivial anecdotes, but such as show very plainly and often with delightful simplicity the life of a child in these surroundings. The chapter upon the Hymn-Book, and the confession she makes of her childish errors in religious matters, and her reasoning about them at the time, are characteristic. The nearness of England—the books for the young then coming principally from English pens and the imaginary children being English—is noticeable; and the excellent reading of those days, which included the 'Pilgrim's Progress,' always a prime favorite, Shakspere, Cowper, Miss Edgeworth, Scott's novels, Layard's and Stephens's travels, and the like, is something to

make one regret the old time, and to help one to understand why New England was fruitful in literature. The whole range of life, intellectual, religious, and social, is covered by Miss Larcom's narrative, and the forming elements in it are plainly made out, while the scene of hillside and sea, and the gray streets with the great and humble houses, the graveyard, and the ships coming and going, is admirably rendered as a background. It was a community in which as a child she did not know the meaning of "rich" and "poor."

The family, however, was in humble circumstances, and when the father died, leaving only the strip of land and the house, it was necessary for the widow to make some provision for the children. She removed to Lowell, and took charge of one of the boarding-houses. Then Miss Larcom soon grew old enough to do some little work at the mills, and of course did it. She was still quite young, apparently under fourteen, and was able to pass an intervening year at Beverly before she came into the mills to do a woman's full work. The more interesting portion of the volume to many will be her portrayal of the life led there by the New England girls who came from all parts to earn their living. The management was wise and liberal, and endeavored to do all that was possible for these young women. A single passage will best present Miss Larcom's impression of her mates, who with her were supporting a magazine, learning German or ethics, or welcoming Carlyle and Tennyson:

"What were we? Girls who were working in a factory for the time, to be sure; but none of us had the least idea of continuing at that kind of work permanently. Our composite photograph, had it been taken, would have been the representative New England girlhood of those days. We had all been fairly educated at public or private schools, and many of us were resolutely bent on obtaining a better education. Very few were among us without some distinct plan for bettering the condition of themselves and those they loved. For the first time our young women had come forth from their home retirement in a throng, each with her own individual purpose. For twenty years or so Lowell might have been looked upon as a rather select industrial school for young people. The girls then were just such girls as are knocking at the doors of young women's colleges to-day."

Many of them supported themselves at the seminaries of the best class one half the year by working the other half at the mills; some were working in order to send their brothers to college—the man's privilege; they all seem to have valued and used the opportunities supplied them at Lowell by societies and classes to improve their minds. Miss Larcom writes sympathetically of their lives, but with a fidelity which carries its own warrant on its face. She adopts the tradition of her people that it is natural for women as well as men to work, that it is their duty, and that it brings with it no reason for regret in an honest heart.

She left the mills when little more than twenty, and added to her life the experience of "going West." The change from the mill-machinery to the unsettled and treeless Illinois prairies is strikingly shown; the description of the travellers and of the mood of the emigrant beginning to build a home in that strange land is excellent in truth and likeness; and here her story ends with a brief account of the college she found, already flourishing even there, and in which she was able to complete her education by working in the institution. The entire narrative is thus an illustration of working life led by a girl under the stimulus of conscientious habit, and with the purpose always to care not less for the mind than for the wants of life. It cannot but be stimulating to those in similar circumstances to her own, and should be interesting to others. The simple tributes to the daily virtue and character of her immediate friends, and particularly a sister, are an added charm, and give breadth to the volume as a record of the common womanhood of the New England stock in its usual and average examples in the community at large. The lover of New England traditions could not ask for a truer or simpler account of them forty years ago; and to those who are interested to know what it was that constituted that hardy and fertile life, so often praised, the book will give much instruction. It is, however, meant for the young, to whom its style and matter are adapted, and for them there could not be more healthy food.

Arkansas Geological Survey. Annual Report for 1888 of John C. Branner, State Geologist. In four volumes. Vols. I–III. Little Rock Press Printing Co.

Up to within a comparatively recent date less has been definitely known about the geology of the State of Arkansas than of almost any of our States or Territories. Not only was there here a serious gap in our knowledge of the general geological structure of the country, but there existed no adequate means of estimating the probable basis of fact in the reports that appeared from time to time of discoveries in it of mineral deposits of marvellous wealth. The recent institution of a State Geological Survey was therefore a wise method of establishing a permanent and legitimate basis for the development of its mineral resources, though it may result in dispelling some of the visions of untold wealth to be acquired in it with little or no labor that are apt to be entertained with regard to regions geologically unknown.

The selection for its Director of a man like Mr. Branner, who, having won his geological spurs under Hartt in Brazil, has had considerable practical experience in this country, was particularly fortunate, seeing that he is also one who appreciates the importance of scientific methods in applied geology. The method of treatment pursued in these first reports is a distinct advance over that hitherto employed by many State geologists of describing the region surveyed areally, *i. e.*, by counties, townships, or other artificial subdivisions. It consists in discussing it systematically, or on the basis of the individual geological formations of the State, and to each of his assistants has been intrusted the investigation of a special formation or group of formations. Vol i. contains a report of a preliminary examination of western Arkansas, with special reference to its resources in the precious metals, by Prof. Theo. B. Comstock. In the choice of Prof. Comstock Mr. Branner has been less fortunate than in the case of his other assistants, but with the meagre funds at his command he evidently had no very wide range of choice. Prof. Comstock's theoretical views are peculiar to himself, and unintelligible to the majority of his readers, and are of little practical value. In the present case he has done what he could for a most unpromising field, yet with all his good will, he makes but a poor showing for the metallic richness of the region examined. Vol. ii. contains a discussion of the Neozoic geology of southwestern Kansas, by Robert T. Hill, which scientifically fills the important gap in the cretaceous and tertiary formations between the Rocky Mountain region and the East, and in its application shows the character and origin of the soils of the region, the methods of improving them, and the economic resources of these formations, such as clays, building materials, gypsum, chalk, lignites, etc. Vol. iii. is by Arthur Winslow, on the geology of the coal regions in western Arkansas, with economic discussions of the comparative composition and adaptability of the various coals.

Such a method of treatment, as compared with the areal treatment by counties, is like the work of the topographer who makes a map showing the surface configuration of a given area, its hills and valleys and natural incidents, compared with that of the land-office surveyor who runs out the lines of a township at so much per mile, and makes a map showing only the outlines of the area surveyed and the points where streams cross these lines. From the material furnished by the latter, by drawing in the intermediate portion of such streams between their intersections with the surveyed lines, an approximate map of the drainage systems could be produced, but one in which guess-work necessarily furnishes a large portion of the data. Imperfect though this method is, it was alone employed for the greater part of the maps of our country until topographical surveys had been instituted. The system of geological surveys by counties, indeed, affords a basis upon which a systematic survey may be built; but unless the systematization be made by one familiar with all the features of the country by personal observation, it too must necessarily have a large proportion of guess-work included in it.

Fugitive Facts: An Epitome of General Information. Edited by Robert Thorne, M.A. New York: A. L. Burt. 1889. Pp. 491.

As one star differeth from another in glory, so may one compilation have fewer claims than another upon the reader's attention. Some are the fruit of many years' searching for the needles of out-of-the-way learning; others are but pages of a scrap-book in which is pasted anything, on any subject, which strikes the maker's eye. The present well-printed and neatly bound volume belongs to the latter class. We presume the compiler is pleased at having his clippings in a shape easier to handle, and we dare say there are persons to whom "Gems" from the encyclopædia will be more interesting than "Choice Passages" of like length from the works of Shakspere or Mrs. Southworth. For a schoolboy, again, to whom useful knowledge (not included in his text-books) must be administered in small and varied doses, this book might be a desirable prize or birthday gift. It is as full of information as an egg is of meat, and, from the composition of Absinthe to the politics of Zululand, all interests are provided for.

It is hardly worth while to inquire into the quality of the information furnished, both because no student would consult a book of this sort, and because it makes no pretensions either to supersede or to stand in the way of any serious work of reference. We shall therefore permit ourselves only two criticisms: one is, that much of the value of a "scrap" consists in knowing whence it is taken; the productions of a space writer on the *Greenbush News* not having the same degree of value, to some persons, as an extract on the same topic from the 'Britannica' would have. Mr. Thorne never gives this credit. Our second criticism is, that the alphabetical order in which the titles are arranged is not that of the key words, and, as there are no cross-references, much that the book contains is unavailable for reference. Thus, articles on Railways are found under Europe, New York (elevated), and First; Bells under Great; Blue-laws under both Blue and Massachusetts; Mugwump under Origin, etc.

The Home of a Naturalist. By the Rev. Biot Edmondston and Jessie M. E. Saxby. Second edition. Scribner & Welford. 1890. 8vo, vi.–395 pp., illustrated.

In this volume are some twenty chapters, most of which appeared in *Chambers' Journal* and other British periodicals so long ago that their present republication has the effect of novelty. But there is nothing in them which the march of time should render uninviting. On the contrary, the bits of folk-lore and description of life in the Shetlands before the invasion of steamers and tourists become more attractive as the years go by. The papers separately published were well worth gathering and reprinting in permanent form. We have seldom derived more pleasure and satisfaction from a book of this class than the present volume has afforded. No one, young or old, we think, will finish its perusal without a feeling of gratitude to the authors for the charming and instructive pictures they have sketched. Home life of a sort only too infrequent, lived under conditions which the progress of civilization is rapidly effacing; sport and outdoor life, now no longer possible in like measure in any part of Britain; animal psychology, as developed in a loving study of domestic pets—not the cat and collie alone, but such as the gull, the cormorant, or the seal; legends and superstitions as weird as those of Brittany and as firmly believed; Shetland weddings in that far-off time; the good physician, braving storm and tide-race on his mission of humanity—these things, and such as these, pass in review before us. They are simply told, out of personal experience and a full heart. Only one chapter, the last, seems to have a touch of fiction in it, and the altered note here is very marked.

The book is well worth better illustrations; the full-page process-work, though not worse than common, jars with the high quality of the text, and had better have been omitted. The heliotype portrait of the good old Scottish doctor and naturalist will be prized by many.

A Rambler's Lease. By Bradford Torrey. Boston: Houghton, Mifflin & Co. 1889.

Mr. Bradford Torrey is one of our pleasantest writers of outdoor books. He has the true rambler's gift, the eye to see and the heart to be interested, whatever fortune may bring him by the wayside. A cornfield in Vermont, a road in the woods, a mountain-side, are sufficient text for him, with their trees and brambles and especially their birds. Like most of those who have like tastes with him, he brings his whole life to bear upon his enjoyment of nature, and strews his pages with those confidences of boyish days which add charm to this modest way of writing. In early life a merely passive and poetical pleasure is the initiation through which these adepts pass, and in later days the disposition to inquire is aroused—the scientific curiosity of the intelligence—and the man becomes an amateur ornithologist of the living birds, interested in their little affairs and habits as in a kind of wild pets. Naturally he falls to conversing of them, and these essays take on a conversational and intimate quality, and through all quietly assume the reader's pleasure in listening. The birds and his adventures with them are the common topic, and he tells his anecdotes of them with an agreeable simplicity, and conveys into his words the wild wood fascination which constitutes the attractiveness of the out-door book. Occasionally, as writers of such leisurely experiences do, he moralizes and indulges in fancies as to the animal soul in nature, and in general betrays a liking for the meditative sympathy of Wordsworth which so humanized the creatures of nature, whether plant or animal, in his poetry; and of course Emerson and Thoreau appear in quotation or allusion as the mild geniuses of this literary mood in New England. Reflection and sentiment, however, are not noticeably prominent; but rather the reader is led into direct acquaintance with the face of nature, in all seasons, and pleasantly reminded how much fine enjoyment lies just outside his threshold if he will but open his eyes and take what they bring him.

Handbook of Psychology. By James Mark Baldwin, Ph.D. Henry Holt & Co. 1889. 8vo, pp. 343.

The most astonishing feature of this book is that a Princetonian openly acknowledges a greater indebtedness to Wundt and Rabier than to Dr. McCosh. Surely the "American Philosophy" has come to a sad end. In its outline and peculiar philosophic views, this Handbook adheres very closely to the venerable ex-President's teaching; but the mass of facts pressed into that framework, for which, of course, the author is indebted to the new movement, gives a decidedly scientific aspect to the work, which is not common with American text-books on psychology. There is one intimation, at least, which would grieve the spirit of Mr. Baldwin's master, who is such a mortal enemy of Kant. In speaking of visual space perception, he says: "Sensations . . . can be only intensive modifications of consciousness which are apprehended under space-form by the mind's own reconstruction." If there was ever a graver departure from the Scottish philosophy than this, we have not seen it. It is, however, only one of the many incidents showing a movement away from the dogmatism of the Princetonian school. To be sure, a concession is made to pedagogic demands in the chapter on "Rational Function," where are raked together a lot of "intuitions," of which the last is the "intuition of God." The language defining it is worthy of quotation:

"The final conceptive product or ultimate generalization of reason proceeds out from the world and self, and seeks a further unifying postulate. This final unity is adumbrated in the unity of the apperceptive process, the identity of the reasoning powers, and the instability of all the complexes constructed in experience. Unity, identity, constructive infinity, end, cause, perfection, categorical being—all lead on, by the necessary progression of intellect, through the conditions and limitations of finite mind, to the intuition of the absolute and unconditioned subject *God*."

It is only just to say that obscurity like this is quite exceptional in Prof. Baldwin's textbook, which is far above the average, and is, for example, incomparably clearer than Prof. Dewey's, however much it may suffer by comparison in other respects. Taken as a whole, it is about the best we know.

BOOKS OF THE WEEK.

Adams, W. H. D. The Maid of Orleans. Philadelphia: J. B. Lippincott Co. $1.25.
Bell, A. M. Popular Manual of Vocal Physiology and Visible Speech. New York: N. D. C. Hodges.
Bellamy, C. J. An Experiment in Marriage. Albany (N. Y.) Book Co. $1.

Diamond Hams,
S. DAVIS, Jr.'s BRAND, Cincinnati.

[From Report to State Department on American Hog Products.]

"I had the pleasure of going through the establishment of S. Davis, Jr. & Co., Cincinnati, and of seeing the care and expertness with which the hams were handled, until they were packed ready for export; and, as this house may be said to represent Ham curing in the United States, it appears to me that no hams in the world can surpass the American for purity, cleanliness and flavor."

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns) $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 10

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding. — 15

DISCOUNT on orders amounting to $100 within a year, 10 per cent.; $250, 12½ per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000 25 per cent.; $2,500, 33⅓ per cent.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,500 copies. The Subscription List is always open to the inspection of advertisers.

***Copies of THE NATION may be procured in Paris of Brentano Bros., 17 Avenue de l'Opéra; and in London of B. F. Stevens, 4 Trafalgar Square, Brentano Bros., 430 Strand, and George Street, 30 Cornhill, E. C.

London agent for advertisements, R. J. Bush, 92 Fleet St., E. C.

Schools.

Alphabetized, first, by States; second, by Towns.

CONNECTICUT, Greenwich.

MRS. BEECHER'S FAMILY SCHOOL in the town of Greenwich, Conn., for girls from the age of seven to fourteen, commends itself to those who seek a happy and healthy home combined with a good school. It is located in one of the pleasantest villages on the Sound, and offers special advantages to girls who are too young or too delicate for ordinary schools. Address Bayport P. O., Fairfield Co., Conn.

MASSACHUSETTS, Belmont.

*THE BELMONT SCHOOL. — PRE-*paratory boarding-school for boys. For information address B. F. HARDING, A.M., (Harv.), Head Master.

MASSACHUSETTS, Berkshire.

CRESTALBON FARM.—Home School for six boys. For circulars apply to ED. T. FISHER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School, Address the Dean, EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (62d Year). For boys and girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive and is very near the Institute.
Preparation also for college (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

*HOME FOR BOYS.—DR. ABBOT AD-*mits not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Duxbury, Powder Point.

*POWDER POINT SCHOOL. — PRE-*pares for scientific school, college, or business. Laboratories. The boys are members of the family.
FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-third year begins Oct. 1, 1889. Mrs. Knapp, Principal; A. M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Quincy.

*ADAMS ACADEMY, PREPARA-*tory and Boarding School for Boys.—Boarding-house entirely reorganized; a few good rooms still vacant. For all information apply to WILLIAM EVERETT, Ph.D.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 17, 1890. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, TEN MILES from Philadelphia. A College for Women. The Program, stating the graduate and undergraduate courses of study for the academic year, will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

Teachers, etc.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality.
A. M., care of the *Nation*.

ALFRED MITCHEL WILL GIVE A course of lectures on English or German literature to a small class during the winter. This course is equivalent in value to the post-graduate course in Johns Hopkins University. It is designed to devote special attention to the progress of individual students. For full particulars in regard to course and terms, address, A. MITCHEL,
Westminster Hotel, New York City.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut Street, Boston.

*HOLMES HINKLEY, A.M., 11 EVE-*rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

TEACHER OF SCIENCES WANTS a position. College and Normal School Graduate. Understands German and French. Experience. References. Address P. O. Box 1388, Ypsilanti, Mich

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

CATALOGUES ISSUED of Books in good condition. Books purchased.
E. W. JOHNSON, 1336 Broadway.

A NEW EDITION DE LUXE OF

Charles Dickens's Complete Works.

LIMITED TO 1,000 NUMBERED COPIES.

Unquestionably the handsomest edition of Dickens's writings—the nearest approach to the highest ideals of perfection in bookmaking—ever attempted in this country.

The type is from a new font especially cast for it, and never used for any other purpose.

The paper—also especially made for it—combines the qualities of excellence in finish and in the materials used, with a lightness of weight that prevents the volume from being uncomfortably heavy to hold and read.

The illustrations—half the value of a good edition of Dickens—are incomparably superior to any ever issued in any edition printed in this country, and are only excelled—if at all—by the original issues of each volume, sets of which bring from one to two thousand dollars.

All the original etchings by Cruikshank and others have been carefully retouched, line for line, from brilliant original proof impressions, and proofs taken for this edition on Imperial Japanese paper. The wood engravings are printed on Japanese paper from electrotypes never before used, furnished by Dickens's original publishers.

The set will be completed in 45 volumes, at the rate of about two volumes per month.

Price, bound in vellum cloth, gilt tops, uncut, . . . $2.50 per vol.

☞ *Issued by subscription only, and no orders taken except for complete sets. Prospectus, with specimen showing type, page, paper, etc., with specimen illustration, mailed free upon application.*

AGENTS WANTED. APPLY TO

ESTES & LAURIAT, Publishers, BOSTON.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Applications for the Assistant Professorship of Geology

in the University of Texas will be received until February 10, 1890. Salary $2,000; term 3 years. It is essential that applicants have experience in teaching Geology. Address

LESLIE WAGGENER, Chairman of the Faculty.

THE

Library and Autographs

OF

WILLIAM F. JOHNSON, Esq.,

OF BOSTON, MASS.

A VERY VALUABLE and interesting collection of English and American literature, comprising under the title Americana, a number of scarce works by the Mathers, Eliot, and other authors of their day; in general literature many standard and popular works of Biography, History, and Romance, and worthy of especial notice and attention, a collection of FIRST EDITIONS of REMARKABLE INTEREST AND VALUE BY REASON OF BOTH RARITY AND BEAUTY OF CONDITION, including the most desired specimens of the works of Coleridge, Hunt, Lamb, Keats, Shelley, Thackeray, Browning, Bryant, Emerson, Hawthorne, Longfellow, and others. Also to be mentioned a charming lot of CRUIKSHANKIANA, and books illustrated by Leech and Rowlandson.

In addition to all the book treasures there are Specimen Autographs of the best known and honored English and American authors, statesmen, and others many of them particularly desirable for condition or interesting contents.

TO BE SOLD AT AUCTION,

January 27 and following days

BY

BANGS & CO.,

739 and 741 Broadway, New York.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

The Origin and Growth

OF THE

English Constitution

An Historical Treatise, in which is drawn out, by the light of the most recent researches, the gradual development of the English Constitutional System, and the growth out of that system of the Federal Republic of the United States.

BY HANNIS TAYLOR.

IN TWO PARTS.

Part I. The Making of the Constitution.

8vo, gilt top, $4.50.

"I cannot help congratulating our country upon the singular coincidence that, in return for Mr. Bryce's tribute to the 'American Commonwealth,' you have so quickly responded by your profound analysis of 'The Origin and Growth of the English Constitution.' I remember nothing like it in the history of letters."—*Rufus King, Professor of Constitutional Law, Cincinnati Law School.*

"The conception of your book, taking American history as a part of English, and English as a part of general Teutonic, is, indeed, just what it should be."—*Edward A. Freeman, the Illustrious English Historian.*

"The work is, in my judgment, a masterly, philosophical, and exhaustive treatment of the most important chapter of political history which the world has ever seen or is ever likely to see. It is a great and needed contribution to a subject which in different phases and parts of it has been elucidated by the writings of Hamilton, Jay, Madison, Marshall, Story, and Cooley in its American deductions; and by Hallam, Stubbs, and Macaulay in its earlier British history."—*Edward J. Phelps, ex-Minister to England.*

"It will be worthy to take a high place in the political literature of the times."—*Hon. J. Randolph Tucker, Professor of Constitutional Law at the Washington and Lee University.*

"A treatise soundly historical, based on extensive study, and controlled by a sound judgment. . . . We close Mr. Taylor's book with a feeling of pride that it is an American scholar who has condensed into this volume the results of so much scholarly research."—*Philadelphia American.*

"One of the most notable books of the year."—*Boston Journal.*

JUST PUBLISHED:

AN EXTRAORDINARY NOVEL.

A Far Look Ahead: or, The DIOTHAS. 16mo, paper, 50 cents.

*** A new and cheaper edition of this extremely thoughtful and ingenious volume has just been issued. It should be noted that 'A Far Look Ahead' was first published in 1883.

"The book is devoted to customs, habits, and love in the misty future, and for pure, genuine imagination most charmingly worked out, is unexcelled."—*Boston Evening Transcript.*

Six to One. By Edward Bellamy, author of 'Looking Backward, &c. 16mo, new and revised edition, paper, 35 cents.

"Humor is not the only quality of this little gem of a story, but it is that for which the reader feels most grateful; it is so quaint, so odd, so indefinable, of a sort which is thoroughly individual and independent of opinion."—*London Spectator.*

A Midsummer Drive through the PYRENEES. By Edwin Asa Dix, M.A., ex-Fellow in History of the College of New Jersey. 12mo, cloth extra, illustrated, gilt top, rough edges, $1.75.

"Seldom does a book of travel come to our table which is so much like a trip itself as this one is. Upon closing the last leaf we feel as if we had been with the writer."—*Public Opinion.*

KNICKERBOCKER NUGGETS.

XXV. **Sesame and Lilies.** By J. Ruskin. $1.00.

"It abounds in some of the choicest thoughts of a master mind, inspiring and ennobling, which are fitly framed in the dainty volume at hand."—*Boston Times.*

XXIV. **Songs of Fairy Land.** Compiled by Edward T. Mason. With illustrations from designs by Maud Humphrey. $1.25.

"The book is worthy a place in a select library of favorites, for few recent recollections are likely to afford the lover of true poetry more sincere and lasting pleasure."—*The Beacon, Boston.*

The Industrial Progress of the NATION; Consumption Limited, Production Unlimited. By Edward Atkinson, author of 'The Distribution of Products,' etc. 8vo, cloth, $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

Railway Secrecy and Trusts; Its relation to Interstate Legislation, an analysis of the chief evils of Railway Management in the United States, and influence of existing legislation upon these evils, and suggestions for their reform. By John M. Bonham, author of 'Industrial Liberty.' (No LXI. in the "Questions of the Day Series.") Octavo, cloth, $1.00.

Liberty and a Living. How to Get Bread and Butter, Sunshine and Health, Leisure and Books, without Slaving away One's Life. By P. G. Hubert, jr. 16mo, cloth, with frontispiece, $1.00.

"It is decidedly well written, with a good deal of dry, sometimes caustic, humor and a half-satirical shrewdness of penetration."—*Chicago Times.*

Modern Horsemanship. A New Method of Teaching Riding and Training, by Means of Pictures from Life. By Edward L. Anderson. Fourth edition, revised and enlarged, with forty photogravure plates, $5.50.

"The rules and directions are so plainly stated and are so admirably illustrated by photographs from life that an intelligent reader will have no difficulty in putting them into practice."—*N. Y. Tribune.*

Charles Scribner's Sons'

NEW PUBLICATIONS.

A Theory of Conduct.

By ARCHIBALD ALEXANDER. 12mo, $1.00.

Professor Alexander's book contains a very complete and searching examination of the various ethical theories and systems, together with the positive statement of the author's own doctrine, which finds the ethical impulse essentially religious.

Creed Revision

IN THE PRESBYTERIAN CHURCHES. By PHILIP SCHAFF, D. D. 12mo, paper, 50 cents, *net.*

Dr. Schaff is in favor of revision. The world, he says, is moving, and the church cannot stand still. His pamphlet, which contains his views in full, consists of two essays, one general in character and the other considering the subject from historical, doctrinal, and practical points of view.

Among Cannibals.

An Account of Four Years' Travel in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ, M.A. Fully illustrated. 8vo, $5.00.

"We have seen so many records of travel put forth by men whose sole qualification for exploration was physical courage that we welcome with uncommon satisfaction the work of a thoroughly equipped observer. This book is at once interesting to the general reader and useful to the scientist. It is one of the books of travel which, like those of Darwin and of Wallace, are certain to be preserved."—*N. Y. Sun.*

Said in Fun.

By PHILIP H. WELCH, author of 'The Tailor Made Girl.' With preface by ROBERT GORDON BUTLER. Square 8vo, $1.25. With full-page illustrations by W. A. Rogers, F. G. Attwood, C. G. Bush, "Chip," A. B. Frost, C. D. Gibson, O. Herford, E. W. Kemble, J. A. Mitchell, F. Opper, W. L. Sheppard, W. T. Smedley, W. P. Snyder, A. E. Sterner, C. J. Taylor, W. S. Van Schaick, M. Woolf.

"There is not a pointless jest in the whole collection. They are all bright, fresh, and enjoyable, and the pictures are abundant and of capital quality."—*Boston Journal.*

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"What a field of romance, of color, of incident, of delicate feeling, and unique social conditions these stories show! The mechanical part of the book fits the delightful text. The illustrations greatly add to the interest of the text."—*Hartford Courant.*

The Poetry of Tennyson.

By the Rev. HENRY VAN DYKE, D.D. 12mo, $1.50.

"A delightful book. Dr. Van Dyke's style is both clear and picturesque, and never fails to interest. Seldom has Tennyson's work been more fairly judged than in these pages. The work is deserving of a wide popularity. Critical works of the stamp of Dr. Van Dyke's are too rarely met with to be allowed to go unappreciated."—*Boston Advertiser.*

The Nation.

NEW YORK, THURSDAY, JANUARY 16, 1890.

The Week.

If we had been asked beforehand where Mr. Edmunds would be found in any debate on the "blocks-of-five" letter written by Dudley in the last Presidential campaign, we should have said that he would not be found pettifogging the case for Dudley, throwing doubts on the authenticity of the letter, or seeking to extenuate the offence by saying to the accusers of Dudley, "You're another." Undoubtedly the Democrats of Indiana have sins enough to answer for. That fact does not improve the character of Dudley's offence. Nor is any presentation of it helpful unless accompanied with unsparing exposure and denunciation of both. Mr. Edmunds's treatment of it, we regret to say, was that of a criminal lawyer retained by the defence, not that of a Senator charged to see that the republic receives no detriment. What would such a man as Abraham Lincoln have said under like circumstances? Mr. Lincoln was as stout a partisan as Mr. Edmunds, and he was by no means unskilled in the arts of the politician or averse to employing them for party advantage. Yet on a question involving the integrity and permanency of republican government, which requires above all things an unbought vote and an unpurchasable people, he would have said: "I join you, Senator Voorhees, and every other man, of whatever political faith, in the severest condemnation of the Dudley letter and the writer thereof and the accessories thereto. I believe that you and your friends have been guilty of the same offences in times past, and that your present indignation arises principally from the fact that you were hurt; but none the less do I support, with my whole soul, every proposition which looks to the establishment of the truth in this matter, and the exposure and punishment of the guilty so far as we may be able to reach them." Would not the Republican party have been benefited if its foremost Senator had taken this elevated point of view?

Gen. B. F. Butler has joined the ranks of the anti-ballot-reformers, imparting a final touch of moral grandeur to the collection. Its members now are Gov. Hill, ex-Gov. Foraker, Mr. Halstead, Senator Gorman, Capt. Boutelle, C. A. Dana, and Gen. Butler. Here is a nucleus for a party which might run two of its members on a Presidential ticket with a chance of polling almost as many votes in this city as Butler did in 1884—that is, 3,499. The Butler organ in that campaign is obviously eager to repeat the experiment, for it gives up a half column of its first page to a report of Butler's views on the Australian system, which, it is needless to say, are very contemptuous. A ticket like Hill and Butler, or Butler and Foraker, or Gorman and Boutelle, or Butler and Halstead, or Foraker and Dana, would be certain to poll the "party's" entire strength, and to have the enthusiastic support of the ex-Butler organ in this city and that of the ex-penitentiary convict in Albany.

"Corp." Tanner denounced civil-service reform at the same Boston banquet at which Gen. Butler expressed his contempt for ballot reform, but the most interesting portion of his remarks was that devoted to his career as Pension Commissioner, and the reasons for its sudden ending. He said that the Republicans carried Indiana for Harrison by the votes of Democratic soldiers, and that those votes were secured because he, Tanner, "personally, and amid the plaudits of every Republican in that State, plastered that State two feet thick, from the north to the south, with the promises of what the Republican party would do for the soldiers if they came into power." He added that he tried to keep these promises when he was put in charge of the Pension Bureau, but the day came when his self-respect demanded that he should say, "One figure I will not cut in official life: I will not prove myself the liar of an Administration." Who did prove to be the liar of the Administration, he did not point out; but he placed the full responsibility for his course in the Bureau upon the President, where it belongs, by adding: "His was a wise declaration who said it was no time to use the apothecary's scales when you come to weigh the services of the men who saved the nation. I believe in that. I quoted it freely. I tried to obey the injunction to keep within the law and be liberal to the boys."

The election of Mr. Calvin S. Brice as Senator from Ohio will bring up for discussion in that body the meaning and intendment of art. i., sec. 3, clause iii., of the Constitution of the United States, viz.:

> "No person shall be a Senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, *when elected*, be an inhabitant of that State for which he shall be chosen."

If Mr. Brice were elected to the Senate from New York instead of Ohio, no question would or could be raised respecting his right to a seat in that body. The question then arises whether a person can be an inhabitant of two States at the same time in the purview of the clause quoted above. We think that such a contention would deprive the clause of all meaning, because if he can be an inhabitant of two States, he can be an inhabitant of forty-two States. In other words, any man is eligible to any Senatorial vacancy in any State—a plain *reductio ad absurdum*. It is idle to speculate on the view the Senate may take of this question next year, when Mr. Brice's credentials are presented, but it is quite certain that he will not be admitted to a seat without a thorough overhauling of the constitutional points in the case. Residence, citizenship, and inhabitancy are different things. In discriminating between them the Senate is not restricted to the rules of evidence applicable to the courts of law. The fact of inhabitancy will undoubtedly be inquired into carefully, not because of any objections to Mr. Brice as an individual, but because the question which his election presents is a fundamental one.

The annual reports of the Civil-Service Commissioners of this State and Massachusetts refute once more by their statistics the wearisome charge of the opponents of competitive examinations that these are in the interest of college graduates and against the common people. In Massachusetts, out of 1,016 persons who passed the examinations, 926 were educated in the common schools and only 27 had attended college. In New York, of 157 who passed the competitive examinations, 96 had been educated in the common schools, 46 in academies, and only 15 in colleges. In both States the Commissioners declare that there has been a great improvement in the character of the employees in the minor positions of the State service. The Massachusetts Commissioners say that they "have had the cordial support of the Governor and Council and the Legislature, and their work has met the approval of appointing officers who, now that the system is thoroughly understood, quite generally acknowledge its relief to them, its justice to applicants to office, and its benefit to the public service." The New York Commissioners say that their predecessors "adopted a resolution, which is awaiting the Governor's sanction, which applies the civil-service examinations to all positions in the Senate and Assembly, with the exception of the Clerk of each house." It is to be feared that the changes which Gov. Hill has made in the New York Commission, by practically forcing the retirement of Gen. Sickles and of Mr. Manning, will not be conducive to increased usefulness in its work during the present year.

The retirement from office, at the end of his term, of Mr. B. R. English, Postmaster at New Haven, together with the story of the obstacles which he has met in applying to the office civil-service rules, is peculiarly instructive as showing the resistance which the reform is encountering, and must hereafter encounter, at the hands of the "practical politicians" of both of the two great parties. Mr. English succeeded as Postmaster of the city Mr. N. D. Sperry, who had held the place previously for more than twenty years, and who served out his term under Mr. Cleveland. Although, during the first year of Mr. English's administration, there were some complaints of the local postal service, there have, of late years, been none. Perhaps in no office of the country during the four years has the civil-service principle been more rigidly enforced. Out of the twenty-three clerks whom Mr. English found in the office, nearly one-half now remain at the end of the four years. Of the twenty-three letter-carriers, ten are left. Of the

whole forty-six, fifteen have been removed, and, according to the Postmaster's statement, every one of these for causes quite disconnected with politics. Twice during the four years the New Haven Civil-Service Reform Association has investigated the office, and each time it has commended in the highest terms the Postmaster's record. To show Mr. English's spirit, it may be stated that, during the last Presidential campaign, certain Democratic managers met with a curt refusal when they asked his permission to "go through" the office, for the purpose of asking party contributions, and, furthermore, were told that they had no business to ask for such contributions at all. His course since taking office has naturally made him the target of severe party criticism, particularly when the Presidential election returns showed a loss of a hundred or more votes in the city's Democratic plurality.

Under the circumstances it might be supposed that Mr. English would at least have escaped attack from Republican opponents for violation of the Civil-Service Law. Fancy, then, his amazement last summer when he was informed from the Post-office Department at Washington that he was charged with allowing party contributions to be collected in his office. He went at once to Washington, where he obtained an interview with Mr. Wanamaker. The Postmaster-General drew from a pigeon-hole a portly bundle of manuscripts signed by certain names, and informed Mr. English briefly of the substance of the charges, which the Postmaster met with a sweeping denial. Mr. English's request to be allowed to see the papers, or at least to be told the names of his accusers, Mr. Wanamaker abruptly refused. An inspector whom Mr. Wanamaker afterwards sent on to look into the charges found them groundless, and they are commonly believed to have been the work of local Republican politicians, "stealing weapons of the Lord to serve Satan," and with the object of driving Mr. English from office before the expiration of his term. But from that day to this Mr. English's utmost efforts have failed to disclose either the details of the charges or their authors; and, under prevailing conditions at Washington, he must count himself uncommonly fortunate in being able to serve out his term.

Congressmen and newspapers, in discussing the causes and the consequences of the recent hat-band and bonnet-trimming decision, must keep it in mind that the decision, if obeyed (it may not be) by a protectionist Administration, will compel not only a refund to Postmaster-General Wanamaker and other importers, but a change in the rate of tax from 50 to 20 per cent. The law of 1883 is still in force. How can importing merchants safely do business when, without the consent of Congress, a rate is suddenly put up 30 per cent., and then put down 30 per cent.? All such jerks will cease if the Treasury will only obey the Supreme Court rule, which commands that, in cases of real ambiguity in the language used by Congress, the lowest and not the highest rate shall be levied by customs officers. Congress should compel itself to use precise language in tax laws, and compel itself by a new legislative declaration that, where it has spoken ambiguously, the lowest tax shall be imposed. That could do no harm, for Congress can always quickly correct its own blunders. But the tariff beneficiaries will not tolerate clear and explicit words in tax laws.

The exhibition of greed among the tariff beneficiaries at Washington continues from day to day and becomes rather more disgusting. The general features are pretty well known and understood, but there are some special features that should be carefully remarked. Mr. Knight of Massachusetts, for example, wanted a new arrangement of the duty on buttons so that it would "increase the duty on low grades and give a slight decrease on the expensive goods." Mr. Knight is wise as a serpent in this matter, and in making this request he follows a line of distinguished precedents. Tariff taxes, in order to be really beneficial to the protected classes, must not fail to hit the poor because they are the bulk of the population. Those who buy low grades of buttons are 90 to 95 per cent. of the population. Give Mr. Knight a chance to tax all the sewing women in the country and he will "let up" on the millionaires with the greatest pleasure. In like manner Mr. Torrey, also of Massachusetts, wanted a larger increase of duty on low-grade razors than on high-grade. And this witness had the impudence to admit that he was now making a fair profit on the razors he sold, but said that he wanted to enlarge his business, and he believed that he could do this if he could have low-grade foreign razors excluded. He employed about seventy men, he said, but of course he represented American labor, the 70,000 barbers in the United States being presumably foreigners, or at all events of no account.

The question of the sugar duties is reaching an acute stage, and one which is likely to give Chairman McKinley much trouble. The New Orleans *Times-Democrat* endorses the position taken by ex-Gov. Warmoth of Louisiana and Representative Peters of Kansas, that the sugar-growers do not want a bounty of one cent per pound or of any other rate per pound. A bounty, it says, could not possibly last more than one or two years. The people would "see through it" and repeal it, and then the cane and sorghum-growers would be without protection, while the other tariff beneficiaries would be getting their fill as before. The Boston *Advertiser*, on the other hand, thinks that "the greatest good to the greatest number should be the motto," and that therefore the opposition of the planters to the bounty system might properly be disregarded. Touching the duty on refined sugar, the *Advertiser* takes a conservative stand, because the cost of bone black is greater in this country than in Europe, and because the original cost of the sugar-refining plants is also greater. No remarks issue from the *Advertiser*, as yet, on the capitalization of the Sugar Trust and the relation thereof to the "original cost of the plants."

The *Dry Goods Economist* is justly indignant that the Department of Agriculture at Washington should have gone before the Committee of Ways and Means and asked that a duty of a dollar a pound be imposed on raw silk in order to encourage the silk-worm industry in this country. The only producer of raw silk in this country, according to the *Economist*, is the Government itself, through a bureau of the Agricultural Department. All the silk thus produced does not amount to 20,000 pounds annually, and this is produced at a loss. The importation amounts to over 6,000,000 pounds. Putting a tax of $6,000,000 on the silk-manufacturers would, the *Economist* says, kill an established industry in order to put a new one on an uncertain basis. Any man who seriously advances a proposition of that kind is a confirmed harlequin, and ought to be beaten with a stuffed club. There are a good many whose backs call for such treatment just now, as for example the tin-plate men and the alleged growers of carpet wool. But these are private persons looking out for their own interests. The Agricultural Department is supposed to have some sort of care for public interests.

The dispute between the wool-growers and the carpet-manufacturers as to the duties on "wools of the third class" is no nearer settlement than it was when Mr. Whitman and Mr. Delano closed their spicy correspondence last October. On the contrary, the Boston *Journal of Commerce* of December 11 says that "the radical demands of wool-growers, and the pertinacity with which they are adhered to, render agreement upon some plan an impossibility." Further evidence pointing to the same conclusion is found in an article in the *Tribune* of the same date, taking the wool-growers' side of the controversy, and putting the argument on the curious ground that it is *dishonest* to use wools of the third class for any purpose but carpet-making. There is, however, no law in this country, or in any other, we believe, which requires a buyer of wool, or of cows' hair, or of hogs' bristles, to use the same for a particular purpose. The tariff describes the wools in questions as "carpet wools and other similar wools," but if it had described them as carpet wools exclusively, it would still do no violence to the Ten Commandments for a man to make a chair cushion out of such wools, if he found them adapted to that purpose.

The *Tribune* and its correspondent in Brazil are wrestling with these facts, sent by the correspondent:

"The exports to Brazil from the United States have fallen from $9,252,094 in 1883 to $8,127,883 in 1887 and $7,137,008 in 1888, while the imports from that country have exceeded $53,000,000. While England contributes 40 per cent. of the imports received at Rio,

France 12 per cent., and Germany 9½ per cent., the United States has the fourth place on the list, contenting itself with 7 or 8 per cent. At the same time Americans receive 66 per cent. of the products exported from that port. While England virtually balances its imports from Brazil by furnishing 45 per cent. of the exports to that country, the United States purchases more than one-half of the surplus products, and contributes a comparatively insignificant fraction of the manufactures and foreign supplies."

Our buying from Brazil seven-tenths in value of her surplus articles does not persuade Brazil to buy much from us. There are steamers enough to bring hither that seven-tenths, and would be enough, if called for, to carry thither all Brazil will buy of us. What, then, is in the way of our sales to Brazil? The *Tribune* answers that Brazil seeks "cheap" goods. What will President Harrison think of men and women so deluded as to wish "cheap" goods? The *Tribune* scolds our manufacturers for their stupid obstinacy and indifference. They should compete with more enterprise and vigor. They should establish agencies, and send goods on consignment, which is precisely that which our protectionists complain of European manufacturers for doing to us. But the fact is our manufacturers cannot undersell Europeans in Brazil, and simply because our taxes prevent. It is cold in the mountains of Brazil, which is a country having, if we exclude Alaska, a larger area than ours, and the people require blankets; but we cannot sell blankets in Brazil in competition with England and Scotland. The smart women in Brazilian cities want smart shoes; but how can we undersell Parisians so long as we have to pay a tariff tax of 60 per cent. on the silk trimmings? Brazilians are large buyers of perfumery; but how can we compete with European sellers so long as our perfumery-makers are taxed 300 per cent. on alcohol, 45 per cent. on glass bottles, 30 per cent. on the stoppers, and 20 per cent. on the paper wrappers? For similar reasons we do not and cannot export to any country articles which, in the language of trade, are really manufactured articles, displaying the skill and labor of our artisans and weavers, and the perfection with which they can manipulate cotton, silk, flax, wool, wood, leather, iron, and steel.

It is quite true, as the Trenton *State Gazette* says, that the opposition to the Blair bill in the South is prompted in part by the fact that it involves "an assumption of 'paternal' functions by the general Government, and an invasion of the sovereignty and independence of the States." But it is a great mistake to suppose, as the *Gazette* in its ignorance apparently does, that the opposition to the measure on this ground is confined to Southern Democrats. On the contrary, it is fully shared by leading Republican Senators from the North. Mr. Hawley of Connecticut, for example, has said on this point: "This bill is a bill drawing into Federal control an interest that from the settlement of the continent to this day has been under local control, and wisely so. It would be the beginning of a permanent policy, a permanent new relation between the Federal Government and the States, and it would never go backward; it would never diminish its action." Mr. Plumb of Kansas was even more emphatic. "I see in it," he said, "the most dangerous endeavor I have ever witnessed to extend the power of the Federal Government at the expense not only of the State governments, but of every form of government within them." In the same tone said Mr. Hale of Maine: "All experience shows that in any field occupied jointly by the Federal and State Governments the absorption and aggression are in one direction. The Federal interest increases, and the Federal control increases, and it is the State interest that yields and grows indifferent and slothful." Republican newspapers have been equally outspoken on this point—the St. Paul *Pioneer Press*, for instance. We are persuaded that, if the *Gazette* will make a careful study of this question, it will be constrained to agree with the conclusion of the *Pioneer Press* that "the Blair bill is bad, in principle and practice, from the ground all the way up." Reports from Washington indicate that there is a growing disposition among Republican Senators and Representatives to follow the advice of the *Pioneer Press*, "Let every patriotic man in Congress speak and vote against it"; and that opposition to the scheme is also increasing among the Democrats, so that it is threatened with deserved defeat.

The suggestion that President Harrison might well appoint a Democrat to some future vacancy on the Supreme Bench, in view of the fact that only two of the present nine judges are members of that party, strikes the Albany *Evening Journal* as the height of absurdity. It says of it: "May the sound American idea of party power and party responsibility never be lost sight of, and may civil-service nonsense never so completely delude the American people that the party voted into power shall be deprived of the legitimate fruits of its victory. The demoralization that would result would be a disaster to the public. 'Nonpartisan politics' is a day-dream of the Mugwump—the ideal of the millennium, when peace, good-will, and free-trade will exist throughout the world. Put none but Republicans on guard!" All this betrays most extraordinary ignorance as to the decisions actually made by the Republicans who have been appointed judges of the Supreme Court. The most important ones have been decisions annulling acts passed by Republican Senators and Representatives, on the ground that these acts were unconstitutional. The truth is, that it makes very little difference whether Presidents "put none but Republicans on guard" in the Supreme Court so long as these Republicans render decisions which command the heartiest approval of Democrats. The argument for appointing a Democrat is not that he would take any different view of the Constitution from Justice Miller and the other Republican judges, but that, in a country where the voters are divided almost evenly between the two parties, it seems hardly fair that one of those parties should have only two representatives out of the nine men on the Supreme Bench.

As for the argument that "such a thing did not happen in Cleveland's time," it is of course absurd. The Federal judiciary being almost entirely composed of Republicans when Mr. Cleveland became President, he was not called upon to appoint Republicans to fill vacancies in order to equalize such honors between the two parties. A Republican President might well follow the example set in this matter by the Republicans of New England. Although that party has controlled Vermont without interruption ever since its formation, and Massachusetts and Maine with only slight breaks, the majority have recognized the justice and wisdom of allowing the minority a representation in the courts, and Democrats have been given judgeships of the highest courts in those States at times when none but Republicans need have been put on guard. There is no doubt that this practice has conduced to popular respect for these tribunals in New England, and what is true of New England would hold true of the whole country. The first essential to a judicial tribunal is that it shall command the respect of the people without distinction of party, and a representation of both parties is the surest way to command such respect.

A fresh attempt is about to be made to induce Congress to authorize an increase of the salaries of Federal judges in this State, and we sincerely hope that it will succeed. Similar efforts have been made in every Congress for many years, but, for some inscrutable reason, have resulted in nothing. Nobody can claim that the salaries paid at present are anything like what they should be. As a matter of fact they are not sufficient to enable the recipients of them to live respectably. A United States District Court judge receives only $4,000 a year, and a Circuit judge receives only $6,000, from which he must pay his own travelling expenses and private clerk hire. The absurd inadequacy of these salaries is more than ever apparent when we compare them with those paid to New York State and city judges. Our Supreme Court judges receive $17,500, those of the Superior and Common Pleas Courts $15,000. We even pay our police justices, scarcely one of whom is a lawyer by profession, $8,000, and our civil justices $6,000. When Mr. Lacombe, who was one of the ablest Corporation Counsels this city has ever had, resigned from that office to accept an appointment as Federal Circuit Judge, he gave up a salary of $12,000 to receive one of $6,000. This is a sacrifice which men of legal and judicial talent ought not to be asked by the Government to make, and it is one which few of them can or will consent to make. The inevitable result is, therefore, that the Government cannot, except in rare instances, command the services of the very men whom it is most desirable to have upon the Supreme Bench. Present salaries ought at least to be doubled, and this Congress ought to authorize the increase without hesitation or delay.

RICH MEN IN THE SENATE.

Mr. Calvin S. Brice has been elected to the Senate from Ohio, with doubts hanging over his qualification as an "inhabitant," and with no equipment worth mention in the matter of political experience, and, in fact, without any generally recognized equipment except great wealth. This is sure to bring up once more, between now and his taking his seat, the much-bruited question of the gradual occupation of the Senate by men noted only for their riches. On this point the founders seem to have eased their minds by forbearing to exact a property qualification. Story refers to it in the following curious passage:

"In concluding this topic, it is proper to remark that no qualification whatever, as to property, is required in regard to Senators, any more than in regard to Representatives. Merit and talent have, therefore, the freest access open to them into each branch of the Legislature. Under such circumstances, if the choice of the people is but directed by a suitable sobriety of judgment, the Senate cannot fail of being distinguished for wisdom, for learning, for exalted patriotism, for incorruptible integrity, and for inflexible independence."

Story's belief evidently was, and he doubtless shared it with most of the political philosophers both of his own generation and that immediately preceding it, that if the people were relieved from the legal necessity of choosing rich men for the high offices of State, they would inevitably choose men of "merit and talent." By merit and talent he plainly meant merit and talent displayed in other ways than in the accumulation of wealth. What we know of the social and political conditions of those days warrants us in supposing that he thought persons distinguished for their oratory, or their legal knowledge, or their capacity as legislators or administrators would be sure to command the popular choice in preference to men distinguished only for the amount of property they possessed. And he was certainly right in his conclusion as to his own time. Where he erred was, in supposing that he was laying down a rule of general application and indefinite duration. Eminence qualifying a man for high office in the popular eye varies from age to age with social or economical conditions. Between the establishment of the Government and the outbreak of the civil war the process of making a fortune was a slow one, and the fortune when made was never very large. It was made, too, for the most part, on the old Poor Richard lines—that is, by industry combined with strict economy. There were but few chances of lucky speculation. Moreover, even large fortunes were spent without splendor or display. Manners were simple, and the means of ostentation, even for the ostentatiously disposed, were scanty.

Under these conditions, intellectual eminence of some kind was almost the only eminence known. The minister, the judge, the successful lawyer, the college president, professors, and authors, were the great men of the day, and their greatness the only kind of greatness that seemed possible to the popular mind, except that of the successful naval or military commander. The rich man, noted for nothing but his riches, was not thought of as a great man at all, because riches were hardly ever the result of any remarkable mental exertion. Those, therefore, were the golden days of the orator and lecturer and editor and the literary man. They filled the popular imagination. The orator had a better chance of the Senate than anybody, and walked about with a following of admirers such as have waited on greatness in no other country since the Roman patricians led their clients on fine mornings down to the Forum. The Senate between 1800 and 1860 was pretty sure to contain whatever eminence of this sort each State possessed.

All this has been changed, mainly, though not wholly, because our economic conditions have changed. The clergy have lost their eminence, owing to the weakening of theological beliefs and the consequent loosening of the bonds of church organization. The judges have lost a good deal of their influence under the operation of the elective system, and the bar has suffered in dignity and consequence through the diminished authority of the bench. The writers and orators held their own fairly, owing to the support they received from the great moral enthusiasm of the anti-slavery struggle. But the war brought into sudden overwhelming importance the military men, or men of action, and correspondingly depressed the "book-men" and "littery fellers." For ten years after Appomattox, military eminence was the only eminence that counted for much either in politics or society. The soldiers came home, and married the pretty women, and got nominated for anything they took a fancy to. They got the Presidency, and a considerable share of the House and Senate, and of the Governorships and Lieutenant-Governorships, and in fact were literally "cocks of the walk." But their day began to pass when the great speculators, the oil, coal, iron, and railroad men, began to appear on the scene under the influence of the immense premiums offered to money-making talent by the debased currency, the high tariff, and the opening of the great West by the new lines of railroad. The talent of the country then began to be turned into the money-making field, which offered for the first time materials for combinations that might task anybody's intellectual powers, and returned in a few years fortunes such as the world has not seen since the Roman procurators came home laden with the plunder of the provinces.

Under these circumstances, rich men having become the popular heroes, it is not surprising that they get the honors and rewards which in Story's day were reserved, and he thought would be reserved for ever, for a different kind of merit. Every generation has its own sign of worldly success, and bestows its trusts on the men who can show it, and infers from their possession of it all the more useful virtues. The misfortune is that wealth is an unusually untrustworthy sign, and can only be relied upon in about half the cases. It is an eminence which, though often the reward of character and capacity, is often won without either. But this, too, shall pass, as the poet says. There is sure to be a reaction against it, as against all titles to fame which will not bear strict examination. In politics, as in business, moth and rust do corrupt, and thieves break through and steal. It will give place in its turn to something more enduring, when the present great opportunities for acquiring it have diminished.

HISTORY OF THE SIX-MILLION-DOLLAR CASE.

If Congress had not thrown down the reins and surrendered itself to be whirled whithersoever the tariff beneficiaries wish to go, it would order a serious investigation into the origin and history of the tax gathering which the Supreme Court has recently condemned, for a second time, as unauthorized, arbitrary, and lawless in the case of hat-bands and bonnet-trimmings. Fifty per cent. ad valorem was the monstrous and indefensible exaction levied, by a sort of lynch law, upon the women of the country. The magnitude of the annual exaction can be inferred from the estimate that the refund to a very few importers who protested and sued will reach $6,000,000. How could there have been such executive blundering in the beginning, and such obstinate adherence to the blunder after so many warnings by the courts? What personal motive allured or pushed on Treasury officials to enforce this illegal tax?

On February 27, 1884, the Arthur-Folger Administration, on the advice of Attorney-General Brewster, decided the rate on bonnet-trimmings to be as the Supreme Court has just now decided. Somehow or other the question went to the Supreme Court, and it sustained Secretary Folger, who was a wise and competent lawyer. The Treasury, under Mr. Fairchild, instead of sending to the customs officers the *text* of the Supreme Court decision, sent a misleading summary on April 25, 1888. On May 31, 1888, Collector Magone had the rate on the article in question before him, and he directed that 20 per cent. be levied, as the Supreme Court had decreed. Appraiser McMullen did not indicate a rate. Naval-Officer Burt refused to liquidate the entry at that rate, because the Treasury instructions of April 25, 1888, in his opinion, required 50 per cent. The disagreement accordingly went to the Department at Washington. On May 15 Mr. Maynard, Assistant Secretary, wrote to Collector Magone, saying that it had been represented to the Department, "at a personal interview by Mr. Cheney and other silk-manufacturers," that some doubts existed in the minds of appraising officers at the port of New York "as to the scope of the Department's instructions of the 25th ult., addressed to the Collector of Philadelphia for the purpose of carrying out the decision of the United States Supreme Court in the case of Hartranft vs. Langfeldt." In order to establish uniformity in classification of such goods at the several ports, Mr. Maynard directed that the general principles as laid down in the instructions be examined by the Conference of Ap-

praisers. The Conference reported on July 26, and, acting upon their report, the Department decided against Collector Magone's 20 per cent. and in favor of Naval-Officer Burt's 50 per cent. rate.

On August 28 a New York manufacturer, Mr. Curtiss, complained to the Treasury that 50 per cent. was levied at New York and only 20 per cent. at Philadelphia, adding that the difference "involves our *existence*," to which Mr. Maynard replied that orders had been given which would restore uniformity. Those orders put up Philadelphia to 50 per cent., as the New York Appraising Board advised. That was on August 31, in the midst of a Presidential campaign on an issue made by the Democratic party for lower duties.

In the next month but one thereafter the suit of Wanamaker (the present Postmaster-General) vs. Cadwalader was brought to trial before Judge McKennan and a jury. It presented the very same question of 20 or 50 per cent. rate. The importer produced and examined forty witnesses and the Collector twenty, and a judgment was entered against the Treasury. The District Attorney, who was beaten, advised the Department that the court was all wrong in its law, and, without taking the advice of the Attorney-General, the suit was appealed by the Treasury Department to the Supreme Court, and the 50 per cent. exaction continued.

On October 5 Mr. Maynard applied to the President of the Silk Association of America for his advice "as to what steps should be taken by the Government in the premises"; and the latter repaired to Washington. Ten days afterwards the Department wrote to District-Attorney Walker of New York that it had been told that witnesses could be had in that city to prove that 50 per cent. was the true rate, and asking if another suit could be tried there at an early day. On October 17, 1888, the District Attorney said that there were a lot of such suits on the calendar, but he added:

"The case of Edelhoff vs. Robertson, No. 9063, tried in this district in April, 1886, is now pending on appeal in the United States Supreme Court. This case involve the proper construction of T. I. 448, Schedule N."

That is the suit just decided by the Supreme Court.

On November 7, 1888, Collector Magone wrote to the Department for more definite orders as to whether the rate should be 20 or 50, saying he had levied 50, but adding:

"If you affirm our action, we will assess duty at 50 per cent. ad valorem. If, on the contrary, you feel compromised, *either by the decisions of the courts* or previous action of the Department, or differ from us as to the construction of paragraph 448, then we will assess duty as you may advise."

On November 13 the Department did not object to 50 per cent., and said:

"In this connection it may be mentioned that the United States Attorney at your port has been requested to prepare for trial, and to try at the first favorable opportunity, a suit which may involve a full consideration of the questions now pending, as to the proper classification of so-called hat-bands and other similar merchandise; and also that the U. S. Attorney at Philadelphia has been requested to take the necessary steps for having the case of Wanamaker vs. Cadwalader, recently tried at that port, concerning the classification of fancy ribbons, taken to the United States Supreme Court for review."

Two days afterwards the Treasury again appealed to the President of the Silk Association of America for advice, and on December 17 Collector Magone begged Assistant-Secretary Maynard to come to New York and help the Custom-house out of the worries into which it had been plunged by the hat-band and bonnet-trimming business. The importers said they had sold goods to arrive on the basis of 20 per cent., and by reason of the recent 50 per cent. decision they were in deep distress. The Treasury decided at first that goods *ordered* prior to the order increasing the tax to 50 per cent. be admitted at 20 per cent., and those ordered afterwards must pay 50. That made such a confusion and rumpus that finally the Treasury Department ordered, on December 20, 1888, that the bonnet-trimmings and hat-bands arriving before January 1, 1889, could be admitted at 20 per cent., but all after that date must pay 50 per cent. If that is not increasing customs taxes by an executive order, what is it?

We have been at the trouble to gather the foregoing facts and dates in order to convince the most sceptical what sort of a taxing system it is under which they live. The recent decision of the Supreme Court puts the illegality of the 50 per cent. exaction beyond question or cavil.

CANADIAN RAILROAD COMPETITION.

Mr. Erastus Wiman, before the Senate Committee on Canadian Relations, said recently that he was authorized to state that Canada would be willing to conform its railroad system to the principles of our Inter-State Commerce Law if necessary to continue its carriage of American products. Details were not given, but presumably Mr. Wiman referred principally to the long-and-short haul provision of our law. It is generally believed that the Canadian Pacific, on its long lines, charges its local shippers more than it receives from American transit trade. The value of the American carrying-trade to the Canadian Pacific must increase in the future, and our roads may as well prepare themselves for a yet stronger competition from Canadian lines. The logic of the situation is driving the Canadian Pacific more and more to seek American trade. A part of its present advantages, both of Government guarantee of dividends and of monopoly, must shortly come to an end. Besides this, the reputation of its managers is at stake. The Canadian people have invested a great many millions in this railroad. If in a few years the road does not show a substantial business, its managers will have to meet a dissatisfied people. Where will this growth of traffic come from? Not from Canada, because there is not enough business there to make the good showing required. It is known that Government and railroad are much disappointed over the failure to settle large numbers of immigrants in the Northwestern provinces, as expected. Whatever the reason may be, the fact is true that it is the United States, and not Canada, which is showing the great increase in volume of trade. To the American transit trade, therefore, the Canadian Pacific must turn if it would show a business large enough to justify the expectations of its projectors and creditors.

If political union or annexation were to be looked for soon, the solution of the larger problem would solve the transportation question also; but that prospect seems very remote. Meanwhile our American railroads think themselves unjustly treated wherever they find themselves paying higher prices for supplies or wages, while at the same time limited as to rates by the competition of their Canadian rivals. Certainly our lines should be freed from the restrictions of the Inter-State Law whenever subject to such Canadian competition. This would not need additional legislation, but only an expression of opinion on the part of Congress and the people that Canadian competition constitutes such dissimilar circumstances and conditions as are mentioned as sufficient excuses in the law itself.

One of the ramifications of this Canadian transportation question is shown by the recent complaint of the Board of Trade and Transportation of this city, and the reply of the Pennsylvania Railroad just made. This complaint in brief is, that railroads charge regular tariff rates on merchandise shipped from New York, while accepting a less sum as a proportion of a through rate, say, from Liverpool to Chicago. Doubtless this has proved a serious matter for New York merchants in certain branches of trade, more serious than the small percentage of imports credited to Western cities as ports of entry would indicate; one reason being that such direct imports (at a less through rate) fix the prices and profits at which all sales must be made. The reply of the Pennsylvania is, that such through combined ocean and land rates are made in competition with similar routes through Canada. In the export case last summer the Inter-State Commission decided that the railroads must charge the same sum to the seaboard whether the grain was for export or for domestic consumption. Logically, the Commission is bound, therefore, to declare the same rule in the present complaint. If the view is the correct one that, in the nature of things, Canadian competition must increase, we may shortly find that we have really legislated in favor of the export and import trade of Canadian ports. Montreal, and perhaps Quebec, with the ports further east, would be glad to be thus assisted. On the other hand, it would be unjust to ask our American carriers to accept on all their traffic the rates fixed on part of the same by Canadian through water and rail lines. It is a difficult question at the best, and the Inter-State Commerce Commission in its late annual report was glad to put the whole matter upon Congress without recommendation.

One way of escape from this export and import perplexity has not been tried, though, if practicable, it would be in line with the theory of exemption of our carriers from the Inter-State Law under Canadian competition. That plan is one of rebates under

careful restrictions: that American carriers, in the Board of Trade and Transportation case, should be allowed to quote the same through-rate to Chicago via New York as via Montreal; that when a shipment was made from New York of a quantity of an article proved by custom-house papers to have been previously imported, a rebate equalizing the through European rate should be paid. This is the plan now pursued at Boston on exports, which works well. New York would present more complications, and, besides this, severe fluctuations of the through-rate would be a serious difficulty in adjusting such a rebate. Possibly the control of ocean steamships by railroads would tend towards steadiness of rates, and in general favor the settlement of our export and import transportation questions. Any plan must have in view two things: the ever present low-rate quotations to and from our interior cities and Europe via Canadian carriers and Canadian ports, and next, the right of the American seaboard merchants to continue sharing in our import and export trade.

THE ANGLO-PORTUGUESE TROUBLE.

THE difficulty between Portugal and Great Britain which Lord Salisbury has so summarily terminated, began by the publication, in the Lisbon *Official Gazette* on the 9th of November last, of a royal decree placing under Portuguese administration a vast territory in the interior of Africa, both north and south of the Zambesi, to which the Portuguese Government gave the name of Zumbo. It embraced on one side a large part of Mashonaland, and to the north an immense region close to the frontier of the Congo Free State, and to the dividing line of Lake Nyassa. Lord Salisbury thereupon called the attention of the Portuguese Minister to the fact that Mashonaland was already a British dependency, and that Portuguese pretensions to any part of it could not be allowed; that the convention between Lobengula, King of Mashonaland and Makalakaland and Great Britain, concluded on the 11th of February, 1888, had been duly communicated to Portugal and published in Cape Colony.

He added that the British Government could not recognize Portuguese pretensions to the country north of the Zambesi; that the territory there claimed by Portugal lay along the river Loangwa, with the tribes on both sides of which the British Government had concluded treaties, and that the Portuguese pretensions in that region were incompatible with British rights resulting from the creation of English settlements on the River Shiré and the banks of Lake Nyassa. Besides this, Portugal had pretended to establish jurisdiction over vast unoccupied territories principally discovered by English explorers. Lord Salisbury reminded M. Barros Gomès that in August, 1887, he had by formal note warned the Portuguese Government that no claim of sovereignty or jurisdiction not supported by occupation or effective military possession would be submitted to.

After the receipt of this note—that is, on the 16th of December—came news from Mashonaland of the 8th of August, from M. Alvaro Castellões, who was making surveys for a railroad in Mashonaland. His story was, in brief, that the natives of various tribes had driven off his surveying parties, and had finally compelled him, after some severe fighting, to fortify himself and await the reinforcements from Maj. Serpa Pinto, the commander of the military escort, and that these attacks had been instigated and directed by two Englishmen, brothers, named Petit. Almost immediately after this, came a telegram dated November 17 from Mashonaland, announcing the arrival on the scene of Maj. Serpa Pinto, with Gatling guns, with the aid of which he defeated and drove off the native forces with great slaughter, and forthwith became the hero of the hour at Lisbon. In the midst of the enthusiasm came Lord Salisbury's cool and crushing ultimatum. It compelled Gomès's resignation and a complete surrender, but the mob got some satisfaction by breaking the windows of the British Embassy at Lisbon.

The truth is, that Portugal, after having been the first Power to explore or make any considerable settlements in Africa, has made no progress there in two centuries, has exerted no influence on the civilization of the continent, has been cruel in her treatment of the natives, and is accused, whether rightly or wrongly, of conniving at the slave trade and obstructing the efforts of other nations to abolish it. It is not surprising that her pride should have been wounded and her old ambition roused by seeing the inroads into the African wilderness made by England and Germany, but, considering that her population is small, stationary, and unenterprising, her financial situation wretched, the position of the monarchy precarious, the army small and of very poor quality, and her navy hardly worthy of the name, her entrance on the scene as a competing colonizer and conqueror must be pronounced an egregious piece of folly. The prompt check given to it by Lord Salisbury must undoubtedly be considered a blessing in disguise.

THE EUROPEAN EQUILIBRIUM.

PARIS, December 26, 1889.

THE preparations for war have never been greater than they are now all over Europe; even the neutral Powers have been roused from a long inertia, and are transforming their armaments, building fortifications, reorganizing their armies. Belgium covers the line of the Meuse with forts; Switzerland is building immense arsenals and new military roads. France has made a new military law: instead of keeping in the service all men from twenty to forty, she keeps now all men from twenty to forty-five, thus adding five generations to twenty and augmenting the number of fighting men by one-fifth. Besides, the institution of the one-year volunteers (copied from the German *einjährige*) has been abolished: all the young men are obliged to spend the same amount of time in the active army, whether they are educated or not, rich or poor; whether they intend to follow a liberal career or to become common laborers. Even the ecclesiastics have not been exempted: the seminarists will go to the barracks. This last article has been the great *cheval de bataille* of our modern republicans, who still repeat, with Gambetta, "Clericalism is the enemy," and who never lose an opportunity to show their hostility to the religious body.

Our armies will be enormous *on paper;* in time of war the whole nation will be in arms. We now read articles in the military papers in which there is, for instance, discussion of a cavalry corps of 60,000 men placed under the independent command of a single general. Imagine 60,000 horsemen invading a province! I was reading some time ago a letter from Turenne to Mazarin. He had at the time a little army of 12,000 men under his orders, and he complained that his horses could find nothing to eat—they were so weak that they had not the strength to go to water. Future armies will be like the plagues of Egypt: the difficulty will be to feed these millions of men. The vision of the horrors of future wars has a calming effect on the imagination, and I can not remember the time when French chauvinism was so subdued. Though the belief in war is in all minds, the time is left vague. "Après moi le déluge," as Louis XV. once said.

If the ideas dormant in every mind could find an expression, it would be this: We shall not begin war; to which must be added: If Russia and Germany should go to war, we could not help joining Russia and taking our opportunity. The same thing is probably thought in Russia; the solitary will of the Emperor is also waiting for some external cause of action. Personally, the Emperor is pacific; he is said to have a great horror of war. He knows that his country did not gain much by the last Eastern war, the siege of Plevna and the march on Constantinople. But could he remain neutral if France and Germany were again belligerent? Could he allow the political annihilation of France? He has been urged, over and over again, to join the Triple Alliance—he has probably been tempted in a thousand ways; but his people could find no compensation for the predominance of the German element in Europe—a hegemony which would destroy for ever the political equilibrium of the Continent.

In order to obey the aspirations of his country and to preserve the existing equilibrium of forces, the Emperor of Russia has adopted a passive attitude. His sullenness for a moment appeared to verge on hostility. The young Emperor of Germany, as soon as he ascended the throne, made it his duty to pay a visit to Russia. It was the first of the series which he thought it necessary to make to his brother sovereigns. The visit of the Emperor of Russia was returned very late, so late that great anxiety was felt in Germany and all over Europe. When at last it took place, the anxiety was, it may be said, intense. What was going to happen in the interview? Its external features were noted with the greatest care; but these features are almost invariably the same. Exchanges of uniforms do not mean exchanges of ideas. There was no witness to the most important conversation which took place—the long conversation between the Emperor of Russia and the Chancellor of Germany. But the diplomatic correspondence which ensued has allowed us to form some idea of the exchange of views which took place on that occasion.

Prince Bismarck had no easy task. The Russian press had been constantly denouncing him as the enemy of Russia; he was obliged to prove, by official documents, that in every important circumstance his instructions to his agents had been inspired, with regard to Rus-

sia, by the most friendly sentiments. His enemies had not hesitated, in order to influence the mind of the Czar, to use once more documents which were wanting in authenticity. His exposition of his diplomacy is said to have been listened to in silence, and, at the end of it, the Emperor thanked the Chancellor for it, and told him that he was glad to receive the assurances which were made to him; at the same time, if the German Empire entertained nothing but friendly sentiments towards Russia, their way (a very simple way) to prove it was not to give any support to the order of things existing in Bulgaria, which was contrary to the letter of the Treaty of Berlin. It is easy to imagine that, on these terms, the conversation could not be carried very far; the Emperor of Russia, however, declared that he would not oppose by force the irregular order of things now existing in Bulgaria; that he would content himself with not recognizing it.

Before the interview took place there had been some talk of this recognition by Italy, by Austria afterwards, and even by the Porte. Many articles had been thrown out as feelers in this direction. The Chancellor of Germany was not long in understanding that any partial recognition would be useless, as the Treaty of Berlin requires unanimity in this case; he understood also that if Russia refused her recognition, France would do the same, as these two Powers, by a sort of tacit agreement, combine their action in every important measure. The signatures of Prussia, of Italy, of Austria on one side, with perhaps those of England and the Porte a little time afterwards, and on the other side the protests of Russia and of France, would have given too vivid a form to the constellation of political forces, to use a current German expression. What is useless in politics is generally not only useless, but dangerous. It was therefore determined that things should remain *ad infinitum* in the present state; the Bulgarian Government will no more be recognized by its friends than by its enemies; it will remain in Europe as a permanent danger to peace.

However, so long as a danger is not imminent, it seems less formidable. Bulgaria will have to count on time, on the unforeseen incidents of political life; if she is wise, she will take good care of her finances. If she organizes her army, especially if she builds railways and becomes an important line of communication between Austria-Hungary and the East, she will some day reap the benefit of her patience. The present King of Rumania was for a long time unacknowledged, and he seems now tolerably firm on his throne. Nevertheless, it cannot be denied that the whole Eastern question may be reopened at any moment, that the little nationalities which have sprung up in various parts of the Ottoman Empire do not seem to have in themselves great elements of independent vitality. Russia is longing for Constantinople, and we can hardly imagine her, in Constantinople, surrounded by a host of small sovereigns and small nationalities. The orthodox Czar will always be tempted to rule over all the orthodox Christians of the East. The difficulties and complications of the Eastern question are numberless; and the Eastern question cannot be reopened without endangering the peace of the world. The smallest spark may set fire to the combustible materials which for the last twenty years have been accumulating in Europe.

We can, therefore, say with reason: "They cry, Peace, peace, but there is no peace." The philanthropic effusions of the Exhibition of 1889 in Paris must not deceive us; we may build higher and higher towers, larger and larger halls; humanity remains fundamentally the same. It is a very materialistic view to believe that because men are better clothed, and warmed, and lighted, they are really better. The moral work of humanity is not comparable to its physical work. We are too often deceived by words. The Republic which has been proclaimed in a moment of stupor at Rio Janeiro, will, I am afraid, have little in common with the Republic which was organized a hundred years ago by the founders of the American Constitution, and it is but a narrow view of politics to divide all the governments of the world, as Montesquieu did in his 'Esprit des Lois,' into three categories. The German Empire of the North of Germany does not much resemble the German Empire of the South, and much less the Russian Empire. Constitutional government as carried on at Bucharest or at Sofia has little in common with the same government as it is understood in London or in Brussels. The present French Republic is a republic *sui generis*, and, even now that Gen. Boulanger is living an obscure life in one of the Channel Islands, can we forget that less than a year ago he was the idol of Paris, which elected him its representative by the largest vote ever obtained in this capital? Can we forget that, two years ago, he was the favorite of the men who are now in power, and their Minister of War?

Without being too much of a "laudator temporis acti," I may perhaps be allowed to say that our time suffers from the absence of any great ruling principles. Everything seems uncertain; there is not a country in Europe—and I will not even except England—where you can be thoroughly tranquil about the future. The great wars initiated by the Second Empire, after long years of peace and quiet, produced a perturbation which is not yet ended. We all feel instinctively that Europe has not found a real state of equilibrium. This uncertainty produces an uneasiness which is felt in all the relations of life. We live from day to day, and dare not look too much into the future.

THE POPE AND IRELAND.

ROME, December 17, 1889.

IT is curious to see how long the newspapers have kept up the superstition of the pressure of the English Government on the Pope to induce him to "pacify Ireland." The English Government has no channel of official communication with the Vatican, and has had none since the Jubilee mission of the Duke of Norfolk; and I know from the lips of his Grace that he had never any negotiations on the subject of Ireland with anybody at the Vatican, that political topics were never discussed in his interviews either with the Pope or the Secretary of State. With the cessation of his mission ceased all official intercourse between the Pope and the English Government, only to be renewed with the coming, a few weeks ago, of the mission of Gen. Sir John Linthorn Simmons to arrange the relations of ecclesiastical and civil affairs in the island of Malta. This Ambassador Extraordinary is a soldier, former Governor of Malta, and I have his personal assurance that his mission has no relation to any part of the English dominions except that island. Between these two there has been no attempt to carry on diplomatic intercourse between the English Government and the Vatican.

This statement is as positive as anything which can be said in opposition to it, because the presence of any person for the purpose of such intercourse in Rome could not escape the habitual observers of affairs which are watched with so much jealousy, nor could the negotiations long escape discovery. Being in more or less familiar intercourse with leading and influential Catholics resident in Rome as well as English Catholics temporarily here, I am able to assert, with a positiveness which does not fear denial, that the English Government has never in a direct or an indirect manner applied any pressure or urgency, officially or officiously, at the Vatican to induce the Pope to "pacify Ireland." If men had not their minds heated by partisan excitement so as to be unable to see clearly, they would understand that the English Government, being a Protestant Government, besides being dependent on public opinion for existence, could not permit the Pope to interpose his authority between itself and the subjects of the Queen without incurring a danger greater than it has now to meet. Nothing in the entire history of England is clearer than that, since the day of Henry VIII., every ruler of the kingdom has repected, *bon gré mal gré*, the jealousy of the English people of any foreign intervention in the affairs of the country, and that to-day the Pope, were he ever so much disposed, would not be permitted to mediate between the Government and what it regards in the light of domestic insurrection. I am convinced that any person competent to judge the position will agree with me that this is certain. There is not a Conservative in England, unless he be more Catholic than Englishman, who would not abandon a Government guilty of such a weakness.

And the facts of the case accord with this à priori view of it. Not only has the Government never desired the intervention of the Pope to "pacify" Ireland, but the Pope has never proposed to take any action which was open to the implication of meddling in Irish politics. It is my opinion that if the Irish people had risen in insurrection, or if they had proposed to rise, the Pope would have limited his action to advice to keep the peace, and this would have been in accordance with his general feeling and advice. But no rescript would or could have been issued, because the act of rebellion, as such, is a political act, and could not have been condemned as immoral by the Church, as boycotting and the plan of campaign were. This judgment, moreover, was not the act of the Pope, but of the College of Cardinals, composed in a large majority of Italians who have no sympathy with the interests of England or English landlords. The practical revolt against English law was not condemned, but the means by which this revolt was carried on, viz., boycotting, which is an act of excommunication, a prerogative which the Church reserves to itself, as well as judging of the conduct which justifies it; and the plan of campaign, which was a combination intended to interfere with the rights of property and the observance of contracts.

I am not going to enter into a discussion of Irish affairs on their merits—I am only stating facts of history. In the discussion of the nature of the disturbances in Ireland which made this rescript necessary, the English Government had no part; nor did it present, directly or indirectly, any case, which is indeed implied in my saying that it did not recognize the political character of the Pope. The Roman ecclesiastics have never taken a leading interest in the Irish affair. The English Government had nothing to offer the Pope or the Church, and the Church had nothing to ask of England. In the time when the matter was under consideration here I asked a leading cardinal what the Church wanted which England could give, and he replied, "Nothing." There was, and always is, a desire for some

method of official communication with the English Government on account of occasional irregularities in Catholic provinces under English rule, and even because the idea of being treated with as an independent sovereign has always been dear to the heart of the Pope; but this is recognized as at present impracticable, though the leading English statesmen of both parties, with the exception of Mr. Gladstone, are in favor of it. The Church has, therefore, no interest in the political side of the Irish question, or, if it have any, it would be due to the Irish ecclesiastics, who are mostly in favor of home rule. Their influence was, in fact, the strongest at work in Rome. The people who worked against them were not the English Ambassador or the Jubilee Embassy, but English Catholics and Irish Catholics who are loyal to the Government and suffering from the state of things in Ireland. These were the "emissaries" of the English Government, as Archbishop Walsh and his coadjutors were of the Home-Rulers.

To clear up the doubts of the authorities of the Church, called on to judge in such a conflict of interests, the Pope sent Monsignor Persico to examine on the spot all the elements of the problem. He heard everybody interested, and his report, made by letter and continuous, not embodied in an ecclesiastical blue-book, settled the question; and the decision of the College of Cardinals, registered among the immutable decisions of the Church, was the end of the discussion. Save certain letters or amplifications of the rescript, this ended the Pope's interference in the matter, and there has been no change in the attitude either of his Holiness or of the College of Cardinals since. The bishops and the priests have been left to their own consciences, and those who conform to the rescript, as those who do not, act on their own responsibility; the former respecting and the latter defying the decision of the authority they accept as infallible.

It is true that there is, in quarters where the Italian prelates are not regarded with favor, a certain impatience with the dominant influence they exert in Vatican matters; but so long as the Pope is Pope by force of his succession to St. Peter as Bishop of Rome, it is difficult to see how the affair can be otherwise arranged. The Church over which he is head is the most conservative of all human institutions, and this is the source of its greatest power over the minds of its adherents. The jealousy of the clergy of other countries is based on the belief that the influence of the Vatican is exerted with too little regard for other nations than the Italian, and is strengthened by the hope of getting a larger part of that influence. But what has nationality to do with this matter? The instant that the Church becomes national it ceases to be universal, and the immediate consequence would be that schisms would begin to appear. In Italy the Church is not under the control or influence of the State, but, on the contrary, in confirmed hostility to it. So far as the jealousies of the Catholics of other countries are concerned, this is a safe position for it to be in. In France there is no doubt that it would be under the influence of the clergy of that country, which would be, so far as the other Powers are concerned, a much more serious trouble. The "spirit of insubordination towards the Papacy on the part of the non-Italian element in the clergy" has nothing to do with Irish matters, nor is there any appearance of its "growing more rapidly of late," except among the Irish home-rule clergy. On the contrary, the zeal and devotion of the Catholics of all Europe have shown within the last year or two a very great intensification. The political prelates of all nations desire to pocket the Church if possible, and the Italian hereditary guardians to keep it. The latter have long, perhaps always, kept the foreign prelates aloof, and it is not more with regard to the Irish than the English that this is true. I remember hearing a Scotch prelate, who stands very high in the esteem of the Pope, say one day that the Italian cardinals did not allow the English prelates to know much of what was going on at the Vatican, and this was precisely in relation to the Irish question, then at its crisis.

The Italian prelates seem to regard themselves as a kind of Levites, whose special virtue and function is to keep the Church from the "liberalization of Catholic theology," because they feel, and very justly, that the liberalization means dissolution in a greater or lesser mode. So far as an outsider can judge, the sound churchmen prefer the risks of apostasy and diminution of the numbers of the faithful to the weakening of the authority of the Church. The Church must maintain its principles beyond the matters of dogma, which, as all the world knows, are settled once for all. There are certain principles of social organization which the Church must uphold with all its authority short of a dogmatic declaration. The Church has the entire Catholic world to think of, and the precedents sought to be established by the Land League would hold equally in Italy, in Germany, Austria, and wherever landlords have tenants.

Out of Rome the greater part of the world seems to think that the Pope settles the questions brought before him in much the same manner that the Czar of Russia follows, and that the decisions he announces are the outcome of his individual cogitations; while the fact is that in no constitutional government now existing is there such profound and prolonged study of the questions to be answered; and, so far from any problem being solved by the opinions of one, however important, ecclesiastic, it employs the united thought and application of the Sacred College in its solution. There is not probably in the entire world another such case of grave and multiplex deliberation on moral questions; and the most solemn form of it was that in which the questions of boycotting and the plan of campaign were answered. The Irish bishops were here to urge all the considerations on their side; they were aided by all the influence of Cardinal Manning, the primate of the English Catholic Church, and against them were the greater part of the English Catholics and prelates resident in Rome, though of the former there were some influential individuals, such as Lords Ripon and Bute, on the side of the Home-Rulers. Under these circumstances, the Pope decided to send to Ireland a confidential representative, and through him learn the truth. The report of this emissary, an Italian, was submitted with all the prior arguments to the College of Cardinals, mainly Italians, and the question was decided by their unanimous verdict.

It is true that there are parties in the Church and opposing tendencies—mainly the Jesuits on one side and the more liberal orders on the other; but their antagonism hardly goes beyond differences as to the policy best calculated to restore the supremacy of the Church, and to apply the term liberal in its commonly understood sense to either party would be a mistake. When the Church begins to "liberalize," it begins to break up. The advantages in the control of the Church by the Italian clergy are, that, besides being the traditional guardians, they are the most conservative, and that the Italian nation has during so many centuries been non-existent (and, so far as the Church is concerned, is so still) that the Italian clergy is a neutral depositary of the Church's sanctions, avoiding all questions of precedence and rivalry, just as the Latin language serves to silence all claims of any living tongue. When the Church leaves its present seat, the first step is taken towards its nationalization, and the consequent and inevitable division into as many churches as there are nations. This it is, more than any desire to regain a temporal sovereignty, that impels the Pope and the Church to hold with such tenacity to the restoration of Rome. This it is which makes the "monopoly of ecclesiastical rule" necessarily Italian; and the more furious the struggle of nationalities in Europe, the more imperative it is that the Pope should be an Italian.

I have not treated the question as a Catholic, as any good Catholic will see, but as an observer who has lived long under the influence of the Papacy, and studied its workings without prejudice or hostility, as without any sympathy with its doctrines or tendencies.

W. J. S.

THE WHIGS OF 1832.—I.

LONDON, December 23, 1889.

PAST politics are the dreariest and the most instructive of studies. Whoever doubts their dreariness should try to read through a volume of Hansard, say for 1832. If our sceptic accomplish his task, he will never again maintain that the details of bygone political battles can be otherwise than wearisome. Whoever questions the instructiveness of the dullest political annals, should read with care Mr. Walpole's 'Life of Lord John Russell,'* and the 'Melbourne Papers.' Neither book is lively reading. The biography is the political life of an able but uninteresting statesman, written by a painstaking but dull biographer. The Papers are disappointing; they are the fragmentary pieces of a fragmentary correspondence, which give tantalising glimpses into the mind of a Minister whose personality was far more original than his policy, and whose true character remains to the end an undeciphered enigma.

But books which disappoint a reader's hope for interest may yet amply satisfy a student's desire for instruction. From them he may learn to understand the causes both of the success and the failure of that Whig party whereof the name hardly survives and the effective influence has long become a thing of the past.

"Over the past not heaven itself has power:
What has been has, and I have had my hour."

These are words more than once applied by Lord John Russell to his own career; they might be appropriately inscribed on a monument to the Whigs of 1832. These men, of whom no Englishman should ever speak but with the profoundest respect, "had their hour." What did they accomplish? The true answer is, that they rendered to their nation, and through England to the world, three immense services, of which the first earned for its authors a vast though transitory popularity; the second brought upon them bitter, though undeserved, popular hatred; the third, and perhaps the greatest, excited little notice at the time, and is now all but forgotten.

Their first achievement was to carry the Reform Bill. What this measure meant to the men of 1832 it is difficult for men living in

* 'Life of Lord John Russell.' By Spencer Walpole. Longmans, Green & Co.

1890 to understand. A lapse of more than half a century is of itself sufficient to place a great gulf between the present generation and a generation who found their leaders, and, so to speak, deliverers, in Grey and Russell and Brougham. But it is not the mere lapse of time which makes it so hard for us to-day to appreciate the real meaning of "reform." The whole state of public and, if one may use the expression, of private opinion also, has undergone a fundamental but subtle revolution which even reflecting persons find it the harder to understand because in England the change has not been marked by the phenomena of revolutionary violence. The essential difference, in so far as it can be summed up in a sentence, may be thus defined. The men of 1832 had grown up in a period during which not only reform but even alteration or improvement seemed all but impossible; fixity had become the law of English life and of English institutions. Modern Englishmen live in an age which has seen most things changed and which feels all things to be changeable. What gave to the Reform Bill its true significance was that it visibly terminated the era of immobility. It changed much; it opened the prospect of far greater changes. The year 1832 was to thousands of Englishmen what 1789 was to thousands of Frenchmen—the opening of a new age. British enthusiasm took, as was natural, a milder and more rational form than the French frenzy of hope which heralded in the bloodshed of the Revolution. Englishmen did not hope, perhaps they did not care, to renovate Humanity. They did hope to reform their own institutions, and in due measure obtained the fulfilment of their desire.

The point to notice is that the Whig leaders, who were essentially among the most moderate of politicians, were, when they carried the Reform Bill, the representatives of something very like revolutionary sentiment. Hence the enthusiasm of followers; hence, too, the genuine fear and hatred of opponents. The fervor of men so little fervid as Sydney Smith and Lord Cockburn was as genuine, and, we may add, neither more nor less natural than the fears of men as bold as Scott, the Duke of Wellington, or Croker. Schedule A and Schedule B contained a good deal more than the destruction of rotten boroughs; they virtually contained, though possibly the Whig leaders hardly saw this distinctly, the revolution, or the possibility of revolution, in the whole system of English life. Put the matter at the very lowest, the Reform Bill of 1832 was the transfer of political power from the landowners and the aristocracy to great traders and to the middle classes. The Whigs earned for the moment the popularity which belonged to men who suddenly carried through a change desired by the mass of their countrymen. Nor was the credit which the Whigs gained undeserved. As Parliamentary reformers, they deserve the praise which cannot often be given to English politicians, of boldly carrying through at one stroke as large a measure as the occasion demanded. It is easy for a critic in 1890 to say that the country would have gained if the Whigs, by extending the suffrage to all householders, had prevented the renewal during the century of the cry for reform. But it is more than doubtful whether in 1832 a measure more extensive than the Reform Act could have been passed, or, if passed, would have been beneficial. To pass the Act showed a boldness not often exhibited by British statesmanship.

The second achievement of the Whigs was the reform of the poor law. Of all the services which statesmen have within the century rendered to England, the introduction of the New Poor Law will, in the eyes of impartial critics, be esteemed the greatest. When an historian meditates upon the habitual cowardice of Parliamentary leaders, on the inevitable tendency of representative government to turn even upright politicians into worshippers of public opinion, and on the singular want of administrative capacity displayed by the Whigs of 1832, he will be filled both with admiration and wonder at the one piece of bold constructive legislation by which the Whigs saved England from ruin. For it is no exaggeration to say that pauperism was destroying the country, and that while the old system of relief lasted, the increase of pauperism was a moral, one might almost say a physical, certainty.

A glance at the report of the Commission which formed the basis of the New Poor Law, the perusal of the third volume of Walpole's 'History of England,' or a study of Miss Martineau's now forgotten tales in illustration of political economy, will easily convince the reader that this statement of the condition of England does not err on the side of exaggeration. The nation suffered from a dangerous disease which might prove fatal. The Whigs had the boldness to apply the true remedy. "The effects of the measure [the New Poor Law] were seen almost instantaneously. The cost of relief steadily decreased, and the burden of supporting the poor, which had exceeded £7,000,000 in 1832, was only slightly over £4,000,000 in 1837. . . . Moderate men could afford," adds Mr. Walpole, "to disregard the clamors of politicians like Cobbett, whose influence had already waned, and of young men like Mr. Disraeli, whose opportunity had not yet arrived." The glory of the Whig Ministry is that they disregarded the clamor of the people and saved the nation. They had their reward; they proved their patriotism and they lost their popularity, for no measure was ever more unpopular than the law which carried out the soundest maxims of political economy just where they came into conflict with the most widespread sentiment of injudicious charity. Politicians of all parties find it difficult enough to-day to support against popular feeling principles of poor relief which half a century and more has proved to be beneficial. A generation who can hardly imitate should at least pay the tribute of admiration to statesmen who, in the face of popular outcry, dared to try a bold experiment then justifiable only by faith in sound principles.

The passing of the Reform Act and the introduction of the New Poor Law could not fail to arouse the most vehement feelings, either, as as the case might be, of approval or reprobation. The third service rendered to England by the Whigs has been, as already intimated, almost unnoticed. Lord Grey and his followers guided the nation pacifically through a period of revolution. The difficulty of this achievement can be understood only by those who note the state of the country in 1832, and who also notice how rare are the instances in which a fundamental change in a nation's institutions has been accomplished without violence: revolution is, in popular language, almost equivalent to insurrection and civil war, and common parlance here reflects, as it is wont to do, the common experience of mankind In 1832 all the signs were visible from which men rightly infer the approach of violent revolution. All classes were discontented. George IV. had ruined the moral credit of the Crown. The peerage and the Church were unpopular. The middle classes aspired to power. Men of sense knew that during fifty years of reaction or repression abuses had accumulated. Every one felt that some change was necessary, and most persons felt that every change was full of peril. The laboring classes were in misery, and were quite prepared, if the occasion offered, to try if the evils they suffered from might not be remedied by violence. The transactions of 1829 showed that popular organization could be stronger than the law. The experience of Ireland was not lost on the people of England, and the now almost forgotten "glorious three days" at Paris seemed a proof that a mob of citizens could overthrow an unpopular government, and were in truth a proof that, in periods of excitement, the forces meant to defend the Crown might easily be used to affect the success of an insurrection. It is by no means clear that, had the peers persisted in rejecting the Reform Bill, some portion at least of the army might not have "fraternized," to use the French phrase, with the people.

In 1841 the Whigs quitted office as a party no longer possessing the power and credit necessary for carrying on the Government of the country; yet the difference between 1841 and 1831 was the true proof of the benefits which Whig statesmanship had conferred upon the United Kingdom. The time of revolution was passed. Compare this state of things with the state of France in the same year. The era of revolution was no doubt thought by Louis Philippe and his ministers to be closed. That they should have believed this must, to any one who examines the history of France between 1830 and 1841, seem a curious instance of political blindness, for more than once the Orleans dynasty had been kept on the throne by nothing but the free use of the armed force. We now, at any rate, know that whoever in 1841 believed Louis Philippe's throne to be firmly established, was the victim of a delusion. The year of revolutions, 1848, tested the work of French and of English constitutionalists. The test was decisive. It proved that the French Liberals of 1830 had unsettled everything and had founded nothing; it proved also that the Whigs of 1832 had conducted England pacifically through a perilous revolutionary crisis. But though Whig statesmanship had succeeded, Whig statesmen had lost their influence. Why this was so is a question well worth consideration. X.

Correspondence.

NEITHER BACHE NOR DUANE.

To the Editor of The Nation:

Sir: In his letter of January 2, entitled "Bache, not Duane," Mr. Ford has given a charming example of the true journalistic rejoinder. Having ignored the main point of my letter, he takes six lines in which I expressed doubt whether Duane wrote what he had previously referred to in these words, "The farewell to Washington on his leaving the Presidency, penned by Duane, has become a classic of unseemly libel"; or whether it had been published in the *Aurora*.

After searching in three libraries, I have found an unmutilated copy of the *Aurora* of March 6, 1797, to which I am referred for personal annihilation. An inspection of this paper enables me now to make the positive statement that not only is Mr. Ford wrong, as he has confessed, in attributing this classic libel to Duane, but equally wrong in charging its authorship to Bache. This classic farewell is a small contribution to the paper of thirty-five lines "From a *correspondent*." Nor is it a farewell to Washington at all, but a fare-

well of the writer because a new era has dawned. Its opening words of quotation, "Lord, now lettest thou thy servant depart in peace," have deceived Mr. Ford. Familiarity with the New Testament would show that they were the words of one quitting this mortal stage. The brief communication is in form more severe than what would now be approved of, but the time was marked by savage invective on all sides. Our fathers liked that sort of thing. The central thought and the bitterest expression of the thirty-five lines is contained in the phrase which calls for "Exultation, that the name of Washington from this day ceases to give a currency to political iniquity and to legalize corruption."

In the main thought, that there was danger to republicanism from the presence of an overshadowing personality and the influence of a celebrated name, probably half of the people of the country believed. Towards the close of Washington's Administration, Jefferson wrote to Monroe, referring to Congress: "You will have seen by their proceedings the truth of what I always observed to you, that one man outweighs them all in the influence over the people, who have supported his judgment against their own and that of their representatives." Lodge, in his recent Life or eulogy of Washington, corroborates this position. Referring to the signing of Jay's treaty, he thus pictures and praises the President's attitude: "With his own party silenced and even divided, with the Opposition rampant, and with popular excitement at fever heat, Washington was left to take his course alone and unsupported." The inflexible determination and the fine courage needed by a great general are not always the best qualifications of a political leader. The great statesman should carry his people with him.

Both Bache and Duane shared in what was a common feeling of their day, the fear of the reëstablishment of a personal government. Both labored successfully in building up the great party that soon swept its Federal opponents into nothingness; a party that deserved its success, because it believed in the people, the influence of whose solid judgment, when enlightened by due discussion, the country has often experienced, and doubtless often will witness. Both of them have also been cleared of the particular charge of libellous writings made by Mr. Ford; and in speaking of them as he has done, it seems to me that he has made at least a mistake. C. W. DUANE.

PHILADELPHIA, January 13, 1890.

A CABINET OF THE HOUSE.

TO THE EDITOR OF THE NATION:

SIR: The instructive comparison between the British Parliament and the American Congress, drawn by Mr. Bryce in his widely read book 'The American Commonwealth,' has fixed the attention of many readers, as nothing has done before, upon the defects of the American system. The main defects are two—lack of contact between the executive and legislative branches of the Government, and lack of concert and proper organization in Congress itself. The latter is probably the greater evil of the two, and the more mischievous in its effect upon legislation.

The need of a remedy is clearly set forth by Mr. Bryce. The possibility of applying a remedy, and the nature of the remedy to be applied, are problems in which every patriotic American must feel an interest. The remedy proposed and so ingeniously urged by your correspondent "G. B." is noticed, although not very fully discussed, by Mr. Bryce. He makes it clear, however, that conferring upon Cabinet Ministers the right of appearing in Congress to discuss measures before the House or Senate would be an inadequate remedy, and might have results other than those desired.

A remedy which shall meet the wants of the case must begin with a reform in the organization and business methods of the House of Representatives, whose defects are most apparent and most productive of evil legislation. The numerous small committees of the House, having no policy in common, and ignorant of each other's work, produce conflicting laws, and, being composed of members of both parties, are often hampered in their work by differences among themselves; hence the bills which they report are generally in the nature of compromises and represent no definite policy. Are these committees indispensable? Or might a substitute be found for them which would do the work better? A single Governing Committee, chosen from the members of the majority, having the sole power of originating revenue and appropriation bills, and given the control and direction of all important measures, taking precedence of other members upon the floor, and furnished with a sufficient force of clerks and with eminent legal counsel, might give at least a single definite policy to the legislation of a session, and produce some degree of harmony where chaos reigns at present.

For the discussion of all minor and private bills the House might be divided into several grand committees of forty or fifty members each, on which the Opposition should be represented, which should have the right of choosing their own chairmen, appointing sub-committees, summoning witnesses, etc., and should act in general for the Committee of the Whole. In this way business might be expedited and a check be put upon the secret influences of the small committee-rooms. Having thus organized the House by appointing a Governing Committee composed of the leaders of the majority, and six or seven grand committees of mixed politics, it remains to bring it into contact with the executive branch of the Government. This could best be done by requesting the President to summon the Governing Committee of the House to certain stated meetings of the Cabinet, at which all money bills and bills affecting the departments should be discussed before presenting them to the House. Thus the Governing Committee would have the benefit of all the information the Cabinet officers could give concerning the effect of its measures on their respective departments, while retaining complete control of legislation in its own hands. The responsibility for every measure would rest with the Governing Committee, and so long as it could command a majority in the House its power would be supreme. If defeated on an important bill, it must give place to a new committee, representing the new majority, and would thus reflect the English Cabinet in all but its administrative functions.

Such a body of trained leaders would add dignity and power to the House itself, and offer prizes in the way of promotion which would be an incentive to industry and ambition among the members. It would offer a mark for the Opposition, and challenge public scrutiny of its acts, throwing the light of public debate on the merits and defects of all the measures which it championed, which would necessarily be few and of the first importance.

By adopting such an organization, the House would surrender neither power nor prerogative, but would gain much greater efficiency, and probably increase its influence in the councils of the nation, while the people would be the gainer by the more enlightened and economical legislation most certain to result.

The increased contact between the legislature and the executive, so long as the majority in the House was in harmony with the Administration, would strengthen the hands of both. When, however, the House was hostile to the Cabinet, the conferences between them might result in compromises less prejudicial to the interests of the Government than those which are at present hatched out in secret committee-rooms.—Respectfully, WM. W. HUDSON.

CLEVELAND, OHIO, December 30, 1889.

THE INWARDNESS OF THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: A New York newspaper that prides itself on being the special mouthpiece of the present Administration is printing a droll series of "Talks on the Tariff," and boastfully defying its tariff-reform contemporaries to answer them, if they can. As the newspapers challenged presumably have enough of serious work on hand without replying to dialectical banter, permit a "literary fellow," whose time hangs heavy on his hands, to point out an interesting admission that this latest theorizer on protectionism is betrayed into making. At the top of each article is printed this choice bit of logical tomfoolery:

"The price of a thing is what is given for what is gotten. To get an article of home production, we—the nation at large—must pay for it nothing whatever as respects the labor and capital which produced it, and nothing in the way of profit to the producer. We, as a nation, part with nothing but the materials used up. The American people can manufacture every staple article of metal, wood, or leather, every staple fabric of wool, cotton, or silk, cheaper than it can import it."

Isn't this frank? We can produce staple goods of every kind cheaper than we can import them, yet our manufacturers have the impudence to demand a 47 per cent. tariff to raise prices artificially! It is not because they are bothered by any vulgar considerations of cost that they want protection; bless our simple souls, no! As a "nation at large" we don't cost ourselves a copper. Production is all right; what we want is to monkey with distribution. The poor are altogether too well off. The rich must be supported by taxes. Tariff-reformers have suspected for some time that this was the true inwardness of the protectionist's brain, but they had not expected to see him display his gray matter to an unfeeling world quite so unreservedly.

ONE OF THE UNFEELING.

CONSTITUTIONAL LAW IN COLORADO.

TO THE EDITOR OF THE NATION:

SIR: A correspondent, in the issue of your paper of December 12, makes some comments upon the state of constitutional law in Colorado. An inference might be drawn from the writer's words that there is something almost *sui generis* in the Constitution of this State, in its limitations upon legislative power. On the contrary, the scope of power in the legislative branch under this instrument has been found to be amply sufficient for the public welfare. It is admitted that the instrument is closer on the economic side than a majority of State constitutions. Still, it is broad enough even in this respect to meet all reasonable demands with a fair margin to spare. The fact that there are restrictions in this instrument against extravagance on the part of the legislative branch, and that the Secretary of State is intrusted with the power of purchasing supplies there-

for, is in no respect incompatible with the proper exercise of legislative functions. The contingency that needed legislation may be prevented, by a failure of duty in the premises by the Secretary, may be dismissed, for history proves that this officer is ever ready with sup plies *ad infinitum*.

It is admitted that a model constitution should be very sparing in parliamentary rules. Still, the most that can be generally charged against such rules is innocuous frivolity, which is the least of evils in law-making. The fret of legislators over such rules is not that needed legislation is thereby actually prevented, but that such are an infringement upon right of choice in procedure. Hence the public is not visibly injured.

The Constitutional Convention of 1876 was superior in qualifications to any other law-making body that has ever assembled in the State. The close economic aspect of the instrument is chiefly ascribable to two causes: first, a general distrust that the opponents to the organization of a State might prevail on the argument of expense, which prospective argument, in the eyes of the convention, was greatly magnified by the general feeling of poverty and unrest engendered by the devastation of the Rocky Mountain locust; secondly, the Convention was imbued with a deep distrust of legislatures, which seemed to be justifiable then as well as now, and was but the echo of public opinion. Truly, that the Caloptenus Spretus left his foot-prints on the organic law, affords no cause of complaint to the people, but rather a cause for rejoicing.

The position of Judge Helm in drawing inferences in his opinion upon historic grounds and slight verbal changes against *stare decisis* is untenable. The Judge by his construction gives to the provision quoted by said correspondent a meaning that the Legislature framing it did not contemplate—that is to say, the legislative mind had neither a negative nor an affirmative purpose in regard to the value of such opinions as general judicial precedents. So far as evidence goes, both from word and act, the Legislature was confined solely to the purpose of avoiding breakers as to its own acts. The very hostility of the Legislature to the court at that time precluded any intention of enlarging such power beyond the necessity of the expedient. Furthermore, such provision was not created upon "solemn occasions," but was injected into the bill by a hasty amendment in a committee of the whole.

In legislative parlance, when any power is to be conferred upon the Court as a whole, or upon any of its members as judges, it is customary to use the term "the Supreme Court." This method of reference always occurs except in cases of variation by reason of a strict adherence to some model to the contrary, or in case of some special precision of expression insisted upon by an accurate and painstaking lawyer.

The requirement that "all such opinions shall be published in connection with the reported decisions of the Court" was not in view of any new or strengthened purpose to be given the opinions, but was solely for convenience of reference. It looks as though the Court was somewhat bent to give the provision a narrower scope and a deeper meaning, thereby to lessen such legislative demands, and thus escape from being "swamped."

The Judge uses these words: "The successive legislatures meeting after the admission of Colorado to Statehood encountered great difficulty in the enactment of laws, on account of numerous wise, but troublesome, limitations contained in the Constitution." I think no instance can be found in which a competent legislator has thus been seriously troubled. The difficulty in the way of needed legislation has been the incorrigibility of the personnel of the legislatures. Instances of enactments pronounced void or inoperative on constitutional grounds are not so numerous as might be inferred from the words of the Judge; and the cause of any such is usually traceable to the stupidity of its framers.

In the use of models for drafting bills, verbal changes occur from clerical inadvertence, from a purpose of brevity, and from sheer caprice, with no intention thereby to work a change of meaning. So there are scattered through the reports instances in which judicial eagerness is shown in finding solemn distinctions in slight verbal changes that have no deeper cause of being than such inconsequential accidents.

The following phenomena are here observable from the existence of this provision: (1) that legislative bodies are ready to ask for such opinions on the most frivolous pretexts; (2) this method is used to avoid expenditure of thought; (3) the supporters of a measure, in order to escape the argument of unconstitutionality by their opponents, seek such opinions, hoping for a favorable response; (4) a legislator who finds himself in a dilemma of either favoring a measure against his judgment or of making dangerous enemies against his own pet schemes, seeks a passage of escape by thus shouldering the responsibility upon the Court.

O. F. A. Greene.

Boulder, Col., January 2, 1890.

[Mr. Greene appears to agree with our former correspondent in thinking that, upon the true exposition of the Colorado Constitution, the opinion of C. J. Helm is not sound.—Ed. Nation.]

DELPHI ONCE MORE.

To the Editor of The Nation:

Sir: Several months ago an appeal was made through the *Nation* on behalf of the American School in Athens, for aid in securing to the School the privilege of excavation at Delphi. The amount estimated as necessary to assure the ownership of the site ($75,000) seemed small indeed for a nation so wealthy and so generous as our own, and many correspondents have expressed surprise at the intimation then given that small contributions from scholars all over the land might be needed, as they certainly would be welcomed. Experience has proved that we were too sanguine rather than over-anxious. No American of great wealth has seized upon this unique opportunity to attach an honorable and lasting fame to his own name. Though the interest aroused is enthusiastic and widespread, it is chiefly among men of slender means. But, from all sources combined, nothing like sufficient contributions and pledges have been secured to win for our country this great opportunity.

News has just been received that the Greek Government has generously extended the time within which their offer may be accepted until June, 1890. With this encouragement it is clear that the sum needed can be obtained. But it is equally clear that success can be assured only by much more widespread effort and sacrifice, on the part of scholars and lovers of learning, than has yet been manifested. Some communities have done their part most generously and promptly. For instance, the officers and students of Cornell University have pledged $322 for this fund. Smith and Swarthmore Colleges and Boston University have made similar efforts in proportion to their means. The pupils and teachers of Riverview Academy in Poughkeepsie have subscribed nearly $200, and the Boston High School girls a slightly larger sum. But there are many far wealthier colleges, and numberless classical schools, where no interest whatever has been expressed.

Probably no one seriously questions the unrivalled importance of this opportunity to the future of classical studies among us. Let it be said as plainly as possible, therefore, that a hearty and general coöperation among thoughtful men and women in every community of the fatherland, is apparently the only means to save us from final failure; a failure which will certainly leave behind it the sting of lasting mortification and regret.

William Cranston Lawton,
Agent of the Archæological Institute.

Cambridge, Mass., January 9, 1890.

Notes.

G. P. Putnam's Sons announce among their earlier publications of the present year 'Thomas Jefferson's Views on Public Education,' by John C. Henderson; 'The First International Railway and the Early Colonization of New England,' by Laura E. Poor; 'Railway Secrecy; its Relation to Inter-State Legislation,' by John M. Bonham; 'American Farms; their Condition and Future,' by J. R. Elliott; 'The Story of the Barbary Corsairs,' by Stanley Lane-Poole and Lieut. J. D. Jerrold Kelley, U. S. N.; 'Six to One,' by Edward Bellamy; and a reprint of 'A Far Look Ahead' (namely, to New York society in the 96th century).

'The Unknown God, or Inspiration among Pre-Christian Nations,' by Charles Loring Brace, is in the press of A. C. Armstrong & Son.

T. Whittaker issues directly 'The Prayer-Book Reason Why,' by the Rev. Nelson R. Boss, and 'Pathways to the Church,' by the Rev. Geo. W. Shinn.

We read in the London *Bookseller* of December 14, 1889, of the amalgamation of the publishing firms of Trübner & Co., Kegan Paul, Trench & Co., and George Redway into a limited-liability company.

Two more volumes have been added to the excellent series, "English History from Contemporary Writers" (London: David Nutt), viz., 'S. Thomas of Canterbury, 1118–1220,' edited by the Rev. W. H. Hutton, and 'England under Charles II., 1660–1678,' edited by W. F. Taylor. They are excellent samples of the scheme, both as respects the intrinsic interest of the documents and the ease with which the historical sequence can be preserved, owing to the copious authorities. Both are quaintly illustrated.

We have received the first volume of *Harvard Studies in Classical Philology*, edited by a committee of the classical instructors of the University, and published in Boston by Ginn & Co. It is a handsome volume of some 200 pages, with a general index and an index of citations. Prof. J. B. Greenough leads off with an antiquarian discussion of *fauces* as applied to a house passage, and shows it to have been the front entrance to the *atrium*. A Latin dissertation, on the modes of deriving fire among the ancients, by Morris H. Morgan, follows. Full and interesting is the paper on the social and domestic position of women in Aristophanes, by Herman W. Haley. Prof. W. W.

Goodwin debates certain Greek constructions. Prof. George M. Lane contributes notes on Quintilian, marked by his customary elegance of scholarship. Plutarch, Vitruvius, and Tacitus also have their commentators. The *Studies* thus make a notable beginning.

Both the Harvard and Yale catalogues for the current year are on our table. They offer an interesting contrast in arrangement, that of Harvard making each department complete as it proceeds, while that of Yale groups all the courses in front and all the student lists at the end, with some obvious advantages.

The most thorough and scientific treatment ever bestowed on the Pennsylvania German dialect has been exhibited in late numbers of the *American Journal of Philology*, by Dr. Marion D. Learned of the Johns Hopkins University. Part I. has now been printed by itself, while Part II., which will deal with German mixture, and etymology, is promised hereafter.

The slow-appearing Historical Collections of the Essex Institute, Salem, Mass., just now reaches us in the issue for the second quarter of 1888. Its main interest will be found to lie in Mr. B. W. Crowninshield's account of his eccentric kinsman's international pleasure-yacht, *Cleopatra's Barge*, built in 1816, with dimensions and tonnage closely resembling those of Mr. Burgess's *Mayflower*.

Despite a certain factitious jocularity and a few stray Briticisms, a little book called 'Whist With and Without Perception,' by "B. W. D." and "Cavendish" (London: De La Rue), may be recommended to those who know what real whist is. The chief novelty of the book is that it gives a series of end games. In chess the books have long since made us almost as familiar with the common end game as with the accepted openings, and "B. W. D." adroitly adapts the same method to whist.

Three of the French Christmas books for boys and girls have an interest for Americans. The first is 'L'Aînée,' by J. Lermont, "d'après Suzan Coolidge." The second is M. André Laurie's 'De New York à Brest en Sept Heures,' with illustrations by M. Riou. Both of these are published in Paris by Hetzel (New York: F. W. Christern). The third is 'Le Tueur de Daims,' by Meryem Cecyl, "d'après Fenimore Cooper," illustrated by M. Ed. Zier (Paris: Delagrave; New York: F. W. Christern).

The unexpected results of law-making were perhaps never more characteristically shown than in the decline of the habit of publishing plays in Paris because of a decision of an American court that performance was not publication, and that therefore an unpublished play could not be acted without the consent of the author, even though he were a foreigner. M. Sardou's comedies are no longer published on the day of their first performance in Paris as was once the case, and many of the minor French dramatists have followed his example. Augier and Dumas have made no effort to hold their American acting-rights, and their plays are published and read as though they were novels. In like manner, M. Alphonse Daudet has published his "Lutte pour la vie" (Paris: C. Lévy; New York: F. W. Christern). The play was reviewed at length by our Paris correspondent not long ago. Its publication is not likely to lead to its piracy on the American stage, as the subject and the treatment are quite foreign to American tastes.

In October, 1885, the Rev. Mr. Baker, Prime Minister of the King of the Tonga Islands, while cruising among the group, had the rare good fortune of witnessing the formation of an island during a prolonged submarine eruption, and he described this remarkable scene in a letter to the Royal Geographical Society. The volcanic matter, mingled with clouds of carbonic and sulphurous gases, was thrown up with prodigious force to a height of several thousand feet. The heavier matter quickly fell; the vapors expanded above into clouds of dazzling whiteness and fantastic shapes; and the lighter volcanic dust (of a light brown color) drifted away at a great elevation. This vast mass of matter was ejected in three large and several smaller jets, "the largest one rushing upwards from time to time like a solid wall of dark matter, often branching like a pine tree." The next morning an island had been formed forty feet high and more than a mile in circumference. The eruptions continued with some intervals for an indefinite time, greatly increasing the size of the island, until it became about five miles long by three wide. Very recently H. M. S. *Egeria* touched at Falcon Island, as it has been named, and found that it was fast disappearing. A party landed and explored the island, though at the evident risk of their lives. It was composed of volcanic cinders which had the appearance of coke, but became liquid when placed in the fire. In some places these cinders were so hot as to make the walking upon them painful and even dangerous. Sulphurous springs also were found in several places. The exploring party planted a flag on the highest point, some sixty feet from the edge of the cliff and two hundred and fifty feet above the level of the sea. They had scarcely reached the ship when a large part of the cliff fell into the sea, making a vast column of white vapor. Three days later the flag had disappeared. A picture of the island is given in the *Graphic* for December 21, as it appeared at the time of the visit of the *Egeria*.

Highly interesting views of people and scenery in New Guinea, after photographs, are given in connection with an article by Hugo Zöller, "Deutsche Kultur in den Barbarenländern von Neuguinea," in *Vom Fels zum Meer*, No. 1, 1889–'90 (New York: F. W. Christern).

Few official documents that we receive give us more satisfaction than those relating to the public health of Japan. A summary of the annual reports of the Central Sanitary Bureau of the Home Department of that Empire for the five years from July, 1879, to June, 1884, inclusive, belongs to that class. This is printed in English at Tokio, in an octavo pamphlet of 160 pages, including tables, and contains a review of the operations of the Bureau in relation to the control of cholera and other epidemic diseases, the regulation of medical practice, and the preparation and sale of drugs, of the extermination of venomous serpents, of the establishment of a vaccine form, the erection of crematories, and general progress in sanitation. Various tables of vital statistics are included. It is by the courtesy of Dr. Nagayo Sensai, Director of the Central Bureau, that we have received this report; and Dr. Nagayo is to be felicitated on the remarkable assimilation to western ways his countrymen have made.

The last, hitherto unnoticed, parts of 'Meyer's Konversations-Lexikon' (B. Westermann & Co.) carry the work into the fifteenth volume and the letter T, and meantime the end must very nearly have been reached. The geographical articles of greatest moment, as giving the freshest information about the probable participants in the next European convulsion, are those on Rumania, Russia, and Servia. Socialism is the chief topic of domestic polity; Schiller and Shakspere the leading biographical notices. Schiller, we are told, is first the poet of youth, and then of reverting old age; and light is thrown on the question (not raised here) whether this poet is holding his own in popular estimation, by a list of his monuments, those since the centenary of 1859 being strikingly numerous. There is the usual profusion of colored plates, of maps, plans of cities, etc. Among these Zanzibar and the neighboring German possessions (if they can be so called, *beati non possidentes*) and Samoa deserve special mention among the charts. We remark, finally, a comparative sheet of stenographic systems.

Nansen's official report of his overland Greenland expedition is translated in No. 142 of the Berlin Geographical Society's *Zeitschrift* (Berlin: D. Reimer), accompanied by a map of the east and west shores of the continent.

The second report of Mr. Robert T. Swan, Massachusetts Commissioner on Public Records of Parishes, Towns, and Counties, is a Senate document (No. 2), dated January, 1890. We commend it to the custodians of records in any part of the Union, partly for its exposure of the lamentable confusion which prevails in Massachusetts, but also for its demonstration of the need of preserving and copying the older records particularly, and its many practical suggestions. One chapter deserves to be widely read, as it discusses the permanence of typewritten copy. The conclusion is that, if the ink be of the right kind (black preferably, blue possibly), the permanence is as great as in the case of press printing. Mr. Swan therefore recommends this mode, which has so great a superiority over pen-writing in other respects.

The holiday number of the *Northwestern Miller* (Minneapolis) is a very striking product of Western enterprise, about evenly divided between text and advertisements, and freely illustrated. We single out for mention a view of the new "whale-back" grain barge which appears to be revolutionizing lake transportation, both as respects capacity and safety, and indeed speed. We are likely to see these strange monitor craft on the Atlantic seaboard, perhaps even adapted to passenger service. A good descriptive article accompanies the cut.

The *Studio* for December 7, 1889, was a Barye number, fully illustrated; the number for January 4, 1890, is occupied in part with another sculptor, Auguste Rodin, who is shown at his work, while another plate copies his sketch for the statue of Bastien-Lepage.

One of the most distinguished and best known scholars of Finland, August Ahlqvist, died at Helsingfors on November 20, of pneumonia, at the age of sixty-three. When very young he travelled in Karelia, Russia, Siberia, and Hungary in order to collect materials for the comparative study of the Finnic-Ugric languages. The result was shown in numerous philological works, one of which, 'The *Cultur*-Words of the West Finnish Language,' an attempt to study the civilization of the race, was translated into German. His 'Reminiscences of Travel' and a tale called 'Among the Voguls and the Ostiaks' were also published in German. But the Professor of Finnish Language and Literature at the University of Helsingfors was also a poet, and many of his songs are popular in the country. To learning, enthusiasm, and eloquence there was added the social charm. No one who knew him will forget him.

—The fourth volume of the new edition of 'Chambers's Encyclopædia' (Philadelphia: J. B. Lippincott Co.) ends with *Friction*. A fair proportion of articles are by writers of known authority. The late Laurence Oliphant furnished that on the Druses; Austin Dobson writes of Fielding, G. Saintsbury of Dryden,

R. H. Hutton of George Eliot; Prof. Henry Morley deals with English Literature. Prof. Geddes undertakes, with marked unfitness, a popular exposition of Evolution; and, by the way, the writer on Feathers has missed his opportunity to cite Darwin's pet demonstration of the genesis of the ocelli. Emerson's life is liberally retold by Dr. Holmes, whose use of the first person singular in one place, on p. 325, has been overlooked by the editor, and who, on the same page, makes Emerson's sympathy with the "long-haired reformers" of Chardon-Street conventions a little too remote. Mr. Emerson's hair was not shorter than that of most of them. The article on Dolls omits mention of what ancient Egypt has handed down in that line, and asserts too broadly at least that black dolls are manufactured for black babies in the United States. White babies have been known to cherish them, and are, we suspect, the chief if not the sole consumers of them. In fact, a Southern paper lately made it a reproach to the colored people of that section that they never purchased dusky dolls for their own children. Loyalty to Queen Victoria is said to have determined that blue-eyed dolls should be preferred in England during her reign. The articles are mostly brought well down to date, as in the case of Floods (with notice of the Johnstown disaster) and of Edward Fitzgerald, etc. (with mention of the new Life and Letters). Under Encyclopædia is given a useful list of this class of works. There are maps of the District of Columbia, of Florida, of England, Europe, and France, and the usual illustrations.

—The death of M. Paul Andral, which occurred on December 19, 1889, recalls the circumstances and conditions under which he became the guardian of Prince Talleyrand's memoirs. Talleyrand died in the year 1838, and left his memoirs by will to Andral, with the stipulation that there should be a delay of thirty years before they should be published. But when this time expired in 1868, M. Andral found that there were still some people alive whose feelings might be wounded by the appearance of the memoirs, and, on that account, added another twenty years to the period that Talleyrand had set. When this time came to an end, year before last, the same motives as before led M. Andral to a new delay, to which he declined to set any definitive term. He had made up his mind, the *Figaro* says, to wait till all reasons for delicacy had passed away. There is, then, it would seem, not much ground for expecting soon to see the long-waited-for volumes. M. Andral has doubtless left behind him directions which will tie the hands of his executors. The manuscript of the memoirs is a bulky one. It will make from twelve to fifteen volumes when it gets into print. At present it is at Châteauvieux (where M. Andral died), shut up in sealed cases, safe from indiscreet eyes. M. Paul Andral was a son of the great physician of that name, and was in his time one of the leaders of the Paris bar. Berryer, as well as Talleyrand, made him his literary executor.

—The latest contribution to the problem of Talleyrand's motives and character comes from the researches of M. Th. G. Pallain, who has just published a volume of papers and letters bearing upon Talleyrand's mission to London, in which he includes the letters sent by him from America to Lord Lansdowne. What Talleyrand hoped to gain from England was an engagement to absolute neutrality, and an official declaration of it in such terms as should have weight with Holland, Prussia, and the Emperor; an alliance offensive and defensive between France, England, and the United States, to open to these three Powers the commerce of the Spanish possessions in the South Seas as well as in the Atlantic; and, lastly, to negotiate a loan of at least four millions sterling, which should be guaranteed by the English Government, in return for which guarantee France was willing to cede Tobago to England. Talleyrand went to London in January, 1792, but, as he was not properly accredited, there were many delays. At last, in April, Chauvelin was sent over to be the head of the embassy in name, though Talleyrand was its moving spirit as before. They only gained the official announcement of neutrality; the rest of the scheme miscarried, partly from George the Third's antipathy to France, and partly, also, from the distrust that the earlier movements of the Revolution were beginning to create across the Channel. At last Talleyrand was obliged to leave England, and took refuge in the United States. His letters from this country, although they are not of very great historical value, will be read with much interest. Their author was at that time, as the *Revue Bleue* says, "already the cool observer whom nothing escapes; who, putting nothing of himself into things, sees them as they are, and not as he would like them to be." "Il rassemble des faits politiques comme on dépose des curiosités naturelles dans un muséum." He found everybody in America eager to make money. He said that the United States knew too much about politics to believe in such a thing as gratitude between nations, and that, from community of blood and disposition and habits, England was the only foreign Power of which we either would or could be the ally. M. Pallain's book throws some new light also upon the life of Biron, Duc de Lauzun, and upon the party among the nobles that was sincerely attached to the Constitution of 1791.

—A good deal of angry feeling is manifested in late French newspapers at the prohibition of M. François Coppée's new play, "Le Pater," which was to be produced at the Français. The scene of the piece is laid in Paris during the last week of the Commune. A Communard who has taken part in the massacre of the priests seeks refuge in the house of the sister of one of the priests whom he has killed. She hides him from the Versailles troops by disguising him in her brother's cassock, and, that he may play the part of an ecclesiastic better, teaches him the *Pater Noster*. Whether the Government wishes that the memory of the Commune should not be recalled, or whether some prominent political persons feel a little sensitive to any reference to the part they played in 1871, one does not know. From the accounts of the play that are given, the Commune only furnishes a background for the action of the drama, the motives of which are love and forgiveness. The story is founded on fact; at least the *brav' Général* Cluseret tells it for truth in his 'Mémoires.' He sought protection, he says, in May, 1871, from a priest whom he had admitted to the Mazas prison to minister to Archbishop Darboy. This priest took him in and kept him for six months in his house in the dress of an ecclesiastic, took him to theological lectures, and finally, with the help of the Archbishop of Brussels, smuggled him across the frontier. The blow that M. Coppée has received irritates him the more because there was very little civility observed in the delivery of it. M. Fallières simply wrote on a tag: "The Minister refuses to authorize the piece called 'Le Pater,'" and tied it to the manuscript and sent it back. M. Coppée, upon this, wrote an indignant letter to the *Figaro*, which his friends, and others as well, have followed up with other communications in the same sense.

— 'The Possibilities of an Art Gallery in Manchester [England], by a Manchester Man,' is a little pamphlet which might be read with profit by all who are interested in the formation of public galleries in this country. The author is a gentleman who has evidently given considerable time and attention to the study of the administration of Continental museums, with a view to deducing from their experience the principles that should govern the establishment of a provincial museum in England, the scope and aims of which are almost identical with those of the museums that are possible in our country. It is refreshing to see that he at once and heartily condemns the "committee system" of management, and what he says on this subject may well be borne in mind by those who contemplate the establishment or development of galleries of art on this side of the Atlantic:

"The lessons of experience in regard to the *government* of an art gallery are not less clear. They are, briefly, that such a gallery cannot be properly managed by a committee. There must, of course, be a committee to say the last word on financial and other matters, but the more the artistic direction of a gallery is left to a single will and brain, the better will that gallery be. . . . To suppose that a committee of business men, however capable, can do the work of a trained student, . . . is simply childish."

We do not know how far England may possess students who are trained in the branches which are necessary to a man who shall be called upon to fill a position of such grave responsibility, but it is a cause for regret that there are but very few in this country. The need of them is growing every year, however, and to those young men who have had an introduction to the study of the fine arts, such as is offered in our larger colleges, and are now looking for a pursuit in which they can develop the tastes which this study has aroused, we can predict with perfect confidence that the time is near at hand when a few years passed among the museums of Europe, studying their management and their collections, will lead to a position at least as remunerative as that of a college professor, and to a line of work than which none is more absorbing or more satisfactory in its results.

—When, a few weeks since, we noticed Dr. Döllinger's latest work, 'Beiträge zur Sektengeschichte des Mittelalters,' we little thought that we should so soon be called upon to regret his decease. Yet his death cannot be regarded as untimely, for he had rounded out the ripe age of ninety-one, with powers unimpaired. Few men could look back upon a completer or more useful life. In a literary career which had extended over the unusual space of sixty-three years, he had poured forth his exhaustless stores of learning, always in an impartial and judicial spirit, and with the single purpose of utilizing for the benefit of his fellow-men the lessons of the past for the improvement of the present and of the future. The services which such a man renders to his fellows do not end with his death; the seeds which he planted will bear fruit in successive harvests, and he leaves behind him a school of disciples trained in his own rigidly accurate methods of research and exposition.

— The observations of the total solar eclipse of December 22 made by the American party were very successful. After landing at St. Paul de Loanda, a few miles north of the

eclipse-track, various places in the line of totality were studied with a view to their practicability as observing points, Prof. Todd finally choosing Cape Ledo as his principal station. Muxima, at first thought available, was found to be too far away, as well as too hot and unhealthful, for occupation. Extensive lagoons directly across the river poison the air with miasma, so that it is found difficult to keep even one Portuguese officer stationed at this desolate point. Cape Ledo is on the Bay of Suto, and was found to be in every way a practicable station. The direct view of the eclipse through the photo-heliograph, forty feet long, was an entire success, and all the extensive apparatus, automatic and otherwise, worked without a flaw. Clouds interfered to some extent, but eighty or more photographs were obtained. The pneumatic movements of all the photographic apparatus were thoroughly accurate, and the principle is demonstrated to be correct. During the total eclipse several prominences attained great brilliancy and distinctness.

AN ANCIENT FISHING CLUB.

A History of the Schuylkill Fishing Company of the State in Schuylkill, 1732–1888. "If you look to its *antiquity* it is most ancient, If to its *dignity* it is most honourable, If to its *jurisdiction* it is most extensive." Philadelphia: Printed for the members of the State in Schuylkill. 1889. (For sale by Porter & Coates and J. B. Lippincott Co.)

It is not generally known that the oldest English-speaking club in the world is now in flourishing existence on the banks of the Delaware, near Philadelphia. Its membership has included many of the most famous men of Pennsylvania; it has shown its quaint hospitalities to most of the Presidents of the republic, and Lafayette was proud to join its circle and fulfil the duties prescribed to all its members at their banquets. The modest limit of membership (now 25) was not seriously impaired either by the shock and upheaval of the Revolution or of the great civil war, near a century later. At both these periods the members of the Colony and State in Schuylkill forsook the angle for the sword, and furnished conspicuous instances of patriotic devotion.

The "Castle," for such their club-house is termed, is still the wooden building erected in 1812 on the west side of Schuylkill River where Girard Avenue bridge now crosses, though it has been twice carefully removed and set up on new sites. The by-laws and regulations are substantially the same as first adopted, the customs and duties of the members are unchanged from those of a century ago, and the last published proceedings of the company have the same delightful archaic flavor as the earlier ones, for generations of faithful secretaries have recorded the momentous events in the history of the Club from its foundation till the present day.

There is probably, nay, it may be said certainly, but one pursuit on which can be based an association of men which, particularly in this country, could preserve its integrity for a century and a half. Social clubs, literary clubs, artistic clubs, generally fall to pieces in a few years from their own weight, if they are not sooner destroyed by internal dissensions. Length of life in such associations, especially if small in numbers, depends on the love and devotion of the members to some art or pursuit of a contemplative and innocent character, involving constant subjection to the calming influences of green fields and running waters—in short, such as those of whom Walton says:

> "The first men whom our Saviour deare
> Did chuse to wait upon him here,
> Blest *fishers* were."

It is a club of anglers which has seen and formed a part of the most interesting period of our colonial history, and has preserved to this day, in our second largest city, an example of colonial life intact amid the wondrous changes through which our country has passed since its formation; and now, old but vigorous as in its youth, maintains the rights and ancient customs of the State in Schuylkill as jealously as when it sent its formal invitation to Washington, and welcomed its Governor, Samuel Morris, on his return from the Revolutionary army.

The Schuylkill Fishing Company was organized in 1732 and called "The Colony in Schuylkill." There were no States then. The "Colonial hall" in which the Colony met was on the estate of Mr. William Warner, called "Baron Warner," to whom was paid an annual tribute of three sun perch. The payment came, in course of time, to be attended with some ceremony, the Governor of the Colony appointing three "citizens," who placed the sun perch on the large pewter dish known as the Penn platter, which was brought to this country by William Penn and given to the Colony. The citizens then presented the fish, with great respect, to Baron Warner.

The "hall" was occupied by the "Colony" until 1812, when it was condemned, and on March 25 the Company assembled and assisted the master builder and his workmen in raising the frame of another building. The new "baron" of the estate, Mr. Rundle, at this time, gave a seven-year lease of the ground occupied, at an annual rental of one white perch, payable in June of each year. In 1822 the passage of the fish to the Castle having been obstructed by the building of the dam at Fairmount, it was recommended by a committee of "citizens" that the Castle should be removed from the old domain at Eaglesfield, Rundle's Barony, to a suitable site which the committee had found near Rambo's Rock, a short distance down the river. The moving was safely effected on May 7, and at Rambo's Rock until 1887 the State in Schuylkill held its "gala" and "fishing" days and old-fashioned festivities. The change of the old Castle to its present situation on the Delaware River near Andalusia was made in November, 1887, and now it is to be hoped its wanderings have ceased.

The chronicles of the Schuylkill Fishing Company up to 1830 were published in that year by William Milnor, jr., a member, and his volume is now one of the prizes of the collector of angling literature. The book under notice contains a reprint of Milnor's, and its continuation to 1888 under the direction of a committee of members; and also includes with the reprint the memoirs of the Gloucester Fox Hunting Club, which flourished near Philadelphia for fifty years from 1766, and numbered in its list of members some of those of the Schuylkill Fishing Company. At the falls of the Schuylkill early in the eighteenth century there was an association similar to the Schuylkill Colony, whose house was sacked and burned by the Hessians during the Revolution. On the return of peace the remnant of the Society of "Fort St. David's" united its forces with those of the State in Schuylkill, adding what was left of its property to the common stock. This included "five immense pewter dishes of divers forms for the display of a barbacue or a large rock fish at the festive board."

But two individuals of the Colony proved recreant to the cause of the independence of the United States at the time of the Revolutionary struggle, while others rendered signal service to their country during that period. In 1782, while the war was still raging, the Colony came out with a formal manifesto and new code of laws, becoming, by the adoption of the latter, so it is stated in page 48, "a sovereign and independent State," and the "court-house" was thereafter called "the Castle of the State in Schuylkill."

In March, 1789, it was specially recorded that Mr. Benjamin Scull, the Prince of Fishermen, produced a trout, "which he this day took in Schuylkill, that measured 15 inches." The same worthy, about this time, also caught a shad with a baited hook, the first known instance. Two years later the event of the season was the leaping on board one of the vessels belonging to the fleet of "a sturgeon 4 feet in length, of which the company then present made a delicious repast."

In 1812, "The good old Governor, Samuel Morris, usually distinguished by the appellation of 'Christian Samuel,' departed this life in the 78th year of his age." His virtues are still honored at every stated meeting of the Company, at which first "The memory of Washington" is drunk standing, and "The memory of our late worthy Gov. Morris" succeeds. The frying-pan of Gov. Morris is still among the cherished possessions of the Company. On July 21, 1825, Gen. Lafayette concluded, as he says, "his tour of all the States of the Union by visiting that in Schuylkill, of which he was made an honorary member," invested with a hat and apron, and introduced to the kitchen, where he occupied himself in turning the beefsteaks on the gridiron.

The year 1829 concludes the reprint of the history written by Mr. Milnor, and the last chapter "adverts briefly to some unrecorded but well-defined and all-essential usages, a rigid adherence to which has preserved, and will preserve, the Company from degeneracy and dissolution." From these we select the following for mention:

Anybody made a candidate by the votes of a majority of eight members is at liberty to visit the Company on fishing days. The purveyor or caterer for each stated day obtains the list of his Company, the keys, etc., and provides frugally and abundantly at the joint expense of all catered for.

The only meat bought is sirloin beef-steaks. These are not "cleansed by washing off the exuding juices before they are committed to the gridirons, nor are their juices allowed to escape by puncture with a fork in turning, nor is butter nor any high seasoning used, the meat remaining on the coals until the 'Ho! steak's ready' note of preparation is given." The method of cooking fish is also narrated, and that of compounding "governor," a noted punch drunk at the banquets of the company. At the centennial celebration of the State in Schuylkill, on May 1, 1832, a long and learned ode was recited by J. N. Barker, several original songs sung, and numerous toasts drunk, among them—"Our Angling Ancestors: they have exchanged the troubled waters of this world for the calm ocean of eternity"; "Good old laws and regulations revered and strictly adhered to, the grand secret of the unparalleled duration and prosperity of the Fishing Company of the State in Schuylkill."

Passing on to 1842, we find, among other notabilia, that "Citizen Philip Physic made a gift to the State of two books containing the words of many popular songs, with the understanding that they were always to be kept in the Company's chest ready for immediate use." In 1843 the most remarkable event chronicled is

that on August 11 "Citizen Fotterall, determining that his catering day should not go unsolemnized, and finding no citizen to assist him, repaired alone to the grounds, and there, in stately solitude, brewed one tumbler of punch and drank it, cooked one steak and etceteras and eat them, offered the regular toasts, and retired in good order, sending the Governor a full report of the proceedings." Two years later, a grave violation of duty on the part of a caterer who absented himself on a fishing day, is recorded. A special meeting was at once called and the offending member fined $5. No repetition of so heinous an offence is found for the next forty-five years.

On October 3, 1861, the closing day of the season, the stars and stripes were lowered, while the whole company sang, uncovered, "The Star-Spangled Banner," and "during the war of the Rebellion it became a sacred custom for all present to stand around that emblem of our nationality as slowly it descended, and bless it with our country's anthem." These were not barren professions of loyalty, as several members of the Company gave their lives to the Union cause, and we find that no fewer than thirteen of them served in the field during the war.

This country certainly can show nothing like the State in Schuylkill, and as a curious and instructive history the simple and unpretentious records cannot fail to prove delightful reading to those not wholly carried away by the whirl of modern life. A few years ago Robert Adams, jr., published in the *Century Magazine* an illustrated article on the Schuylkill Fishing Company, which gives many details of its proceedings in a most interesting way. The present history is handsomely manufactured and well illustrated with portraits of distinguished citizens of the State and views of the Castle and its surroundings. So important a book to the collector might have been made still more desirable had it been in two volumes, each with a separate title-page. A limited number of copies are offered to the public.

RECENT MATHEMATICAL WORKS.

Prof. Robert E. Smith's work on 'Graphics' (Longmans) easily deserves to be placed at the head of our list. The mechanical execution of the book and the accompanying "Atlas of Diagrams" is of the highest order. The minuteness and thoroughness of the author's knowledge of his subject, his ingenuity in avoiding difficulties, his fertility in inventing new and elegant processes, and the skill and practical good sense with which he discriminates between those cases where the graphic method is applicable and those where the ordinary methods of calculation are most advantageous, are all so marked that, if his manual dexterity is in like proportion (and the beauty and accuracy of his diagrams would seem to indicate that it is), he must be one of the most accomplished draughtsmen in the world. Prof. Smith is also a very accomplished, we might perhaps say a profound, mathematician. Thus, chapter vii., on "Vector-Summation," shows that thorough appreciation and complete mastery of the labors of Clerk Maxwell and Rowan Hamilton which enables him to make clear, practical applications of their more abstract principles.

Most of the matters treated by Prof. Smith in this first part of his treatise relate to mechanical engineering, and more especially to the statical part of mechanics. But it would be a great mistake to suppose that it is intended to take the place of the ordinary treatises on these subjects. A person who had never studied a treatise on statics would waste his time if he attempted to make use of this book. The more thorough and accurate the student's knowledge of mechanics, the more complete his mastery of the ordinary mathematical processes applied in the solution of mechanical problems, the better will he appreciate Prof. Smith's graphic methods and the greater will be his confidence in the results obtained. We sincerely hope the patronage extended to Prof. Smith's treatise will be sufficient to warrant the speedy publication of his second and still more important part.

The text-books in geometry used in British schools may be divided into three classes. Of the largest of these classes Messrs. Hall and Stevens's 'Text-book of Euclid's Elements' (Macmillan) is a more than ordinarily good representative. As in politics and religion, so in the matter of teaching geometry, there are parties in Great Britain. These parties have, for the last half century, been in continual conflict. One party, the ultra-conservatives, regards the 'Elements' of Euclid with a reverence inferior only to that with which the great majority of Christians regard the Bible. But as both the 'Elements' and the Bible are in dead languages, translations are indispensable, and the same party looks upon Simpson's translation of the 'Elements' much as the great body of Christians look upon the King James version of the Bible. They consider the substitution of any other text-book of geometry as an insidious attempt to sap the foundations of geometrical truth, a tacit confession of the intellectual weakness of the rising generation, a fraudulent pretence by which the teacher seeks to cover up his inability to teach the genuine science and to excuse himself and his pupils from the performance of a rigid duty. Another party, the radicals, regards Euclid himself as a man of great genius, and his 'Elements' as one of those books which, like Aristotle's 'Analytics,' or Newton's 'Principia,' or Adam Smith's 'Wealth of Nations,' or Darwin's 'Origin of Species,' marks an epoch in the intellectual history of the human race. But they consider the 'Elements' as wholly unsuited for use as a text-book in the present age of the world, needlessly difficult of comprehension by the young, unadapted to modern methods of teaching and modern modes of thought. The members of this party demand an entirely new book. They believe it is possible to construct one which will satisfy all theoretical and practical requirements, will be more in accordance with modern methods of instruction, and will necessitate the expenditure of far less time and labor than is implied in the mastery of the 'Elements' of Euclid. The strength of these opinions led, a few years ago, to the formation of the Association for the Improvement of Geometrical Teaching. A text-book of Geometry has been published by this Association. To what extent it fulfils their intentions, this is not the place to discuss. A third party—a kind of "Liberal Unionists"—far exceeds both the others in numbers, and is represented by the great majority of the mathematical teachers of Great Britain. The number and variety of text-books of geometry produced by members of this party, especially during the last ten years, is very great. They have one common characteristic—they all profess on their title-pages to be editions of the 'Elements' of Euclid. They differ principally in the extent to which they carry their alterations, omissions, and additions.

Messrs. Hall and Stevens give us the first six books of Euclid—all that are usually studied in an elementary course — substantially in the form in which they appear in Simson's edition. The fifth book, which treats of ratio and proportion, has been entirely recast. We will say a few words in regard to it further on. The chief peculiarity of Messrs. Hall and Stevens's edition is the extent and variety of the additions. After each important proposition a large number of exercises are given, and at the end of each book additional exercises, theorems, notes, etc., etc. These are generally well selected, often ingenious and interesting, but the general impression of such a book is that geometry is not so much a science as a vast collection of facts and observations, connected with each other in various ways, but hardly susceptible of reduction to an orderly, consistent, in fine, scientific whole.

Messrs. Hall and Stevens's reconstruction of the fifth book of Euclid, on ratio and proportion, is based on a work of De Morgan, published more than half a century ago. De Morgan's book, a thin octavo of 87 pages, was a kind of commentary on Euclid's fifth book, and was marked by that clearness of statement and felicity of illustration in which he was perhaps unsurpassed by any mathematician who ever lived. The present editors of Euclid have often adopted his language, and their points of view are mostly the same as his. But we are inclined to think they would have done better to abandon Euclid altogether, and write a professedly new treatise on the subject. The fifth book of Euclid is notoriously the most difficult in his 'Elements.' But the difficulties are, in great part, inherent in the subject itself, and are to be overcome not so much by the study of any treatise as by the constant application of principles to specific cases. There are a great number of minute details about the construction of this edition, and its mechanical execution, which we have no space to mention, but all showing the care, the patience, and the labor which have been bestowed upon it. On the whole, we think it the most usable edition of Euclid that has yet appeared.

Prof. N. F. Dupuis's 'Synthetic Geometry' (Macmillan) has nothing in common with Euclid or any of the ordinary text-books of geometry, except that it treats the same subject. The author does not expressly say whether he assumes that the student has previously studied Euclid or any other of the common text-books, but he says in his preface that "the whole intention in preparing the work has been to furnish the student with that kind of geometrical knowledge which may enable him to take up successfully the modern works on analytical geometry." Still he treats the most important parts of elementary geometry in a manner peculiar to himself; but he also treats a great number of other subjects which find no place in ordinary elementary text books; thus, section 111 of part ii. treats of the "Geometric Interpretation of Algebraic Forms"; part v. treats, among other things, of "Anharmonic Ratios," a subject which occupies so large a place in that remarkable work, the 'Géométrie Supérieure' of Chasles. Prof. Dupuis's book is a valuable acquisition to the library of the professional mathematician, but it seems to us to belong to the class of works with which the authors will do better work than anybody else.

The 'Geometrical Conics' of Messrs. Cockshott and Walters (Macmillan) is interesting as showing, in the statement of its definitions and propositions and in its arrangement, the manner in which the Association for the Improvement of Geometrical Teaching thinks the subject should be presented to pupils. We have no room to criticise their work. It consists, in the first place, in having added demonstrations to the propositions of the Association.

Immediately after the treatment of the parabola, which is placed first, they have inserted a section of half-a-dozen pages on "Orthogonal Projection." One-half of this small space is occupied by the figures necessary for the elucidation of the subject, but they have succeeded in making an admirable presentment of its fundamental principles, containing all that is needed in subsequent parts of the work. The most striking characteristic is the immense number of problems upon which the pupil may test his mastery of the subject. There are, if we have counted rightly, 203 of these "riders," inserted at various places throughout the body of the work. At the end of the book we have 31 "important propositions to be proved by the reader," followed by 496 problems, nearly all of which are taken from examination papers prepared at the different colleges of the University of Cambridge. The shortness of human life, especially of that portion of it which it is possible to devote to the study of conic sections, and more especially still of that portion which a student at school or college can devote to that subject, forbids the supposition that the authors expected any one pupil to do all this work. It is a great mine from which pupils, professors, and amateurs can draw as inclination prompts or occasion requires.

We some time ago recorded our opinion that the elaborate treatise on Statics by Prof. Minchin was, for those acquainted with the higher mathematics, the best in existence. We at the same time recommended the 'Treatise on Elementary Statics' of Mr. John Greaves, both because it was an excellent work by an accomplished mathematician, and because it was written with the express design of serving as an introduction to Prof. Minchin's great work. Mr. Greaves now gives us a still smaller and more elementary 'Statics for Beginners' (Macmillan). For those who intend to study Mr. Greaves's former work, and yet desire to commence with as simple a book as possible, there are obvious advantages in beginning with one by the same author. Even those who have no present intention of pursuing the study beyond its most elementary principles and applications, will not go amiss in using a book especially adapted to serve as an introduction to a higher course.

Of Mr. W. E. Johnson's 'Treatise on Trigonometry' (Macmillan) all that we can say is that it is a very large and elaborate work, better suited, as it seems to us, to the library of the professional mathematician than for use in preparing lessons by the student for the classroom. Large as it is, it does not treat Spherical Trigonometry at all. The last chapter, on the "Geometrical Interpretation of Imaginaries," is well worth the attention of mathematicians.

The excellence and the widely extended use of the previously published text-books of Prof. John Casey create a presumption in favor of his last one on 'Spherical Trigonometry' (Longmans). Those who examine it will find that presumption fully justified. One feature of the book is that it gives the original sources not only of such propositions and processes as are out of the usual course of instruction, but often of those which might properly be considered as having long since become the common property of mathematicians. These historical and bibliographical notices often contain curious and interesting information which, while relieving the monotony of demonstrations and formulas, excites the interest and curiosity of the student. As is now the fashion, the number of exercises is very great; the book contains over five hundred.

Appended to the preface of Messrs. Wentworth, McLellan, and Glashan's 'Algebraic Analysis' (Ginn & Co.) is the following "Note," signed by Prof. Wentworth and Dr. McLellan: "It is due Mr. Glashan to state that the main part of the work on this algebra has been done by him." After careful examination, we cannot avoid the inference that the book is Mr. Glashan's, and that Messrs. Wentworth and McLellan have had very subordinate parts in the composition of it. If we were to venture an hypothesis, we should say that these gentlemen have probably examined the manuscript with sufficient care to satisfy themselves that it is worthy of their endorsement to the extent that Prof. Wentworth, who has a wide reputation as the author of mathematical text-books, and Dr. McLellan, who occupies a responsible official position in one of the departments of the educational machinery of the Dominion of Canada, are each willing to figure as associate authors of the work. They may well do so. It is a work of much more than ordinary merit. Those merits will become more apparent on the publication of a companion volume, which the authors say is in the course of preparation, containing demonstrations of the theorems, solutions of the examples, and other information more especially adapted to the use of private students who wish to pursue their studies without the assistance of a teacher. But there is another promise of the authors, or, as we are inclined to think, of Mr. Glashan, that if the patronage extended to this part i. shall be sufficient to warrant it, part ii. will follow, and a synopsis of its contents is given. We strongly urge all teachers of mathematics, and all interested in mathematical studies, to provide themselves with this book, not only on account of its own merits and utility, but in order to secure the publication of the second part, which, if executed in accordance with the programme announced in the preface to this part, and with the same skill, will bring within a manageable compass, and illustrate by examples, a vast amount of mathematical knowledge of the very highest order, practical, historical, bibliographical, and speculative, which now lies scattered through the pages of mathematical journals, foreign treatises, and the proceedings of learned societies.

The name of Prof. John D. Runkle will awaken in the minds of most of our older mathematicians pleasing recollections of the *Mathematical Monthly*, a journal which, a little over thirty years ago, was founded principally through his enthusiasm and perseverance, of which he was the editor, which presented to the eye the most beautiful specimen of mathematical typography then to be found either in this country or in Europe, and which reckoned among its contributors the ablest American mathematicians of that time, and many younger men who have since taken their places and achieved world-wide reputations. The intense political excitement of 1860, and the absorbing interest of the tremendous military struggle that followed, turned men's money as well as their thoughts into other channels, and the *Monthly* succumbed.

Prof. Runkle's 'Plane Analytic Geometry' (Ginn & Co.) is a very able work and well adapted for use as a text-book, but it is very large. A second volume, on 'Solid Analytic Geometry,' is promised, and it would seem that the extent of the course would necessitate, on the part of the average college professor and student, the omission of a considerable portion. But the book is intended primarily for the students of the Massachusetts Institute of Technology, and special technological schools can and ought to devote more time to mathematics, especially to analytic geometry, than is possible in the department of arts in most colleges. For those who intend to become engineers, architects, astronomers, or teachers of mathematics, the work seems admirably constructed.

Mathematicians will welcome the appearance of Prof. A. R. Hardy's treatise on 'Analytic Geometry' (Ginn & Co.), because they will be glad to see another specimen of the work of the accomplished author of the 'Elements of Quaternions,' and those who "hate mathematics" will welcome it because they think its completion may clear the way for another novel from the pen of the author of 'Passe Rose.' Prof. Hardy's treatise is much smaller than Prof. Runkle's, yet covers more ground, for it treats of solid geometry as well as plane. It is quite large enough for use as a college text-book, and we highly approve of shortening somewhat the course of plane, in order to make room for at least the elements of solid geometry.

The second edition of Prof. Wm. E. Byerly's 'Integral Calculus' is more than double the size of the first. The chapter on "Definite Integrals" is increased to four times its original length. This is well; it is, perhaps, the most important part of the Calculus. The chapter on "Line, Surface, and Space Integrals" is entirely new. But the most important addition is the long chapter (56 pp.) on "Elliptic Integrals." Not only is this chapter a very good one, but, so far as we know, this is the first time the subject has been treated in an American text-book. Another new chapter (xvii.) is an "Introduction to the Theory of Functions," which "was sketched out and in part written by Prof. B. O. Peirce." On the whole, if any person competent to the task were to compare these text-books with those on the same subjects in use half a century ago, he could not help noticing how large a portion of the recent works is occupied by matters then unknown, or known only to a few great mathematicians; nor could he help admitting that the "world does move," and that, too, forwards and upwards.

MORE NOVELS.

Children of Gibeon. By Walter Besant. Harper & Bros.

A Family Tree, and Other Stories. By Brander Matthews. Longmans, Green & Co.

Two Runaways, and Other Stories. By Harry Stillwell Edwards. The Century Co.

Ogeechee Cross-Firings. By R. M. Johnston. Harper & Bros.

Nobody knows whether the women of Gibeon were included among "all the inhabitants" who sent forth that embassy which appeared in the camp of the Israelites, footsore and ragged, their wine-skins all rent and their provisions reduced to a mouldy crust. Most likely the elders of Gibeon were wholly responsible for the theatrical device which secured a league with Joshua, and took good care not to subject it to incisive and offensive criticism from their wives and daughters. Yet the women shared the punishment decreed by Joshua when he knew that he had been duped, and that the pretended travellers from a far country really dwelt at his door. "Let them live," he said, "but let them be hewers of wood and drawers of water unto all the congregation," thus keeping his faith and the oath of all the Princes, yet not missing the sweetness of revenge.

In the course of ages, by the force of might and by strategy, the men of Gibeon have managed slightly to modify the doom of per-

petual servile labor. The women have been less fortunate, which is part of the fate of all women. Christian civilization has brought no rest or respite to the women of Gibeon; science, with its innumerable appliances for increase of comfort and diminution of toil, has done nothing to mitigate their misery; politicians and philanthropists—always talking, yet always full of talk—have not lifted a hair's weight of care from their shoulders; every year their feet in increasing numbers go down into darker places, and there is no light nor hope of any. Now and again a lance is broken for their sorrows, a song sung, a story told, but rarely has Providence sent them so stout and able a champion as Mr. Besant. He does battle nobly with effective weapons in skilled hands, and he summons, straight and fearlessly, all the daughters of the "Princes of the Congregation" to rally round him and carry on the fight. His novel is admirable, both as a novel and an appeal for a social reform. It is never gloomy, nor has it any affinity with philanthropic tracts. It does not produce hopeless depression, but stirs wholesome indignation. The poor are not sentimentalized, with virtues magnified at the expense of the rich, nor is the oppressor raked over the coals for miseries which are no fault of his. He is accountable for enough wretchedness, and any justice that can be done him is the sort of justice which ought to make him hide his face and cry for mercy.

The plot of the story is well constructed, with enough romance and mystery to excite curiosity, and providing good opportunities for jogging several varieties of slumbering consciences. Unlike most grumblers and would-be reformers, Mr. Besant suggests practical ways for ameliorating the conditions which he describes and deplores. The daughters of the Princes may work a reformation by personal effort and by combination. When each one who wears or uses in any way the product of the toil of her sisters of Gibeon shall know that each sister is honestly paid for her work, then the burden will be lightened and the curse lifted.

In one of the short stories included under the title, 'A Family Tree,' Mr. Matthews says: "A good idea for a short story is a shy bird and doesn't come for the calling." Mr. Matthews knows the bird perfectly well, and rarely attempts to palm off an inferior species. In none of these stories is the idea bad, but unfortunately in several it is so attenuated that one must be supersensitive to catch it. The charm of a short story lies not so much in what is written as in what is insinuated, yet for those not in the author's confidence a slight footing on solid ground is indispensable. Mr. James, who is a master of insinuation, occasionally overdoes it, and Mr. Matthews, who is less subtle and delicate than he, becomes irritatingly vague when he has not a bird of the finest quality sure in his hand. Nobody could divine from what he is given to go upon, whether "Memories" is a tragedy by implication or not. It is cruel, after compelling us to follow the very commonplace, sentimental reminiscences of Lieutenant Robert Douglas, not to give us the least clue for deciding whether he rescued "Pike County Pete's kids" or perished in the blizzard. We are all tired to death of the story-tellers straining to tell something, but it is very doubtful whether the story-tellers whose aim is to tell nothing will wear as well. "Notes of an Uneventful Voyage" is similarly defective. A little stability and definiteness could not have done any harm, and might have justified so much noting of insignificance.

The idea of a Family Tree is not the sort of dea which Mr. Matthews can trifle with most acceptably. His treatment of the humorously supernatural is inimitable, but the supernatural which ought to make one's flesh creep eludes him. Even in using a mildly cynical, very modern youth to link together a series of grimly tragic events, there is a frivolity destructive of any emotion of horror which those events might excite. The idea of "On the Battle-Field" is wholly good, and by the manner of narration a fantastic improbability becomes a real, true story. "Scherzi and Skizzen" are exquisitely frothy papers, including a very witty travesty of Chesterfield's letters. The keenly satirical drawing of a common type of American is still so good-natured that it will cause a grin of appreciation to expand the countenance of every John Quincy A. Chesterfield in the republic. "Postal Cards" are the cleverest work in a book of which all the workmanship is clever and polished in the modern style—a style that has more sparkle than elegance.

There is nothing elusive in the ideas or finical in the management of the stories in the volume entitled 'Two Runaways.' Each is an episode comic or tragic, told plainly and naturally, with small regard for literary graces. The inexhaustible negro, run close by the poor white, supplies both the fun and the pathos. If the language of printed books has any appreciable influence on speech, the future of English in America is awful to contemplate. Unless a sudden blight should fall upon the dialect writers, the native tongue may be quite extirpated, and, a generation or two hence, Americans may be communicating with each other in a "jangling noise of words unknown," a hideous gabble. However bad the language of these stories may be, each is for one reason or another worth telling, and one, "De Valley an' de Shadder," has dramatic fire and passion of remarkable force and dignity.

Mr. Johnston's story, 'Ogeechee Cross-Firings,' like most of his preceding stories, is a wonderful example of corrupt and distorted language. The peculiarity of his books is that the jargon of the uneducated people is hardly less incomprehensible than the hifalutin discourse of the "cultured classes," and much less fatiguing. Mr. Johnston's delineation of the slave-owner in middle Georgia is doubtless faithfully realistic. The plainness and primitiveness of his portraits must be shocking to those who cherish in memory an ideal planter, a gentleman of chivalrous honor and distinguished manners, with Johnsonian sentences rolling off his tongue as easily as smoke curls from his very costly cigar. It is granted by the wicked that truth is wholesome; yet even the good will admit that it is sometimes uninteresting. This story of middle Georgia may be counted among the uninteresting truths.

BRISBIN'S TREES AND TREE-PLANTING.

Trees and Tree-Planting. By Gen. James S. Brisbin, U. S. A. Harper & Bros. 8vo, pp. 258.

In Mr. Edward Emerson's charming memoir of his father's life in Concord, there has been saved for us a truthful and ingenious toast proposed by Col. Shattuck: "The Orator of the Day; his *subject* deserves the attention of every agriculturist." We may say the same of this book on Tree-planting. Its subject deserves the attention of every one who wishes well to his country, but we are not persuaded that the book itself deserves any attention at all.

It is all the more disappointing because its author was one of the first in our country to call attention to the deplorable effects of forest-waste, and we had the right to expect from him a work on forest-saving which should exhibit evidences of careful observation, or at least of careful editing of the observations of others. In this treatise we find no evidence of either. Notes of original observations are conspicuously absent, and the citations from other writers are given with a carelessness which would be amusing if it were not provoking. There is not only a failure to give the page and chapter of the references, but the volumes themselves are not mentioned, and in one case at least the name of the author cited is given incorrectly.

Moreover, there is no sense of proportion governing the citations, as will be illustrated by the following naïve remark (p. 47). After referring to the great importance of certain experiments made by the late President Clarke of Amherst, the author says: "Unable, from want of space, to present our readers with the full report, we endeavor to condense the material portions into a brief space." Overlooking the complete absurdity of introducing into a work on Trees and Tree-planting occupying only 258 pages the whole of a popular lecture on a minor topic, we may call attention to the fact that the brief abstract as it stands consumes six of the pages, and that, too, under the startling title of the "Blood of Trees." But this title does not seem so strange when we find that the author gives us, later on, nine pages filled with an account of the medicinal properties of the trees of the United States, prepared by "a firm of Manufacturing Chemists." Among the Trees mentioned in this account of drugs figure the "American alder" and the "black alder," Aralia spinosa (written in this book Arabia), and the broad-leaved laurel, all of which are, to be sure, goodly shrubs, but hardly to be reckoned as trees in the sense in which that word is understood by most authors. However, it is hard to know exactly what our author means by the term Tree, since (on p. 167) he gives us, incredible as it must seem, a paragraph on sheep laurel, otherwise known as lambkill, a plant which, under favorable circumstances, may attain the height of three feet. But, in order that this humble plant may have company in a work on Trees, we are given also a section devoted to the "ground hemlock," which, according to Gen. Brisbin, "is always a straggling, prostrate shrub," and another to the "shining willow," which, we are told, "if carefully cultivated, may reach the height of fifteen or twenty feet, but in its wild or native state is much smaller."

The difficulty of knowing exactly what our author means by Tree is increased by the following description of a small herb found in California (p. 32): "The soap-plant of California is not only beautiful, but useful, the bulbs being preferred by those who use them to the finest quality of soap. There is *another* tree found in South America, the bark of which is used as soap also." Our readers must pardon us for italicizing the word another.

Gen. Brisbin gives some references to the usefulness of a few of the trees not included in the list furnished by the firm of manufacturing chemists. For instance (on p. 109), we have an account of the cedran tree, "which grows only in Central America" (but which may become of commercial importance in view of the pleasant relations established by the visit of the members of the Pan-American Congress). Mr. John P. Curry's

"attention was first called to the cedran tree while on the Isthmus as consulting engineer for the Panama Railroad Company, by observing the neutralizing effect that its beans produced upon a snake-bitten buzzard. The bird was struck by a rattlesnake, and then made its

way to a cedran tree, and, after pecking at one of its beans, flew off apparently uninjured. A native to whom Mr. Curry related this incident scouted the idea of a rattlesnake-bite being dangerous, and exemplified his confidence in the efficiency of an antidote by bringing a snake of twelve rattles the following day and allowing himself to be bitten by it. He then took a cedran bean, and, having chewed it, swallowed a portion, and saturated the wound with his saliva; after which treatment no disagreeable feelings or unpleasant effects resulted from the bite."

And now comes an example of the author's method of dealing with important facts:

"Mr. Curry, after having been thus satisfied of the marvellous curative power of these beans, verified his experience by writing to the *Alta California* newspaper, and carried about a peck of the beans to San Francisco, where many successful experiments of their efficiency were made by Prof. Lanzwert, a German physician, on dogs, cats, and rabbits, etc., which were allowed to be bitten by rattlesnakes. After these tests the neutralizing power of these beans was never known to fail when applied to human beings bitten by these reptiles."

After this, it cannot surprise us to learn that a tincture manufactured from its roots by the firm of manufacturing chemists before mentioned is a "safer antidote than whiskey or alcohol," and that the same "is also a cure for gout and an antidote for hydrophobia." Of antidotes for snake-bites there would appear to be no lack in our forests, for we read on p. 142 that the bark of the catalpa is "a very good and sure antidote for the bites of snakes" (kind not mentioned). Further on, other statements are made regarding the same plant: "The honey collected from the flowers is very poisonous, and produces effects closely allied to the effects of the honey collected from the yellow jasmine. The flowers are *also* valuable as a remedy for asthma."

Very much that the author has given us regarding the age of trees is nearly as uncritical as the foregoing about their supposed uses. His account of the "big trees" of the Pacific Coast is unpardonably incorrect, since it comes from the pen of one presuming to write on the subject of trees. He has not made use of the trustworthy materials within easy reach, such as the 'Botany of California,' Dr. Gray's 'Sequoia,' and the like; if these were not at hand, he had little right to prepare even a single paragraph on the subject. We are told, for instance, "that they are mostly three thousand years old" (p. 29). But what shall be thought of a writer on the forest trees of America who could have allowed the following sentence to appear in his book (p. 86)? Speaking of the honey locust, the author permits himself to say: "Michaux, sent out by France twenty years ago, predicted that it would become valuable as a hedge-plant." André Michaux visited this country in the last century, arriving in New York in 1785. The author seems to have no clear ideas regarding the lapse of time.

The work is neither trustworthy as a popular treatise nor useful from a scientific point of view. Some portions are quite out of place in a scientific volume, and not sufficiently dignified even for so-called popular science. Thus, on page xxiv. of the introduction, Gen. Brisbin speaks of his boyhood and tells us how "Annie Berry sprained her foot so terribly, on that day, she was laid up for weeks, and the old doctor shook his cane and threatened what he would do if we ever frightened Annie again—all of which we knew was talk, for the doctor loved us too well to harm a hair on our young heads." Such bursts of confidence as this show plainly that the author writes pretty much as he would talk to his friends when wishing to convince them of the necessity of caring for trees and tree-planting; he would not then think it necessary "to verify his references," nor to maintain throughout his conversation due proportion in the treatment of his topics. But a treatise on so important a subject should be accurate and well-proportioned. This treatise, unfortunately, is neither. It cannot aid at all in the great work which its author has so much at heart, for its matter, commonplace to the last degree, should have been relegated to the columns of some country newspaper. There, from the ephemeral nature of the publication, it could do but little harm.

It remains for us to state that the volume is illustrated by a fine portrait of the author.

How to Catalogue a Library. By Henry B. Wheatley. A. C. Armstrong & Son. 1889.

THE latest volume in the "Book Lovers' Library" may be cordially commended to all who cherish the popular delusion that anybody can make a catalogue; and even the professional cataloguer may learn something from this intelligent discussion of the difficult points in cataloguing, and careful comparison of the various codes of rules. The introduction treats of the definition of a catalogue, and is followed by a brief account of the codes in use in the British Museum, Bodleian, and Cambridge libraries. Jewett's, Cutter's, and the English Library Association's rules are also noticed, but no mention is made of the code of rules prepared in 1883 by the coöperative committee of the American Library Association, and fairly representing the general practice of this country. The question of the best form for a catalogue is next taken up, and the preference given to print, though it is admitted that manuscript catalogues must always be used in a large number of cases, and especially in private libraries. For a manuscript catalogue the book form is recommended, and the card catalogue dismissed with scant courtesy. The favor in which it is held in this country appears to the author "something almost incomprehensible, and one can only ask why such a primitive mode of arrangement should be preferred to a book catalogue. I can scarcely imagine anything more maddening than a frequent reference to cards in a drawer; and my objection is not theoretical, but formed on a long course of fingering slips or cards."

It is curious to see how our English friends continue to fight shy of the dictionary catalogue. Mr. Wheatley, indeed, gives it a half-hearted and grudging approval, conceding that, "in the abstract, the most useful kind of catalogue is that which contains the titles and subject references in one alphabet"; but he adds that "in libraries containing more than 10,000 volumes it will be found more useful to have a distinct index of subjects, while in catalogues of libraries below that number it will generally be advisable to include the subject references with the titles in one general alphabet." We are not aware that the Boston Athenæum or Boston Public Library has found it necessary, or even desirable, to abandon the dictionary plan, though these libraries contain considerably more than ten times 10,000 volumes.

The fourth chapter contains an interesting, as well as instructive, comparison of the various rules concerning the treatment of title-pages. The author's preferences are in the main sound, though exception may be taken to his treatment of anonymous works, catalogues, and prefixes in foreign names. The vexed question of the authorship of academical dissertations is discussed at length in a paper by B. R. Wheatley, which contains some useful suggestions, but, oddly enough, the author's rules give no directions whatever for the treatment of this puzzling class of publications. On the question of the arrangement of transactions and journals the author, though evidently influenced by the British Museum practice, seems inclined to hedge a little, and says that, if a library contains many magazines, journals, or transactions of societies, etc., it will be well to keep them distinct from the general catalogue, but if they are few, they can be included in the general alphabet. The rules for a small library which follow the discussions are, with very few exceptions, clear and sensible so far as they go; but even a beginner in cataloguing, or the librarian of a small library, would, on the whole, do better to take as a guide one of the fuller codes, for, as Mr. Cutter says, "in planning a manuscript catalogue it should be remembered that a small library may grow into a large one, and that if the catalogue is made in the best way at first, there will be no need of alterations."

The Political Life of Our Time. By David Nicol. 2 vols. D. Appleton & Co. 1889.

FEW readers in this hurried age will have the patience to learn of our political life through the medium of these pretentious volumes. The sight of a chapter entitled "The Development of our Political Culture in the Intellectual Life of India" is sufficiently deterrent, but when we are further bid seek "The Origin of our Political Culture in the Social Life of China," our courage wholly deserts us. We cannot withhold our admiration from an author who states candidly that he has availed himself, without scruple and without prejudice, of every fact and opinion open to him which he has deemed capable of evoking a healthy decision on the many grave interests of our time and country; but, while we wonder, we may not follow. It is indisputable that "the political events of our day succeed each other with great rapidity, and their issues are of such magnitude as to call forth all round the exercise of the most matured judgment"; but this proposition only arouses in us that irrelevant desire for craniological investigation which seized upon Charles Lamb when the Scotchman announced that, in his opinion, Shakspere was a great poet. We grant that "in the present attempt to educate the public mind to a just discrimination of the significance and consequence of passing events, all the representative features of the intellectual and social conflict of our day are merged in the desire to reach that union of philosophical with political and economical truths which the keenest of German critics foresaw would yield the most astounding results to modern society"; but we dare not submit our own mind to this educational process, for fear the result may be more astounding than wholesome. "That way madness lies" for temperaments less serious than this author's.

In short, we find the book absolutely unreadable. We discern that the author has studied much, and we come upon passages from time to time that are intelligible; but after an honest effort to discover what it is all about, we have been obliged to abandon the attempt in despair. Not only is the style singularly impenetrable, but the connection of thought proceeds according to some intellectual law that is to us unknown. We are reluctant to condemn so unsparingly what is evidently the product of patient industry, but we are convinced that ordinary readers would be unable to profit by it. Since it has been possible to write such a book, we suppose that it is possible for minds consti-

tuted like that of the author to understand it, and we may say that it is at least suggestive. The passages quoted above from the preface we believe give a fair idea of the author's thought as well as style, and we need only say that those who find them instructive will find in the body of the book many more of the same kind.

In and Around Berlin. By Minerva Brace Norton. Chicago: A. C. McClurg & Co. 1889.

THIS little volume is the work of an American woman who, through the "generous sympathy" of her husband, as we learn from the dedication, goes to Berlin for her first residence abroad, lives there a few months, and writes up in a readable way the things that most attracted her attention. We have a chapter of "first impressions," dealing with the habit people have in Berlin of living up several flights of stairs; with the curious stoves and beds, and with the absence of elevators, carpets, bath-rooms, and closets. Then family and social life come in for consideration, the chapter upon this being the longest and most interesting in the book. Domestic customs, table manners, food and cooking, social usages, Christmas, a wedding—such are some of the topics touched upon. A chapter on education has a few pages concerning the Royal Library, and the pleasure of working there, a short account of a gymnasium (compiled from books, the privilege of a visit being so difficult for a woman to obtain), and a fuller account, with interesting details, of two visits to girls' schools. Subsequent chapters treat of such matters as churches, museums, palaces, public works, prominent personages, charities, etc.

For a book purporting to give only the impressions and observations of a short stay in the German capital, a book written with little preparation for the sojourn it describes, and written by one apparently not familiar with the German language, 'In and Around Berlin' is, as was said above, very readable.

Fine Arts.

THE BARYE EXHIBITION.—II.

LANDSCAPES BY COROT, ROUSSEAU, AND DAUBIGNY.

WHEN we look at the landscapes in the Exhibition of the works of friends and contemporaries of Barye, we are convinced that there is little profit in praising the work of one master as being better than that of all other masters, and we are reminded of the truth that in art it is often unjust to compare one man's work with another's to the advantage of either when their characteristics and methods are different. For though, in the Retrospective Exhibition at Paris last summer, there could be no doubt of the superiority of Corot, who was admirably represented by some forty pictures, and one of his landscapes there, "Biblis," yields to no other that has ever been painted by anybody in pure poetry and simplicity in the depiction of nature, though no painter ever painted a better landscape, it would be unjust to say that none ever painted one as good. In the Retrospective Exhibition there was not as good a one, but some of the other great landscape-painters were not there seen at their best; and it is because one or two of them are to be seen at their best in the Barye Exhibition that the pictures here are so interesting to those who have seen both exhibitions. There is no work in the New York galleries by Corot that equals the "Biblis," nor is there one that is quite as fine as "La Charette" or the "Crossing the Ford," two of the other notable Corots at Paris; but, on the other hand, there are at least three pictures by Rousseau and an equal number by Daubigny that surpass any works by these painters shown at the Retrospective Exhibition. With "Le Givre," No. 539; "Morning on the Oise," No. 567, and "The Valley of Tiffauges," No. 599, before us, we are safe in asserting that Rousseau may be seen at his best; and in the case of Daubigny, though the three pictures, "Landscape," No. 561; "On the River Oise," No. 579; and "Sunset on the Coast of France," No. 544, are not all among the most important of his works, yet we find in them so many of Daubigny's finest qualities, they one and all reveal so much of that direct, simple painting of nature which characterizes his best work, along with such refined and beautiful sentiment in the conception and such variety of motive, that it is fair to form a definite judgment from them as to the place of Daubigny among his contemporaries and the value of his work in the development of modern landscape-painting.

Among the eleven canvases by Corot in the exhibition, "The Martyrdom of St. Sebastian," No. 528, is perhaps the most widely known, and it is generally counted in the list of the most important of the painter's works. But it is not in this picture, nor in such grandiose compositions as the "Orpheus," exhibited in New York a few years ago at the Bartholdi Loan Collection, that we find the finest of his qualities. Nor shall we find them in that other much-praised picture, "The Evening Star," No. 529, which is dry in *facture* and cheaper in color quality than Corot's better work is wont to be, nor in the "Fauns and Nymphs," No. 594, though this picture in some ways comes up to his highest standard, and, were it not for the rigid straight line of the tree trunk in the middle that mars the composition, and a certain harsh brownness in the general tone of the big rocks above the pool in the foreground, it might be ranked very high. The great masses of foliage are admirably treated, and the sky is one of marvellous purity and depth. With the celebrated "Lake Nemi," No. 584, there is still less fault to find. It is a trifle theatrical in composition (it is avowedly a made-up composition, but it is just a little bit exaggerated in the effort to escape the prosaic), and it is not quite so pure in color nor quite so free from paintiness in the lightest part of the sky, as Corot's very best work is usually. Otherwise, in the rendering of a delicate atmospheric effect, in poetic beauty, and in the harmony of the ensemble, it is admirable, and will bear comparison with the best things from the master's brush. But the best Corot in this exhibition is "La Danse des Amours," No. 616. Here is a picture in which we find the most wonderful atmosphere, the most delightful color harmonies, and the most unobtrusive painting. That enchanting purity and simplicity which we saw in the "Biblis" are echoed here. These noble groups of dark trees, this vibrating, luminous sky, these tender tones of gray and green and warm white—white that is colored, so to speak, by a hundred tints that are reflected in it; these broad, simple masses which balance each other and hold each its indispensable value in the harmony of the whole—these things mark a master work, and here, if we do not find quite all that Corot has said in such a landscape as "Biblis," where nothing seems to be wanting, we do find some of his very finest qualities, and such truth and beauty of expression as belong only to the best of his pictures.

Of all the great painters of landscape the world has known, Corot is incontestably the most purely poetical. Truth is the foundation upon which all his art is based; and, with all his breadth in painting and his synthetical interpretation of nature's moods, he never forgets that fidelity to the facts is all-important, and never substitutes for the real beauty of Nature herself some fancied charm of color or effect of his own, as the English Turner did. Yet actual facts form his basis only, and other painters whose fame is as great as his have insisted more on these facts and made more of them in detail than did Corot. Rousseau appears as such a painter in one of the pictures here, "The Valley of Tiffauges." There are landscape drawings by Rousseau in existence, preparations for pictures on canvas in thin washes of color, with fine lines drawn with a pen or the point of a small brush, in which almost every leaf on a tree is outlined, almost every stalk is shown in a field of grain, hundreds of little blades and stems are exactly indicated in a foreground of grass and herbage. With such a groundwork for a picture, Rousseau has sometimes carried out this fidelity to the smallest detail in painting it, and "The Valley of Tiffauges" is a notable example of the successful treatment of a landscape in this manner. The foreground is a tangle of bushes, weeds, and grass; in the middle distance are close-growing trees encircling the little valley, and beyond are wooded hills. On the left is a cottage half hidden by the foliage; and the pale sunlight which falls gently on a poplar tree in the middle of the picture is not strong enough to light up the sky, which hangs behind the hills with warm gray and black clouds that serve to intensify the effect of the sunlight, and to concentrate the interest in the centre of the composition. The picture is conceived on large lines, and, in spite of the presence of an amount of detail that would be utterly bewildering if it were not painted by a great master, it is exceedingly broad and grand in general effect. It will bear an infinite amount of study, and not an inch of painting on the canvas will be found to vary in treatment from the standard of careful painting of detail that marks that part of it where the interest is concentrated. Everything is given, and yet nothing obtrudes, and, what is perhaps more remarkable still, the artist, while neglecting not even the smallest touch to bring out the leaves on every branch of the trees and every blade of grass, has painted his picture throughout with a splendid scheme of color—a strong, rich, deep ensemble of sombre tints that make of this landscape one of the finest tone studies in the exhibition.

But if we wish to see what Rousseau could do when he did not attempt such a *tour de force* as he has accomplished in the "Valley of Tiffauges," we may look at the "Morning on the Oise," No. 567. This is a picture in which a

poem is suggested, in which the warm morning sun of midsummer on a pleasant valley, with a river gliding through its fertile meadows, is made to play on trees and field and water in a harmony of golden light. The sky is dusky blue at the horizon, and there are masses of grayish clouds above. In the middle of the picture, the water, reflecting the blue of the sky and the grassy banks of the river, gleams in the sun, and an idle boat with a white sail shines gently in the light. Everything else in the composition is subordinated to this central mass—not that the foreground is slurred over, or that the trees and hills that hem in the sunny valley are not painted with proper fulness; but they are not insisted upon. We feel that they are there, but we look only at the boat on the river, and the smiling sunshine that makes the flowers bloom in the meadows and warms the water where the children are playing on the banks. Doubtless Rousseau has painted pictures that show more robust strength, more power to deal with difficult problems in nature, than this; but it is certain that he never signed a more beautiful little canvas, and that if he, too, is to be called a poet-painter, as Corot is, his best claim to the title is in this enchanting "Morning on the Oise."

In the Louvre there is a magnificent landscape by Rousseau, the celebrated "Sunset," that we call to mind whenever we hear his name mentioned, for his fame might rest on this one picture, and he would not lose the high place he holds among modern painters of landscape. There is another picture at the Barye Exhibition which is its rival among the masterpieces, a picture that could only have been painted by a very great artist, and which ranks among the finest landscapes in the world. We have seen Rousseau as an analyst and a master of technical expression in the "Valley of Tiffauges," and as a synthesist and poet in the "Morning on the Oise." In "Le Givre," he is both, and he reveals in this wonderful picture such a noble strength and such power in the interpretation of nature that we are almost ready to say that nothing could be better than this. Indeed, it would not be too high praise, and it may be justly given. As has been said before, comparisons do not prove much; and if we think that Rousseau and that other landscape painter who, at times, rises to a very high level, Diaz, should properly be placed a little below Corot, we may say that even if this be true, considering the sum of each man's achievements, it is not just to rank such a picture as "Le Givre" with any but the very best. And when we come to consider Daubigny, whose work is the most recent of all of them, and on which we have had less time to wait for the judgment that comes finally when we can appreciate at a distance what a painter's life and work are worth, we may again be embarrassed; for is not Daubigny often the peer of any landscape-painter? Is he not, indeed, sometimes the best of them all? And then Corot seems to be the one who must definitively have the highest place until we see the "Sunset" in the Louvre and "Le Givre," and then we are sure that Rousseau, in these pictures, at least, yields the palm to nobody.

The foreground in "Le Givre" slopes irregularly down away from the front of the picture, and the hoar-frost which gives the picture its title lies on the chilly rocks and dead grass of the hillside. In the valley beyond there are groups of trees that stand up dark and grim against the line of blue hills and the stretch of country that lies cold and cheerless under the heavy clouded sky. At the horizon, the burning red glow of the sun breaks through, and its light gilds the edges of the cloud curtains higher up with yellow and red and crimson. The air has a frosty breath, and the earth is wrapped in gloomy silence. That is the subject-motive of the picture. It is not a merry one, nor yet is it forbidding. It is simply grim and grand. "Le Givre" is magnificently painted; it is broad and strong, but not forced, and there is dignity and power in every brush-stroke. In composition it is natural and unaffected. It is admirably drawn and constructed; in color it is puissant, sober, and rich.

Daubigny lived and studied so much out of doors that he has tried in his pictures, more than any of the great landscape-painters of his day, to preserve the actual look of nature. He was not content to use facts for a basis and paint his remembered impressions. Perhaps it was a matter of temperament with him, or possibly he found the results of such work as he may have attempted if he followed the methods of Corot and others who preceded him less satisfactory than those he achieved when he adhered more closely to his studies from nature. Be that as it may, there is in his work more of the impression of what we fancy we have seen ourselves than there is in the creations of the other great artists, and we are apt to think that Daubigny's landscapes contain more actual truth than is to be found in any others. We shall have to compare him with the painters at work to-day, such as Monet, or Harpignies, or Cazin, to find any one who resembles him in this respect. But while this ever-present fidelity to nature's looks is a conspicuous quality in Daubigny's painting, it by no means overshadows others that are essential in the highest fields of landscape. In the present exhibition, indeed, we have three pictures which show most clearly that Daubigny felt the poetry and the tenderest beauties of nature as much as any man, and, moreover, we are persuaded that in their expression he equals if he does not excel some of those whose reputation is based principally on the presence of such qualities in their painted works. In the little landscape called "On the River Oise," a delightful picture, in which the afternoon sun pours over a pleasant bit of country with a river flowing between green banks, and cows are coming down to the water's edge from the cool shade cast by the trees that grow high on the sloping meadow, there is expressed all the quiet beauty of a pastoral scene. It is as refined and sweet in sentiment as any landscape could well be, and there is no trace of the workman who sees only superficial beauty or striking effects. The sky is wonderfully brilliant, and harmonizes delicately with the subtle tints of the distant hills and more positive hues of the foreground, and the canvas is bathed in a gentle golden light. It is very beautiful, this little picture, and we shall hardly find anywhere a more delicious piece of tender color.

But in another picture by the same hand near by, which is catalogued simply as "Landscape," we may find even more charm than in this one. It represents a wide river which fills all the foreground except where the shore frames it in at the left; and beyond a bank with tall poplar trees and a mill that juts out into the stream lies a town with innumerable roofs and gables, and a church spire that points up to the gray clouds which roll in the sky and are reflected in the broad current that flows past the town. There is infinite truth of observation in this picture, and we marvel at the skill of the painter who has put the scene so admirably on canvas, who has given to each thing its proper value—the trees that grow across the river enveloped in the atmosphere, and the tall poplars nearer to us darker against the sky, the town with its gray and white walls reflected in the water, the shadows broken by the ripples, and the great open sky with its clouds of pearly gray—who has painted all this with such justness of vision and without a single discordant note. This is such a picture as a painter loves, and Daubigny is appreciated best by the painters. They like his honest, direct method, his evident sincerity, and they admire his winning, tender way of depicting Nature, copying her many moods with a loving hand that fears to add or take away lest her fair beauty be marred.

If to such charming qualities as are shown in these two admirable landscapes by Daubigny we add vigor and strength and a breadth of conception that marks the great master, and should wish to find them all in one picture, we may turn to a third canvas, "Sunset on the Coast of France." The green sea fills the middle of the picture, and a low headland juts out at the horizon on the right. In the foreground is the rocky beach, with seaweed and wet drift, and, enclosed in rugged walls of rock and sloping ledges, the water in a pool lies still and calm. The upper part of the sky, where it is blue and pale, is reflected in the pool; outside the beach, the sea, with its rolling waves, shows only its own deep, dark green. All this is nobly painted, with a firm, steady swing of the brush, and the wide expanse of the sea is majestic; but the glorious sunset sky is what gives the picture its grandeur. The sun is low down and disappearing at the horizon in a magnificent glow of light—a light so intense that the floating clouds are almost burnt out by it. It is no flaming mass of red and crimson, and there are no crude blotches of flaring yellow, as there would be if a weaker hand had tried to paint it. There is no exaggeration, there is no falsifying, no toning down here to make it more forceful there. It seems to be as absolutely truthful in effect as paint can make it, and its grand beauty cannot be adequately described in words. When we look at it and it grows upon us, when we feel all its splendor and note with what simple means the painter has put before us such a noble and beautiful effect in nature, we cannot hesitate, if we are asked who are the greatest painters of landscape, to reply that Daubigny is one of them, and of the very best.

The State. *Elements of Historical and Practical Politics.*

A sketch of Institutional History and Administration, with complete Topical Analysis. By Woodrow Wilson, Ph. D., LL. D., author of 'Congressional Government.' 720 pages. Retail price $2 00.

No better introduction to the modern study of historical and comparative politics. . . . A critical and scholarly estimate of the different State structures of our time. . . . The book is remarkable throughout for clearness and strength of presentation.—*Public Opinion, Washington, D. C.*

All that could be desired in style, and its clearness, conciseness, and accuracy of statement, as well as the thorough pervasion of its pages by the scientific spirit, will deservedly commend it to the popular favor.—*Boston Advertiser.*

No one who knows Mr. Wilson's methodical mind and clear statement will doubt that he has achieved an extraordinary success in making his book at all. He is scientific in his method, but he is also intuitive in his perception of the profound relations of law, which underlie the forms of government, so that the book has a unity which is always helpful to the student.—*Atlantic Monthly.*

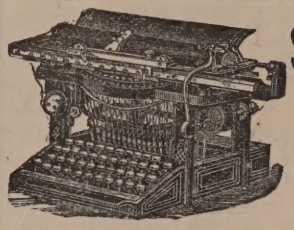
POEMS by JOHN HAY, GRAHAM R. TOMSON, C. P. CRANCH, A. LAMPMAN, E. S. MARTIN.

25 Cents a Number; $3.00 a Year.

CHARLES SCRIBNER'S SONS Publishers, New York.

THE HIGHEST AWARD of a GOLD MEDAL,
AT THE
PARIS EXPOSITION
WAS SECURED BY THE

REMINGTON



STANDARD TYPEWRITER
which has been for
FIFTEEN YEARS THE STANDARD
and
Embraces the latest and highest achievements of inventive skill.
WYCKOFF, SEAMANS & BENEDICT, 327 Broadway, New York.

Schools.

Alphabetized, first, by States; second, by Towns.

CONNECTICUT, Greenwich.

MRS. BEECHER'S FAMILY SCHOOL in the town of Greenwich, Conn., for girls from the age of seven to fourteen, commends itself to those who seek a happy and healthy home combined with a good school. It is located in one of the pleasantest villages on the Sound, and offers special advantages to girls who are too young or too delicate for ordinary schools. Address Bayport P. O., Fairfield Co., Conn.

MASSACHUSETTS, Belmont.

*THE BELMONT SCHOOL.—PREP*aratory boarding-school for boys. For information address B. F. HARDING, A.M., (Harv.), Head Master.

MASSACHUSETTS, Berkshire.

CRESTALBON FARM.—Home School for six boys. For circulars apply to ED. T. FISHER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School, Address the Dean, EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (62d Year). For boys and girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive and is very near the Institute.
Preparation also for college (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

*HOME FOR BOYS.—DR. ABBOT ADM*its not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Duxbury, Powder Point.

*POWDER POINT SCHOOL.—PRE*pares for scientific school, college, or business. Laboratories. The boys are members of the family. FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-third year begins Oct. 1, 1889. Mrs. Knapp, Principal; A. M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Quincy.

*ADAMS ACADEMY, PREPARA*tory and Boarding School for Boys.—Boarding-house entirely reorganized; a few good rooms still vacant. For all information apply to WILLIAM EVERETT, Ph.D.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 17, 1890. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, TEN MILES from Philadelphia. A College for Women. The Program, stating the graduate and undergraduate courses of study for the academic year, will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.
MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

Teachers, etc.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality.
A. M., care of the *Nation*.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., 11 EVERETT St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

TEACHER OF SCIENCES WANTS a position. College and Normal School Graduate. Understands German and French. Experience. References. Address P. O. Box 1388, Ypsilanti, Mich

School Agencies.

THE BOSTON, NEW YORK, AND Chicago Teachers' Agencies. Circular free. EVERETT O. FISK & Co., 7 Tremont Place, Boston; 6 Clinton Place, New York; 106 and 108 Wabash Ave., Chicago.

CONTEMPORARY PORTRAIT GALLERY.

Darwin—Garrison—Phillips.

(A) CHARLES DARWIN, in the year 1854, without a beard. (B) The same, with full beard in 1881, the year before his death. From photographs.
(C) WILLIAM LLOYD GARRISON in the year 1874. (D) WENDELL PHILLIPS, at about the age of fifty. From photographs.
Engraved on wood in the highest style of the art by G. Kruell, member of the Society of American Wood Engravers, and printed on Japan paper under the artist's supervision. Size of the printed blocks about 9x6 inches.
Edition limited to 200 sets of proofs, signed and numbered. Sold only in pairs (A, B) (C, D), at $20 per pair, carriage prepaid. Circulars sent on application. Address G. KRUELL.
East Orange, New Jersey.

ONEITA

No water known so fully embodies the medicinal virtues of the best Mineral Waters, and yet is so Agreeable, Pure, Clear, Sparkling, and Exhilarating a Table Water.
Send for circular with analysis.

ONEITA SPRING COMPANY,
UTICA, N. Y.
J. M. BELL & CO., 31 Broadway, New York.

KNABE
PIANOFORTES.

UNEQUALLED IN
TONE, TOUCH, WORKMANSHIP, AND DURABILITY.
WILLIAM KNABE & CO.,
Baltimore, 22 and 24 E. Baltimore St. New York, 148 5th Ave., near 20th St. Washington, 817 Market Space.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York. Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.
NO. 59 WALL STREET, NEW YORK.

CATALOGUES ISSUED of Books in good condition. Books purchased.
E. W. JOHNSON, 1336 Broadway.

BOOKS on Linguistics, Archæology, Indians, Science. Catalogue free. A. S. GATSCHET, Box 338, Washington, D. C.

D. APPLETON & CO.'S
NEW BOOKS.

Around and About South America:

TWENTY MONTHS OF QUEST AND QUERY. By Frank Vincent, author of 'The Land of the White Elephant,' etc. With Maps, Plans, and 54 full-page Illustrations. 8vo, xxiv-473 pages, cloth. Price, $5.00.

Mr. Vincent made the entire circuit of South America. He visited every capital, chief city, and important seaport, made several expeditions into the interior of Brazil and the Argentine Republic, and ascended the Paraná, Paraguay, Amazon, Orinoco, and Magdalena Rivers; he inspected the coffee districts of Brazil, descended the gold mines; in brief, left no place of importance unvisited. Several interviews with Dom Pedro are of special interest.

An Epitome of Herbert Spencer's Synthetic Philosophy

By F. Howard Collins. With a Preface by Herbert Spencer. 12mo, cloth, xviii-576 pages. Price, $2.50.

"The object of this volume is to give in a condensed form the general principles of Mr. Herbert Spencer's Philosophy as far as possible in his original words. Each section has been systematically reduced. The Epitome consequently represents *The Synthetic Philosophy* as it would be seen through a diminishing glass; the original proportion holding between all its varied parts."

The Physiology of Bodily Exercise.

By Fernand Lagrange, M. D. International Scientific Series. 12mo, cloth. Price, $1.75.

CONTENTS: I. Muscular Work—The Organs of Work, Movements, Heat, Combustion. II. Fatigue—Local Fatigue, Breathlessness, Stiffness, Overwork, etc. III. Habituation of Work—Power of Resisting Fatigue, Modifications of Organs by Work, etc. IV. Different Exercises—Violent Exercises, Exercises of Strength, Exercises of Speed, Exercises of Endurance, etc. V. The Results of Exercise. VI. The Office of the Brain in Exercise.

The Religion of the Semites.

THE FUNDAMENTAL INSTITUTIONS. By Prof. W. Robertson Smith, author of 'The Old Testament in the Jewish Church,' 'The Prophets of Israel,' etc. 8vo, cloth, 488 pages. Price, $4.00.

"A right understanding of the religion of the Old Testament is the only way to a right understanding of the Christian faith, but . . . the doctrines and ordinances of the Old Testament cannot be thoroughly comprehended until they are put into comparison with the religions of the nations akin to the Israelites."—*From the Preface.*

James G. Birney and His Times:

THE GENESIS OF THE REPUBLICAN PARTY. WITH SOME ACCOUNT OF ABOLITION MOVEMENTS IN THE SOUTH BEFORE 1828. By WILLIAM BIRNEY. 12mo, cloth, with Portrait. Price $2.00.

"The abolition of slavery in the United States was neither an accident nor a miracle; it was a result of evolution. Upon the issues made the author invokes the impartial judgment of the men who write American history."

Falling in Love:

WITH OTHER ESSAYS ON MORE EXACT BRANCHES OF SCIENCE. By Grant Allen, 12mo, cloth. Price, $1.25.

"Mr. Grant Allen's treatment is dexterous, his style light and pleasant, his command of the fields of science extensive, and his resources in all that pertains to the 'fairy-tales of science' admirable indeed. The result is a bright and readable book."—*London Saturday Review.*

Practical Hints for Teachers of Public Schools.

By George Howland, Superintendent of the Chicago Schools. International Education Series, edited by William T. Harris, LL.D. 12mo, cloth. Price $1.00.

The Town Dweller:

HIS NEEDS AND HIS WANTS. By the late J. Milner Fothergill, M.D. With an Introduction by B. W. Richardson, M.D. 12mo, cloth. Price, $1.00.

The Dean's Daughter.

By Sophie F. F. Veitch. Appletons' Town and Country Library. 12mo, paper. Price, 50 cents.

"Recalls to some extent the vanished hand of the author of Jane Eyre. . . . 'The Dean's Daughter' firmly establishes Miss Veitch's position among the upper ten of the female novelists of the day."—*London Academy.*

Julius Courtney; or, Master of his Fate.

By J. MacLaren Cobban. Reprinted from Blackwood's Magazine. The Gainsborough Series. 12mo, paper. Price, 25 cents.

This remarkable novelette illustrates some new and startling phases of hypnotism. It has attracted much attention in course of its publication in Blackwood.

Blind Love.

A Novel. By Wilkie Collins. With a Preface by Walter Besant. Appletons' Town and Country Library, 12mo, paper cover. 50 cents.

The Popular Science Monthly
FOR FEBRUARY.

CONTENTS:

NEW CHAPTERS IN THE WARFARE OF SCIENCE. VII. Comparative Mythology. Part I. By Andrew D. White, LL.D., L.H.D.
THE LOCALIZATION OF INDUSTRIES. By J. J. Menzies.
THE EVOLUTION OF THE MODERN RAILWAY BRIDGE. By Professor Charles D. Jameson. (Illustrated.)
AGRICULTURE AND THE SINGLE TAX. By Horace White.
CHINESE SILK-LORE. By General Tcheng-Ki-Tong. (Illustrated.)
LETTERS ON THE LAND QUESTION. (Continued.) By Professor Huxley, Herbert Spencer, Auberon Herbert, Frederick Greenwood, and Darcy Wilson.
EXERCISE FOR CHEST DEVELOPMENT. By Fernand Lagrange, M.D.
CANADIAN ASBESTUS: ITS OCCURRENCE AND USES. By Professor J. T. Donald, M.A.
CHRYSANTHEMUMS. By Jean Dybowski. (Illustrated.)
RAINFALL ON THE PLAINS. By Stuart O. Henry.
LONG FASTINGS AND STARVATION. By M. Charles Richet.
SKETCH OF JAMES GLAISHER, F.R.S. (With Portrait.)
CORRESPONDENCE; EDITOR'S TABLE; LITERARY NOTICES, ETC.

Price, 50 cents Single Number; $5.00 Per Annum.

1, 3, AND 5 BOND STREET, NEW YORK.

CHARLES SCRIBNER'S SONS'

IMPORTANT NEW BOOKS.

AMONG CANNIBALS.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

The London Spectator.

"His observations are interesting, and he has a very pleasant and modest style of narrative, so that the book is as agreeable as it is instructive; in short it is one of the most complete of its kind in all respects, and a worthy record of the steadfast enterprise of a hardy Norseman in a scientific age. We can infer from the style and fine temper of his narrative that he belongs to the higher class of scientific explorers, who think far more of their work than they do of themselves.'

The London Athenæum.

"His narrative is of great value and interest, describing, as it does, the intimate daily life, with some real glimpses into the thoughts and feelings of a race of men still in a most 'primitive' condition. The volume is not only agreeable reading throughout, but full of curious information."

THE AMERICAN RAILWAY.

Its Construction, Development, Management, and Appliances. Introduction by Judge THOMAS M. COOLEY. With 255 illustrations. Large 8vo, $6.00 *net.*

The Boston Post.

"There is to be found in this substantial and richly illustrated volume all that almost any one can wish to know about railways in this country. Their history and development, the methods of construction, the provisions for the safety and comfort of passengers, the life of railway men, the mail service, the commercial aspects of railways, the question of management, the matter of strikes—all these topics are competently discussed by writers who are recognized authorities."

THE VIKING AGE.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo, $7.50.

The Boston Transcript.

"Mr. Du Chaillu's monumental work, 'The Viking Age,' upon which the careful labor of over eight years has been expended, is one for which scholars will be profoundly grateful. It brings together from innumerable sources a vast amount of information relative to the period covered, never before put in systematic form."

ASPECTS OF THE EARTH.

A Popular Account of Some Familiar Geological Phenomena. N. S. SHALER, Professor of Geology at Harvard. With 100 illustrations. 8vo, $4.00.

The Christian Union.

"Few books are so well calculated to arouse interest in, and to develop intelligent observation of the world around us. Such chapters can only be written by a man who is at once a profound student and a successful teacher. Of their many merits, the chief one is their absolute clearness."

*** For sale by all Booksellers, or sent, post-paid, on receipt of price by the Publishers,*

CHARLES SCRIBNER'S SONS, 745 Broadway, New York.

Scribner & Welford's NEW BOOKS.

Acrobats and Mountebanks.

By HUGUES LE ROUX and JULES GARNIER. Translated from the French by A. P. Morton. With 233 illustrations. Square 8vo, cloth, $6.00.

"The handsome book should be pleasing to all who are interested in the topic it discusses. It will be found full of all sorts of curious information. . . . It abounds in woodcuts of the most graphic and varied sort."—*The London Globe.*

Free Trade in Capital:

OR, FREE COMPETITION IN THE SUPPLY OF CAPITAL TO LABOR AND ITS BEARINGS ON THE POLITICAL AND SOCIAL QUESTIONS OF THE DAY. By A. EGMONT HAKE and O. E. WESSLAU. 8vo, cloth, $6.00.

Laugh and Learn:

The easiest book of Nursery Lessons and Nursery Games by JENNETT HUMPHREYS. Profusely Illustrated by Engravings. Square 8vo, cloth, $1.25.

"'Laugh and Learn' instructs and amuses; it is the very book for a wet day in the nursery, for besides solid instruction, admirably given, it contains numberless games and contrivances, with useful and amusing illustrations. The musical drill is remarkably good."—*The Athenæum.*

The Marriages of the Bourbons.

By CAPTAIN the HON. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature, and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

VOLUME VII. OF THE HENRY IRVING SHAKESPEARE.

The Complete Works of William Shakespeare.

Containing "Timon of Athens," "Cymbeline," "The Tempest," "Titus Andronicus," "The Winter's Tale." Edited by HENRY IRVING and FRANK MARSHALL. With Notes and Introductions to each play by F. A. Marshall and other Shakespearean scholars, and numerous illustrations by Gordon Browne, Maynard Browne, and W. A. Margetson. To be completed in 8 vols., square royal 8vo, decorated cloth. Price, per vol., $3.00. Vols. I., II., III., IV., V. and VI. already published.

The First of the Bourbons. 1589–1610.

By CATHERINE CHARLOTTE LADY JACKSON, author of 'Old Paris,' 'Court of the Tuileries,' etc., etc. 2 vols., crown octavo, with illustrations, $9.00.

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. SEELEY, author of 'Horace Walpole and His World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD,
743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 23, 1890.

The Week.

SECRETARY WINDOM'S Silver Bill is at variance with all the laws of sound finance, and the only excuse that can be found for it is that the present coinage law, which it proposes to repeal, is still more at variance with them. The upshot of the bill, if it should pass, would be to stop the present arbitrary coinage of two millions per month, and make it discretionary with the Secretary to receive silver bullion and issue certificates therefor, or not, and to change his policy in that regard from time to time; the approval of the President being necessary to a suspension of the ordinary operation of the law. This is so totally opposed to all conceptions of currency and money that have ever received the sanction of thinkers, that in any other country it would be set in the pillory as a warning to the rising generation, but for the fact that it is intended to supersede something even more anomalous. The discretion of the Secretary of the Treasury is certainly better than the two-million-per-month law. Moreover, since the silver certificates are not to be legal tender, and since the banks are not required to receive them, the possible mischief would be within determinable bounds.

Senator Sherman having taken it upon himself to introduce the Knox bill to continue the existence of the national-banking system after the national bonds shall have been paid off (for that is the *raison d'être* of the bill), we may assume that the measure is to be seriously taken up and pressed to a vote, although a conclusion may not be reached upon it during the present session or in the present Congress. We have already expressed the opinion that the principle of the bill is sound. In its amended form, an additional security to note-holders is given by a provision that the redemption of the circulating notes of failed banks shall constitute a first lien on the assets and on the individual liability of the shareholders of the banks, taking precedence of all claims except the expenses of the receivership. This is also a sound provision. Meanwhile a counter proposition has been put forward, that first-class bonds issued by States and flourishing municipalities may be received in lieu of United States bonds as security for bank circulation. This plan we consider wholly inadmissible, for a variety of reasons. First-class State bonds are not obtainable in any amount worth considering, all the States whose securities would be regarded as good beyond peradventure being nearly or quite out of debt. The duty would be imposed upon the Treasury Department, at all events, of inquiring into the financial standing of both States and municipalities in order to determine what are first-class, and also what description of bonds have been lawfully issued under the respective Constitutions of the States. Here lobby influence would certainly come in to the assistance and confusion of the Treasury officials, and if any mistakes were made resulting in loss, conflicts between Federal and State authority would ensue which might lead to greater evils than the measure is intended to cure.

The convention of the Afro-American League at Chicago last week appears to have been a failure, so far as any benefit to the negroes is concerned. The colored bishops, the chief educators, and the other more promising leaders of the race were almost entirely absent, and the men who did most of the talking contributed nothing of value to the discussion of the questions involved. Indeed, the idea of accomplishing anything through the League was all wrong. That idea grew out of the notion that the wrongs from which the negro suffers can be righted in short order by the action of a convention, or of a political party, or of the Government. Those wrongs grow out of a prejudice among whites against blacks, which prejudice in turn grows out of the fact that the blacks were long slaves, and are still as a race generations behind the whites in civilization. To overcome this prejudice must be the work of time, and a long time at the shortest. The best way to hasten the result is for the blacks to devote themselves to the acquisition of education and of property, rather than to holding conventions and demanding legislation which would probably be adjudged unconstitutional by the Supreme Court, and would be annulled by the people if it were not by the judiciary. The most hopeful sign for the future of the race is not the holding of Afro-American League conventions, but the fact, cited by Gen. S. C. Armstrong in *Frank Leslie's*, that "the race is steadily accumulating property in land," and that "where the total taxable landed property of Georgia has increased in ten years 53 per cent., the taxable landed property of the negro has increased 83 per cent.—a state of things whose significance needs no comment, especially as it exists, according to the best evidence we can get, throughout the South."

Gov. Abbett of New Jersey has given Gov. Hill the hardest blow which he has received as the leading opponent of ballot reform. Great hopes have been entertained by the Hill-Dana-Butler-Foraker-Gorman-Boutelle-Tanner-Halstead combination that Gov. Abbett would join them in opposing the Australian system, and especially the exclusive official-ballot requirement of it. It is said, on apparently good authority, that Gov. Hill wrote several letters to Gov. Abbett earnestly requesting him to take such a stand. But the latter was too sagacious a politician to put his political future in peril by any such alliance. He has placed himself on record in his message as being squarely in favor of the official ballot, saying that among the "essential features" of a ballot-reform law, which he cordially recommends, should be the following:

> "There should be an exclusively official ballot, printed and distributed by the State, so that one ballot cannot be distinguished from another when it is folded and ready for voting. The law should prohibit the use of any ballot except the official ballot."

He goes on to say that he believes personally that official ballots could safely be distributed elsewhere than in the polling-places, but that he recognizes the fact that ballot-reformers do not agree with him on that point, and that he is willing to waive it if the Legislature so decree. Gov. Abbett's declaration, taken in connection with that of Gov. Campbell of Ohio and Gov. Wilson of West Virginia, all Democrats, leaves Gov. Hill more than ever solitary in his party as the opponent of the reform. He is, in fact, the beginning and end of organized opposition in this country. But for him and his specious objections, which a handful of professional anti-reformers have echoed, nearly every State in the Union would have had by this date a genuine ballot-reform law on its statute-books.

The speech made by the Honble. Calvin S. Brice, who has just been elected to the United States Senate, in acknowledging his nomination by the Democratic caucus, traced out in broad and striking lines the great features of the legislative policy which he would support in the august body in which he now takes his seat. He spoke as follows:

> "I desire that there shall be freedom of action, freedom of speech—as much of each as is consistent with every one in the commonwealth. This is the sum of my Democracy—not more legislation than is required to accomplish this. Whether the issue be a temporary one or a protracted one, by it I know I can test and determine the place where I will stand and where the Democratic party ought to be. Whether it is a question relating to money laws, as we had between 1869 and 1876 and 1878, I say that no more legislation should be enacted than is required to give to each individual free action, free thought and deed. I say, gentlemen, that the principles of Democracy have been the same from the times of Jefferson and Washington down to the present, whether it was the tariff or the money that demanded the attention of the legislators. This is my Democracy, and by it I propose to live and die."

The Brooklyn *Eagle* makes on this the criticism, which if jestingly made is very unseemly, that "there has been nothing equal to it since the construction of Noah's Ark." In a certain sense this is undoubtedly true. The Ark was not made without much thought and many plans and specifications. Neither, we may be sure, was this striking but compact sketch of the Democratic policy in Federal affairs. Like all things worth examination, its full meaning cannot be grasped without prolonged study, but it will well repay the investigator, if in no other way, as a mental exercise.

The Vermont "Commissioner of Agricultural and Manufacturing Interests" has published (in Swedish as well as in English, which seems very odd and adventurous for a staid New England commonwealth) his advertised map of the State, "showing the locations of towns in which are unoccupied farms, and lands occupied which can be bought at about the same price as those unoccupied." These towns are printed on the map in deep colors, so as to make a striking picture to the eye, and at first glance appear to include about one-half the whole State. In reality their number is but sixty, or somewhat less than one-third the whole number of Vermont towns. It is to be observed, however, that the map includes only towns from which official intelligence has been received, and there are many others than those here delineated in which, as a matter of fact, to use the Commissioner's language, "Good farms, with fair buildings and maple-sugar orchards, can be purchased at from $3 to $5 per acre, while others, with better buildings, and near railroad or village, can be bought for from $5 to $10 per acre." Our own observation and information point to the conclusion that the number of Vermont towns in which these conditions actually exist (more or less widely) may be double the number officially notified to the Commissioner, and therefore appearing on his map.

Confining observation strictly to the map, it is interesting to note that the desolate regions are in a longitudinal strip comprising, roughly, the eastern half, and, as the State widens towards the north, still bearing to the east and leaning, as it were, on the Connecticut River. Indeed, upon the western border but a single town is marked upon the map, that of Sandgate, next to the favorite summer resort of Manchester, while no less than fourteen of the marked townships are either directly upon the eastern border or are but one remove from it, the thriving neighborhoods of Brattleboro and Bellows Falls maintaining a narrow fringe of prosperity along the river for a considerable space. And all the remaining desolate towns are packed together almost without break against this eastern limit. It is not altogether easy to account for the strong line of demarcation between the eastern and western halves of Vermont, thus laid down on the Commissioner's map, but it seems probable that the great Champlain waterway may have influenced the prosperity of the western half of the State as far south as the latitude of Rutland, while from Rutland south the mineral resources of the western portion must have contributed something. Still, it must be remembered that, as we have remarked, the map is but a compilation of official reports, and that a showing of actual fact might present a distribution somewhat different from the one under review. The whole southern border of Vermont, save the extreme easterly and westerly townships, is marked as belonging to the desolate region, thus carrying out the conditions of the adjoining Berkshire (Mass.) country; and from the southern border the portions thus marked rise contiguous through the space of nine townships (more than one-third the length of the State) before a break is reached at Woodstock. After this they stretch again almost unbroken to the northern boundary.

We are glad to see that the Grand Jury has indicted Major Clark of the Southern Club, who treated us the other day to an exhibition of a Southern "shooting affray," or "street fight," or "personal difficulty," between two gentlemen in Twenty-fourth Street, just outside of the Club. A most disgusting exhibition it was, but a faithful reproduction of the original article. First there was the quarrel in the club hall, a trumpery, childish affair, about the proper manner of returning a borrowed book. Then there was the usual altercation, containing words that no gentleman could submit to without trying to murder somebody. Then there was the adjournment to the sidewalk and the production of a pistol by the injured man. The other, being unarmed, then took refuge behind a common friend, and tried to interpose him between himself and the possible balls, but had to receive the fire over the friend's shoulder. Then there was the running of both parties round a cart, one firing and the other dodging; then the mad flight of the defender into a hotel to borrow a weapon from the clerk, so that he might have it out with the aggressor. The performance could not have been more perfect or more ruffianly if it had taken place in the streets of Jackson, Miss., or Sylvania, Ga. Neither Barnum nor Buffalo Bill could have got it as well done in his circus, and we trust a New York jury and a faithful Recorder or City Judge will express their appreciation of it.

In a recent review of the Tenth Census report upon the "Social Statistics of Cities," we commented upon the excessive rate of taxation in Hartford, Conn., and professed our inability to explain it. The Board of Trade of that city has now furnished us an official explanation, which is that the statement in the census report was a gross error. The tax per capita in Hartford for 1880 was not $30, but $20.15. Since we have, although innocently, disseminated an evil report concerning our neighbor, we shall endeavor to make reparation by quoting some of the figures given by the Board of Trade in the annual report of its Secretary. It seems that, estimating the population by the registered vote in the years of Presidential elections, it increased from about 42,500 in 1880 to about 51,500 in 1888, while the individual tax averaged for the nine years $19.66, and was for 1888 only $18.67. During this period the city has expended, in reduction of debt and in extraordinary disbursements, more than $1,100,000, the result being shown in a new railroad station and other public buildings, city parks and water-works, and other improvements of a permanent character. It is thought that no more expensive improvements will be necessary for some time to come, and that the rate of taxation will be still further reduced. The report presents many other particulars concerning the growth of the city.

The Duke of Marlborough has entered the lists in behalf of bimetallism, and has essayed to break a lance with Mr. Robert Giffen in the columns of the London *Times*. Mr. Giffen had written a smashing letter to support the thesis that neither one country, nor any group of countries, nor the whole world, could maintain by legislation a par of exchange between silver and gold on any basis whatever in the face of varying conditions of supply and demand. This is the contention of economists with a very few exceptions, and is sustained by Mr. Giffen with great vigor. The Duke, in his reply, falls into more errors than we have space to enumerate, but one of them deserves special notice. He points to America as a bright and shining example of sound principles of finance carried into practice, and assumes that all the kinds of currency in circulation here, greenbacks, bank-notes, gold certificates, and silver certificates, are legal tender. "Here," he says,

> " is one of the wealthiest nations of the world, with the most unlimitable resources, establishing a system of legal tender on a basis which is at complete variance with Mr. Giffen's opinions, and all Mr. Giffen has to say is that their theory is rotten. The fact is, we are completely behind America in our conceptions of currency and legal tenders. If we cannot arrive at the millennium of bimetallism, is there any reason why we are to remain in a species of patriarchal condition provided for us by Lord Liverpool and Sir Robert Peel, and refuse to stir an inch from the conditions of currency which were suitable to England when her trade was a tithe of what it is at the end of this century?"

The Duke has good reasons, no doubt, for admiring American finance, but his expression of them in the *Times* is misleading. The only legal tenders in this country are greenbacks and gold and silver *coin* of full weight. All the other things circulate by virtue of their redeemableness. In fact, the system of Lord Liverpool and Sir Robert Peel, which the Duke considers so much behind the age, is, in its essence, the American system to-day. The greenbacks and bank-notes correspond to the uncovered issue of the Bank of England notes, which are really secured by the Government's debt of fifteen millions to the bank. The gold and silver certificates are like the excess of Bank of England notes over and above the fifteen, million issue, *i. e.*, they represent coin in the Treasury dollar for dollar. The greenbacks are themselves a Government debt protected by a gold reserve equal to 30 per cent. of their face. The latter are slightly different from anything in the English system, but the difference is scarcely material in the aggregate of the currency afloat.

The so-called "Grace Contract" which the Government of Peru has signed with its English bondholders is probably the most remarkable document of the kind ever executed. It is called, in the resolution authorizing it which the Peruvian Congress passed in October last, "A contract cancelling the foreign

debt of Peru." Under its provisions the bondholders release the Government, "fully, absolutely, and irrevocably, from all responsibility for the loans of 1869, 1870, and 1872," and in return the Government cedes to the bondholders "all the railways of the State for the term of sixty-six years," and the product of its guano beds for an indefinite period. During five years from the delivery of each railway the bondholders shall have exclusive right to build extensions, and they bind themselves to maintain the lines and their rolling-stock in good condition and to construct such stations as good service and public convenience require. The Government cedes to the bondholders, without remuneration, all available State lands which may be necessary for railways, stations, shops, and other buildings, and pledges its assistance in acquiring possession of private lands needed for such purposes. Free use of the quays is also ceded, and the admission free of duty of locomotives, steam and electric motors for the lines and factories, rolling stock of all kinds, sleepers, coal, and all material used in construction and repairs. The Government reserves the right to regulate passenger tariffs upon the lines, below a specified maximum, and freights are to be settled by agreement between the Government and the bondholders. The rates for the transfer of troops and war material of the Government are specified in the contract. The lease of the railways carries with it the telegraph and telephone lines established in connection with them. The bondholders promise to build certain extensions and make certain repairs within specified periods, under penalty of fines and of final forfeiture of the lines to the Government in case of failure.

In addition to the cession of its railways the Government cedes the entire product of its guano beds up to the amount of 3,000,000 English tons, and the admission, free of duty, of machinery and material required for working them; and if the 3,000,000 limit cannot be reached, the Government shall not be held responsible for the difference. When the limit has been reached, the beds are to revert to the Government. At the end of the sixty-six years' lease the railways are to be returned to the Government free of all liabilities, with all their rolling-stock, and all in good condition. During the lease of the mines and railways the Government shall pay to the bondholders thirty-three annuities of £80,000 each. The contract is hedged about with conditions and penalties in all directions, and all differences as to its interpretation must be settled by the courts of the country. The Government appears to have given over to its creditors its chief sources of income, to be used by them not merely for their benefit, but for that of the country itself. The bondholders cannot carry out their agreements and not vastly benefit the country by extending its railway lines, enlarging the working capacity of its guano beds, and opening up large tracts of agricultural country which are now lying idle. Both sides to the contract appear to be well protected, and to have combined for mutual benefit.

Great expectations seem to have been aroused among the inhabitants of the Isthmus of Panama by the arrival there of the commission of French engineers appointed to investigate and report upon the abandoned canal. This is natural, but the reports sent out by correspondents of the opinions and prophecies of the commissioners should not be taken too seriously. The commission are actually in the employ of the "provisional administrator" (receiver) of the bankrupt canal company, their fees and expenses being provided for by something analogous to an issue of receiver's certificates, and they will naturally be disposed to do and say what they can to justify their employment. The state of public opinion and the condition of financial affairs in France are more important factors in this problem than the after-dinner speeches of M. Germain, the head of the commission. Here is what the Paris correspondent of the London *Times* has to report upon that subject, in a review of the French money market, published on December 30. M. Blowitz, (the correspondent), it should be remembered, was one of M. de Lesseps's thick-and-thin supporters down to the day of the final catastrophe:

"The collapse of the Panama Canal Company, which became an acknowledged fact in the first days of the year, has cost the French savings a sum of nearly seventy-four millions sterling ($370,000,000), and as by far the largest part of the colossal amount has been sent out of the country, it will never return in the shape of dividends or otherwise. It may be considered as irretrievably lost. A commission has now been constituted to investigate the merits of the enterprise and the possibility of carrying it out with a capital reasonable enough to be got afresh from the public; but it is generally felt that this commission is simply to act as pallbearers to a scheme which had not been sufficiently studied at the outset, and in the management of which enthusiasm and sentimentalism stood in place of sober calculation and business-like appreciation of possibilities."

There was nothing in the known deliberations of the "Reconciliation Conference" which met early this month in Vienna, and adjourned after a brief sitting, to foreshadow the sanguine cable announcement that the object of the Conference had been fully attained, and all the differences between the Czechs and the Germans settled. As the party leaders had assembled in obedience to the direct wish of the Emperor, who probably became alarmed at the threatened withdrawal of all the German Deputies from the Vienna Reichsrath—an act which would have rendered constitutional government in Cisleithania practically impossible—it was to be expected that some sort of truce would follow the strife between Germans and Czechs, which has gained in bitterness since Count Taaffe first instituted his "reconciliation policy," ten years ago. Undoubtedly the Governor of Bohemia, Count Thun, who had become obnoxious alike to the Germans and the ultra-radical Young Czechs, will be withdrawn; the German Deputies who had withdrawn from the Diet at Prague will reënter it; and, very likely, the German element in Count Taaffe's Cabinet will be reinforced by the appointment of two or more Liberal Germans in place of the most pronounced pro-Slavic members. The Conference considered the German demands for the establishment of purely German local courts in those districts of Bohemia where only that language is spoken, for the division of the Appellate Court at Prague into a German and Czech Senate, and the provision of other double administrative machinery; and the very fact that the German cause appears to have been generally successful, argues against the stability of a peace obtained through concessions on the Czech side only.

The differences between the two nationalities date back to the troubles of the Reformation. The opposition of the Czechs to the present political order of things in the Empire is based on the claim that the lands of the "crown of St. Wenceslas"—Bohemia, Moravia, and Silesia — never surrendered their rights of autonomy, and that while in 1526 they elected a prince of the Hapsburg dynasty King of Bohemia, the Emperor of Austria is not legally King of Bohemia unless crowned as such at Prague. The demand for the coronation of Francis Joseph having recently been unequivocally refused by Count Taaffe in his reply to the interpellation of Herr Plener, the leader of the German Opposition in the Reichsrath, and the Germans having carried their point at the conference, it would appear that the Czech part in the "settlement of all differences" consisted simply in the recognition of the force of circumstances, and the submission to the will of the Emperor, whose personal popularity is as great in Prague as it is in Vienna. Nor must it be forgotten that the dissensions within the ranks of the Czechs themselves—that is to say, between the Old Czechs and the Young Czechs—are only less radical and acrimonious than the national differences between Slavs and Germans. It was only a few weeks ago that the proposal of the Municipal Council of Prague to erect a memorial tablet to John Huss in the new museum building caused the most violent division of sentiment between those who glorified Huss as a Bohemian patriot and those who execrated him as a heretic. The Young Czechs, under the leadership of Dr. Gregr and through their mouthpiece, the *Narodni Listy*, attacked the clerico-feudal opposition of the Schönborns and Schwarzenbergs to the erection of the tablet with a vehemence generally reserved for their German opponents. It is safe to say that, so long as Count Taaffe remains Premier, whatever advantages the Germans have gained are but temporary; that the Czechs are quite willing to bide their time, and that, if Taaffe attempts to rally to his support the Liberal Germans, it is only because he cannot, without endangering the very existence of the monarchy, rely any longer on his allies up to the present time—that curious conglomerate of Czechs, Poles, Dalmatians, Slovenes, reinforced by the Roman Catholic clergy and the feudal nobility.

THE NEGRO PROBLEM.

THERE is a bill before the Senate providing for Government aid "to persons of color" in emigrating from the Southern States to Africa. There was an interesting debate on it on Thursday, in which Senator Butler of South Carolina made an extremely able, but entirely philosophic, speech, which was answered by Senator Hoar of Massachusetts. Mr. Butler treated the presence in the Southern States of some 8,000,000 of colored people in a condition of discontented and, as far as human eye can see, of permanent, political and social inferiority, as by far the most serious question of the day. He proposes, therefore, that they should be encouraged to emigrate, with Government aid, to the great African Continent from which their ancestors came, and which is now being opened up to civilization exactly as the American Continent was in the sixteenth century, and in which the right men can found, if they please, a considerable number of powerful States. The English have already founded one at the Cape of Good Hope. The Dutch have founded two further north. The "Congo Free State," which has been sketched out rather than established, is not yet a political community, but its charter offers splendid opportunities to energetic colonists for whom the climate has no terrors, to found an empire. It contains everything that an empire needs except civilized and acclimated settlers.

Senator Butler's contention that if the Southern negroes are fit to participate on equal terms in the political and social life of the Southern States, they are *à fortiori* fit to undertake the great work of reclaiming and regenerating Africa, or at all events to establish prosperous communities in the portions of it which European enterprise has now opened, is, therefore, not an unreasonable one. In fact, if there be such a thing as appointed destiny for great bodies of men, it would seem as if it ought to be the destiny of the blacks who have been brought here, and to a certain extent trained in civilization, to go back to the cradle of their race and spread over the Dark Continent the blessings they have purchased at so fearful a price. A more splendid opportunity has never been offered to any people.

But, of course, the negroes cannot be forced to emigrate. Nor could transportation be provided for them, if they declared their willingness to go to-morrow. All the great emigrations of history have been voluntary emigrations—the movements of bold and enterprising men who sought, "under new skies and amid a strange vegetation," better conditions of living than they had at home. The great movements of population which overthrew the Roman Empire, whether undertaken for colonization or conquest, were voluntary. All the really successful colonies of the modern world have been founded in the same way. The two greatest emigrations the world has seen, those of the Irish and Germans to this country, have been made willingly, and the expense, which has been enormous, has been borne by the emigrants themselves, generally poor people. In fact, it is useless to think of emigration on a scale so great as to produce important social and political results unless it is undertaken with zeal and hopefulness by the emigrants themselves. Unwilling, faint-hearted exiles have never founded a State yet, or added to the strength of one already founded.

Consequently, until we see some sign among the leading colored men of a desire to lead their people to Africa, and of a desire among considerable bodies of their people to follow them, it is useless to expend much thought on African colonization as a solution of the negro problem. There is in our mind no question that, if they were really as worthy of American citizenship as some of their friends think they are, they would be glad to avail themselves of the African opening to get away from degrading social conditions, and realize such dreams of race greatness and capacity as their best men doubtless cherish. But greatness cannot be thrust on white men: why should we suppose it can be thrust on black men? The very reasons which make their presence here obnoxious to white people operate to prevent their departure.

There is, however, it is proper to observe, a rapidly growing sympathy at the North with Southern perplexity over the negro problem, and a growing disposition to listen even to such heroic solutions of it as that proposed by Senator Butler. Even those who were not shocked by the carpet-bag experiment, and have been since then disposed to make light of the Southerner's troubles with his colored brother, are beginning to "view with alarm" the political prospect created by the increase of the negro population, and by the continued inability of Southern society to absorb or assimilate them in any sense, physical, social, or political.

What is doing most to intensify this alarm is the extraordinary nature of the measures devised by the friends of the negro for his elevation to an equality with the white man. These measures are of such a character that tens of thousands of philanthropic and conscientious men at the North are beginning to ask themselves to-day whether the highest interests of the American commonwealth do not call for a resolute and peremptory resistance to any further political sacrifices for the negro's benefit. The first, and the greatest that any civilized community has ever made, was the sudden admission to the suffrage of a million of recently emancipated slaves belonging to the least civilized race in the world, and this in a State avowedly founded on the intelligence and political experience of the voter. No nation has ever done this, or anything like this, for the benefit of aliens of any race or creed. It was a great leap in the dark, the ultimate consequences of which no man now living can foresee. It involved greater risks than war on the largest scale with any civilized Power. The mistake of going to war can always be cured by making peace, but the mistake of bestowing the suffrage on a large body of people unfit for it is one for which there is no remedy. A very large portion of the Northern public is asking to-day: "Was not this enough? Ought we not to stop here, and let the negro work out his own salvation? Who or what is he, that we should put the interests of the 55,000,000 whites of this continent in peril for his sake? Is it not to be feared that the venal and easily intimidated and cajoled vote which we now allow him to cast, may exert a profoundly deteriorating influence on our whole system of government, without doing him any perceptible good?"

So far from answering this question satisfactorily, his friends are preparing and urging on the community for his benefit changes of the most serious character in the working of the Government. The most valuable and successful feature of the Constitution, the one which has excited most admiration and is producing most imitation in other countries, is the relegation to State jurisdiction of all local concerns, and especially of police and education. This is really the corner-stone of our system. Well, we have been witnessing, during the past few years, two attacks on it, of the most insidious character, and both for the benefit of the negro. One proposes to put the national Government in charge of education in the States where negroes abound, and relieve the local taxpayers of all responsibility for his intellectual condition, and create a bureau in Washington like that in Paris, which enables the Minister of Public Instruction, according to M. Duruy's boast, to tell any visitor what page of what book any class of any school in France is reading at any given moment.

The second sacrifice which the country is asked to make for the negro is also a great one, namely, the centralization at Washington of the control of State elections, and the concession to the General Government of as much local police power as may enable it to guarantee the colored population complete security, both of person, property, and political rights. These measures have not passed. They are not likely to pass. But they are renewed year after year, and pushed, under one form or another, with a tenacity which is naturally and properly alarming people. If the Northern public were to witness such attempts with indifference, it would show that a complete modification of the Government in the direction of a centralized Cæsarism was not far off. And they are humiliating as well as alarming, because they propose to adapt a political structure, specially created for the benefit of valor, foresight, industry, and intelligence, to the special needs of the ignorant, the weak, the lazy, and incompetent. It is somewhat like a proposal to make such alterations in the house of a decent and prosperous mechanic that tramps may feel at home in it. Until these attempts are abandoned, the negro problem will continue to agitate the nation in ways not propitious for the negro's future.

HOW TO CHOOSE A SMOKE INSPECTOR.

THERE are a great many droll incidents in the testimony taken by the Committee on the

Ballot-Box Forgery. One such is the statement of R. G. Wood that, after he had put the forged paper in Gov. Foraker's hands, and Foraker had used it "for what it was worth," he (Wood) recommended him to retract it as soon as possible, because Murray was about to make an affidavit that it was a forgery. "You had better be lively about it," said Wood to Foraker, "because Murray told me if I did not get the paper back, he would make an affidavit. I told Murray that if I could not get it, *I would make an affidavit with him*"—*i. e.*, an affidavit that the paper which he had put into Foraker's hands in exchange for the latter's recommendation of him for an office was a forgery. Forgers are generally very liberal with affidavits. There is no kind of coin which they dispense more freely, but it is seldom that they proclaim an intention to expose themselves under oath, as Wood says he did in this case. Probably he lied when he told the Committee that he told Foraker that he had such an intention. Probably all his testimony is false, except where it is confirmed by others.

There is one important part of it, however, that *is* confirmed by Foraker himself. It is that part which relates to the dicker between himself and the Governor for the office of Smoke Inspector of Cincinnati. This is an office in the gift of the Mayor of the city. Wood was a candidate for the place. There was another candidate, perhaps more than one. Wood testifies that he asked the Governor for his influence; that the Governor replied he could get the office for him if it was not pledged, but that he wanted Wood "to do a little hustling for him." This was to "hustle around" and get a paper showing that Campbell, the Democratic candidate for Governor, had entered into a certain corrupt contract.

Foraker's testimony as to his bargain with Wood is even more explicit. He told Wood first that as he was willing to recommend him to the Mayor, he (Wood) "should be willing to do a favor for him, and that he wanted that paper," meaning the ballot-box paper signed by Campbell. Wood promised to get it. This was on the 15th of August. Two days later he received a letter from Wood saying that the Mayor thought favorably of his application, and that a letter from the Governor would be a great help, and that as soon as the Smoke Inspectorship was settled he would go to Washington and get the paper. This was very sharp on Wood's part, but the Governor was sharper. The latter wrote in reply (August 19) "that he (Wood) would get the letter of recommendation from him as he had promised when he (Foraker) got the information Wood had promised, *and not before.*" But although he would not give Wood the letter to the Mayor before getting the ballot-box paper, he did give him one to President Harrison recommending him "as an old soldier and an inventor of merit."

Wood went to Washington and "hustled" there and along the road until the 9th of September, when he returned to Cincinnati and telegraphed to Foraker that he had procured the paper. Meanwhile Foraker had had a conversation with the Mayor on the cars about the Smoke Inspectorship, and had obtained from him a promise to defer action a few days. On the 11th, Wood appeared at Columbus with the paper, which he delivered to the Governor. Thereupon the latter wrote the letter he had promised recommending Wood for the office of Smoke Inspector. The bargain had been fulfilled on both sides, with the trifling exception that the paper which Foraker received was fraudulent, while that which he gave was genuine.

In one sense, however, the paper that Foraker gave was as false and fraudulent as the one he received. The office of Smoke Inspector may or may not be one requiring much scientific knowledge, but it certainly requires some, and it also requires an honest man. Under the rules of a good civil service, the process of filling the office would have been something like this: Wood and all the other candidates would have been put through a competitive examination. Their eyesight would have been tested first, to ascertain whether they could see smoke distinctly at the height of tall chimneys. Then they would have been asked what kinds of coal produce the most smoke, and what kinds the least, and also required to identify the kinds used in Cincinnati, and tell how the firing should be done in order to make the least smoke, and what kinds of apparatus for smoke-consuming produce the best results. Then all the candidates would have been required to furnish certificates of good moral character from persons of known standing in the community. Nobody would have been interrogated as to the shortest route from Cincinnati to Paraguay, or the height of the great wall of China, or the use of the Greek digamma, or the age of the obelisk of Luxor, or any of the facetiæ which the Johnnys and Mikes and Charlies of high and low degree put into the mouths of the civil-service examining boards. After the examination had been completed on these lines, the candidate showing the most knowledge and the best character would have got the appointment, and that would have been the *democratic* method of filling the office, because all the candidates would have been served alike. Nobody would have had any extraneous advantage, or any "pull" from the Barnacle family, or recommendation from a distant Governor, to enable him to get something above his deserts in a contest with his fellow-citizens.

Contrast this method with the one actually followed. It is almost certain that if Wood had been appointed Smoke Inspector, he would have known nothing whatever about the duties of the office. It is entirely certain that his hand would have been behind his back to receive any fees that smoke-producers were willing to pay rather than be disturbed. It is most probable that he would have found too much smoke in places where fees were not forthcoming, and would have systematically blackmailed the owners. If there were any way to make private gain at the expense of public interests, he would have found it out and put it into practice, and in the course of time would have become a local "boss" of distinction and a person to be reckoned with at all county and State conventions. That these things have not happened is due to luck altogether. The Governor did all that he had agreed to do, and all that he could do. The paper turned out to be a forgery, and the forgery was discovered. It might have been a forgery, and yet not have been proved such to the satisfaction of the Governor and the Mayor, in which case pride and consistency would have required that Wood should be appointed and retained in office to spite the Democrats. It turned out that before the Mayor had acted upon Foraker's recommendation, an ugly "record" was produced against Wood. He had been "run in" by the police on some former occasion, and the facts had been published in the newspapers. But this was only another streak of luck in favor of the public and against Wood and Foraker.

The case is a typical example of the spoils system, so far as methods go. Not all the people who get office by means of dirty bargains like this are forgers and perjurers, or capable of becoming such. But then there is no reasonable guarantee that they may not be. What Foraker wanted was not a good Smoke Inspector, but a club to beat Campbell with, and instead of paying for it out of his own pocket, or out of the Committee funds, as he might properly have done, he tried to saddle the expense on the taxpayers of Cincinnati. He says that he wanted all the time to have a competent man appointed, but the only evidence of competency he required was the ballot-box paper with Campbell's signature attached to it. He never stipulated that Wood should know how to doctor a smoky chimney, or even know smoke when he saw it, but only that he should produce the desired evidence against Campbell. This is the way the spoils system works always. It does not necessarily yield us Woods, but it provides no safeguards against them.

AN AMERICAN MYSTERY.

A RECEIVER'S report of the *Star* newspaper company of this city has been filed which shows obligations aggregating nearly $761,000, besides interest, with less than $20,000 of assets. The largest creditor is Collis P. Huntington, who has a personal claim of over $610,000 against the company, and another one of nearly $80,000, which stands in the name of one of his employees. Among other claims is one of $1,007.56 from the Grant Monument Association, the amount raised by the newspaper by means of appeals for popular subscriptions, but never turned over to the Association. According to the receiver's showing, Mr. Huntington has invested in the newspaper nearly $700,000 since he took possession of it in September, 1885, with little or no chance of ever getting a cent of it back again.

There is in the foregoing plain statement of facts a mystery which becomes even more inexplicable when further details are given. Mr. Huntington has been spending all that money upon a lifeless enterprise, for the

Star newspaper was dead when he bought it, and it cannot be said to have been alive for a second since that time. John Kelly, as Boss of Tammany Hall, came into possession of it in 1877, when it had little more than a name, and a disreputable one at that, for its total assets. He built up a circulation for it by requiring every applicant for a liquor license to subscribe annually for two copies, and by compelling every Tammany office-holder and dependent to take it. He gave it further sustenance by means of official advertising and that of contractors and other people who desired his "pull" in getting contracts and offices from the city. But when he fell, after his futile effort to defeat Cleveland in the Presidential election of 1884, it went down with him, and in February, 1885, it suspended publication as a daily, keeping up a precarious and feeble existence as a Sunday paper. It remained practically dead till September of that year, when it was revived, and William Dorsheimer became its editor, resigning a few months later the office of United States District Attorney, in order to retain the position. Under Mr. Dorsheimer's direction it reappeared to the public eye as a daily newspaper with eight pages and all the outward forms of actual life. It was soon afterwards moved into capacious and expensive quarters on Broadway, but the vital breath refused to enter into it. Nobody was ever seen reading it; it gave no indications of remunerative advertising support, and if it had a bona-fide circulation anywhere, the outward signs of it could not be detected. Yet it went on day by day, coming out with the same regularity as a genuine and living newspaper, and is, we believe, still doing so. For a time there were occasional pretences that it was actually gaining a circulation, but these were usually made after the city had been freely sprinkled with "sample copies," and were consequently not convincing.

Nearly two years ago Mr. Dorsheimer died, and it was generally supposed that he would take the paper with him, so to speak, but this proved not to be the case. Its daily ghostly appearance continued, and the mystery was greater than ever. His course in regard to it was always puzzling. He had no training as an editor, but was a lawyer of recognized ability and a political speaker and leader whose merits had won for him high public office. When President Cleveland appointed him United States Attorney for this district, the selection commanded the approval of men of all parties. That he should resign an office so honorable and so obviously congenial, to enter, at his advanced time of life, upon a calling of which he was ignorant, was surprising, but not inexplicable. He was not the first man, nor will he be the last, to reach the profound conviction that his talents fitted him to do something else much better than what he had spent his life in doing, especially if that something else were the editing of a newspaper. He might have deluded himself by thinking that there was a great future for the *Star;* but if he had that delusion at the outset, it must have been dispelled long before the end of the first year. After that, life must have been a daily torture to him. He was a man of education, of scholarly tastes, and considerable literary attainments; yet every morning he was confronted at his own breakfast table with a newspaper, of his own editing, which must have offended every taste which he most desired to gratify. It was, in the first place, a fraud; for it pretended to be a newspaper, published and sold like other newspapers, and it was nothing of the kind. In the second place, the exigencies of its fraudulent existence compelled that it should be filled every day with "sensational matter" of the worst description, in the desperate hope of attracting attention. The failure to command respectable support drove it to seek the other kind, and it became more and more every day the champion of men and causes which other newspapers refused to champion. To see all this spread before his eyes each morning, to know that he was personally responsible for it, and to know also that the degradation involved in it was all in vain, since its only object, the bringing in of money, had not been attained, must have been a tax upon human endurance which few men would be able long to sustain.

But if Mr. Dorsheimer's course was mystifying, what shall be said in explanation of Mr. Huntington's? Why has he gone on sustaining a bogus newspaper until he has thrown away, as completely as if he had burned bank-notes for the amount, $700,000? He is one of the most successful men of his day, one of the practical men of affairs who have made vast fortunes by their indomitable energy, shrewdness, and perseverance. In an ordinary business transaction he would bring to bear all his experience and sagacity to secure for himself as large a return as possible for every dollar which he invested in it. Yet he has put a fortune into a spurious publication which was and is absolutely hopeless, which can in no manner do him service or aid him in any cause, and which brings him nothing but discredit. When he stops paying for its publication, it will die and leave no trace.

The $700,000 which he has thus wasted would have founded a great museum, or a great library, or even a great university, which would have been an honor to his name for all time. The endowment fund which Ezra Cornell gave for the establishment of Cornell University was only $500,000. The Astor Library was founded with $400,000, and the Boston Public Library with $50,000, and all its property in buildings and land to-day is worth less than $400,000. The beautiful and valuable collection and equipment of the new Slater Museum at Norwich, Conn., cost less than $30,000. The sum squandered would have been of immeasurable service also in carrying out Mr. Huntington's own ideas about barring Central Africa to the slave-trader. In any of these directions the money would have been devoted to the enlightenment and happiness of the human race, and such a use of it, one would suppose, would most have commended itself to the possessor of millions.

THE UNION PACIFIC-NORTHWESTERN AGREEMENT.

The decision of Chairman Walker upon the Union Pacific-Northwestern contract is moderate in its language and convincing in its conclusion. It states that the contract is "hostile to the spirit and intent with which the Association was organized," and that the "presidents' agreement was violated by the making of the contract in question." The point at issue may be stated thus: The American policy has always been to encourage railroad building without any restrictions as to the needs for new lines or the effects upon the older roads. Pooling was an attempt at regulation, by the roads themselves, of the excessive competition thus induced. For the reason that pooling was partly successful in doing this, it was opposed by the people of the Western States and forbidden by the law of 1887. Since it is especially true that no railroad lives to itself alone, the lack of unity among the railways west of Chicago led in 1888 to the grossest abuses known to our transportation history. The case seemed growing worse, and the loss of revenue gave rise to great alarm. Then followed the bankers' and presidents' meeting a year ago, from which sprang the Inter-State Railway Association as a basis for harmony of action among the competing lines.

The principle of the Association is simple. It is that reasonably remunerative tariffs can best be maintained, not by attempts at stifling all rivalry, which under our national policy is impossible, but by agreements defining the conditions under which the competition shall be carried on. Among the agreed conditions we find these: that changes in rates embracing competitive territory shall be subject to the Association, and shall not be made by any line independently; that divisions of revenue between roads interchanging competitive traffic shall also be subject to Association rules, because otherwise changes might be made as secret inducements for the diversion of traffic; and that the Association shall have some oversight of the apportionment of competitive business. If the rates agreed to in the Union Pacific-Northwestern contract had really been put in force in certain parts of the territory covered, says Mr. Walker, there would at once have been a rate war. If the Union Pacific can permanently give better terms to one line at Omaha than to another, the competitors of the favored line must make concessions to travellers and shippers, else the traffic will all seek the favored route. This presents the exact condition of affairs which the Inter-State Railway Association was organized to terminate, and which proved so disastrous in 1888. In like manner, if the Union Pacific gives to the Northwestern all its unconsigned freight (freight not marked for a special road east of Omaha), the Chicago, Milwaukee and St. Paul, for example, must either build westward to get another Pacific connection, suffer loss of traffic, or spend large sums in expenses and inducements to shippers west of the Missouri River to consign

their freight by that particular road—the latter alternative being always doubtful of success without a cut in rates. Such a cut would be met by retaliation, and this by other cuts indefinitely. In short, the Union Pacific-Northwestern contract would apparently substitute an individual benefit for a general one.

The Walker report can hardly prove pleasant reading for the presidents of the two roads concerned. President Adams of the Union Pacific a year ago was one of the foremost in urging the great need of an association for the correction of existing evils. He was chairman of the committee which drew up the original draft of the plan for organization, and, in presenting it to the presidents, spoke in favor of some action of the kind. In subsequent addresses the same line of reasoning was followed. Now, if Chairman Walker's conclusions be accepted, Mr. Adams and Mr. Hughitt appear to have been the first presidents who, without consultation with their colleagues, have, by a ten years' contract, formally violated the agreement which one of them at least did so much to form. To this charge of a breach of faith the evident reply is, that the railroad situation has changed during the year. This is true, although the change has come almost entirely from extensions of existing lines. It should be remembered that there is a clear difference between individual roads and a system of roads. Changes in the existing order by reason of consolidation or through ownership or lease are legitimate so far as associations are concerned, and the policies so formed, as to the former lines thus combined, are outside the province of Association control. Had the Union Pacific and the Northwestern been amalgamated, no decision of the Chairman would have been asked for: such centralization brings its own problems. But, on the other hand, the Inter-State Railway Association was formed to preserve harmony between individual competitors, and in the case in question the two roads preserve their independence and retain separate membership. Whether they can be both a virtual combination and at the same time separate companies, is the question. The contracting roads think that the Association will be remodelled to allow this. At all events, it is certainly to be hoped that the violation of the terms of the Association agreement will not give rise to disputes which might bring back again upon the Western lines the disasters of 1888.

IBSEN AND HIS TRANSLATORS.

AMERICA has lagged a long way behind Europe in realizing that the Norwegian dramatist Ibsen is a genius. But, having at last discovered that the rest of the world considers him a great writer, we seem to have determined to make up for being belated by now talking a great deal about him. Unhappily, the quality of what is said or written is by no means equal to the quantity. It is hardly reasonable, perhaps, to expect this country to produce a critic who has studied Ibsen's books in their original language. The Ibsen enthusiasm is not yet so serious with us that any one seems willing to learn Danish for the sake of reading that author's productions as he wrote them. Yet this has been done, we are told, repeatedly in England. All his published books (except his first drama) are available in German translations, but no American seems disposed to undertake their study in that language either, and as yet so few of the poet's books have been translated into English that entirely sound conclusions as to his philosophy based upon a study of these alone are impossible; while the works which so far have been put into English illustrate only one phase of his authorship, and that is not the side, perhaps, which will have most weight in finally determining his position as an *artist*. The result is, that the notices of Ibsen which have appeared in American journals are, for the most part, either ignorant and valueless, or simply reproductions—disgraceful plagiarisms many of them—of English critical articles.

A reader, therefore, who has a serious interest in the poet's life and views had best content himself, in addition to reading such of the dramas as are obtainable in his mother tongue, with a perusal of the one thoroughly good critical article available to those who read English only, namely, Dr. Georg Brandes's masterly analysis, to be found in the volume entitled, in the American translation, 'Eminent Authors of the Nineteenth Century.' This one article is worth everything else that has been written in English concerning Ibsen. For a lighter treatment, Mr. Edmund Gosse's articles contributed to the *Fortnightly Review* will be found pleasant and not unprofitable reading. The first of these was published in the number for January, 1873, and was reprinted, after revision, as a chapter of his 'Studies in the Literature of Northern Europe,' while the second article, which deals with Ibsen's social dramas, appeared in January, 1889. Mr. Philip H. Wicksteed's study of "Peer Gynt," printed in the *Contemporary Review* for August, 1889, is worthy of mention as affording some idea of one of Ibsen's works which, perhaps, there is small likelihood of our ever having the opportunity to read in English.

Out of Ibsen's eighteen published works, seven have now been translated into English, three of these having been produced by several hands. The earliest translation was that of his bulkiest book—an adjective which can be applied to it, however, only by comparison with his other works, for it contains in all little more than five hundred small duodecimo pages. It is in reality two volumes in one, two related dramas under one common title, "Kejser og Galilæer" ("Emperor and Galilean: a world-historic Drama"), the first part being called "Cæsar's Apostasy," and the second "The Emperor Julian." It was published on October 16, 1873, a second edition appearing near the end of the same year, and the translation into English, by Catherine Ray, was issued in 1876. Miss Ray's book, which contained a brief introductory notice, does not seem to have circulated in the United States, and is now out of print.

The next translation, taking them in chronological order, was that of the drama best known in America because of recent stage representations in Boston and New York, and commonly called "Nora," or "A Doll's House." The first translator, Mr. T. Weber, instead of retaining the author's title, named his book—which was published in Copenhagen in 1880—"Nora," after its heroine. It is not likely that many copies of it reached this country. A second English translation, by Henrietta Frances Lord, was published in London in 1882. Miss Lord also chose to call her translation "Nora," and she prefixed to it a preliminary notice, of some twenty pages, which she called a "Life" of Henrik Ibsen, but which is not so much a biographical sketch as a critical notice, of considerable interest, of the work which she had translated. It is this translation which D. Appleton & Co. have just published in a beautiful little volume which they have entitled "The Doll's House."

The text seems to be entirely identical in the two prints; but while the misstatement that the work is translated from the *Norwegian* (it should be Danish) is allowed to stand, and the misprint of the original title of the book which occurs in Miss Lord's edition remains uncorrected, superfluous care has been exercised to remove from the pages of the introductory notice all trace of the previous publication of the volume, and the date which was subscribed to it, "November, 1882," has been erased—a proceeding which does not commend itself. The change of title, also, is not entirely felicitous. Doubtless a retention of the author's title is better than the coining of a new one; but in the former case the title should be strictly translated, and care should be taken that the meaning which the author may have intended to convey by it is not lost. The original work was called "Et Dukkehjem"—*A Doll Home* (not A Doll's Home nor A Doll's House); and readers familiar with Ibsen's original works, who realize that every word used by that author has distinct weight, may reasonably believe that he intended to intimate by this title that the heroine's environment was that of a doll, but not that she herself was necessarily so devoid of character as that term implies; and her action in the last scene of the play would seem to sustain this inference.

Still a third translation of "Et Dukkehjem," this time from the competent hand of Mr. William Archer, who is an enthusiastic admirer and very intelligent student of the poet, appeared during this last year. This translation was prepared for use in presenting the drama at the Novelty Theatre in London last June, and has been published in an edition limited to 115 copies, with a portrait of Ibsen and photographs of the actors in the various characters of the play. It has also been reprinted in volume one of the 'Prose Dramas of Henrik Ibsen,' which has just been issued by the John W. Lovell Company, as number two of "Lovell's Series of Foreign Literature," with an introduction, written for this edition, by Mr. Gosse. The volume contains three other plays, noticed below. The portrait of Ibsen which faces the title-page is from a good photograph taken in Munich about three years ago, but it is a reproduction by some cheap process, and the fine lines about the eyes and lips are lost, which seriously detracts from the value of the picture.

Miss Lord followed up her first translation by a version of one of Ibsen's strongest social dramas, "Gengangere" ("Ghosts"), which was printed in the pages of the socialistic journal *To-day*, where it was pretty much lost to the general reading public. Her translation was afterwards revised by Mr. Archer, and was one of three plays published under the editorship of Mr. Havelock Ellis in 1888 as one of the volumes of the "Camelot Series." The other two were "Samfundets Stötter" ("Pillars of Society"), published in 1878 and translated by Mr. Archer, and "En Folkefiende" ("An Enemy of Society"), originally published in 1882, and translated by Mrs. Eleanor Marx-Aveling. "Gengangere" had appeared originally in Copenhagen in December, 1881. This little volume, which is entitled "The Pillars of Society, and Other Plays," and which contains an introductory notice by Mr. Ellis, may be warmly commended. Mr. Arch-

er's versions of "Ghosts" and "Pillars of Society" are also included in the Lovell Company reprint.

Ibsen's last two books, "Rosmersholm" (the name of a country estate), and "Fruen fra Havet" ("The Lady from the Sea"), were published in November, 1886, and November, 1888. Of the former no adequate translation has yet appeared, but the new Boston journal, the *Transatlantic*, is printing, in meagre weekly instalments, an attempt at a translation, which cannot, however, be considered a satisfactory performance. It bears the marks of ordinary hack work, and is far from conveying a proper conception of Ibsen's remarkable language. Another translation, by M. Carmichael, is printed in "Lovell's Series of Foreign Literature," but it is too free a rendering to be entirely satisfactory. 'The Lady from the Sea' was published in Berlin, by previous arrangement with the author, a week after the publication of the original in Copenhagen, the German translation being by Prof. Julius Hoffory, than whom no one could be more competent for the task. This German version Mr. G. R. Carpenter has retranslated into English, with fair success, and printed in the *Harvard Monthly* for November and December, 1889. Another translation of the book, direct from the original, has been prepared by Mrs. Marx-Aveling, and just published, with a brief introduction by Mr. Edmund Gosse, as one of the volumes of the "Cameo series," in London. No serious fault can be found with this translation, which places in the hands of American readers a readable version of one of Ibsen's most delightful works, and Mr. Gosse's note is excellent.

THE WHIGS OF 1832.—II.

LONDON, December 30, 1889.

ON the elections which in 1832 followed the passage of the Reform Act, the Whigs swept the country. The new constituencies, it was said, "remembered their political creators in the days of their youth." The Tories, it was thought, were not only routed but destroyed; supremacy had passed from one party to the other, and the authority of the Whigs was secured for at least half a century. Before the end of 1833 their popularity was on the wane. In 1834 Peel returned to office and almost held his own against the Opposition. The accession of the Queen did something to stave off the ruin of an enfeebled and discredited party. In 1839 the Whig leaders consented to hold office at the sacrifice both of reputation and of power; in 1841 the victors of 1832 were a defeated and unpopular minority.

Nor can it be said that the disasters of the Whigs were transitory. The whole set of English politics for the last sixty years has been in the direction of democracy; but democratic progress or development has not fostered the influence or the prestige of the Whigs. Peel, Palmerston, Beaconsfield, Gladstone, have each, in different ways and in different degrees, excited the enthusiasm of their followers; but Lord Grey lost his hold on popular feeling almost from the moment when the Reform Act became law. Lord Melbourne, who, though he was the head of a Whig Ministry, was never in truth a Whig, was never popular at all. Lord Russell, who embodied all the virtues, and, let it be added, all the weaknesses, proper to the last inheritor of the great Whig tradition, inspired confidence among his Parliamentary following, and commanded respect among all candid opponents, but he never, except for a very short period at the crisis of the Reform struggle, won the affection of the people or the trust of the public. In 1852 he was the admitted leader of the Liberals, but his Ministry was tottering to its fall, and (what, for the present purpose, is of more consequence) the achievements of 1832 were as much matters of mere history as the Revolution of 1689. Yet, and this is well worth noting, the period of time which separated 1832 from 1852 is exactly the same as that which separates 1870 from 1890. The dubious successes of 1870 have secured for Gladstone more popularity than the permanent victory of 1832 conferred upon the statesman whose pride it was to have introduced the Reform Act. The Whigs "had their hour." Why had they "their hour" only? The question is historically curious. The answer to it contains some permanent political instruction. But this instruction will be gained only by those inquirers who are content to explain the results of human conduct or feeling not by "a cause," but by the influence of combined causes.

The first and most obvious explanation of the fall of the Whigs was the want of a great Whig leader. The crisis of 1832 brought forward, happily for England, a group of estimable and honest politicians. It did not produce, among the Whigs at least, a single man of genius or a statesman of anything like first-rate ability. A critic may object that this statement overlooks the existence of Brougham. The alleged exception proves the soundness of the general assertion. Brougham's extraordinary talents and still more astounding energy are not open to question. His ability as a statesman is more than dubious; but, whatever be our estimate of his talents, no sane critic can count him among the Whigs. Had he remained a member of the House of Commons he might, it is likely enough, have become for a time the leader of the nation. That he would have continued in alliance with Melbourne and John Russell is, to any observer of character, incredible. Not only were the Whig leaders not statesmen, but (and this is a matter which deserves more attention than it has received) they were not trained officials, and they were forced to carry out a Liberal policy through a body of civil servants every one of whom inherited Tory traditions. The consequences were curious, and to the Whigs disastrous. Followers of Canning, like Palmerston, who had no real sympathy with reform, and Lord Melbourne, who seems to have thought the Reform Act at the best a regrettable necessity, obtained, and rightly obtained, in the Cabinet an influence out of proportion to any services they rendered as reformers, while subordinates who looked upon the rule of the Whigs as an unwarrantable usurpation of an authority which Providence had, so to speak, morally vested in the Tories, gave, it may be suspected, but half-hearted help in the designing of Liberal measures or the preparation of Whig budgets. Every line of the life of Lord John Russell deepens, it must in fairness to the English people be added, the conviction that his Lordship, if heir to all the hereditary virtues, was also the inheritor of the special fault of the Whigs—the incapacity to look beyond the ideas of the Whig connection to the interest and the feelings of the great public. Russell resigned to Peel the fame of repealing the Corn Laws solely because Lord Grey refused a seat in a Cabinet in which Palmerston should be Foreign Secretary. Let any one realize what this fact means, and he will understand why the leader of the Whigs never became the leader of the nation, and the Whigs of 1832 failed to guide the democratic movement of the last half century.

Another cause of weakness to the Whigs which was patent to every man in 1834 and 1835, is apt not to be estimated at its due importance by critics of to-day. The Tories possessed throughout Great Britain, and as Orangemen in Ireland, an amount both of power and of popular favor which resembled in kind the influence which Bismarck and his supporters now exert in Germany. The Tories, whatever their faults, had carried the country with triumph through the most desperate struggle in which England was ever engaged. At their head was the most competent administrator whom England had produced since the time of Pitt, and the most successful general of whom she could boast since the days of Marlborough. The great war, Waterloo, and Napoleon are to us traditions of the past. To the men of 1835 or even of 1840 they were living memories. From the generation who rallied round Peel and Wellington, the campaign of 1815 was less distant, both in time and in sentiment, than the war of secession is to the Americans of 1890. The triumphs of the war were almost as much the reproach of the Whigs as the glory of the Tories; for popular sentiment, at any rate, credited the Whig leaders with very dubious zeal in the contest with France. To all this must be added that the patriotism which popular delusion or gratitude attributes to Peel, did not prevent him from using with the utmost dexterity all the arms of opposition warfare. The Minister who is supposed to have given cheap bread to the people, took full advantage of the hostility of squires and farmers to free trade in corn, and gained full credit to himself for the partial failure of the efforts made by the Whigs to do justice to Catholics in Ireland, though the failure arose in great part from Tory indignation at every attempt to conciliate O'Connell, and from the systematic mutilation by a Tory House of Lords of legislation which carried out the principles of religious and civil equality formally recognized by the passing of the Catholic Emancipation Act. To the skill with which Peel transformed Toryism into Conservatism, and brought to the aid of the Conservative Opposition every possible source of party strength, no historian can refuse the admiration which is due to supreme ability. But the acknowledgment of Peel's surpassing genius as a parliamentary strategist is hardly consistent with honest recognition of his claim to high patriotism.

But the fall of the Whigs is at bottom due to a cause far more subtle than any matter of personal character or of political partisanship. Neither the deficiencies of Russell nor the talents of Peel, considerable as they both were, would, we may be sure, have been sufficient of themselves to bring about the permanent collapse of a great political party. The Revolution families who, for between fifty and sixty years, controlled the destinies of England, committed grave errors. Walpole, Pelham, Newcastle, for that matter, Chatham himself, were men who never committed faults, or who invariably preferred the welfare of the nation to their own or their party's interest. It were no rash assertion that the reformers of 1832 were, both in patriotism and in foresight, superior to the Whigs who followed Walpole. But it is impossible not to see, or rather to feel, that Walpole, and leaders far inferior to Walpole, represented the living forces of the nation. The spirit of the time (to use a vague expression which, though it may mislead, is almost the best term we have at hand for summing up the aggregate effect of a large number of indefinite causes) did, during a great part of the eighteenth century, favor the rule of the

Revolution families. It did not in 1832 favor the rule of the Whigs. If this vague statement be brought down to a more definite form, it amounts to the assertion that, by one of the odd paradoxes of which history is full, the authors of the Reform Act represented rather the convictions of a past time than the sentiment of the day or the aspirations of the immediate future.

Mr. Leslie Stephen has somewhere said happily that we must not be deluded by the artificial division into centuries, but must remember that the "eighteenth century" stretched on in England to 1832. The observation is, if its meaning be fully appreciated, full of instruction. The French Revolution had in England temporarily arrested or diverted the course of progress. In 1832 there were lots of abuses, some great, some small, which, in the natural course of things, ought to have been swept away forty or fifty years earlier. The best of the Whig leaders had been trained by circumstances and position to take up the reforms natural to say 1790. The sweeping away of rotten boroughs, the establishment of civil and religious liberty, the emancipation of the Catholics, which ought, in accordance with Whig doctrine and very possibly in accordance with sound statesmanship, to have been combined with endowment of the Catholic priesthood, were all innovations or reforms exactly in accordance with the enlightenment of the eighteenth century. In carrying out these kinds of reforms, as in their great reform of the poor-law, the Whigs were giving effect to a traditional policy handed down to them by the wisest and best of their predecessors. But it was a policy of the past. Some portions of it had already become impossible through changes in public opinion. To Lord Melbourne, who shared the religious scepticism, or to Lord John Russell, who had imbibed the rational piety, of a past age, the endowment of the Roman Catholic priesthood might appear both a matter of reasonableness and of justice; but the religious movement, which was still evangelical, though just on the point of beginning its transformation into High Church ecclesiasticism, made impossible even the proposing of schemes which the days of Burke might, without opposition, have embodied in acts of Parliament.

Of the commercial reforms more or less surreptitiously favored by Peel, and soon openly to be claimed by the whole Manchester school, of the benevolent State interference patronized by Lord Shaftesbury, the Whigs knew nothing. With the religious sentiment of the day they had little sympathy; with the beliefs or emotions which gave strength to the High-Church movement in England, or to the Free-Church movement in Scotland, they had no sympathy whatever. They, no doubt, like all friends of good government in England, wished to support the efforts of foreign constitutionalists. Lord Russell, in his old age, could boast with truth that he had always been the friend of Italy; but it was Palmerston, and not the genuine Whigs, who tried to give moral and occasionally material support to the cause of popular freedom on the Continent; and the constitutionalism of the Whigs, even as represented by Palmerston, was somewhat out of date. They were zealous for good government, they believed in the possibility of extending throughout Europe the blessings of English constitutional freedom, and thought bona fide that any people might be happy who enjoyed a government of which the forms imitated or parodied the Constitution of England. They hardly understood the influence of nationality, and were utterly opposed to every movement which partook, or seemed to partake, of socialism.

The best of the Whigs were good men and just men, but they were men of the past, they were not in any sense men of their time. To assert this is not to assert that the Whig view of life or politics was erroneous. In many respects the rational enlightenment of the eighteenth century will, it may be suspected, prove to have been wiser than the faith, enthusiasm, or sentimentality of the nineteenth. A leader may fail to be the man of his age not only because he has not perceived new truths, but also because he clings with tenacity to established dogmas, which seem to be truisms or platitudes only because a particular generation have ceased to practise maxims which it is impossible to confute. What is certain is, that leaders who are not men of their age will soon cease to lead. The Whigs were in one point of view the Conservatives of their time: they believed in the aristocratic ideal (and a very high ideal it is) of freedom, of justice, and of good government. But they came into office at the very time when Whig ideals were ceasing to influence the world. In their case not for the first (and we may safely assume not for the last) time in English history, a great party has achieved a nominal triumph at the very moment which, owing to the changed spirit of the age, preceded the party's real fall. X.

A POETESS OF THE WEIMAR SCHOOL.

BERLIN, December 19, 1889.

To those who wander in the by-paths of German literature, the name of Amalie von Imhoff is well known; contemporaries make frequent mention of the "celebrated authoress of the 'Sisters of Lesbos,'" and Goethe students are familiar with the figure of a beautiful and gifted girl who charmed the court and private circles of Weimar in the golden days. Her poetical works, at best but a feeble reflection of the literary splendor of her time, have long since faded from the memory of the reading public, and of her life after leaving Weimar little was heretofore known. But it is precisely the experiences of her life that commend Amalie von Imhoff to our appreciative attention to-day. Amalie's letters and journals, etc., with connective text, have been edited by her niece, the Baroness von Bissing. It is an excellent biography and delightful reading.

Amalie was the niece of Frau von Stein. Her father had been in the English service in India; divorced from his first wife, who subsequently married Warren Hastings, her husband's former friend, Imhoff returned to Germany. In Weimar he married the younger sister of Frau von Stein, Fräulein von Schardt. This was Amalie's mother. A portrait of her by Goethe is still extant. Amalie was born in Weimar in 1776, and was named after the mother of Carl August. Goethe had come the year before, and Amalie's childhood thus fell in the "ten years" of gayety, squandered talent, and discontent prior to the Italian journey.

As a young girl Amalie stood under the direct personal influence of Goethe and Schiller. In Herder she found a fatherly friend; Jacobi was her instructor in Greek. Amalie had a talent for painting, too, and Heinrich Meyer, Goethe's valued counsellor in matters of art, watched over its development, and, as he watched, fell hopelessly in love. Amalie exercised a strong personal charm, to which some private journals of that time bear witness. Goethe and Schiller speak of her with real affection. She was eighteen years of age when Schiller was first attracted to her talent for verse, and both he and Goethe soon came to regard her as their special charge. "Continue to cherish our Agnes* and Amalie," writes Goethe to Schiller; "one does not appreciate what a treasure such natures are till one comes to look about the wide world for similar ones. You, my friend, have the faculty of making your influence tell as teacher which I have not. These two pupils of ours are certain one day to do much good work." In the Goethe-Schiller correspondence are frequent allusions to "our poetesses, our pupils, and friends." One of Schiller's letters contains a striking criticism; Goethe's considerate tact omitted it in the edition of the correspondence which he published in 1828–'29, when Amalie was still alive. "Amalie Imhoff," writes Schiller, "has been led to poetry, not by the heart, but only by the imagination, and will lightly trifle with it her life long. But since, to my mind, the truly æsthetic consists in a union of seriousness and lightness, whereby the seriousness lies in the contents and the lightness in the form, Amalie will always fall short of the highest by lack of 'contents.'"

Schiller was an excellent critic, and these words characterize with great precision the quality of Amalie's poetic work. Under Schiller's direction, however, Amalie began her first ambitious poem, the "Sisters of Lesbos." Schiller disapproved of the choice of subject: "It is strange," he writes to Goethe, "that these good souls cannot comprehend of how much importance it is whether a subject allow of poetic treatment or not." But the poem gave him great pleasure after all: "It is developed with tenderness, clearness, simplicity, and uncommon grace. When you come we'll talk it over together." And Goethe came and read and severely criticised the poem. He felt inclined to abandon the patronage of all dilettante versemakers whatsoever, as so much labor lost. Schiller persuaded him to be patient; he must regard the help given to striving young talent as a "sectionem cadaveris" for the application of theoretic principles. With an air of good-natured impatience, Goethe began to suggest, correct, and improve. Finding Amalie by no means discouraged by the severity of his strictures, but cheerfully ready to follow his advice, Goethe took heart. A few questions revealed, to his amused surprise, that Amalie had no knowledge of the structure of the hexameter in which she had written her poem. "I see," he said, "the child makes her verses as the rosebush bears roses." In Goethe's diary stands the entry: "I took an interest in the 'Sisters of Lesbos' and gave advice. I was attracted to the authoress as an extremely beautiful child and in after times as a woman of rare talent." Of those hours with Goethe, Amalie herself writes: "They contained for me so rich a treasure of instruction, and were in all their associations and accompaniments so inspiring, so poetic, that these moments alone outweigh a whole lifetime of ordinary experience."

'The Sisters of Lesbos' appeared in 1799, and soon reached a third edition; upon this poem rested Amalie's literary fame. The reader of to-day will be unable to understand its former popularity. It is wholly lacking in fervor, something too, in interest; the characters are of eighteenth-century sensibility, represented under social and ethical conditions which render such characters and such psychological problems incongruous. A subject requiring dramatic lapidary treatment has been delicately executed in wax. "The execution remains far behind what it should be," was Goethe's last word.

Amalie was maid of honor at the court.

* Caroline von Wolzogen, Schiller's sister-in-law, author of the novel 'Agnes von Lilien.'

The full life of Weimar at the height of its glory was hers to enjoy and appropriate to her needs. A new century had dawned, the exhilaration of great expectations was in the air. It was the last glow of the light before it went out. That Herder had but a few months to live and that Schiller was so soon to follow, that the gloom of the battle of Jena was about to darken all the land, lay concealed behind the kindly curtains of the future. There was brilliant gayety at the court and boundless enthusiasm at the theatre, and conversations took place of whose every word that chance or good will has preserved to us, we are justly jealous. In the winter of 1803 came Mme. de Staël, and all that Weimar harbored of genius and learning gathered about her. Amalie enjoyed her special favor, and a letter of Amalie's contains an interesting passage:

"Goethe was quite as eager," she writes, "to make the acquaintance of Mme. de Staël as she was to make his. After the meeting, Goethe reported to his friends: 'It was an interesting hour. I found no opportunity to speak: she talks well, but much—very much!' The ladies, in the meantime, were eager to learn what impression our Apollo had made upon the stranger, and Mme. de Staël likewise confessed that she had found no opportunity to speak. 'But,' she is said to have sighed, 'when a man talks so well, one is content to listen.' Who spoke? Who was silent?"

We are reminded of Mme. de Staël's remark concerning Coleridge, that though great in monologue, he had no notion of dialogue.

In the meantime, a traveller of more importance in Amalie's life had visited Weimar, and had gone away with a tacit understanding that Amalie should become his wife. This stranger was Carl Helvig, who, in the service of Gustav IV. of Sweden, had visited Weimar in the winter of 1802. The career of this self-made man is remarkable. Helvig was born in Schleswig-Holstein. His parents were unable to give him even a common-school education, but unwearying diligence made him an accomplished linguist, fitted for important foreign missions; unceasing study, regardless of health, made him a successful engineer; ambition and indomitable energy, combined with true nobility of character, raised him from a position in the army little better than that of a day laborer to the side of his sovereign and the highest rank attainable in the career he had chosen. For Greek, too, he had found time, and his embassy to Constantinople had led him to the site of ancient Troy; his Homeric studies found favor with Herder and with Voss. Chance had brought Helvig into Napoleon's presence in 1796, and he was present at the battle of Rivoli. Napoleon was lacking in frankness and straightforwardness, remarks Helvig, and even at that time could not have spoken in a tone more absolute had he already been Emperor. Helvig's efforts had been directed especially to the reform of the clumsy artillery system. The public trial resulted in his favor; his reforms were adopted. Helvig himself was ennobled and received the highest commission in the gift of the King—he was made Master-General of the Ordnance.

At the time of his engagement to Amalie, however, his success was still doubtful, and his presence in Sweden necessary. The care of an invalid mother kept Amalie in Weimar. This year of separation has given us the most interesting chapter in the book before me. It is the correspondence in which Helvig unassumingly relates the story of his life. The moral qualities that made such a career possible commanded Amalie's respect. Here was a man who could demand much of others, because he made the highest demands upon himself. Amalie's diary reveals even a certain enthusiasm of admiration, but Schiller's criticism recurs to us here—it is her imagination that is kindled, and she does not feel that triumphant love which silences all apprehensions. She has a dim presentiment that they are not related natures, the energetic man of action and the contemplative, poetic soul. While he is casting cannon, she is coining fancy into verse. But, with a characteristic act of will, Halvig resolves to make her happy despite every discrepancy of birth, education, and taste. In the spring of 1803 they were married, and Amalie entered upon a new era of her life.

The beginning of the new era was marked by a violent severing of the old ties. Amalie's mother and only brother died; Herder, too, and her old friend Schiller, who lived to stand godfather to her first child, died soon after. In 1804 Amalie entered a wholly different intellectual atmosphere with the new duties of wife and mother. The simple greatness of Weimar life was exchanged in the Swedish capital for a feeble imitation of Parisian forms. "The higher culture of women," she says, "is still contraband in Stockholm." Through all her letters runs a vein of discontent, evident only in the tone of one who, in the fulfilment of a clearly recognized duty, is obliged to leave unsatisfied the aspirations of a higher nature. Her health suffered, her family increased; for her own and her children's sake, a visit to her native land was planned. She spent a winter in Heidelberg. Here she found herself once more in her proper element of literature and art. Here lived Voss of Homeric fame, the author of 'Luise.' The Boisserées, too, in the midst of their great work for old Dutch and German art, were there with the beginnings of their epoch-making collections. It seemed that a new life had opened for Amalie here, but misfortunes came.

Her husband's career, hitherto a series of triumphs over all obstacles, was suddenly checked. Gustav IV. had been dethroned by a military revolution in 1809, the King was arrested in his palace by night and carried into banishment. His first question was of his favorite, "Is Helvig among the revolutionists?" and with melancholy satisfaction he received the assurance that Helvig was ignorant of the undertaking. A different spirit began to prevail in Sweden. Bernadotte took charge of the military affairs, and Helvig was suspected of disaffection towards the new King Charles XIII. His enemies, whom Gustav IV. had dismissed, returned to positions of influence. When war broke out, Helvig was not called into service. This was a severe blow to his ambition; he sought dismissal and withdrew to Berlin to await it; his request was disregarded, and he could not enter foreign service. He had neglected his private affairs and had not husbanded his means. His wife was obliged for a time in Heidelberg to earn money with her pen. Her correspondence with authors and publishers, however, offended her husband. His reverses had told upon his health and disposition. He felt himself shut out from his wife's innermost interests, and his irritation found harsh expression. These were days of trial for Amalie darker than her prophecy had foretold, but she displayed a heroism of resolution that put Helvig to shame. Months of uncomplaining labor and alone she devoted to the regulation of his affairs in Stockholm. Helvig remained in Berlin, and, having at last secured his dismissal from Sweden, received title and rank from Frederick William III., but nothing was given him to do. To this ineffectual close his career of brilliant promise had now come. Condemned to inactivity and impatiently burning for action, he passed down into old age, broken in spirit and embittered. Common sorrow bound him still more closely to his wife. With their eldest child, now their only one, the stricken parents took up their residence in Berlin.

In poetry Amalie had found her chief comfort. In Heidelberg she had published a number of poems, Voss assisting her with some Greek idyls. There appeared also, in dramatic form, 'The Sisters in Corcyra,' a strange production of cold fancy. Amalie's Norse studies bore fruit in the legend of the 'Wolfsbrunnen,' and in the collection of 'Sagen und Legenden,' to which Fouqué gave his blessing and the young Cornelius eight illustrations. But it was in Berlin that her most important work was begun—the translation of 'Frithiof's Saga.' In Sweden Amalie had enjoyed the friendship of Tegnér. The poet was still engaged on this poem when Amalie began the translation. He sent her canto by canto as they were finished. In 1824 appeared her translation of the first five cantos with a dedicatory poem to Goethe. Her translation has a freshness of feeling and perfection of form that entitle it to the praise which it received in 'Kunst und Alterthum' of that year. This work of Amalie's lay in the direction of Goethe's ideal of a *Weltliteratur*—it was another shuttle in the loom where national literatures were being woven into a universal. With Goethe's favorable review the work had received the highest sanction; in literary Germany Goethe's sovereignty was absolute. "This recognition is perhaps a matter of little moment to you," writes Amalie to Tegnér, "but if you are not indifferent to the spread of your fame as poet over all Germany, then I may tell you that through this testimony of Goethe your renown with us is assured, for we regard Goethe's judgment as most competent." And Tegnér, otherwise so little susceptible to eulogy, was flattered by Goethe's warmth of praise. It is to be regretted that Amalie did not devote her talents more exclusively to translation, for which they especially fitted her. I refer to Schiller's criticism once again: the poet furnished the "contents," and Amalie's imagination grasped and reconstructed the original in the correct and graceful forms of which her native gifts, a long practice, and the advantages of her early Weimar training, had made her master.

Of her original poems I have avoided saying much. The interest that Amalie von Imhoff awakens to-day is in the main biographical, but yet her fame rests upon the title I have ventured to give this letter, and among her poems is one series that renders her laurels secure even in this generation of changed tastes and standards. I mean twelve lyrics, unfortunately difficult to obtain at present, which in 1826 Amalie published for the relief of the widows and orphans in Greece. Bettina von Arnim set some of these poems to music. This is Amalie's best original work. Brought up in an atmosphere of enthusiasm for antiquity and of homage and gratitude towards Greece, Amalie was deeply stirred by the struggle of the enslaved Greeks for freedom, to which Lord Byron lent the nimbus of his name. Amalie's glowing sympathy found warm expression in these earnest and beautiful songs. Her heart was in the cause, and Helvig's position of cold criticism pained her. His standpoint was military; he understood the feebleness of the Grecian cause, and despised the character of the modern Greeks. Again Amalie found herself inwardly estranged from him to whom outwardly she stood nearest.

Amalie's life had been one long contrast of this sort; she had not been made happy. She

was, indeed, a popular and beloved member of Berlin society, and in the social sense Berlin had become the intellectual centre of North Germany. Aged survivors of that time speak of the social life in Berlin with ever young enthusiasm; Varnhagen, Schleiermacher, Fouqué, Gneisenau—above all Achim and Bettina von Arnim—these were Amalie's friends, and the "old charm of our own home made itself felt," writes poor Helvig, whose occupation was gone. But from the time Amalie had left her girlhood's home, she had never found the sympathy which her nature dumbly sought, dimly discerned at times, but lost again. Bettina was, during these years, her nearest friend, and the link that bound her spiritually still to Weimar, upon which they both looked back as upon a paradise lost. Weimar was the bright ground-texture of Amalie's life, upon which later experiences were embroidered in darker colors and the sorrowful shapes of military revolutions, losses, material reverses, and spiritual loneliness. There is something tragic in this eternal contrast of two such natures as Helvig's and Amalie's. His ambition lay in the field, where he might display his energy. Her life effort had been to make herself "an immortal part of the great whole." These are her own words. Among her papers were found the lines:

"Schreibt wenn mich Grabesruh umschlossen
Im Stein der meinen Hügel schmückt:
Sie hat geliebt, doch nie genossen,
Sie ward geliebt, doch nie beglückt."

Amalie von Imhoff died in December, 1831. Her master had not yet finished 'Faust.'

Correspondence.

THE LOST WASHINGTON WILLS: THEIR POSSIBLE RECOVERY.

To the Editor of The Nation:

Sir: Noticing that the will of John Washington is now missing, I would call attention to the fact that George Washington, in his letter to Sir Isaac Heard (Sparks's 'Writings,' i., 547), says: "Lawrence Washington, from whose will you enclosed an abstract, was my grandfather. The other abstracts which you sent do not, I believe, relate to the family of Washington in Virginia; but of this I cannot speak positively." He also says: "Lawrence died in 1697, and was interred in the family vault at Bridge's Creek." The inference is strong that as Lawrence seems to have died in Virginia, his will was probably recorded in England on account of property held there. The date, about 1697, of such will, is probably later than investigators have hitherto had in mind. I suggest that search be now made in the will offices of England for a document of that date, and it may be well to see if any copy can be found in Sir Isaac Heard's collections at Heralds' College or elsewhere.

In connection with this matter, the Washington pedigree, Mr. Frederick D. Stone, the Librarian of the Historical Society of Pennsylvania, has called my attention to the following footnote on p. 31, vol. i., of Lodge's recently published Life of Washington; it is as follows:

"The well-known account of the Baconian troubles, written by Mrs. Ann Cotton in 1676 (Force's Hist. Tracts, i.), is addressed 'to Mr. C. H., at Yardly, in Northamptonshire,' probably Yardly-Hastings, about eight miles from Northampton, and consequently very near Sulgrave Manor. At the beginning (p. 1) the writer refers to the commander of the Virginians in the first campaign against the Indians as 'one Colonel Washington, him whom you have sometimes seen at your house.' This suggests very strongly that John Washington, the first Virginian of the name, was of Northamptonshire, and that he came from or lived in the neighborhood of Sulgrave Manor, and that he belonged to that family."

Here we have contemporaneous evidence connecting George Washington's great-grandfather with Sulgrave, or at least its immediate vicinity, which, of course, strengthens Mr. Waters's pedigree.

In this pedigree he states the mother of the said John Washington to have been a Roades. It may be worth while mentioning that the records in London of the families of this name throughout England were examined and collected by Col. Chester in the year 1867, as he then informed me by letter. This collection must still be among his papers; if searched, it might throw some light on the Washington ancestry, at least in its connection with the family of Roades. I will add that Col. Chester likewise informed me that, in his opinion, the "Col. Washington" who is mentioned as having served in Ireland in the seventeenth century, was the same person as Henry Washington of Worcester fame. It may be so, and yet there were more Washingtons than one in Ireland, I think, just as is the case with the Netherlands and the West Indies.

Care of The Historical Society of Pennsylvania, Philadelphia.

BONDAGE TO PARTY NAMES.

To the Editor of The Nation:

Sir: Your comment on the communication from "W: M. G." in No. 1279 sufficiently exhausts the subject, but perhaps a few words more in detail may be useful. The trouble with many who think with your Cambridge correspondent is, that they do not throw off their prejudice against the name Democratic. This prejudice is a natural one, but as a mere prejudice it is out of place here.

By Mr. Cleveland's courageous message of December, 1888, our political parties, after existing many years for the spoils alone, were again given a real principle upon which to divide. In national politics this difference ought to give to every citizen a good reason for voting with that party which stands for what he believes to be the right of that great question. Here the policy of each party is clearly defined and unmistakable. No mere sentiment in favor of one party because of its good deeds, or against the other because of its bad record, ought to govern his action. Neither party is now controlled by those who made the glorious history of the one or the mistakes of the other, nor do the intelligent masses of the Republican party or the "Residuum" of the Democratic party shape the policy of either.

It is true, as your correspondent says, that whatever is good in our political future must come from such men as made the Whig party and now make the Republican party; it is because they are such men that the Republican party is losing their support, perhaps will perish, its great work finished, unless, by such bait as the appointment of Pat Egan, enough of the "Residuum" to give it new life can be induced to take their places.

Why should any increase in the power of the Democratic party be deprecated if that party will carry out a policy which shall benefit the whole country? All good citizens might rejoice if the Democratic party, returning to power presently, should abolish those war taxes which, during the life of a generation, have stood in violation of the pledges under which they were enacted.

When a citizen of Cambridge sees the Democratic party of his town increased by hundreds of men in intelligence and patriotism like Charles W. Eliot or T. W. Higginson, he need have no fear that such increase is a misfortune to his town; nor is the political atmosphere of that town bad, even though it elect a Democratic Mayor. It is the mere name which is the bugaboo, and yet that name, which meant one thing yesterday, means quite another thing to-day. Once it stood for the extension of slavery; again, it meant sympathy with rebellion, then fiat money; but now it means tariff reform. Some people believe it means also civil-service reform and other good things, but of these there may be doubts. That it means tariff reform, however, there can be no doubt, and that the Republican party is in the hands of those who will oppose to the end any reform of the tariff is equally certain. As parties are but means to an end, if your correspondent favors free wool, iron, and coal for Massachusetts, he need not lament any increase in Democratic strength.

C. B. W.

Cincinnati, January 9, 1890

To the Editor of The Nation:

Sir: Will you permit me to add to what was written by your correspondent "W: M. G." in the *Nation* for January 2 on "Parties and Young Voters" the following?

(1.) It so happened, some years since, that the writer, together with some others, conducted a canvass of this county, with the suppression of the grog-shop as the issue. In doing so he found one township which cast 280 votes at the election that year, with a Democratic majority of 162. There was but one small village, of about 150 inhabitants, in the township; but there were seven grog-shops and not a single organized church or religious society. There were two church buildings, one frame and one brick, but each without doors, windows, or floors.

The next day we went into another township of the same soil, timber, and natural advantages every way, and found that it cast 289 votes, which were very nearly equally divided; and, singularly enough, there were seven organized and active churches and not a grog-shop.

(2.) I went into a business-room in the south part of this city a few days since, and the owner said to me he bought there because he found he could do so at a much lower rate than in the north or east part of the city. The south is the Democratic portion of the city and as attractive naturally as any other part.

(3.) Some years since a prominent Democrat in one of our principal cities called upon the principal of the High School to consult him about sending his son to college. Upon the son's return after his first year's study, the father called upon the principal, and the following colloquy took place:

"If I had known that college I sent my boy to was such a hot-bed of radicalism, I would not have sent him there."

"Well, where would you have sent him?"

"Oh! I would have sent him somewhere else. The colleges are not all as bad as that one."

"You would not have sent him South, would you?"

"No; there is no school there I would send him to. But there must be some of the colleges that are not such hot-beds of radical notions as that one."

"Well, I don't know about that. I am pretty well acquainted with the colleges and the professors North and West, and my information is that fully 90 per cent. of the professors and 75 per cent. of the students are Republicans."

"Well, Mr. ———, I'll tell you. Whenever I meet a teacher or a preacher who is a Democrat, I confess I am always afraid of him."

(4.) The Minneapolis *Times*, an independent newspaper, says, in relation to Iowa politics, that "it must be conceded Republicanism represents the highest intelligence and best character of the State." Is not that true of every State in the Union, except possibly the old slave States?

(5.) Bryce (in his 'American Commonwealth,' vol. ii., p. 2) says:

"During the war it [the Republican party] drew to itself nearly all the earnestness, patriotism, religious and moral fervor which the North and West contained. It is still, in those regions, the party in whose ranks respectable, steady, pious, well-conducted men are to be looked for. If you find yourself dining with one of the best people in any New England city, or in Philadelphia, or in Cincinnati, Cleveland, Chicago, or Minneapolis, you assume that the guest sitting next you is a Republican almost as confidently as in English county society you would assume your neighbor to be a Tory; that is to say, you may be wrong, but in four cases out of five you would be right."

It may be true that the trend of young men is towards the Democratic party, but it is not so among my acquaintances. I can give the names of three Democratic fathers whose sons came home from school Republicans.

J. J. J.

Columbus, O., January 15, 1890.

CABINET OR COMMITTEE?

To the Editor of The Nation:

Sir: If I ask leave to comment upon Mr. Hudson's letter, it is for the sake of promoting discussion on a subject which ought to be, if it is not, of general interest. In the first place, Mr. Hudson misquotes Mr. Bryce. After a careful reëxamination of his book, I affirm, and challenge contradiction, that Mr. Bryce nowhere says, of himself, that the admission of the Cabinet officers to Congress would be "an inadequate remedy." What he does in this direction is simply to quote (as in chap. xv., p. 150, of the English two-volume edition) the opinions of Americans as given to him. On the other hand, the first half of the first volume is almost a continuous disquisition upon the advantages of the English system of having the Ministry in Parliament, and the disastrous consequences of the want of that system here. He does not even say, like his countryman Mr. Bagehot, that it is an excellent thing, which the Americans have not and cannot have. On p. 82 he refers to the Senate report of February 4, 1881, providing for the admission of the Cabinet to seats in both houses, with the necessary changes of the rules, and merely adds, "Nothing has so far been done to carry out this report." And this view is confirmed by a remark on p. 279:

"These observations may suffice to show why the fathers of the Constitution did not adopt the English Parliamentary or Cabinet system. They could not adopt it because they did not know of its existence. They did not know of it because it was still immature, because Englishmen themselves had not understood it, because the recognized authorities did not mention it. As the idea never presented itself, we cannot say that it was rejected, nor cite the course they took as an expression of their judgment against the system under which England and her colonies have so far prospered."

He does not even say, as Mr. Hudson puts it, that the measure might have results other than those "desired." The remark referred to is on p. 284: "I have no space to discuss the merits of this proposal, but must observe that it might lead to changes more extensive than its advocates seem to contemplate." Well, suppose it does. If the Cabinet ever have seats in Congress, it will be because the houses vote them in. If the result is not satisfactory to the country, which would have more to say about the matter than it has about anything now, it would be perfectly easy to vote them out again. The experiment is the simplest thing in the world.

So much for Mr. Bryce. What is the alternative proposed by Mr. Hudson? "A single Governing Committee, chosen from the members of the majority, having the sole power of originating revenue and appropriation bills, and given the control and direction of important measures."

In what would this committee differ in principle (though it might be a degree simpler) from those existing now? It would be composed wholly of local representatives having no national authority. Its members must either be appointed by the Speaker or elected by the members, and in either case be bound hand and foot to party and local interests. It might, and therefore would, conduct its real deliberations in secret. It would be in no way responsible for executive administration. As it happens, we are not left to conjecture. The French Budget Committee is the chief of its kind, and has control of all the finances, both as to revenue and expenditure, but it cannot get its budgets closed from year to year, it cannot control expenditure or regulate taxation; and so the finances, with a large annual deficit, are rushing on towards bankruptcy.

Mr. Hudson proposes that the contact with the Executive should be by sessions of the Governing Committee with the President and Cabinet. Could there be a more pitiable spectacle? It is bad enough that single members of the Cabinet should be obliged, in order to carry any measure of public interest, to lobby and intrigue with the committees, like any private speculator. But here would be the President and his Cabinet, the representatives collectively of the whole nation, in the position of suppliants and intriguers before an all-powerful committee, whose interests would be entirely local, who would be bound first of all to satisfy the claims of the private interests which had placed them in power, and who would officially care nothing whatever for the national interest. Suppose that the Governing Committee (made up, observe, from the majority of the House) should be of the opposite party from the President. Pleasant sessions those would be!

Mr. Hudson's main reason for substituting a Governing Committee for the Cabinet seems to be that the former could resign when defeated, while the Cabinet could not. Why need we imitate so slavishly the English methods? An English Ministry must resign at the bidding of Parliament because it must obey its creator and master. Congress, thanks to the framers of the Constitution, is neither the creator nor the master of our Executive. Why need the Cabinet resign in the face of an adverse majority any more than now? They could modify or postpone burning questions, and leave the people to decide at the next elections. In the face of those elections, Congress would be very wary of factious opposition to the Executive. Fancy that body, from party motives, refusing troops and money to Lincoln's Cabinet during the war!

What is needed is that which Mr. Bryce insists upon, public contact between the Legislature and the Executive. The Senate report above referred to, which deserves, and is perhaps destined to obtain, immortality, says that the advantages of the change proposed are so obvious as not to need discussion, which means that they were not prepared to take the burden of discussing it. There is one great objection, greater than the difficulty about resignation, greater than the fear of other extensive changes—so great that it makes one almost despair of seeing it brought about—and that is that the *lobby* does not want it, and this Government to-day is a government of the lobby.

G. B.

Boston, January 18, 1890.

THE FISHERIES QUESTION.

To the Editor of The Nation:

Sir: I think you are somewhat in error as to the facts stated by you in a short article upon the Canadian Fishery Question, in the *Nation* of January 9. Bait and ice were largely purchased by American fishermen all along the coasts of New Brunswick and Nova Scotia during the fishing season until the Canadian Act prohibiting the sale was passed. Bait is also largely procured in Newfoundland, but the trade in bait, ice, and other supplies was a lucrative one in the maritime provinces of the Dominion, and some of our Opposition newspapers contend that the inhibition of this trade by the Dominion authorities was unneighborly and also impolitic. Fishing within a marine league of the shore of Canada has, of course, always been prohibited, when not otherwise regulated by treaty; but allowing American fishermen to purchase bait and supplies from Canadians does not necessarily give the former the right to take fish in Canadian waters.

As we understand the question here, the American fishermen wrongly claim that under the Treaty of 1818 they are entitled to purchase bait, etc., in our ports, in the same way that one of our vessels can now go to an American port and purchase the like, or any other article of commerce, there. We have the right to prohibit your fishermen from purchasing these supplies in our territory, but the whole question could and should be disposed of by a common-sense arrangement between the two countries, whereby their productions could be exchanged without restriction, fiscal or otherwise. Each country has something to sell which the other wants and is willing to buy, and if the politicians who purposely, it seems, muddle the question, would stand aside, the business men of the two countries could speedily settle the matter.

I entirely agree with you in your opinion as to Mr. Babson's conduct, but he, I presume, is endeavoring to make himself "solid" with the Gloucester fishing people, many of whom, by the way, are Nova Scotians born and bred, and British citizens to this day. On our side the good Tories make themselves "solid" with their constituents by expressing their anxiety to die in the defence of Canadian liberty. Do you think your Mr. Babson could be induced to meet our Gen. Laurie of Nova Scotia, not at San Francisco, but on some nearer neutral ground, where the whole question could be decided in the lists? We can get along without the General if you can spare Mr. Babson.

W. B. C.

New Brunswick, January 14, 1890.

DÉGRAS.

To the Editor of The Nation:

Sir: The article in No. 1280 of the *Nation*, under "The Week," in which you mention the raising of the tariff on dégras by a Chicago appraiser, and refer to the nature of dégras itself, contains a slight technical error to which I beg to call your attention.

Dégras is a grease obtained as a by-product in the process of oil tanning of skins and hides. In this method of tanning, fish or train-oil is

used, and also the grease obtained in cleaning and preparing wool for spinning. Oil-tanned leather, after going through the process and the manipulations of tanning, takes up more grease than it can hold and is necessary for tanning. The excess of grease is removed by pressing and washing, and the grease so obtained is called dégras.

In the process of oil tanning, the fatty matter used undergoes certain chemical alterations which make it peculiarly adapted for dressing regularly tanned leather; and the demand for dégras for the latter purpose is greater than can be supplied from the by-product of oil tanning. Dégras is therefore regularly manufactured by subjecting the same skins over and over to the oil-tanning process simply with the object of obtaining dégras.

I do not know whether this will help the Chicago amender of the tariff any in his view that dégras is an expressed oil in the sense of the law. Yours very truly,

A. V. WEISE.

SARCOXIE, Mo., January 14, 1890.

MILLIONAIRES AND SINNERS.

TO THE EDITOR OF THE NATION:

SIR: Your recent article on "Millionaires" reminds me that a young minister, not long since, supplied a pulpit for one Sabbath in a thriving manufacturing town east of the Hudson. He was the guest of a deacon, and as they walked together after the morning service the deacon said, "Perhaps you do not know that you preached to Eighteen Millions of dollars today?" "No," said the minister, "I did not; but you will go to h—ll all the same unless you repent."

Would you call him "an angel unawares"?

Very truly, S. N.

PHILADELPHIA, January 13, 1890.

MASONIC RITUAL.

TO THE EDITOR OF THE NATION:

SIR: The recent deplorable accident at Huntington prompts me to put a question which I dare say is in the minds of many:

Is it not high time that the great and beneficent order of Masons had raised itself to a higher intellectual plane, and purged its ritual of fables of the Kabbala, properties of the pantomime, and terrors of the nursery?

I am, sir, etc., WM. HAND BROWNE.

AVITUS AND MILTON.

TO THE EDITOR OF THE NATION:

SIR: If my article on "A Precursor of Milton," in the January *Atlantic*, fails to make it certain that Milton knew Avitus, the fault is in my translation of the passages quoted. They should have been (and in the first instance were) given in the original, parallel with the corresponding passages from 'Paradise Lost,' but the exigencies of magazine-printing forbade that form. No English translation can convey the resemblance between the Latin poet and Milton; it comes out curiously in the Italian version of 'Paradise Lost' by Guido Sorelli. But only a careful comparison of the two poems can give the argument full force, and whoever is interested in it will go to them and accept nobody's dictum.

I must dispute the expression used in the last number of the *Nation*, which implies that Avitus was a "much more obscure person" than Milton. Every student of early European history under our era, especially of ecclesiastical history, knows better than that. It is only as a writer that the great statesman-bishop's fame has been lost.—Yours respectfully,

S. B. W.

JANUARY 13, 1890.

'FUGITIVE FACTS.'

TO THE EDITOR OF THE NATION:

SIR: In the review of 'Fugitive Facts' appearing in your issue of this week, there are statements and implications not of *opinion*, but of *facts*, which are totally incorrect, and can have no other foundation than the hasty surmise of your reviewer.

The volume is *not* in any sense a mere collection of "clippings." The variety and scope of the titles are due, in large part, to the scrap-book method, but there is not a single article of any length in the book, except such as are mere enumerations of numbers or names, which is taken directly from any source whatever. The Greenbush *News* may have furnished a suggestion for a title, but the information given on that subject is the best that our great libraries render available. The articles are, almost without exception, original composition, and are designed to give, in clear, concise form, the pith of the matter obtained from many sources. Hence, any "credit" is impracticable beyond the general statement in my preface, that "all statements are supported by the best authorities."

I feel much aggrieved by the impression conveyed by your notice, as many single articles represent days of diligent search and reading in the library, and the effort to catch and present to the readers the *gist* of diffuse and exhaustive articles found in other works. That suggestive "scrap" from the Greenbush *News* entailed much labor in the ascertaining of reliable information on that subject.

I beg that you will correct the mistaken impression conveyed by your notice by publishing this letter, or in such other way as you prefer.—Very truly, ROBERT THORNE.

37 GRAMERCY PARK, N. Y., January 11, 1890.

[In view of the limitations of individual knowledge, we *did* assume that Mr. Thorne could not have written at first hand, or have personally verified, statements on so multifarious themes as his book contains. The manner of compilation which we attributed to him was inferrible from the heterogeneity of the contents. It seemed impossible that any one should deliberately have made out such a list of subjects for investigation; and that Mr. Thorne did not do this, but merely printed extracts and scrap-books made on no definite principle of selection, was further indicated by the unintelligent way in which the articles were arranged. We did not undertake to test the truth of his statements, but if their uniform accuracy were demonstrated, our criticism would still hold good. As to giving credit, we are unable to admit the impossibility which Mr. Thorne urges, especially as this is common in similar compilations. It is customary for scholars, even the most eminent, to cite the authority for their statements. When an author fails to do this, there is no means of estimating his accuracy except by personal investigation.—ED. NATION.]

Notes.

HARPER & BROS. have in press the second volume of Justin McCarthy's 'History of the Four Georges,' and a new edition of Quackenbos's 'Illustrated History of Ancient Literature, Oriental and Classical.'

A work on 'Civil Government,' by John Fiske, is announced by Houghton, Mifflin & Co.

Cassell & Co. announce that they will publish a memorial of the late Henry W. Grady, editor of the Atlanta *Constitution*. His coworkers on that journal have prepared it, and it will be edited by Joel Chandler Harris. It will contain a complete life of Mr. Grady, and representative selections from his writings and speeches.

Roberts Bros., Boston, will publish next month 'Albrecht,' an historical novel, by Arlo Bates, and George Sand's 'The Bagpipers,' translated by Miss Wormeley.

Mr. W. W. Pasko, 19 Park Place, invites subscriptions to a 'History of Printing in the City of New York, from its Beginning to the Present Time,' with illustrative, historical and biographical notes. It will make two quarto volumes with numerous cuts, maps, etc. Five hundred copies only will be printed.

Mr. J. M. Place, publisher of the Harrisburg *Telegram*, has, in connection with Mr. J. J. McLaurin, undertaken the preparation of a history of the Johnstown disaster, the net proceeds of the sale of which will go to the relief of printers' orphans and aged persons who suffered by the flood.

'A Study of Ben Jonson,' by Algernon Charles Swinburne, will be brought out by Worthington Co.

Ginn & Co.'s latest list of announcements include 'A Brief History of the Roman People,' by the late Prof. Wm. F. Allen, and 'The Annals of Tacitus,' edited by the same hand; a revised and enlarged edition of Prof. Goodwin's 'Moods and Tenses of the Greek Verb'; and 'Open, Sesame' (Part I.), a collection of prose and verse for schools and homes.

F. W. Christern sends us the prospectus of the 'Obras Completas' of Lope de Vega, to be published by the Spanish Royal Academy. The rate of publication will be three or four volumes a year. The editing of the text will be scrupulous as to its purity, and critical and historical notices will accompany each piece by this prolific writer.

A wide reading of 'The Story of Emin's Rescue as Told in Stanley's Letters' can confidently be predicted. The letters, to which have been added a few from members of his staff, have been edited by Mr. J. Scott Keltie, librarian of the Royal Geographical Society, who furnishes a needed introduction touching Emin's situation which Stanley was invoked to relieve, and giving the particulars of the expedition down to the time of its arrival on the Congo. A map shows the route traversed, and there are portraits of Emin and his rescuer. The American publishers are Harper & Bros. The little volume can be quickly read, but not quickly forgotten.

The Clarendon Press has made a fine volume (the first) of a reissue of Anthony Wood's 'Survey of the Antiquities of Oxford,' edited devotedly enough by Andrew Clark, who nevertheless seems to be aware of the want of interest of this veritable sawdust heap of local antiquities. The critic (on this side of the water at least) can hardly take hold of it. This instalment deals with the city and its suburbs.

For the fourth time M. Jules Lemaitre has collected into a volume his dramatic criticisms contributed every Monday to the *Journal des Débats*, and this fourth series of his 'Impressions de Théâtre' (Paris: Lecène & Oudin; New York: F. W. Christern) does not yield in piquancy to its predecessors. Especially to be noted is his frank criticism of his own play,

"Révoltée," acted last year at the Odéon, and his biting analysis of the late Théodore Barrière's "Filles de Marbre," recently revived in Paris for the first time in thirty years, and most unsuccessfully, though it still lingers in American theatres, where it is known as the "Marble Heart."

M. Ernest Bertin has collected from the same journal a volume of book-reviews, 'Études sur la Société Française' (Paris: Calmann Lévy; New York: F. W. Christern), in which he considers, in the light of recent works, Mme. de Sévigné's grandson, Racine, La Rochefoucauld, Saint-Simon, Voltaire, and other representatives of French society of the past. Perhaps the chapters of most interest to Americans, who were once asked, "Have we a Bourbon among us?" are those on Louis XVII. and on the many pretenders to his rank.

The prison statistics of the United States for 1888 form the subject of a monograph by R. P. Falkner, Ph.D., which is published by the University of Pennsylvania. The reports of prisons upon which it is based are defective and arranged upon different plans, so that the material is refractory. We observe that in the year 1886 there was among the 552 convicts in Philadelphia only one intemperate person, or the intemperate numbered only one-fifth of one per cent. During the same year one-third of the convicts at Joliet, Ill., were classed as intemperate. Data of this character can afford few valuable results, and we find nothing in this paper that calls for particular mention. It may, however, as the author suggests, serve as the basis for future studies.

The absurdity and injustice of double taxation in Massachusetts are well shown in a small pamphlet by Mr. J. P. Quincy (Houghton, Mifflin & Co.). He does not consider the subject with reference to the ultimate incidence of taxes, but points out in a spirited way the inequalities in the assessments of neighboring towns, and the propriety of the migrations of the "tax-dodger." But we doubt the wisdom of invoking the aid of "all Nationalists, Christian Socialists, and Single-Tax men." Appeal might better be made to the saner portion of the community.

State Boards of Health are disseminating sanitary information so copiously that, before long, preventable disease in a community should be disgraceful as well as hurtful, and should equally reflect upon the intelligence of the people and the honesty of the officials, and warn off intending settlers. The report of the State Board of Michigan (Dr. Henry B. Baker, Secretary) for 1888, the sixteenth of the annual series, is the last we have seen. Considering the amount and character of its yearly work, conspicuously the circulation of tracts of instruction, the essentials of public hygiene must soon be common among the citizens of the peninsular State. The matters of most general interest in this report are the cumulative evidence of the spread of typhoid fever by an infected water-supply, charts showing the restraining influence of isolation and disinfection upon the spread of diphtheria and scarlet fever, and a discussion of the relation of temperature to respiratory diseases. In diphtheria, where isolation and disinfection were neglected, the proportion of both cases and deaths was about four-and-a-half times as many as where they were enforced, and in scarlet fever it was about five times as many. The estimate is made that in the two diseases combined, in 1886–7, 11,800 cases were prevented and 1,685 lives were saved in Michigan by these measures.

There is reprinted a paper read by Dr. Baker before the last International Medical Congress, showing the increase of diseases of the respiratory organs as the external temperature declines (which is generally recognized), and explaining it by supposing that the albuminous parts of the blood pass into the air passages whenever the want of moisture in the air leads the salts to be in those passages in excess. In this albuminous layer the presumed bacterial causes find a favorable seat for development. We cannot say that this satisfies all the conditions.

The Jacksonville (Fla.) Auxiliary Sanitary Association has published a report, voluminous in detail, but not in convenient form for analysis, covering its yellow-fever work in 1888. Nearly $350,000, independently of Government aid, was received as donations and used on account of the public health.

The *New England Magazine* is now among the best that come to our table. The January number is the fifth of the vigorous new series, and has half-a-dozen articles which may be read profitably and with interest even by those not to the New England manner born. Such is Mr. A. R. Willard's well-informed and freely illustrated paper on "The New England Meeting-house and the Wren Church," for have not New Yorkers also evidence of Wren's influence on their earlier church buildings? Such is Dr. Jameson's historical inquiry, "Did the Fathers Vote?" He shows that in Massachusetts at least they were chargeable, like their posterity, with indifference to the exercise of the suffrage, but to an even greater extent. We can barely mention "Boston Musical Composers," with portraits; "The Behring Sea Controversy," "Thomas Jefferson and the Louisiana Purchase," and two papers on Browning.

In the *Scottish Geographical Magazine* for January, Gen. Sir Lewis Pelly gives an account of what has been done by the British East Africa Company in the exploration and development of its territory. Stations have been planted in the interior. The port of Mombasa is being improved by the construction of a pier and a lighthouse. Forty miles of railroad are being laid, which is eventually intended to connect the Victoria Nyanza with the coast at this point. A road and telegraph are being built along the coast. All this has been accomplished without opposition from the natives, whose good will has been won by the tact shown by the company's officers in dealing with the various chiefs and tribes. Gen. Pelly also briefly sketches the history of the South African and Royal Niger Companies, showing what is to be expected from each. Capt. A. Hovgaard of the Danish Navy describes the movement of the ice in the Kara Sea. He believes that the navigation of this "inland" sea, for so he regards it, will become "a very simple matter," and that "sooner or later a regular trade will be established by this route with Siberia." He also advocates an attempt to reach the North Pole by this sea, the only route still left untried. At the annual meeting of the Society in November, M. Élisée Reclus and Maj. J. W. Powell were elected honorary members.

Mr. Eugene Schuyler, Consul-General of the United States in Egypt, has been unanimously elected an honorary member of the Khedivial Geographical Society at Cairo.

In his last letters to the London *Times*, Mr. Geo. Curzon, M. P., describes the political and commercial conditions of Khorasan, at whose capital, the sacred city of Meshed, both Russia and Great Britain now maintain consul-generals. He argues that Russia desires to possess this Persian province, not only because of its superior wealth "in fruit, in minerals, in produce of every kind, above all in grain," to her Transcaspian possessions, but because of its being essential to her gaining an outlet, by way of Seistan, to the Indian Ocean. As regards the feeling of the people towards Russia, he says: "My impression is that Meshed, if it is destined to fall, will fall without a blow, and that a change of ownership in Khorasan might be effected without the loss of a drop of blood." This is owing to a variety of causes, chief among which are the "utter rottenness of Persian administration," the liberation of great numbers of Persian slaves in Khiva, and the repression of the Turcoman raids. Mr. Curzon asserts that, notwithstanding all the efforts of the Russians to obtain a commercial supremacy in this province, and in spite of the fact that the "volume of trade" is "indisputably Russian, the value is still on the side of the English." The cheaper goods in the retail shops come from Russia, but the tea, indigo, drugs, medicines, and spices, as well as other articles of British manufacture, come from India. "It can be demonstrated," he says, "that Meshed at this moment does a larger trade with Bombay than it does with the whole of Russia." His last letter is descriptive of his journey from Meshed to Teheran, with some account of the latter city, in which there are now nearly five hundred Europeans.

The bibliographical periodicals for December do not offer a great variety in their contents. In the *Centralblatt für Bibliothekswesen* the two principal articles are the bibliography of the writings of Michael Bapst, and an interesting historical sketch of Jesuit bibliography by Professor Arndt; while the fifth *Beiheft* is devoted to a third supplement to Weller's 'Deutsche Zeitungen,' by A. Heyer, and a bibliographical essay on Arabic translations from the Greek, by M. Steinschneider. In the *Library* for December worthy of note is the paper, by the Chief Librarian of the British Museum, entitled "Some Hints on the Future of Free Libraries"; interesting, too, is the paper by W. Blades on chained libraries, describing more particularly the chained library of Wimborne Minster.

The petition to the members of the French Academy on behalf of a simplified orthography is still in circulation. It was launched in May last, and M. Louis Havet came to its support in the *Revue Bleue* of November 23. The most of the changes proposed would seem to be little shocking to the native sense. The mute letters are of course attacked (as *l* in *fils*, *o* in *faon*, etc.), and the quasi-mute in doubling (as *n* in *honneur*.) But also the mute accents are to be abolished (as in *où*, *là*, *gîte*, *fût*). The French, both in writing and in printing, are so careless in this matter that here again no feelings ought to be wounded. Still, unless French printers refuse to give to foreign words such of the obnoxious accents as belong to them, we do not see the force of the argument that they can economize in *â*, *û*, *î*, *û* in every font.

Not a few Americans genealogically curious will be glad to have their attention called to the beginning of a publication, in the *Lincolnshire Notes and Queries* for January, of a list of the gentry of Lincolnshire, carefully copied from the Herald's visitation of the County of Lincoln of 1634. It embraces the Disclaimers also, *i. e.*, people socially qualified to bear arms, but having no right to do so. These often obtained the right from the crown after the visitation, and became "visitation families."

—The American Society for Psychical Research, after existing for five years, with its headquarters in Boston, and publishing some

600 pages of "Proceedings," at last, for pecuniary reasons, terminated its corporate existence on January 14. The English Society of the same name is heir to its documentary possessions, and is to keep Dr. Richard Hodgson, late Secretary of the American Society, as its own secretary in America. A majority of the associates of the American Society have joined the English Society, forming the nucleus of an American branch. Professors S. P. Langley of Washington, H. P. Bowditch of Boston, and W. James of Cambridge are appointed vice-presidents of the S. P. R. in America; but apart from their advisory functions there is no "organization" here, a circumstance which will doubtless contribute to economy and efficiency of work. The English Society's Proceedings keep up with wonderful vigor, and have become indispensable to students of psychology. It is to be hoped that a solid moral and pecuniary support to the Society may be extended from this country. The annual assessment of American associates is $3.00. They receive for this the published "Proceedings," which appear quarterly, and the monthly "Journal" printed for circulation in the Society only. American work will henceforward appear in these publications. Those who wish may become full "members" of the English Society, with voting and other privileges, by the annual payment of $10. Meetings of the Branch will be held periodically for the reading of papers and discussion. Those who desire to join the Society or to obtain information should address the Secretary, R. Hodgson, No. 5 Boylston Place, Boston.

—The first number of the new English Liberal weekly, the *Speaker*, bears date of January 4. It contains the usual apology for journalistic commencements, and only time can supply one department which we hope is contemplated, that of Letters to the Editor, for these are a sign at once of the vitality of the paper itself, and of an active public sentiment glad of a medium through which to make itself heard. In fact, the title of the paper seems to call for this. The *Speaker* presents a quarto form both narrower and shorter than the *Nation's*, but likewise in three columns; and the scheme is of forty-eight pages, the advertising pages being numbered continuously with the reading matter. The type chosen is large, but, being "unleaded," has too condensed an appearance to suit our taste, and, being the same in size throughout, with the exception of book-titles and poetical extracts, still further daunts the eager reader. The leading articles are both signed and unsigned. There is special foreign correspondence; a department of "First Impressions" (or brief, informal notices which do not preclude longer reviews by-and-by); and, at the close, a business article. A buff paper cover envelopes the paper. It will be interesting to observe if England can support *three* politico-literary journals of this order. Significant is the action of the *Saturday Review*, at the beginning of the present year, in introducing a department of news chronicle and comment; and of the *Spectator* in experimenting with a column of causerie on social topics and literary intelligence.

— *Le Livre* closes not ingloriously the first phase of its existence with the December number. One misses the customary full-page plate, but there is a generous supply of curious facsimiles (?) of title-pages and vignettes drawn from the works of the obscurer Romanticists, bearing such extraordinary alternative titles as 'Les Gondoles du Cœur, ou les Bercements de l'Amour,' 'La Fille d'Ophélie, ou le Fantôme d'Elseneur,' 'Les Frissons du Tombeau, ou les Résurrections,' 'Les Amours d'un Squelette,' 'Edgard le Taciturne, ou l'Étrangleur,' etc., etc. In fact, the thirty titles scrupulously recorded and the illustrations make the impression of a clever mystification—"contes pour les bibliophiles." Among the reviews we remark that of 'Sous-Offs' (*sous-officiers*), a romance of military life designed to expose the petty tyranny of the system, by Lucien Descaves, who seems to have used the darkest colors freely; and that of the third volume of Georges Bengesco's Voltaire Bibliography, which has to do with the correspondence. Altogether, this indefatigable searcher records about 10,500 notes and letters for the sixty-seven years 1711–1778, which he numbers in accord with the Moland edition. But Moland's omissions are made good not only by mention of them, but by printing the text of more than a hundred letters which have never appeared in any 'Complete Works' of Voltaire. More than this, M. Bengesco improves upon Moland by a more correct indication of the sources of the letters, the place of their first appearance in print, etc. M. Octave Uzanne, in laying aside one editorial rôle for another, presents a specimen of the new serial, successor to *Le Livre*, *Le Livre Moderne*, a dainty octavo of which the "expression typographique" and the "format" are all that can be judged in advance of publication, and these will be favorably judged.

— It is a distinct offence against good taste for one writer to attempt to continue a story which has been finished by another. A story, and still more a play, is a work of art, and it cannot be followed out to a possible end any more than a picture can have other bits of canvas tacked on to it. This offence against good taste has been committed by Mr. Walter Besant in the January number of the *English Illustrated Magazine*. If Mr. Besant thought the moral of "A Doll's House" a bad one, it was open to him to say so in plain English. He gains nothing by drawing a crude picture of the ruin into which the Helmer family has fallen twenty years after the end of the play. Moreover, he shows a fatal lack of power to grasp the meaning of the "Doll's House." Nora's leaving her family at the end is a mere incident, and not the main point of the play. So violent a measure as this would only occasionally be necessitated by the discovery on the part of a woman that she is a distinct human being, with accountabilities of her own. The discovery is the great thing, and the following it up by some action, whatever the particular circumstances may require. That it is not in foreign countries only that there is necessity for preaching this doctrine, may appear from the following sentence, taken from the circular for 1889 of one of the best girls' schools in Virginia: "A woman's province in life is to throw herself heartily into the pursuits of others rather than to have pursuits of her own."

—The only important article in this number of the *English Illustrated Magazine* is that on "Competition and Coöperation Among Women," by Mrs. Jeune and by Wm. James Walker. Mrs. Jeune points out how nearly impossible it is for combination to take place among women who are mothers and who are already working at starvation wages. The only remedies which she can suggest for the heart-rending state of things that prevails among the women in the east of London—for the worst features of which the sweating system is responsible—are (1) to induce boys and girls of seventeen and eighteen to refrain from marrying and having families, utterly regardless of their ability to provide for them; (2) to restrict immigration; (3) to educate the cleverest of the workers so that they can enter the ranks of the skilled laborers; (4) coöperation; (5) to make domestic service more attractive by restricting its hours of labor and diminishing its restraints. She points out that all these means are nearly hopeless when one considers the immense mass of the misery to be relieved. One thing, however, could be done: better dwellings could be secured if volunteer workers could be found who would devote themselves to enforcing regulations which are already in existence. It is a fact, she says, that in parts of London some of the most disgracefully kept property belongs to members of the vestries, and that the sanitary inspectors appointed to see that their hygienic conditions are satisfactory are relatives of the people to whom the dwellings belong.

— The great French Exposition of last summer included an "exposition of social science," and the eminent economist A. de Foville, in a letter on the economic situation in France in the January issue of the Harvard *Quarterly Journal of Economics*, appeals to his brethren in this country that they secure for the social subjects a similar place in our Exposition of 1892. One wonders a little what an exposition of social economy is like. At first blush a collection of books and other printed matter would seem to be about all that could "expose" the subject; but in the same issue of the Harvard *Journal* is an account of the French enterprise, by Mr. E. Cummings, which shows that the spectacular genius of that people grappled even this unpromising task with a good degree of success. Of course the solid part of the exposition of last summer consisted of the books, reports, pamphlets, figures, which showed the history and state of the various social questions. The exhibition was divided into fifteen sections, each devoted to some one subject, such as Profit-Sharing, Coöperation, Apprenticeship, Laborers' Dwellings, Trade Organizations, Mutual Aid Societies, and what not; and on all of these there seems to have been brought out, or at least collected, a great mass of interesting and valuable information. But, as Mr. Cummings puts it, "The administration wisely recognized that, for the most part, Exposition-goers are bereft of all senses but one—sight. Therefore, the abstractions of economic science, the beauties of profit-sharing, the blessings of sobriety and *prévoyance* must be rendered visible." Every endeavor was made to stimulate pictorial representations—by charts, diagrams, mottoes, photographs, votive temples, full-sized models of workmen's dwellings, and all sorts of decorative details. There was a pavilion devoted to the famous profit-sharing enterprise of the Maison Le Claire, daintily decorated by that house-painting establishment; busts of M. and Mme. Boucicault were placed in a little shrine to their philanthropic Bon Marché; a descriptive monument illustrated the growth of coöperation in England; and there was an exhibit of our Knights of Labor, in which decoration and mottoes predominated decidedly over facts.

—All this brought a danger that the exposition might degenerate into an "economic kindergarten," and Mr. Cummings hints plainly enough that it did not always prove possible to avoid some approach to the ludicrous. But the pictorial touches seem to have added immensely to the general educational value of the exposition; and this benefit was combined with the more solid results achieved for serious students. Congresses of specialists were held for each of

the sections, in which there was thorough and valuable discussion, and, as we have already noted, the exposition brought out a quantity of new literature and new information on the social subjects. On the whole, it seems to have been a success; and if we do not dally so long with the preliminary questions of site and scale as to make adequate preparation out of the question, the French example may well be imitated when our turn comes in 1892.

—The death of Champfleury (whose real name was Jules Fleury Husson, born at Laon, September 10, 1821, died at Sèvres, December 6, 1889) removes one whose chief hold upon the interest of people of a later generation than his who are separated from the literary life of Paris by the Atlantic Ocean and various other things, lies in his having been a survivor of the small knot of "Bohemians" whose chief was Henry Mürger, and in his having been the reputed father, or rather godfather, of modern realism. His reputation in both these points is misleading. He was the friend of Mürger, and of others of his set, such as Baudelaire, Bonvin, Courbet; but he himself was but a *bourgeois* in Bohemia. He not only worked hard, but he lived without debts, and even saved money. Realism he disdained, both word and thing, and he was particularly offended at the report that it was he who invented the name. The Goncourts he assailed with amusing virulence. Thus, to quote from the *Figaro* of December 7, 1889:

"Ces cocodès de lettres qu'on appelle les Goncourt, qu'ils soient deux ou un. Ce sont des animaux à sang-froid qui ne sentent ni ne ressentent aucune émotion. . . . Descriptions à la façon d'un clerc d'huissier se piquant de style; royalistes en histoire, ce qui les empêche de voir clair; compilateurs achevés d'almanachs qui n'ont jamais passé pour ouvrir de vastes horizons intellectuels; disciples ou plutôt valets de chambre de Gavarni, pleins de mots cherchés au détriment de son crayon d'un *chic* dont on se moque déjà. . . ."

Champfleury will, however, most likely be remembered on account of his 'Souvenirs,' which are memories of the *vie de Bohême*, rather than from any other of his hundred books and pamphlets. From that book, too, it may come to be doubted whether the Bohemia of tradition ever really existed, after all; whether Mürger did not represent as essential and characteristic what was in truth no more than accidental in the life of which he wrote. One knows how much make-believe there was in the New York Bohemia; perhaps the Bohemia of Paris was just as unreal a country. M. Jules Levallois, who writes of Champfleury in the *Revue Bleue* of December 14, is distinctly of the opinion that it was.

— No very remarkable number of the extinct East India Company's military officers have distinguished themselves by their learning; and of these but a mere handful still survive. Of those that have passed away, several might be named as having earned a title to high praise for their achievements in letters; but conspicuously prominent among them all, if not, on the whole, preëminent, stood Col. Sir Henry Yule, whose death took place on the 30th of last December. Col. Yule, C.B., K.C.S.I., the youngest son of the late Maj. William Yule of the Bengal Army, was born at Inveresk in May, 1820. After graduating at the Military School at Addiscombe, he was commissioned in the Royal Bengal Engineers, and reached Calcutta n 1840. In 1862, partly owing to impaired health, he retired from the army, with the honorary rank of Colonel, and from that time spent many years in Italy. On returning to England, he was, from 1875 till a few months ago, a life-member of the India Council. Of his professional services, which were neither few nor unimportant, this is not the place to enter into details. In 1858 he made his first noteworthy effort in literature, as author of a quarto volume, 'Narrative of the Mission sent by the Governor-General of India to the Court of Ava in 1855.' As adding to the knowledge previously possessed of Burma, it is a work of substantial value, while its admirable pictorial illustrations afford evidence that its author's talent was wider than that exhibited by his letter-press. His next publication, in two volumes, dated in 1866, was 'Cathay and the Way Thither.' It consists of mediæval notices of China, accompanied by comments evincing immense research and erudition. In 1871 followed his new translation, with notes, also in two volumes, of Marco Polo's 'Book Concerning the Kingdoms of the East,' which, as 'The Book of Ser Marco Polo,' reached a second and enlarged impression in 1875. Eminent as was the reputation which Col. Yule acquired by his 'Cathay,' it was not only supported but enhanced by the varied merits of his reproduction and rehabilitation of the old Venetian traveller, who had been so long and so unjustly a subject of scoffing and derision. Renewed proof of Col. Yule's matchless ability as an Oriental geographer and ethnographer was furnished by his "Essay on the Geography of the Valley of the Oxus," incorporated in the second edition of Capt. John Wood's 'Journey to the Source of the Oxus,' which came out in 1872; and his memoir of its author, prefixed to the abridged edition of Capt. W. Gill's 'River of Golden Sand' (1883), has the value which attaches to everything that he produced.

— His scattered essays and criticisms embedded in the *Edinburgh Review* and elsewhere being passed by, we now come to the laborious compilation whimsically named 'Hobson-Jobson' (1886), of which, in conjunction with the late Mr. A. C. Burnell of the Madras Civil Service, he was the author. This, as its alternative title denotes, is "A Glossary of Anglo-Indian Colloquial Words and Phrases." One has only to consult at random this unique contribution to lexicography, in order to be satisfied that its execution would have been impossible but for the indefatigable exploration of countless obscure nooks and corners; a good share of its materials having been gleaned from forgotten books and pamphlets and from unprinted documents not easily accessible. Nor, on his last appearance as an elucidator of distant regions in bygone times, did Colonel Yule in the least deteriorate from the thoroughness of treatment and the wealth of recondite information which had characterized all his literary workmanship from the outset. We refer to his edition, in three volumes, of the 'Diary of William Hedges,' which had never before been published. This Diary, which dates about two centuries back, supplies a curious and interesting picture of Bengal at a period when Calcutta, even as a name, was still to emerge into existence. In addition to numerous honors conferred on him by foreign learned institutions, Col. Yule had been President of the Royal Asiatic Society, and also President of the Hakluyt Society. In requital of what he accomplished, his contemporaries acknowledged his deserts to the full. As to the future, such are the exhaustiveness and the critical exactness of his scholarship, and so nicely guarded are his conclusions, that his fame is firmly secured against depreciation, however sedulously the subjects with which he occupied himself may be investigated by his successors.

ARTHUR YOUNG'S TRAVELS IN FRANCE.

Travels in France by Arthur Young during the Years 1787, 1788, 1789. With an Introduction, Biographical Sketch, and Notes by M. Betham-Edwards. 16mo. London: George Bell & Sons; New York: Scribner & Welford. 1889. (Bohn series.)

At last, after nearly a hundred years, there is a new edition of Arthur Young's 'Travels in France.' There was certainly a demand, eager if limited, for such an edition, for the old ones were much sought after and brought high prices. The book was originally published at Bury St. Edmund's in 1792, in one volume, quarto, of viii. and 566 pages. An ill-printed edition, in two volumes octavo, appeared in the following year in Dublin. In 1794 the author published a second volume at Bury St. Edmund's, and in the same year in London a second edition of the first volume, enlarged by the insertion of the journal of a short tour in Spain and somewhat altered. These two volumes, although differing in their places of publication, form one complete work. They were sent by Arthur Young to Gen. Washington, as we know by the words "From the Author" in a large, bold handwriting, apparently that of the recipient, on the fly-leaf of each volume of his copy. This edition of 1794 was the original of the last complete English edition, which forms a part of the fourth volume of Pinkerton's 'Voyages and Travels,' published in 1809. In the British Museum there are, moreover, three editions in French and one in German.

The work in its final shape, as left by the author, consists of two parts, the first of which is a diary of his journeys in France, Spain, and Italy, the second a collection of thirty essays, or chapters, on French agriculture, commerce, manufactures, and kindred subjects, with one on the Revolution. A series of notes on agriculture in Italy and in Spain is added. Miss Betham-Edwards has ruthlessly sacrificed all the second part, with the exception of the chapter on the Revolution. She has also cut out the parts of the diary which relate to the Italian and Spanish trips of the author. By these excisions she has reduced the bulk of the book by more than two-thirds. She has retained, perhaps, what is most interesting to the general reader, but has omitted much that is very valuable to the student of the period.

Arthur Young's book is precious in two ways. Its author was an intelligent, observant traveller, and a man of the world, moving in the best company at a most interesting time. As an account of French society and manners, and of the general aspect of the country, his book is comparable to those of Dr. Rigby and of Swinburne, to the 'Tableau de Paris' of Mercier, and to the memoirs of many contemporary writers. It is the part of the book which resembles all these that we get in Miss Betham-Edwards's edition. As a scientific student of agriculture, Young was eminent in his day, and his studies of the condition of France in this respect are very valuable. As a writer on the details of administration, he is worthy of attention, for he was very knowing and painstaking. As for his general views, they were those of his age. He was fully impressed with the idea that the Government makes the people what they are, instead of holding, as we are more inclined to do to-day, that the people make the Government what it is. The truth would appear to lie somewhere between these two theories. Young's opinions on these important matters recur constantly in the diary, but are more elaborately worked out

in the second part, which Miss Betham-Edwards has omitted.

It is by singular good fortune that the 'Travels in France' has taken a prominent place in general history. A book, however excellent, on the subject of agriculture must have seemed to be destined to lie awhile on the squire's study-table, and find its way in due course from the upper shelf to the paper-mill. Most books of travel meet with a fate but little more distinguished; and such has, indeed, been the history of most of the many volumes written by Arthur Young. He travelled in England as well as in France, and published the results of his "tours" at great length; but the historian of the last century seldom pores over these. He spent something like three years in Ireland, and the account he wrote of that island is, as Miss Betham-Edwards rightly affirms, "invaluable to this day"; but it is not so constantly quoted as the book before us. Young's journeys to France, however, were made just as some of the most momentous events in modern history were approaching and taking place in that country. These events were not a little connected with the tenure and cultivation of land, and Young is, on the whole, the most competent and disinterested observer who has left an account of that cultivation.

Miss Betham-Edwards has prefixed to her edition a valuable introduction and an interesting biographical sketch. In the former she has undertaken a comparison of the state of France to-day with that which was seen by Arthur Young a hundred years ago. The progress in prosperity and happiness achieved during the century seems truly marvellous. We fear that a part of this advance is illusory. There has undoubtedly been improvement, but something must be allowed for the personality of the writers. Miss Betham-Edwards, who has been much in France, is a most kindly and genial observer. Arthur Young, on the other hand, was not over-indulgent. His book gives us the impression of its author as a self-assertive and rather combative man, interesting undoubtedly from his information and intelligence; courteous, perhaps, when on his good behavior, but not very conciliatory in his manner to strangers—the grumbling Englishman with whom all travellers on the Continent are familiar. Should we compare the France of 1789 described by Dr. Rigby with the France of our own time pictured by Lady Verney, the result would hardly be so cheering.

Arthur Young travelled a great deal on his own horse, thus seeing the various parts of France in the best possible way. He was everywhere struck with the excellence of the roads, but also with the small number of vehicles upon them, even near Paris. In the provinces this was still more remarkable. At Carcassonne, a town of fifteen thousand inhabitants, the traveller could not get any carriage at all, when the heat of the weather made riding uncomfortable. He says he believes there is in England no town of fifteen hundred people where postchaises and able horses may not be had at a moment's warning. French stables, he remarks, are covered dunghills. On the subject of the inns he is as minute as a guide-book, and much more free in his expressions of disapproval, although he likes the food better than that furnished for the same price in England.

Young's eyes are ever open to the sights of the road. In the south of France he notices many of the country girls and women without shoes or stockings, and throughout the country "women picking weeds into their aprons for their cows, another sign of poverty." "But if their feet are poorly clad, they have the *superb* consolation of walking upon magnificent causeways." Now and then we have a charming picture of rural plenty:

"The vintage itself can hardly be such a scene of activity and animation as this universal one of treading out the corn, with which all the towns and villages in Languedoc are now alive. The corn is all roughly stacked around a dry, firm spot, where great numbers of mules and horses are driven on a trot round a centre, a woman holding the reins, and another, or a girl or two, with whips drive; the men supply and clear the floor; other parties are dressing, by throwing the corn into the air for the wind to blow away the chaff. Every soul is employed, and with such an air of cheerfulness that the people seem as well pleased with their labors as the farmer himself with his great heaps of wheat. The scene is uncommonly animated and joyous. I stopped and alighted often to see their method; I was always very civilly treated, and my wishes for a good price for the farmer, and not too good a one for the poor, well received."

But the other side of the rural picture is more prominent. Young boils with indignation at the sight of waste lands in places where the proximity of markets would have made the soil worth cultivating:

"Thus it is," he cries, "whenever you stumble on a Grand Seigneur, even one that is worth millions, you are sure to find his property desert. The Duke of Bouillon's, and this Prince's, are two of the greatest properties in France; and all the signs I have yet seen of their greatness are wastes, *landes*, deserts, fern, ling. Go to their residence, wherever it may be, and you would probably find them in the midst of a forest, very well peopled with deer, wild boars, and wolves. Oh! if I was the legislator of France for a day, I would make such great lords skip again."

And the game-preserving lords were but imitating their sovereign. It is difficult to conceive of the hardships occasioned by the great preserves of the royal family, the *capitaineries*, as they were called. That of Chantilly, traversed by Young, was said to be above a hundred miles in circumference, and the inhabitants for that extent of country were pestered with game, without permission to destroy it, in order to give diversion to one man and his friends. The regulations maintained in these regions, often in the neighborhood of populous towns, or of Paris itself, were minute and oppressive. No new walls or fences might be erected, lest the game should be hindered in its attacks on the farmer's crops. Barley could not be cut before midsummer, nor the fields weeded until after the nesting season. The result was an enormous amount of game. About Montgeron, within a day's ride of Paris, there was a covey of partridges on every two acres, besides favorite spots where they abounded much more. Even deer were not uncommon; on the eve of the Revolution one was chased by the hounds of one of the princes and killed in the Rue Royale, at that time one of the outer streets of Paris.

The years of Young's travels were full of political excitement; the last of them were years of revolution. Our traveller associated constantly with people who were taking a great part in public events, dining frequently, when in Paris, at the Duke of Liancourt's table, where many deputies to the National Assembly used to meet twice a week. He attended the sittings of that body and noticed the disorder of the proceedings, the frequent interruptions by members, and the yet more dangerous interference of the spectators in the galleries, who were even known to hiss—"an indecorum," as he well remarks, "which is utterly destructive of freedom of debate." He also paid much attention to the *cahiers*, or lists of grievances, which the nobility, clergy, and people of the various provinces, towns, and villages sent to the Assembly by their deputies, and which have ever since furnished a rich store of information as to the abuses of old France and the desires of the different orders of its inhabitants. In his journeys, besides being subjected to some personal annoyances, caused by the troubled state of the times, he was thrown among many noblemen who had fled from their houses for fear of outrage, and he passed at least one burnt château. His story of confusion in Paris, of want of news, and of absence of the most elementary political training or intelligence in the country, is familiar to many readers by the quotations which historians have given from his book. Many persons will be glad to enlarge their acquaintance with it, in the little volume before us.

RECENT LAW BOOKS.

Possession, it is well known, has been for centuries one of the great battle-fields of the Roman law. The Continental treatises on this topic would make a small library. In the English and American legal bibliographies, on the other hand, one finds no mention of the title "Possession." The learning on the subject must be sought piecemeal in the treatises on Torts and Limitations, or in the books of practice. Some of the philosophical and historical aspects of this branch of the law were discussed by Mr. Justice Holmes in a chapter of 'The Common Law.' But to Pollock and Wright's treatise on 'Possession' (Oxford: Clarendon Press; New York: Macmillan) belongs the distinction of being the first and only English book devoted exclusively to this topic. This fact of itself raises a strong presumption that the English law differs widely from the Roman law in the matter of possession. An examination of the book confirms this presumption.

Mr. Pollock writes the introduction and the first half of the book, which, like all this author's writings, is eminently readable. The discussion of the "Nature of Possession" is an admirable piece of work. The chapter on the "Transfer of Possession" leaves a certain impression of scrappiness, perhaps unavoidable when so much ground is covered in so few pages. Much of value is to be found in the remaining chapter on "Possession and Title." There is, for instance, great confusion in the books generally as to the effect of the statute of limitations where B has disseised A, and, having held adversely for ten years, is in turn disseised by C, who occupies for another ten years. Mr. Pollock's solution of the difficulty is at once simple and satisfactory. C can defend successfully against A, but not against B; for A's right of entry is more, while B's right of entry is less, than twenty years old.

Mr. Wright's contribution to this composite work is a very careful examination of possession and trespass in relation to theft. The historical method has been applied, and in particular the Year Books have been exploited with great thoroughness and with substantial results. Now and then the learned author mistakes the import of the ancient sources, as on page 174, where he finds in Littleton's remark the origin of Trover. The "new found Haliday," which excited Littleton's criticism, was simply an innovation in the mode of declaring in Detinue. Again, on page 152, Mr. Wright takes exception to the doctrine that one who steals from a thief may be indicted for stealing the goods of him from whom they were first stolen. But the victim of a theft might maintain an appeal of larceny against either the first taker or any subsequent taker caught in possession of the goods. The same

rule was naturally extended to indictments, for the criminality of the alleged thief could not depend upon the nature of the prosecutor. The rule that one who steals in one county and carries the goods into another county, may be indicted in either, has a similar historical explanation, namely, that the appeal of larceny could be brought where the thief was taken with the "mainour" as well as where the chattels were stolen. The reason commonly given, that there is a fresh taking in every county, is a fiction of modern lawyers.

Now that this new field of Possession has been opened, we may hope for further explorations, the necessity for which the authors of this pioneer book would be the first to recognize. In the meantime we recommend this treatise to our readers as one of the most interesting and profitable of recent law books.

A book so generally useful as to call for a fourth edition deserved a more careful revision than 'Perry on Trusts' (Boston: Little, Brown & Co.) has received at the hands of the present editor. For, although "the results of about one thousand new cases have been embodied in the text of this edition," the omissions are many and serious. A few illustrations must suffice. The erroneous statement, in §706, that a bequest to keep a tomb in repair is a charitable trust, and therefore valid, remains without comment, although contradicted by some twenty decisions, no one of which is cited, showing that such a bequest is not charitable and therefore void as a perpetuity. The effect of a bequest "upon trust," the terms of the trust not being expressed in the will, but communicated to the trustee, is a controverted question, the trust being effectual in England, Ireland, and Illinois, but inoperative in Massachusetts. The existence of this controversy has escaped our editor. It is a common opinion that a trust for other than charitable purposes must necessarily fail if there is no defined beneficiary who can compel its performance. There seems to be no reason in the nature of things why a court of equity should prevent a willing trustee from effectuating his testator's intentions; and in several recent cases where property was given to trustees upon trust to build a monument, to purchase an advowson for such person as the trustees should designate, to maintain the horses and dogs of the testator, or to apply in masses for his soul, the courts have declined to interfere with the trustee. These cases may be thought to have an important bearing upon the pending litigation in regard to the "Tilden trust." But the reader will seek in vain for them in the book before us, although, it is fair to say, one late New York decision looking the other way is cited.

The scheme of Mr. Buswell's treatise on the 'Statute of Limitations' (Little, Brown & Co.) is an improvement upon its predecessors. If the execution is somewhat disappointing, especially in the chapters dealing with equitable claims, one must take into account the great difficulty of the subject. Indeed, so wide is the field to be covered that it is well-nigh impossible that any practising lawyer should find time to write a first-class work on limitations. This new book will doubtless prove a useful supplement to the treatises of Angell and Wood.

We have two books before us on the subject of Administration from the house of Little, Brown & Co.—'The American Law of Administration,' by J. G. Woerner, Judge of the Probate Court of the city of St. Louis, and 'The Law of Executors and Administrators,' by Simon G. Croswell of the Boston bar. Judge Woerner's work is in two volumes, and the citation by him of 15,000 cases indicates the reading he has done in the preparation of it. One must regret that he has not cited more English cases, even though their citation had led to his dropping the word "American" in his title. It would, again, probably be considered ungracious to criticise an author for giving you more than the title of his book leads you to expect, but one may well question whether some of the topics treated by Judge Woerner would not more appropriately be found in books on Property. The work is a thoroughly valuable one for both the practising lawyer and the student of law.

Mr. Croswell has managed, by using a very concise but clear style, to compress his work into a volume of 793 pages. Because of his experience in writing and editing law books, the profession would naturally expect a useful book from his hands, and that he has written such a one will not admit of question.

The founder of the Whewell Professorship of International Law in the University of Cambridge, England, desired the occupant of the chair to deal particularly with that branch of the subject having for its objects the amelioration of the hardships of war and its final extermination. In accordance with these wishes, the late Sir Henry Maine dealt with the subject of war in eight of the twelve lectures delivered by him at Cambridge on International Law, the remaining four chapters dealing with the general character of the subject. These lectures are now published by his executors (London: John Murray). As elsewhere, when not advancing a new idea, he presents his theme in such an attractive and striking way as always to interest and hold the reader. Of this character is what he has to say as to the distinction between positive law and international law. "International law," he says, "has but slender connection with it [positive law], and . . . has less analogy to the laws which are the commands of sovereigns than to rules of conduct which, whatever might be their origin, are to a very great extent enforced by the disapprobation which attends their neglect." He fully admits that international law, as the word law is used in positive law, is not law at all.

In 'Notes on the Revised Statutes of the United States' (Little, Brown & Co.), Messrs. John M. Gould and George F. Tucker give to the profession the result of labors begun in 1878. Their plan is to indicate the changes that were made in the previous law by the revision of 1874 and all statutory changes and additions since that time, and then, in connection with each section, to give the decisions relating thereto. The book is an indispensable companion to the Revised Statutes, and no lawyer can afford to be without it.

Two volumes of Mr. John D. Lawson's 'Rights, Remedies, and Practice' (San Francisco: Bancroft-Whitney Company) are now published. The work when completed will consist of seven volumes. If the remaining five are executed as well as those now published (and we do not doubt they will be), Mr. Lawson will have edited one of the most important practical works of recent times. The author designs to cover the field of American case law. His plan, as we understand it, is not to deal so much with the rationale of the law as to state briefly the results reached and to give illustrations thereof. This Mr. Lawson has done very successfully in dealing with the subjects of principal and agent, attorney and client, auctioneers, brokers and factors, master and servant, corporations, banks, railroad companies, gas companies, building and loan associations, voluntary associations, religious societies, charitable associations, partnerships, husband and wife, parent and child, guardian and ward, and executors and administrators, in the two volumes now before us.

Chaucer: The Legend of Good Women. Edited by the Rev. Walter W. Skeat, Litt.D. Oxford: Clarendon Press; New York: Macmillan. 1889.

THE valuable edition of the Minor Poems of Chaucer, which was brought out a short time ago by Prof. Skeat, has been speedily followed by an edition of the 'Legend of Good Women' at the hands of the same scholar. It is almost needless to say that the work is well done. It is amply supplied with explanatory notes which shirk no difficulties; with a glossary that omits no word that needs to be defined; and with an introduction of fifty-four pages which discusses fully the most important points connected with the poem. All the qualities, indeed, that we have learned to expect in Prof. Skeat's editing—wide general knowledge of early English literature, coupled with special knowledge of the subject upon which he is engaged, and these reinforced by the utmost care and industry—are as conspicuous in the preparation of this beautifully printed volume as in any one of the many excellent works which owe their existence to his scholarship and zeal.

In some respects the preparation of the work has been comparatively easy. In the multitude of manuscripts, as in the multitude of counsellors, there is safety; and of the 'Legend of Good Women' nine manuscripts are accessible, if we count as one the text which appears in the folio of 1532. There are therefore no such perplexing questions in connection with various readings as there would be were the authorities few, as, for instance, they are in 'The House of Fame.' The variations, in fact, between these manuscripts are on the whole so slight that it is possible to present a text of this poem which may be deemed to represent with a fair degree of certainty Chaucer's exact words.

This task has been so successfully accomplished that there can be no question that this edition will supersede all others that have been produced. Room, however, must always be given the critic to cavil, and our first objection to this text is, that it is an expurgated one and in most instances an unnecessarily expurgated one. This is something that the 'Legend of Good Women' does not require. Much has been said in the past about the distressing delicacy of Americans; but if we are to judge from the text-books of English literature prepared in England, the mother country is developing this feeling to a degree which leaves us far behind. There is nothing in this volume quite equal to the famous change made in a line of the Prologue to the 'Canterbury Tales' in the Clarendon Press edition, where "wikked sin" was carefully substituted for "concubyn." But there are some alterations and omissions that approach dangerously near it. There are signs, indeed, from these various text-books that it will soon be regarded as soiling the bloom of manly or maidenly purity to speak of a person as having been born.

But, outside of this, the excellence of the text is so great that it comes upon the reader with a sense of surprise to find so experienced an editor as Professor Skeat stumbling over and actually corrupting the following line:

"Yet hath he mad lewed folk delyte."

This he declares he cannot scan; and, to remedy the defect partially, he inserts a *the* before *lewed* without any authority whatever, but giving as an additional reason that it is helpful to the sense. On the contrary, this emendation perverts the sense. Chaucer does not

mean to say that he has made all "lewed" (that is, all ignorant) people delight—which is the meaning imposed upon the line by the introduction of the definite article—but only that he has made some of them delight. Surely, all difficulty with the scansion can be obviated by substituting for the monosyllabic form of the past participle of *make* the dissyllabic form *maked*. This is not only found frequently in the poet's writings, but occurs in this very work, and, in the original version of the Prologue, occurs in this very line.

Rarely can any exception be taken to the explanations, and it seems, therefore, a somewhat invidious task to point out the one or two places where there has been failure. The source of the word *radevore* remains as much a problem as ever, and Prof. Skeat's suggestion that it might properly be spelled *radenore*, in consequence of a possible derivation from the Greek, is entitled to one of the exclamation points with which he is wont to punctuate the views of others he cannot away with. *Arrest*, too, is very unsatisfactorily explained in the line,

"In noble corage oghte been areste."

It is the more unnecessary as it has been defined rightly by previous editors. The sense of "restraint" which the context requires, is rejected by Prof. Skeat because, he says, it does not exactly appear in Murray's Dictionary. But it has that precise meaning in the passage quoted in that work from the 'Summoner's Tale,' though it is most singularly defined there as "remaining, abiding, continuance."

Let us end up our fault-finding with an expression of dissent from some of the views expressed in the introductory part. There is a good deal said there that would meet with more consideration were it not said so positively. There is displayed at times altogether too much of the knowledge that nobody knows or ever can know. We have had conjecture advanced to the dignity of established fact in times past in discussing the life of Chaucer. Now that it has been pretty effectually cleared away in that quarter, let us refrain from applying the same methods to either the form of his works or to the time of his composition of them.

We should be sorry if anything said in dissent on particular points should be construed into a denial of the great merits of this edition, and in general of its thorough accuracy and excellence. That it will remain the standard one of the 'Legend of Good Women' there is no reason to doubt. That it will attract numerous readers to the poem itself is a result particularly to be hoped. The stories contained in it are not, indeed, representative of Chaucer at his best. He himself plainly grew tired of the work before he had half finished it, and he takes pains to let us know that he had done so. But the Prologue will always remain one of the most interesting and characteristic of his productions. In its two forms it is here presented to the reader, who can have thereby an opportunity to study the varying treatment by the author of the same subject at different times. Now that we have it, through the careful and conscientious editing of Prof. Skeat, essentially if not precisely as it came from the hands of the poet himself, and with all difficulties in the way of its fullest comprehension removed, it may well become a source of constant pleasure to even a far wider circle of readers than it has hitherto been its fortune to have.

Aspects of the Earth. By N. S. Shaler, Professor of Geology in Harvard University. Charles Scribner's Sons. 1889.

THERE is probably no American geologist at the present day who is more successful in presenting the facts of geology in a popularly comprehensible and attractive form, and at the same time keeping himself within the bounds of scientific accuracy, than Prof. Shaler. As a rule, the men who write most readily on popular science are those who have a somewhat superficial knowledge of their subject. They are not troubled with doubts as to the soundness of any particular theory or explanation of natural phenomena, but accept those found in current scientific literature without a question, provided they suit the course of reasoning they are following. Among those, however, who have so completely mastered what is known about a science that they are unwilling to accept the explanations given in text-books until they have personally tested their truth—that is, among what may be called original investigators—the number is now very small, and will constantly become smaller, of those who are qualified to write upon their own specialties for a popular audience. In the first place, it is extremely difficult for them to put themselves on the same intellectual plane with their audience—to gauge it correctly; and, secondly, in a science like geology, in which investigation is constantly modifying and controverting currently accepted theories, they are unwilling to present their explanations in the calm tone of unqualified conviction which is necessary to hold the attention of that audience, and are too apt to weary them with subtle doubts and alternative views beyond their comprehension.

To those who are familiar with the multiplicity of Prof. Shaler's scientific occupations, as Professor of Geology at Harvard College and as member of the United States Geological Survey, it is a matter of wonder that he is able to write *ex cathedra* upon such a variety of scientific subjects and at the same time make so few mistakes. It is rare that the self-confidence and versatility of mind which are necessary qualifications for such work do not, sooner or later, lead its author into some serious scientific error.

In his title to the present work Prof. Shaler was more happy than original. It is an almost literal translation of 'Der Anlitz der Erde,' by Prof. Ed. Suess of Vienna, a monumental work, giving a fundamental and exhaustive discussion of the geological structure of the earth, which, after the German method, has been appearing in parts since 1885, and is not yet completed. The American volume consists of a series of essays upon what might be considered physical geography, rather than geology in the stricter sense of the term, and is well described by the sub-title—"A popular account of some familiar geological phenomena." The greater part of it has already appeared in the form of illustrated articles in *Scribner's Magazine*. To Prof. Shaler's charming style has been added the beauty of large, clear type, heavy paper, and abundant and excellent illustrations. Among them may be recognized many of Bourne & Shepherd's remarkable photographic views of the Himalayas, probably the most perfect mountain pictures the world has ever seen, though they must have been taken over twenty years since. They are not always given a distinct local title, but are used to illustrate some process of nature which the author is describing.

Prof. Shaler's presentation of facts is always interesting, and his manner of accounting for them not infrequently possesses an originality and boldness of conception that would startle a geologist of the more cautious and plodding type. For instance, in his first chapter, on the "Stability of the Earth," he discusses the relative susceptibility to earthquake shocks of various portions of our continent, and, reasoning that since perched boulders or pinnacled rocks would probably have been thrown from their pedestals by a violent shock, their presence in any region must afford evidence that that region has been free from them in the past and may hence be assumed to be without danger from them in the future, he proceeds on this basis to define geographically those regions that may be considered exempt from danger of serious earthquakes. While some might question the stability of his premises, the practical conclusions which he draws, as to the necessity of greater care in guarding against the dangers which the character of much of our modern architecture subjects us to, are most pertinent and forcible. It is beyond the power of the imagination to conceive of the horrors that would be produced in New York city, for instance, by an earthquake shock, even of the comparatively moderate type that recently affected the region round Charleston, S. C.

One of the most interesting chapters is that on "Caverns and Cavern Life," and of the great limestone caverns of the States east of the Mississippi his experience enables Prof. Shaler to speak with great authority; but his views with regard to the probable existence in the Rocky Mountain region of great deposits of ore in caves that have been hollowed out of limestone, will hardly meet with universal acceptance among those who have carefully studied that region. In recounting the remarkable caverns that are left in lava flows by the congealing of the outer crust while the fused interior still flows on, he has neglected to mention the singular caves of this nature on the north side of the Columbia River, near Mount Adams, which serve as natural ice reservoirs, and from which, years ago, before the Alaskan ice trade was established, ice was obtained for the San Francisco market.

The chapter on "Rivers and Valleys" contains, besides its admirable description of their manner of formation, many practical hints of value to the general public, and speaks approvingly of Maj. J. W. Powell's scheme of establishing storage reservoirs in the arid region of the West, without, however, endorsing his theory that the destruction of forests produces no harmful effects on the rainfall of the country. On the contrary, Prof. Shaler agrees with the majority of geologists and physical geographers in considering these effects so destructive that some Government regulation of forests is necessary to avert the widespread disasters which must, sooner or later, result from the gradual removal now going on over vast areas. The chapter on the "Forests of North America" is one of the ablest presentments of this important subject that have yet been written.

The book closes with an interesting account of the geological origin and nature of soils, in which are pointed out some of the wasteful effects of tillage, which, combined with those resulting from the removal of forests, are slowly tending towards the destruction of the fertile soil-covering that nature provided for our continent before the advent of the white man.

BOOKS OF THE WEEK.

Alexander, Prof. A. A Theory of Conduct. Chas. Scribner's Sons. $1.
Bentzon, Th. Tentée. 2d ed. Paris: Calmann Lévy; New York: F. W. Christern.
Birney, Gen. W. James G. Birney and his Times. D. Appleton & Co. $2.
Blanchard, E. B. The Devil's Dream: A Temperance Story. Funk & Wagnalls. 75 cents.
Blyth, E. K. Life of William Ellis. London: Kegan Paul, Trench & Co.
Caylor, O. P. A Fated Promise. G. W. Dillingham.

Crawfurd, O. Sylvia Arden. Frank F. Lovell & Co.
Daintrey, Laura. Fedor. Empire City Pub. Co.
Du Boisgobey, F. Lover or Blackmailer? Chicago: Rand, McNally & Co.
Dumas, A. The Count of Beuzeval. G. W. Dillingham.
Evolution: Popular Lectures and Discussions before the Brooklyn Ethical Association. Boston: James H. West. $2.
Ford, W. C. Writings of George Washington. Vol. V. 1776–1777. G. P. Putnam's Sons. $5.
Gardiner, S. R. The Constitutional Documents of the Puritan Revolution. 1628–1660. Oxford: Clarendon Press; New York: Macmillan.
Hake, A. E., and Wessiau, O. E. Free Trade in Capital. London: Remington & Co.; New York: D. Appleton & Co. $6.
Hoppus, M. A. M. The Locket: A Tale of Old Guernsey. 2 vols. London: Richard Bentley & Son.
Keltie, J. S. The Story of Emin's Rescue as Told in Stanley's Letters. Harper & Bros.
Littell's Living Age. 5th series. Vol. 68. Boston: Littell & Co.
Loti, P. An Iceland Fisherman. Chicago: A. C. McClurg & Co. $1.
Maitland, E. The Pilgrim and the Shrine. John W. Lovell Co. 50 cents.
Milford, P. Ned Stafford's Experience in the United States. Chicago: Rand, McNally & Co.
Moorehead, W. K. Fort Ancient: the Great Prehistoric Earthwork of Warren Co., O. Cincinnati: Robert Clarke & Co. $2.
Nordau, M. Parisian Sketches. Part I. Chicago: L. Schick. 50 cents.
Powell, E. P. Liberty and Life: Discourses. Chicago: Chas. H. Kerr & Co. 75 cents.
Schaff, Rev. P. Creed Revision in the Presbyterian Churches. Chas. Scribner's Sons. 50 cents.
Seeley, L. B. Fanny Burney and her Friends. Scribner & Welford. $2.50.

Fine Arts.

KRUELL'S PORTRAITS.

At the last monthly meeting of the Century Club much interest was excited among the large number of members and guests present by Mr. Gustav Kruell's portraits of Darwin, William Lloyd Garrison, and Wendell Phillips, which were exhibited under such favorable conditions as allowed of close examination and study. Admiration for these representations of three remarkable men was surpassed by wonder as to how they were done, although on the card containing the title of each subject was plainly written "wood engraving." One thoroughly conversant with the admirable result and the stages by which it has been reached, feels some hesitancy in determining whether this should be classed as the product of a new art or simply as the old art of Bewick. If we review Mr. Kruell's progress, we shall find that his experimental steps—when the helping hand is so needful—betray the influence of the early inspirer of American wood-engravers, W. J. Linton. This was the apostolic succession of Bewick's "white line," and to this choice of example we undoubtedly owe the freedom which marks Mr. Kruell's study, as well as the exact art culture by which it has been urged. A thorough knowledge of drawing, and possibly painting, he must have possessed to have enabled him to use Linton's free treatment without losing his own identity. A portrait of Fletcher Harper, which created a stir in its day, carries us back to the time when marks of this discipleship were distinct. Here we observe the virile touch, the fluent "pure line," the general gray tone, qualified by dark shadows and courageous clips of white. These are the thumb-marks of Linton. From this point the follower gradually relinquishes the master's hand, walks alone, year by year growing in independence, daring to lay out new ways for himself, subduing his method to the utmost simplicity, concentrating more and more his attention upon portraiture, as affording elbow-room for artistic enlargement untrammelled by any other personality than his own—the whole progress vivified by the energy of enthusiasm which has helped carry his wood engraving beyond the limits of illustration into acknowledged relationship with the fine arts.

These four portraits (there are two of Darwin, a younger and an elder) are printed on a hand-press and on Japan paper. To the casual observer they appear like etchings, but examination shows them to be refined engravings, printed on translucent paper, through which the light partially shining, a shadow is thrown upon the "mount" from the engraving itself, contributing a delicious overtone, more subtile and delicate than that produced by re-inking as in etching.

Mr. Kruell's work, although diversified by all the varieties of method by which textures are created and modulations obtained, discloses other traits not so conspicuous in engraver's work. Here is perfect drawing, strong modelling, nice discrimination in textures, composition such as illumines the subject, unity that relates everything—background and drapery—to the completeness of the portrait, a sweep and largeness of treatment which hides the difficulty and labor of production, and, beyond all, a deep knowledge of, and sympathy with, the motive that quickened the life of the subject. No shade or line or wrinkle, no ascertained peculiarity of attitude or attire, but is made to contribute its full value toward setting forth the manner and soul of the man.

Look at the portraits of Darwin. In the first he appears a robust man of forty-five; the strong material of his coat, with deep wrinkles, his high shirt-collar, ample plaid neckcloth, and checked waistcoat, denoting an interest in the world's affairs and activity out of doors. The chiaroscuro has the wide range from black to white, the least possible note on these extremes, and without a hint of crudeness; the textures, the color of flesh, light-brown hair and sandy whiskers, are exquisitely felt; Darwin's large head, which easily lends itself to grotesque exaggeration, is here saved from disproportion by slightly composing the forehead with the background, the drawing depending mostly upon the shadows of the beetling brows, through which the searching eyes look out. No thought of technique or even art obtrudes itself; we contemplate with deep interest the broad, kind features of the childlike great man, and own the benign influence of the related character.

The other picture represents Darwin at seventy-two, and is taken out of doors. He wears a soft felt hat and dark circular cloak, and leans against a tree that runs up the side of the picture, with small attempt at composition, by which the effect of weariness is heightened. The face is in almost a three-quarters view, quite colorless, the beard and hair showing light in comparison. In contrast to the other, the treatment is here tender, gentle, intensely sympathetic; the line, when we examine it, is smaller, more simple and uniform; the face is not sad, but resigned; the eye no longer inquires, but answers with a look of patient waiting. We feel that his work is done; the light of it has faded from his countenance, and he abides the end. The chiaroscuro is here used to excellent descriptive effect.

In William Lloyd Garrison—a man "whom," said Darwin, "I honor from the bottom of my soul"—we have another strong subject, strongly placed and well related in tone values. Here, too, is ruggedness in treatment, just to the degree demanded by the character; and here, too, the work is done and the end near. The eyes are lit by the benevolence which animated the fight, and almost break into smiles—a battlement in peace time overgrown with flowers.

On the other hand, Wendell Phillips, the Damascus blade of the anti-slavery ranks, polished in dress and deportment, is not only so set forth as a portrait, but is so expressed in Mr. Kruell's technique. While each of these pictures, in its way and in accordance with its subject, is a masterpiece, this last one is preeminently a masterpiece as catching the elegance and refinement of the silver-tongued speaker. By a happy accident of the original photograph, the characteristic pose and glance exactly match Lowell's description of Phillips in 1846:

> "There, with one hand behind his back,
> Stands Phillips buttoned in a sack,
> Our Attic orator, our Chatham;
> Old fogies, when he lightens at 'em,
> Shrivel like leaves."

The qualities we have here attempted to set forth, the evidences of broad culture, the command of the given means, are such as we seek in the best painters' work, and until such art has become more widely known and has been awarded its special place, it is by painters' work that its standing must be determined. Certainly we may look in vain among other graphic arts for anything comparable with these portraits. Elsewhere a manner interposes between our intelligence and the object portrayed; exquisite lines demand admiration, inane scratches pique curiosity, or opaque tones limit our interest. But here we dwell upon the intelligences represented, without thought of the mode of production; we look upon absolutely human faces and into human eyes.

Shoulder to shoulder, in this development, with the artist of whom we write, are an increasing phalanx, now represented by Kingsley and Closson in landscape, French and Miss Powell in figures, all moved by one spirit, in their various ways, to set forth Bewick's art in this new field, where, urged by the momentum of a hundred years' experience, strengthened and refined by improvements in printing and material, with the "Japan proof" added, it must continue to grow and multiply testimonials to its excellence such as shall make for it its own host of admirers. This is the necessity of each new art expression, and there is no reason to fear the result as regards this one.

VOL. L.—NO. 1283 THURSDAY, JANUARY 30, 1890. PRICE 10 CENTS.

Robert Browning.

Browning's New Poems, *Asolando: Fancies and Facts*, bound in Persian silk, from designs by Mrs. Henry Whitman, $1.25. In crown 8vo form, $1.25. [*Fifth Edition.*]

Also, a Revised Issue of the *Riverside Edition of Browning's Poems*, embodying changes just made in last London Edition. 6 vols crown 8vo, $ 0.00; half calf, $18.00.

T. B. Aldrich.

Wyndham Towers: A Narrative Poem of the time of Elizabeth. Artistically bound. Crown 8vo, $1.25. [Third Edition.]

"At once the author's masterpiece, and in some respects the most noteworthy contribution to American poetry for many years."—*The Critic (New York).*

Jane G. Austin.

Standish of Standish. A Story of the Pilgrims. $1.25. [Third Edition.]

"It is relief inexpressible, and joy, too, to the reviewer's heart to find in the midst of all the highly seasoned novels of the present season a book so finely wrought, so clearly cut, and so powerfully carried through from beginning to finish as this. The beautiful directness and purity of its style, the splendid picture-events in which great men form part and are not made small, the pathos with which that old colony life is invested, all unite to demand from the judging class of readers such praise as few novels of the year deserve."—*Boston Advertiser.*

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the publishers.*

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

AMONG CANNIBALS.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

The London Spectator.

"His observations are interesting, and he has a very pleasant and modest style of narrative, so that the book is as agreeable as it is instructive; in short it is one of the most complete of its kind in all respects, and a worthy record of steadfast enterprise. We can infer from the style and fine temper of his narrative that he belongs to the higher class of scientific explorers, who think far more of their work than they do of themselves."

The London Athenæum.

"His narrative is of great value and interest, describing, as it does, the intimate daily life, with some real glimpses into the thoughts and feelings of a race of men still in a most 'primitive condition."

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00, *net.*

"The first satisfactory popular account of the American Railway. It is a striking example of thoroughness and judgment. In the general design, in the selection of writers, in the illustrations, and in the arrangement of the matter, the book is a model."—Christian Union.

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo. $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—N. Y. Observer.

SAID IN FUN.

By PHILIP H. WELCH. With preface by ROBERT GORDON BUTLER. With many full-page illustrations by Rogers, Attwood, Bush, "Chip," Frost, Gibson, Herford, Kemble, Mitchell, Opper, Sheppard, Smedley, Snyder, Sterner, Taylor, Van Schaick, and Woolf. Square 8vo, $1.25.

The Boston Journal.

"There is not a pointless jest in the whole collection, and the pictures are abundant and of capital quality. The work of the artists has been entirely a labor of love, for all the profit from the copyright goes to the fund for Mr. Welch's family. Whoever buys the book, therefore, not only secures a copious equivalent in wholesome, clean, genuine 'fun,' but he also contributes something to the needs of the family of one of the gentlest, truest, and best-loved men in newspaper circles, whose death has been widely deplored."

A Theory of Conduct.

By ARCHIBALD ALEXANDER. 12mo, $1.00.

Professor Alexander's book contains a very complete and seaching examination of the various ethical theories and systems, together with the positive statement of the author's own doctrine, which finds the ethical impulse essentially religious.

English Lands, Letters, and Kings.

By DONALD G. MITCHELL. 12mo, $1.50.

"These chats make a most charming verbal incursion into England's past, from the beginning of English letters to the revels of Kenilworth."—Philadelphia Times.

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"As a statement of the essence of Tennyson's poetical art, the book has no successful rival."—Boston Beacon.

"The entire volume is one which ought to be enjoyed by every lover of English literature."—Philadelphia Bulletin.

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"The stories will take an enduring place in literature, both because of the exceptional interest of their matter and the rare charm of the manner in which they have been given to the public."—Boston Beacon.

*** For sale by all Booksellers, or sent, post-paid, on receipt of price by the Publishers,*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York.

The Marriages of the Bourbons.

By CAPTAIN the HON. D. BINGHAM. With Illustrations. 2 vols., 8vo. $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature, and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

Acrobats and Mountebanks.

By HUGUES LE ROUX and JULES GARNIER. Translated from the French by A. P. Morton. With 233 illustrations. Square 8vo, cloth, $6.00.

"The handsome book should be pleasing to all who are interested in the topic it discusses. It will be found full of all sorts of curious information. . . . It abounds in woodcuts of the most graphic and varied sort."—*The London Globe.*

Our Home in Aveyron.

WITH STUDIES OF PEASANT LIFE AND CUSTOMS IN AVEYRON AND THE LOT. By G. CHRISTOPHER DAVIES, Author of 'Norfolk Broads and Rivers,' and MRS. BROUGHALL. 8vo, with numerous full-page illustrations, cloth, $6.00.

"A simple and pleasant book of studies of French peasant life and customs. . . . The photographs by which it is illustrated are admirable, and bring South-Central France most excellently before the reader."—*Athenæum.*

Hazell's Annual, 1890.

A Cyclopædic Record of Men and Topics of the Day. Rewritten to date. Contains over 3,500 Original Articles by Eminent Specialists on every question now before the public. Edited by E. D. Price, F.G.S. 12mo, cloth. $1.50.

"An extraordinary amount of information at a low price. . . . We can imagine few volumes more useful to place on the table of the reading-room of a public library or of a mechanics' institute."—*Academy.*

Whitaker's Almanac for 1890.

Containing an account of the astronomical and other Phenomena, a large amount of Information respecting the Government, Finances, Population, Commerce, etc., etc., throughout the World, etc., etc. 12mo, half roxburgh. $1.00.

Free Trade in Capital:

OR, FREE COMPETITION IN THE SUPPLY OF CAPITAL TO LABOR AND ITS BEARINGS ON THE POLITICAL AND SOCIAL QUESTIONS OF THE DAY. By A. EGMONT HAKE and O. E. WESSLAU. 8vo, cloth, $6.00.

Laugh and Learn:

The easiest book of Nursery Lessons and Nursery Games by JENNETT HUMPHREYS. Profusely Illustrated by Engravings. Square 8vo, cloth, $1.25.

"'Laugh and Learn' instructs and amuses; it is the very book for a wet day in the nursery, for besides solid instruction, admirably given, it contains numberless games and contrivances, with useful and amusing illustrations. The musical drill is remarkably good."—*The Athenæum.*

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD,

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 30, 1890.

The Week.

THE McKinley Administrative Customs Bill, which passed the House on Saturday, is, we think, the wickedest measure that has passed that body since the Fugitive Slave Law. Like that act, it abolishes trial by jury. It goes one step further, for it takes away the citizen's right to any kind of trial in a court of law on a question of fact respecting the disposition of his property. When this measure, or one substantially like it, was before the Senate on the 18th of March, 1888, Senator Edmunds of Vermont offered an amendment giving the importer the right of appeal to the Circuit Court of the United States, and upon this motion he said:

"I must ask the indulgence of the Senate for a moment, because the amendments which I have proposed to this section are, in my opinion, extremely vital and important to its being made capable of standing the test of any kind of constitutional validity.

"As the section now stands, the decision of the appraisers as to the identity of the goods, whether falling under one section of the law or another, or whether the law they apply to them has been repealed or not, is absolutely final. Their decision as respects the *value* of the property, which is within their jurisdiction as appraisers, *may be made final.* We all understand that. But I have never yet heard of a law, or of a court that upheld a law of any such nature, that authorized any executive officer *to possess really the whole taxing power of the country*, which the Constitution imposes on Congress. Congress must select the objects of taxation and describe them. The executive must execute that act of Congress upon the things described and not upon something else. When they have found the things described, then the law-making department may repose in them the final judgment as to *how much they are worth*, and then the law places the rate to be affixed to that valuation.

"Now, this section as it stands, I say, leaves to the final decision of the appraisers every question of fact concerning the goods submitted to them, whether they fall under one law or another law; whether they are, for instance, silks or woollens; whether they are cottons or leather. . . . You have got, therefore, as I suppose, a 'case,' in the language of the Constitution, in a court of justice of original jurisdiction, in which that court has no jurisdiction whatever over any question of fact whatever—which is ridiculous and absurd. There cannot be a case pending, a controversy, in a court of original jurisdiction, without one party, or the other, or both parties being entitled to prove the grounds upon which they invoke the intervention of the court and its judgment on the facts as they may be found."

This bill is fraught with more damage to the commerce and prosperity of New York than any other that has been before Congress in twenty-five years. Yet it was a Senator from New York (Mr. Hiscock) who undertook to answer Mr. Edmunds, by saying that the appraisers never would decide that woollens were silks, or that cottons were leather, and that therefore no wrong would be done and no constitutional guarantee would be infringed. To him Mr. Edmunds replied in these words:

"It is always interesting to hear Senators who have their hearts set on accomplishing a given purpose intimate that they do not care so much about the Constitution, and express the hope and belief that the Constitution will never be found to stand in the way of doing anything that they believe to be for the public good, and that no court can be got to so interpret that Constitution or a law as to deprive the sweet will of the people, expressed through constitutional channels, of the power of doing exactly what they want to do. That is not my way of reading the Constitution."

The bill is a measure to put the importing business in the category of crimes, and then to deprive the importer of the protection of the judicial tribunals of the country. Tariff legislation has got into such a snarl by reason of the quarrels of the protected classes among themselves, that it is very doubtful whether any duties can be augmented. But if new difficulties can be put in the way of the importer, that will answer the purpose. Moreover, if the decisions of courts can be eliminated from customs administration, it will be easier to carry out the new policy of increasing duties by Treasury decision, as was done in the worsted case and in the hat-trimmings case. And this wicked and unconstitutional measure is passed at the very time when we are protesting against the exclusion of our pork from Germany and France by their Treasury decisions. What shall we have to say if they in turn adopt the McKinley bill, and rule out everything that we have to sell by the neat device of appraising boards from whom no appeal can be taken?

The subsidy-beggars were on hand at Washington last week, and all of them had much complaint to make about "tramp steamers." A tramp steamer is any steamer not running at regular and stated periods on a particular line, but taking cargo wherever it is offered. All, or nearly all, sailing vessels accordingly are tramps, since they habitually take cargo where it is offered, carry it to its destination, and then pick up another and carry that, and then another, and so they go on tramping around the world. Really any steamer is a tramp that is competing with *us*. If we can give him a bad name, and create a prejudice against him, so much the better. If we can liken him to a footpad who goes through the country doing no work, sleeping in barns, robbing henroosts, and frightening the farmers' wives, we may induce ignorant people who are poorer than ourselves, to contribute something out of their taxes to help us to compete with the tramp. Reflecting people will, perhaps, be able to discern a slight inconsistency in the argument which begins by asking subsidies to furnish facilities for ocean commerce, and ends by complaining that we have too many facilities now. Tramp steamers are odious for the very reason that they furnish these facilities. Another inconsistency may be detected in the ingenuous statement of Mr. J. M. Lachlan, of the Brazil Line, that his company has not made a cent during the entire period of its existence, but that it has refused $43,000 tendered to it for carrying the United States mails during that time. A company that throws $43,000 over its shoulder ought not to appear before Congress *in forma pauperis.*

Every man who goes to Washington to get himself billeted on the taxpayers has a neat demonstration in his pocket to show that what he wants will not cost the people of the United States more than two or three cents per head, and that therefore his demand is quite reasonable. Even the Sugar Trust are prepared to show that the duty on refined sugar is a mere flea-bite to each person, and not worth making a fuss about. And now come the quinine-manufacturers, or the *Tariff League Bulletin* for them, showing in the last number of that paper that a duty of 20 per cent. on quinine would be only a trifle to each person in the United States, supposing them all to have chills once a year. "Few sick persons," it says, "take so much as one ounce avoirdupois of quinine, while the average for the whole population is only 28 3-10 grains; even if an ounce of quinine were taken at a cost of 31½ cents, and the sick man paid a duty of 20 per cent., it would be only 6 3-10 cents." The argument made by the high-tariff organ in favor of a reënactment of the "blood tax" is not very hearty. Indeed, it reads like the appeal of those Italian beggars (in the good old times of Pius IX., of blessed memory) who used to assail all persons indiscriminately at the doors of churches, simply in the way of business, offering to show the most attractive sores and the most engaging deformities on the chance of there being somebody in the crowd who did not understand the game. The organ may as well spare its breath. The blood tax will not be reënacted even at the low cost of 6 3-10 cents for every victim of the grip.

The brutality which the spoils system engenders among its advocates, upon which we have so often commented, finds a fresh and striking illustration in the latest attack upon the Civil-Service Commission. The efforts by which the spoilsmen endeavored to prevent an honest and faithful man from getting employment, though he had been in the public service for twenty years, and had a family dependent upon him for support, were worthy of savages. The man's only offence had been that he had, under official compulsion, given evidence that his superior officer was unfaithful to his public trust. The final attempt of his pursuers to bring discredit upon the Commission for their manly course in getting employment for him, has led to an exposure of the whole case, which is a valuable object-lesson in politics.

The report which Mr. Roosevelt has made, to his associates on the Civil-Service Commission, of his inquiry into the conduct of the officials of the New York Custom-house in regard to political contributions during the last Presidential campaign, is a very interesting document. He found that in the

Naval Office, under Col. Burt, the law prohibiting political assessments "was observed absolutely, both in letter and in spirit"; that, so far as he could find out, "there were no collections made for political purposes in any shape or form, and nothing like political coercion was tolerated; each employee was left entirely free to contribute to whichever political party he desired, or not to contribute at all if he did not wish to. In other words, the subordinates were treated as American citizens ought to be; they were required to do their full duty to the Government, and, this done, were left free to exercise their own judgment in political matters." In the Collector's office, under Mr. Magone, there were indirect and apparently general efforts made to evade the law, but not always successfully. There was no coercion, and no evidence that the Collector had knowledge of what was going on. In the Surveyor's office, under Mr. Beattie, contributions were universally levied, and with coercion upon Republican clerks, if not with the knowledge of Mr. Beattie, at least without interference on his part. "Such widespread and far-reaching evasion and violation of the law," concludes Mr. Roosevelt, "speaks but ill for the vigilance of those whose duty it was to see it enforced. The contrast in this respect between the Surveyor's office under Mr. Beattie and the Naval Office under Mr. Burt reflects credit on the latter and does not reflect credit on the former." Yet President Harrison, solemnly pledged not only to uphold the Civil-Service Law, but to regard "only the interests of the public service" in making removals, removed Col. Burt without even ordinary courtesy, though he had spent a lifetime in the public service, and he gave his place to a politician as a reward for political activity.

The absurdity of Senator Blair's plea for Federal aid to education in the South on the ground that the South expends only $1 per capita upon schools to $3 at the North, is shown by the fact that Vermont does not expend one-third as much for each child of school age as Massachusetts, because of the differences in the cost of systems between a State with but two places having over 10,000 inhabitants and a State where the greater part of the people live in cities and large towns. It only remains to show, as the report of the Commissioner of Education just issued enables us to do, that there are Southern States which already expend as much proportionately as the Northern States with which they should be compared. Mr. Blair's own State of New Hampshire had 346,991 people by the last census, and Florida 269,493. New Hampshire's school expenditure in 1888 was $686,491. A corresponding ratio for Florida would have been about $525,000, and the actual expenditure was $484,110, the difference being more than accounted for by the fact that New Hampshire has three times as many cities and large towns as Florida. Maine has 648,936 people, and West Virginia 618,457. Maine's expenditure was $1,238,898, and West Virginia's $1,234,578, a slightly larger ratio for the Southern State. Vermont has 332,286 inhabitants and Texas 1,591,749, or a little more than four and a half times as many. Vermont's expenditure was $650,392, and that of Texas $2,778,172, or nearly four and a half times as much. In other words, a number of the Southern States already expend as much proportionately upon schools as do Maine, New Hampshire, and Vermont, and the rest of them are rapidly attaining the same level. One might as well, therefore, talk of Federal aid to New England as to the South.

Mr. Saxton has consented to three amendments of his ballot bill, all of which are in the nature of concessions to Democratic demands. The first provides for grouping the names of all candidates by parties, rather than by offices, the names of each party's nominees to be placed in a separate column, with the party title at the head. By the side of these parallel columns there is to be left a blank column in which any voter may write or paste the names of candidates for whom he wishes to vote. The second amendment provides that the voter shall erase the names of all candidates upon the ballot save those for whom he wishes to vote. For some inscrutable reason there are Democrats who think this method more "constitutional" than that of marking with an X the names of the voter's choice. It seems to us much more likely to cause delay and confusion, for, in the hands of an illiterate voter, the erasure of a lot of names in several closely printed columns is a far more difficult task than the simple marking of a portion of the names with a cross. The third amendment provides for the issuing of a blank ballot, one column wide, in cases where no nominations have been made, upon which voters may write or paste such names as they choose.

The first of these amendments is the one which will excite most discussion, and it will call forth some adverse comments from the friends and advocates of the reform. Under the Australian system the names of the candidates are placed in alphabetical order, under each office, and this method is followed in the English and Canadian systems and in the new laws of Massachusetts, Montana, Minnesota, Rhode Island, Wisconsin, Tennessee, and Kentucky, the politics of each candidate being indicated after his name. Under the Belgian system, which was an outgrowth of the Australian system, and was adopted in 1877, after the latter had been tried with such complete success in England, the names of candidates are grouped by parties, and this method is prescribed in the Indiana and Missouri laws. The objection to it is that it is in the interest of strict party voting, thus acting as a check upon complete independence of action by the voter in marking his ballot. There is undoubtedly force in this objection.

There is a curious outbreak of zeal in both houses of the Legislature in favor of appointing women as deputy factory inspectors. Four bills upon the subject have already appeared, two in the Senate and two in the Assembly. The most elaborate and in many respects the most objectionable of the series is fathered by Senator Fassett. This bill furnishes a striking illustration of cumulative folly in legislation. In 1886 a law was passed to regulate the employment of women and children in manufacturing establishments; and to execute the provisions of this law the Governor was authorized to appoint a Factory Inspector, at a salary of $2,000 a year. This Inspector was to be allowed one assistant at a salary of $1,500 a year, and these two were to be the sole executors of the law, and were allowed only $2,500 a year for expenses. In 1887 an amendment was added giving the Factory Inspector power to appoint eight deputy inspectors, at a salary of $1,000 each. Last year a bill supported by Senator Fassett was passed authorizing the appointment of six deputy female inspectors, but for some reason the power to appoint them was conferred upon the Governor instead of upon the Factory Inspector. When the bill reached the Governor, it was discovered to be defective, either because of a clerical error or otherwise, for while it gave the Governor the power to appoint, it left the power of removal with the Inspector. The Governor, therefore, vetoed it.

Senator Fassett's present bill provides for the appointment by the Governor of eight deputy female inspectors, at a salary of $1,000 a year, and gives him the power of removal also on charges preferred by the Inspector. Why the power of appointment and removal should be changed from the Inspector to the Governor is the most inexplicable feature of this bill. The same section which gives this power to the Governor in reference to the women deputies leaves it with the Inspector in reference to the men deputies. What reason is there for giving it to the Governor in either case? The Inspector is the superior officer of the deputies and must be held to account for their conduct. If he cannot be trusted to make suitable appointments, he should be removed from the office, but so long as he is allowed to remain, there can be no excuse for taking such a power as this from him. Another objectionable feature of Mr. Fassett's bill is the extension of the scope of the law to "mercantile establishments," giving the Inspector and his deputies jurisdiction over "any place where goods, wares, and merchandise are offered for sale and wherever five or more persons are employed." The possibilities for pernicious meddling and "strikes" thus opened would be boundless and intolerable. There would be a call for even a larger number of deputies than is now demanded in a bill which Mr. Brown has introduced in the Senate and Mr. Duffy in the Assembly, which provides for twenty-eight deputies, ten of whom shall be women, and all at a salary of $1,000 a year. This is simply a proposal to add $20,000 to the salary list of the Inspector's force. Nothing like such an increase is needed.

The editor of the *Times* pronounces the Fair Bill constitutional. "We have not the least doubt," he says, "that the proposed measure is entirely constitutional, and really in no need of defence on that ground, and that it would be so held by any judicial tribunal." Now, this would be entirely satisfactory if it were not that his decisions have been frequently reversed by the courts of this State. It is true he has also frequently reversed theirs, but they have control of the Sheriff and the militia, and can, therefore, get their judgments executed, which he cannot. Hence the public is quite justified in remaining in a state of suspense about the matter. Indeed, he admits that the case is "something exceptional," so that his previous rulings will not cover it. We, therefore, take the liberty of submitting to him this view, for which we ask his patient consideration: If there were no doubt about the constitutionality of municipal assistance to an international fair, the city could sell bonds and give the proceeds in cash to the Commission to spend as might be necessary, could it not? It is because there is doubt, that the expedient of buying lands for park purposes and then giving the use of the land to the Fair, has been resorted to. But everybody knows that the city does not need any additions to its parks. It has more parks now than it can lay out and keep in order. Therefore the purchase of park lands is an undisguised pretence or subterfuge. What the courts will be asked to decide is, whether the Constitutional restrictions can be got rid of by pretence or subterfuge, because if they can they are worthless, and need further amendment. Many good lawyers think they cannot, and the question will be tested shortly. It will require great courage in any judge to do his duty in the matter, especially if he should be asked for an injunction, for he will certainly be bombarded with abuse, and denounced as that vile thing, "an enemy of the Fair"; besides being a Judas and a Benedict Arnold.

A meeting of the Woman's Educational and Industrial Union of Buffalo was held a few days ago to promote the passage by the Legislature of a bill requiring the employment of at least one educated woman physician in each State institution for the insane, where insane women are received for treatment. The State has given legal sanction to the practice of medicine by women, and public opinion fully approves this policy. The question here presented is not whether women are entitled to employment in the State hospitals, but whether women patients are entitled to treatment at the hands of their own sex, under the supervision which the law establishes for the care of the institutions. We do not see how two opinions can be held on this subject, and it appears that in nine States where the experiment has been made the opinion is pretty nearly unanimous that the woman physicians should be employed in such institutions. A woman physician has been employed in the Willard Asylum in this State during the past five years, at the instance of the Superintendent, who writes in terms of high approval of the practice. A woman physician has been in charge of the female department of the Norristown, Pa., Hospital for the Insane during ten years, having one thousand women under her care. We can hardly doubt that the bill will be favorably considered by the Legislature. After it shall have gone into effect, the public will wonder why any different system ever prevailed.

The Samoan treaty was published several days ago, and has attracted considerable attention in Germany and England, but scarcely any in this country. The reason is, that Germany and England have more interests in Samoa than we have, although theirs are not great, because the islands themselves are of trifling importance except as stations or stopping-places in the South Pacific. We have little need of stopping-places there because we have scarcely any shipping. This is proved by the fact that, although we have had the right to establish a coaling-station there for fifteen years, we never thought of availing ourselves of it until we got into a row with Germany there. What the row was about not more than half-a-dozen people can now tell. Not even the bumptious editors who fought so valiantly for our rights last year can tell without referring to their files, and if they were to do that, nobody would read the stuff now. The influenza microbe can "give points" to Samoa as a matter of popular interest in this country, if not in Germany as well. Very likely Bismarck is as glad to "get out" as we are. The cable reports that public opinion in Berlin considers the treaty a "German retreat." We hope that this phrase does not imply an American advance.

The New York *Times's* London correspondent is determined to have the Bank of England issue £1 notes payable in silver, whether it is authorized by Parliament to do so or not. His reason is, not that he has any particular views on the subject of bimetallism, or on the convenience of small notes for purposes of retail trade, but because he was the first one to make the announcement. As a good journalist he is bound to see the thing through. Although everybody else is waiting for Parliament to amend the bank charter, he is for acting at once. There is nothing like consistency. If you have said that the moon is made of green cheese, always stick to it. That England will issue £1 notes before long is highly probable. That they should be silver notes of full legal tender is next to impossible. The recent advance in the price of silver in London is due solely to an increased demand for remittances to India.

The famous Danish Minister, M. Estrup, has dissolved the Folkething, or Chamber, a month before the legal limit in order to be able to discuss the budget with a new Legislature, before the beginning of the financial year, April 1. M. Estrup occupies a position such as no minister in a parliamentary country has ever occupied before. He has for fifteen years held his place against a majority in five successive Chambers, each of which has refused to vote his budget, but he has gone on and collected the taxes and spent them just the same, having the King and the army at his back. This extraordinary state of things is due to the fact that the voters always send up large Radical majorities, while the Court is rigidly Conservative, and insists on keeping a Conservative Ministry in power, and relies on the popular attachment to the royal family to prevent any open resistance to the unconstitutional régime. The majority would, it is well known, make short work of the army and navy, and many of the more expensive offices of State, and probably cut down the civil list of the Crown. That M. Estrup expects the new Chamber to be much more tractable than the present one, is hardly probable, but, like most men in trouble, he thinks any change may be in some degree for the better.

The Spanish Ministerial crisis appears to have been partly manipulated and partly natural. Sagasta is the shrewdest politician that Spain has known in many a day. He was nothing loath to secure a reorganization of his Cabinet, and the easiest way to bring this about was to have all the Ministers resign and give him a clean slate. There can be no doubt, either, that he was sincerely desirous of placating the powerful dissident factions of his own party by giving them representation in the Cabinet, and that their obstinate insistence on their own terms was a real disappointment to him. Then came the pretence of withdrawing his own personality, and the attempt of Señor Martinez, President of the Chamber of Deputies, a very respectable and inoffensive Liberal, to form a Ministry. This was predestined to failure, and was probably meant only as a sort of object-lesson to the recalcitrant Liberals, to show them that if Sagasta could not lead, no one could. All this, with the subsequent prompt success in forming a Cabinet as soon as this formality was out of the way, and the Queen had asked Sagasta again to try his hand at it, betrays the deftness of the political manager. But there are also fixed elements in the situation which play their part in these changes, and which foretoken the speedy failure of the new Cabinet. The Liberal majority cannot be counted upon for the most important measures to come before the Cortes—the budget and the bill for universal suffrage. These Government projects will probably not be killed outright so much as indefinitely postponed. Yet Cánovas and the Conservatives can do nothing with the present Chamber, and, as Sagasta cannot manage it, everything points to a vote of temporary credit, the dissolution of the Cortes, and a new election, which will be contested on the main issues now before the country, and which will yield a positive and working majority on one side or the other.

M'KINLEY'S BRUTAL BILL.

From the beginning of our Federal Government under the Constitution down to the repeal, in 1874, of the customs moiety laws and the extermination of custom-house spies and informers, an intentional undervaluation in even one line or one item of an invoice—though the fraud infected not more than five dollars' worth of merchandise—involved a confiscation of the *whole* invoice, even if of $1,000 or $50,000 in value, provided the payment of tax-money required by law was thereby evaded. The law of 1874, pushed forward by Bayard and Casserly, declared the forfeiture should only cover the articles tainted by the fraud. The old law of 1863 denounced, be it remembered, an undervaluation proved to have been "knowingly" made. But the proposed Treasury-McKinley bill to "*simplify*" the collection of taxes on imported merchandise declares, in its seventh section, that on consigned goods (never sold or bought, and therefore having no value fixed by selling and buying) the person making entry shall not, on his entry paper, add to the invoice value in order to make dutiable value. Why not? The importer of *purchased* goods can make such addition if he has reason to suspect that the Appraiser will report a dutiable value greater than the invoice value. Is it to stop consignments to our ports by foreign manufacturers? Why endeavor to do that?

The McKinley bill then declares that, if the appraised value (which is the dutiable value) shall exceed the invoice value more than 20 per cent.—that is, if the consignor and appraiser differ by that percentage—"such entry may be held to be presumptively fraudulent, and the Collector may seize such merchandise" (a legislative hint to seize), and, on trial in court, the forfeiture *shall* be adjudged unless the claimant "shall rebut such presumption by sufficient evidence." Bear in mind that the 20 per cent. difference is not only to be taken as presumptive evidence that the maker of the invoice told a falsehood therein, but that the falsehood was uttered knowingly, intentionally, and with a guilty purpose to cheat the Government.

But that is not all: the forfeiture is, by Mr. McKinley, made to cover the *whole* of the merchandise in the package in which is the infected article. Worse even than all that: the importer cannot enter his merchandise, valued (we will assume) at $10,000, without paying, let us say, 60 per cent. tax, or $6,000. If appraised at 20 per cent. more than $10,000, he must then pay as regular tax $7,200, together with a penalty of $2,400, making $9,600 as tax, and then lose *all* his merchandise besides. The customs tax becomes, on entry of the merchandise, a personal debt to the United States, which the importer can be made to pay by suit, whether or not his merchandise is confiscated. The regular tax, the penalty tax, and the confiscation are each made cumulative by this McKinley plan to collect protective taxes.

Even more monstrous is the ninth section of this McKinley bill, which declares that if anybody shall make, or attempt, an entry by a *false* paper, or a *false* statement, or any *false* practice, then all that is in the package, or its value, *shall* be confiscated. The court has no discretion. It is not even clear, from the Treasury-McKinley language, that an attempted evasion of a tax need be proved by the Government. Certainly no proof of actual *intention* to defraud is necessary. It will be enough if the paper, or statement, or practice be merely false in *law*. The real although concealed purpose seems to be a sly repeal of an important part of the sixteenth section of the law of June 22, 1874, which compels the court to require the jury to find whether or not the falsehood alleged was "with an *actual intention* to defraud the United States." That section was enacted to put a stop to confiscations on what lawyers call "presumptive knowledge" by an importer that he did something false. Mr. McKinley endeavors to condemn an importer to State prison, with a forfeiture of his property, if he declares a falsehood in his invoice, or at a custom-house; and Mr. McKinley's language implies that an executive decision or opinion that a falsehood has been declared, is, by the device of presumptions, to control the judicial power. He uses the phrase "presumptively fraudulent." He applies it to an invoice value less by 20 per cent. than an appraiser's valuation.

Fraud should contain, as we think, three ingredients, which are deceit, actual intention to deceive, and an injury by that deceit. It should exclude mere ignorance and negligence and an honest difference of opinion. But Mr. McKinley condemns the maker of an invoice as guilty of a "presumptive" fraud on the customs revenue if the value declared in the invoice is less, by more than 20 per cent., than the value which an appraiser says is dutiable value. It would be much the same if he were to introduce a bill to eliminate intention to defraud from a definition of the alleged Silcott forgeries, and the crime on which Silcott's extradition is to be asked. What he really endeavors by his bill to punish by imprisonment and confiscation is an insertion in an invoice of a value less by 20 per cent. than another and a different value, which is dutiable value, or appraised value, even although the invoice was made abroad in perfect good faith. The motive is to deter a foreign manufacturer from sending to this country, on consignment, things which people wish to buy. Mr. McKinley carries his deterrent legislation, in the interest of "protection," so far that he puts importers of such consigned goods outside of the pale of humanity.

MORE MUTINY AMONG THE PROTECTIONISTS.

It must be with feelings of profound gloom, if not of complete despair, that sincere protectionists contemplate the growing movement among Republicans for free raw materials. The proper way to deal with the malcontent element of course would be to read it out of the party, but, as this would unfortunately result in driving the party from power, it cannot be safely followed. In fact, it has become necessary to resort to the humiliating step of imploring those who are experiencing an eclipse of faith to adhere to the old standards, for fear that the "American system," the product of so much careful calculation and the theme of so much eloquence, may suffer an entire collapse. Yet even here the difficulties seem almost insuperable, for the disaffected are disposed to maintain that they must have free raw materials or be ruined, and to insist that their ruin is not in accordance with the true theory of protectionism.

A striking instance of this alarming tendency is afforded by the utterances of Mr. P. L. Moen of the Washburn & Moen Company of Worcester. He declares his unalterable devotion to the "idea of protection," but protests that that idea is to protect the whole body of American workingmen, and "not to protect manufacturers in one section of the country from the competition of those in other sections." He asserts that the makers of Bessemer steel in the West obtain their ores near at hand, and thus have a permanent protection in the freights which Eastern makers have to pay both upon their ores and their products. The addition of duties upon foreign ores constitutes, therefore, an unjust discrimination against the East, which can be remedied only by allowing that section to import raw materials free of duty.

However plausible Mr. Moen's argument may seem, it is obvious upon a little reflection that it involves a principle inconsistent with genuine protectionism. He is especially interested in ore as his raw material, but his principle applies to all materials that are used in any manufacturing process. The cotton-manufacturers of New England can claim with equal force that they must have coal and machinery duty free, or there is an unjust discrimination in favor of Pennsylvania and the South. The foundrymen make the same claim as to pig-iron, and the shoemakers make like claims as to linen thread. The builders will require free lumber and cement, the brass-manufacturers free copper, the carpet-makers free wool, and even the poor needlewomen may feebly cry for free thread and free needles.

Mr. Moen's claim is hostile also to another of the fundamental tenets of protectionism, the "home-market" doctrine. If he and other manufacturers in like circumstances are allowed to send vast sums of money out of the country on the pretence of obtaining free raw materials, it is obvious that this money supports foreign producers and laborers instead of our own, and is therefore expended to the disadvantage of American industries. How can Mr. Moen profess to be desirous of protecting American workingmen while he is guilty of such practices as these? If he is getting his ore from abroad while there remains an American mine unworked or an American miner unemployed, he is a traitor to his cause and to his country. If such is the case, it is a conclusive proof that the duty upon foreign ore does not afford sufficient protection to our industries. Rather than yield to his demand, it were better to devas-

tate a strip of country a hundred miles wide along our coast, and thus interpose an effective barrier against the flood of foreign ores, the products of pauper labor, with which our miners have at present to compete.

The truth is, Mr. Moen's professions of devotion to the idea of protection have a hollow ring. There is nothing of the "sink or swim, live or die, survive or perish" spirit about such devotion as he exhibits. He seems to have been ardent in the cause so long as his profits were large, and to be growing cool now that our beneficent policy has raised up American competitors who are cutting them down. He fixes his attention upon that dogma of his creed which declares that protective duties raise the price of the products of American labor, and ignores that other dogma, equally important—although to the uninitiated apparently inconsistent—which maintains that the same duties lower the price of the same products. He has enjoyed the rich blessings of the first dogma, and now turns against his faith when the bitterness of the second becomes perceptible. Such conduct is not heroic, and if there is any truth in the American theory of the development of our industries, it should be worth suffering for. If Mr. Moen and those whom he represents do not feel disposed to sacrifice themselves in this sacred cause, they might as well give up trying to humbug themselves and the people by their talk about protecting American workingmen, and confess that the less our industries have to do with the Government at Washington the better for every one.

THE NEW EXTRADITION TREATY.

If the *Tribune* text of the recently negotiated extradition treaty between the United States and Great Britain is accurate, the result is not what many experts in the jurisprudence of extradition had hoped for. It is only a patching of the single section in the Webster-Ashburton Treaty of 1842 which has stipulations for extradition. During the intervening half-century, the use of electricity in sending messages under the sea, and the celerity of the movements of criminals, have made the old methods of arrest quite insufficient. The new treaty has no new provisions adequate for these new conditions. There is a great and useful enlargement of extraditable offences, and at the end of them is this stipulation: "Extradition is also to take place for *participation* in any of the crimes mentioned in this convention, or in the aforesaid tenth article; provided such *participation* be punishable by the laws of both countries."

Is "participation" intended to include all accessories either before or after the commission of the offence? Will it embrace one who suggests a crime and persuades another to commit it? Can one be extradited who helps the criminal to escape, or knowingly uses the proceeds of the crime? Does the treaty include those described by modern law as principals in the second degree? Can an accessory be extradited before the principal has been convicted?

The second article stipulates that "A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded be one of a political character"; and that "if any question shall arise as to whether any case comes within the provisions of this article, the decision of the authorities of the Government in whose jurisdiction the fugitive shall be at the time shall be final"; but there is no definition or description of "political character," nor of the "authorities," executive or judicial, which shall decide.

The third article has a provision which, if Silcott were extradited for forgery, will forbid trying him for a lesser offence if forgery cannot be proved. England has shown her willingness to abandon that contention, as may be seen from the most authoritative opinion on the subject, if the character of the men be considered, ever uttered in England, including among them Cockburn, Selborne, Blackburn, Russell Gurney, Baggally, Brett, Thesiger, John Rose, Stephen, and Harcourt.

The fourth article declares:

"All articles seized, which were in the possession of the person surrendered at the time of his apprehension, whether being the proceeds of the crime or offence charged, or being material as evidence in making proof of the crime or offence charged, shall, so far as practicable, and if the competent authority of the State applied to for the extradition has ordered the delivery thereof, be given up when the extradition takes place. Nevertheless, the rights of third parties with regard to the articles aforesaid shall be duly respected."

But there is no stipulation in regard to arrest on a telegraphic request, or for searching the premises of the accused, or a place to which he may be believed to have transferred stolen property, or evidence of his crime, as is usual in ordinary cases in this country and in England.

The tenth section of the treaty of 1842 covers persons "*charged*" with the crimes mentioned therein, and all the crimes mentioned in the first article of the present treaty need only be charged. What need, therefore, is there of this seventh article of the new convention?

"The provisions of the said tenth article, and of this convention, shall apply to persons convicted of the crimes therein respectively named and specified, whose sentence therefor shall not have been executed.

"In case of a fugitive criminal alleged to have been convicted of the crime for which his surrender is asked, a copy of the record of the conviction and of the sentence of the court before which such conviction took place, duly authenticated, shall be produced, together with the evidence proving that the prisoner is the person to whom the sentence refers."

During the half century of the old treaty of 1842 there have been many serious questions raised under it not yet put to rest, but with these the new convention fails to deal.

Nearly all foreign Governments have, it is believed, including Great Britain, heretofore expressed the wish that the surrendering Government should have a motive for reducing the expenses of arrest, examination, detention, and final surrender, by paying those expenses itself. The expenses are so enormous in our country that France and Germany say they cannot afford to make the application for extradition. But Mr. Blaine expresses to the Senate this quite unique reason for upholding the present practice: "The formalities attending extradition proceedings, and the fact that the demanding Government is required to pay the expenses, are better guarantees against demands based upon trivial causes than an insignificant pecuniary limitation." That is equivalent to saying: "We will insert in the treaty as many trivial crimes as you may desire to have inserted, but we will make the expenses of extradition so great that you will never demand from us the offender."

THE PRESBYTERIAN REVISION.

The discussion now going on in the New York Presbytery, as well as in the Presbyteries of other places, over the proposal to revise the Westminster Confession of Faith, is extremely interesting even to those who do not belong to the denomination, because it distinctly marks a change of a very startling character in the nature and objects of church creeds. A creed is what a certain number of people believe to be true in religion, politics, or science. But until now the creeds of certain religious denominations—the Roman Catholic Church for one, and the Calvinists or Presbyterian Church for another—have not only contained what the members of those bodies respectively accepted as true, but what, as they held, all other men were also bound to accept as true, on pain of eternal damnation. Both the Catholic Church and the Calvinistic churches have been, as everybody knows, very firm in insisting that the deliberate and persistent rejection of certain statements presented by them in the form of articles of faith, by any person whatsoever, learned or ignorant, would be followed at least by exclusion from heaven after death, or, in other words, that a man's salvation depended on his opinions concerning his relations to the Creator.

The Westminster Confession even goes further than this. It declares that a certain number ("some") of "angels and men" are, without reference to their opinions, and merely for "the manifestation of God's glory," "foreordained to everlasting death" (chap. iii.). It also declares that "others not elected, even though they be called by the ministry of the Word and have some common operations of the Spirit, cannot truly come to Christ," and "cannot be saved." Much less can they be saved who do not "profess the Christian religion, be they never so diligent to frame their lives according to the light of nature and the law of that religion they profess; and to assert and maintain that they may is very pernicious and to be detested" (chapter x.). Chapter xxv. says that outside "the visible Church"—that is, outside the number of those that profess the true religion—"there is no ordinary possibility of salvation."

Now, all these affirmations, and a great many others of the same sort, were, when they were made and embodied in the Confession, intended to be affirmations of facts of the universe, and were accepted as such by members of the Presbyterian Church.

They were not presented as things which anybody might believe or reject at his option, or as "pious opinions" simply, or even as strong probabilities. They were produced as part and parcel of Divine order, which a man could no more safely disregard than he could safely disregard the law of gravitation or the succession of day and night.

It is now proposed to change this creed in various particulars. The reports of the discussion made in the newspapers are meagre, and we therefore do not venture to rely on them for details. But we believe it is correct to say that, in the arguments for revision, the Confession is not treated as the early Church treated it—as a list of Divine truths which could not be rejected without peril—but simply as a list of things which certain persons believed in the seventeenth century, but which nobody in the nineteenth century is bound to believe unless he pleases. For instance, the Committee appointed to report on the revision recommend that the third chapter be so altered that nothing shall be said about the predestination of some men to everlasting death; that the fate of non-elect infants shall be passed over in silence, or else that they shall be made participants in the salvation allowed to elect infants, and that provision be made for the salvation of such heathens as may show themselves worthy of it by their walk and conversation—a class which the Confession expressly proscribes, and for whom, in fact, it forbids a word to be said.

On the old theory of the nature and objects of a creed, these changes could only be justified by showing that they were made in consequence of some fresh revelation, through recognized theological channels, touching the methods of Divine government; that is, in the Presbyterian view, through some important addition, previously unknown, to the one source of religious truth —the Scriptures—or some new and indisputable interpretation of the existing canon. But nothing of this sort is alleged. What is said is, that these changes must be made because the original doctrines enunciated in the Confession are "unpreachable," meaning either that the ministers no longer believe them, or that the congregations will no longer listen to them. In the nineteenth century, it is maintained, people will not believe, no matter who says it, that non-elect infants are damned, or that good heathens or sceptics have no chance of salvation, no matter how pure their lives or how earnestly they may strive for the light; that these things were all very well for the seventeenth century, but that in our day such doctrines are too repulsive for popular acceptance.

This, it will be seen at a glance, reduces a church creed very much to the plane of a political platform. Truth is none the less truth because it is unpalatable or unpleasant. The facts of theology are, or ought to be, just as imperious as the facts of natural science. Unwillingness to believe a thing because it would, if true, be inconvenient or disagreeable, or shock a prejudice, is, in all other domains of human thought or activity, accepted as evidence of unfitness for any serious process of ratiocination, or even for the orderly conduct of life. The utilitarian argument, or "police argument," as some have called it, for the truth of Christianity—the good it has done to the world, and the damage its extinction would cause to human society—has always been open to this very grave objection. If there be anything we learn with certainty touching the government of the universe through experience of the course of nature, it is that law takes no account of human likes or dislikes.

Consequently, a creed which simply professes to express popular opinion upon certain topics at certain periods, and which is, therefore, open to change at greater or less intervals to suit the changes in popular taste or feeling, may be a useful kind of creed, but it is not the kind of creed on which the great religions of the world were founded and to which the leading churches owe their existence. Tocqueville, in one of his letters to a friend who had written to him of the "progressive Catholicism" of which there was as much talk in 1854 as now, said, "I share your feelings about the impertinence of progressive Catholicism. It is detestable, aside from the question of faith. A religion is absolutely true or absolutely false. How can it make progress? As you very justly remark, the progress must be in the application and not in the doctrine." This is just as true of other churches as of the Roman Catholic Church. As soon as you make them "progressive," and decide what they are to believe by a majority vote, you assimilate the Church to a political party, and convert its creed into a platform of the political kind. For which reason it seems as if it would be vastly more respectful to the great historic faiths not to examine them in our time too curiously, or try to ascertain exactly how much life each article has left in it. The best thing to be done with "a creed outworn" is to let it alone. The more it is debated, the more it crumbles.

THE PORTUGUESE CASE.

THE excitement of the Portuguese over the snub they have received from Great Britain is so childish in its manifestations that its causes or consequences seem hardly worth examination. The returning of British medals, the boycotting of British goods, and the throwing of stones at the British Embassy are not the expressions of really important rage, and must soon cease. They are made doubly absurd by the fact that they are called forth by the loss of a million square miles of territory, when they are only suited to the loss of a game of cards or unhandsome treatment at a dinner-party. But the affair is, after all, an episode in a history which is now bidding fair to become interesting—that of the African Continent—and it is therefore worth while to see what Portugal's case is as set forth by M. Barros Gomes in his despatch of the 29th of November, 1889.

Lord Salisbury laid down the rule, to begin with, that "an effective occupation was an essential condition of sovereignty." M. Gomes on this point makes his strongest fight. He says that this rule has no place in international law with regard to the interior of Africa, and was limited by the Berlin Conference to the coast regions; and that the phrase "sphere of influence," now so freely used by all the European foreign offices, is of itself the best proof "that effective occupation (if by that we understand the permanent establishment of authority), cannot constitute the essential condition of possession on the part of other nations."

The "sphere of influence" is undoubtedly a vague and therefore somewhat weak phrase; but its meaning is well known. It means the sphere within which a Power competent to carry out its threats and fulfil its promises, has given the inhabitants to understand that they may, in case of need, rely on it for protection. Promises of this sort made by Germany or Great Britain are for all practical purposes as good as forts and garrisons. Made by a Power like Portugal, they are not worth the paper on which they are written. When Lord Salisbury refused to acknowledge possession without occupation, he meant undoubtedly nominal occupation which could be made real at any time, if necessary, against an adverse claimant. Portugal has no such nominal occupation anywhere, and least of all in Mashonaland.

The rest of M. Gomes's argument is historical, but certainly not diplomatic, and reads like a lecture before a Geographical Society. He says, as regards the territory north of the Zambesi, that Portugal discovered the Nyassa Lake in 1624; that the region between the lake and the Zambesi was explored by Portuguese in the last century and in this; that Montague Kerr, in his book 'The Far Interior,' records the discovery of proof of Portuguese influence in this region in the use of the word "Ami" by an elephant-hunter named Eustaquio da Costa; that Livingstone also discovered it in the information he got from the Portuguese authorities on the coast touching the river Shiré and the Nyassa; that Mr. A. F. S. Arnot also came on traces of it, and that it led to the submission in 1887 and 1888 of numerous "little kings" to Portuguese authority, and the establishment of a Portuguese mission at M'ponda, on the south shore of the lake.

Touching the Mashonaland, he says it was originally acquired by purchase in 1620 from the old empire of Monomotapa; that there are ruins of ancient fortresses in this region the Portuguese origin of which is acknowledged by M. Lochner in an article in the *Bechuana News*, and by the reports of two Portuguese officers now travelling there; that the construction of these forts is recommended in reports now in the Archives at Lisbon, dated about 1610; that their construction was followed up by settlements in 1633 and 1677, and by the despatch of numerous eminent missionaries, who have left traces over the whole confines of Monomotapa. Finally he declares that, in spite of her domestic troubles since the beginning of this century, Portugal has never ceased to claim this terri-

tory "by constant and uninterrupted manifestations."

Of her ability now to occupy, settle, fortify, defend, open it, or civilize it, M. Gomes does not say one word. This is not surprising in view of the fact that the emigration from Portugal numbers about 15,000 a year, who nearly all go to America; that the revenue amounts to about $38,000,000, and that there has been a deficit every year for the last thirty years; that the population is less than 5,000,000, and increases at the rate of about one per cent. per annum. Moreover, England has been for a century her best friend and protector. She drove the French out of Portugal in the beginning of the century, has since defended her against all the world and supplied her with her best markets. Portugal exports to the value of (in round numbers) $28,000,000, and of this Great Britain took, in 1887, almost exactly one-half, or $14,180,000. The quarrel is, in truth, almost as ridiculous from the sentimental as from the practical point of view.

THE PRISONS OF THE CIVIL WAR.

In the summer of 1888, the late Jefferson Davis wrote for the *North American Review* a paper that has just been published by *Belford's Magazine*, under the title, "Andersonville and Other War-Prisons." A part of it compares the mortality and, by inference, the sufferings of the prisoners at the North with those of prisoners held at the South; and the figures used show that 50,000 more United States than Confederate troops were captives, with 4,000 fewer deaths. Mr. Davis accounts for this smaller mortality by the Confederate "care for the defenceless." He says that "this, in the depth of our destitution, never ceased," and that "it was not starvation, but acclimation, unsuitable diet, and despondency which were the potent agents of disease and death." This revival of the most ghastly phase of the war compels notice, notwithstanding the decease of the conspicuous author.

According to Fox, 24,866 national soldiers died of disease in Southern prisons, in addition to 5,290 who died of wounds and other causes in the hands of the enemy, or a total of 30,156. But the same excellent authority asserts that, owing to imperfect records, all the deaths are not included in those figures, and, as shown by the graves, the Union mortality has been estimated at 36,401. That would give, in round numbers, 30,000 deaths from disease. Fox also says, "30,152 Confederates died in Northern prisons," not including mortality from wounds in field hospitals nor deaths at Johnson's Island and some other places of confinement. The published official records substantially agree with this, and also account for 30,716 deaths among Confederate prisoners, of which 5,569 followed violence and 1,556 were from causes not noted, leaving 23,591 due to specified disease. It appears, therefore, that the mortality from wounds was practically the same for both sides, and that the actual deaths from disease were slightly in excess at the South. We have no available data by which to confirm or correct Mr. Davis's census of the total captives. But in this discussion the actual mortality is not so important as are its causes. We have not the space to traverse in detail the indictment of want of "care of the defenceless," the implication of needless cruelty at the North, but the following facts are worth rehearsal:

At Johnson's Island, in Lake Erie, which was a hygienic model prison, where chiefly officers were confined (whose condition when captured was presumably better than that of the rank and file), the annual mortality rate was 35.4 per thousand of mean strength, the fatality 4.4 per cent. of the cases treated, and the deaths 9.8 annually for every thousand commitments—it being remembered that the mean strength and the commitments are very different factors. The other extreme was reached at Elmira, N. Y., where the percentage of fatal cases to those treated was 28.8, and the annual death-rate per 1,000 men committed was 241, or 444 per 1,000 of mean strength. At the nine principal depots the percentage of fatal cases was 7.7, the annual death-rate per 1,000 admitted was 65.7, or 230.4 per mean strength, while in the Confederate ranks the death-rate from disease was 167.3, or three-fourths of this.

Mr. Davis assumes that as, generally speaking, all the prisoners were on duty when captured, therefore they were in substantially equal condition to be benefited by rest and proper treatment; and that, owing to the admitted greater salubrity of the North, and its superior facilities for caring for both the well and the infirm, there should have been a lower mortality there than at the South. The chief fallacy lies in the assumption that because men were in the ranks they were free from disease-tendencies. This is a conspicuously false premise. The diseases most fatal to the Confederate prisoners were the same diseases that were most fatal to their armed ranks: the diseases from which the Union troops died in captivity were entirely different from those that affected them in the field. In other words, the depraved physical condition and tendency to disease of the Southern men were intensified and aggravated by the state of confinement; but the Northern soldiers were made ill and died from quite other causes—both of these statements being general.

Thus, according to the best available statistics, the annual rates per thousand of the cases of certain important classes of disease in the Confederate and Union armies, and among the Confederate and Union prisoners, under several conditions, were as follows (unfortunately, there are no trustworthy figures by which to compare the deaths from separate diseases with the mean strength of large bodies of Confederate troops):

COMPARATIVE RATES OF SICKNESS AND DEATHS FROM DISEASE FROM THE BEGINNING OF THE WAR TO INCLUDE 1862.

	Ratio of cases per 1,000 cases of all diseases.		Ratio of deaths per 1,000 deaths from all diseases.		Percentage of mortality to cases.	
	C. S. A.	U. S. A.	C. S. A.	U. S. A.	C. S. A.	U. S. A.
Diarrhœa and dysentery	277	107	283	176	1.48	1.25
Pulmonary diseases	51	115	255	134	18.89	2.34
Eruptive fevers	54	23	73	60	5.12	5.27
Continued fevers	45	30	391	337	33.27	22.28
Malarial fevers	141	160	43	76	1.15	.95
Rheumatism	36	52	...	3	...	.14
All other diseases	396	337	131	214	1.26	1.32

ANNUAL SICK-RATES PER 1,000 MEAN AGGREGATE STRENGTH.

	Parts of 1861-62-63. C. S. A.	1863, U. S. A.	
Diarrhœa and dysentery	987	543	The same ratio was preserved for other periods U. S. A., but consecutive C. S. A. statistics later than 1862 are not available.
Pneumonia	103	34	
Eruptive fevers	No record.	No record.	
Continued fevers	275	125	
Malarial fevers	796	460	
Scurvy	No record.	No record.	

AVERAGE ANNUAL RATES OF DEATH PER 1,000 OF STRENGTH.

	Northern prisons.	Andersonville.	Elmira.	C. S. A.	U. S. A. White.
All diseases	230.4	732.6	444.1	167.3	53.48
Diarrhœa and dysentery	73.0	465.6	211.5	No exact data.	15.62
Pneumonia	61.7	27.4	117.3		6.34
Eruptive fevers	40.5	8.2	58.9		4.50
Continued fevers	13.6	20.5	21.2		11.60
Malarial fevers	12.6	12.2	9.9		5.04
Scurvy	4.3	102.8	3.0		0.16

The Confederate mortality in prison was very great, but it was great under all circumstances.

At the first blush Elmira seems a rival of Andersonville, and it is upon such statistics, unanalyzed, that the specious pleas of Northern inhumanity and neglect rest. The annual mortality of Elmira was 444.1 per 1,000 of mean strength, and the percentage of fatal cases was 28.8, which is enormous, but no other Northern depot attained half those figures. But Andersonville gave 732.6 to the 1,000 annual mor-

tality; 13,000 men died there in the fourteen months of its occupancy, and during six months of that time so many died out of an average strength of 19,453 as to imply the death of all in fifteen months. To those dying in confinement should be added the thousands who certainly perished soon after their release, so miserable was their state.

There seems small doubt that the condition of the Confederate prisoners on arriving at the North was the determining factor in their subsequent physical career. This is shown by contemporaneous official reports. Thus at Hart's Island less than one hundred of a large detachment reached there "as well men or even in fair health." At Fort Delaware in July, 1863, the mortality was almost exclusively from chronic diarrhœa, confined to prisoners from the extreme Southern States received from the army near Vicksburg, and already the subjects of the disease for long periods. Prisoners from Virginia, under the same hygienic influences, then remained well. At Elmira "the Fort Fisher prisoners arrived in cold weather, very much depressed, poorly clad, and great numbers were soon taken sick with pneumonia and diarrhœa, rapidly assuming a typhoid character." Smallpox repeatedly broke out in various prisons, owing to the unprotected state of the prisoners, by whom the disease was frequently introduced.

Elmira is believed to be the only Northern prison at which there was much conspicuous mortality from avoidable disease, and here, as at the other depots, the underlying cause was the enfeebled condition of the men on arrival. Of 1,394 deaths there from diarrhœa and dysentery, all but 18 were from chronic diarrhœa. The contrasted statistics show that, among every thousand cases of all diseases treated in the armies, there were from these two combined 107 in the Union and 277 in the Confederate, and the annual sick-rate per 1,000 mean aggregate strength was 543 and 987. The proportion of deaths from these diseases in the Confederate lines cannot be determined, but of the Union white troops they were 15.62 per 1,000 mean strength. At Elmira the maximum was reached with 211.5 deaths per 1,000 mean strength, while the average in all the Northern prisons was 73, opposed to which towers at Andersonville the death-rate of 465.6 per mean strength from these alone. From scurvy there died 0.16 (sixteen-hundredths of one man) per 1,000 mean strength in the Union ranks. There are no figures for the Confederates, but there are frequent references to the existence of scurvy among them, and the fact that fifty-eight cases (with no death) occurred at Johnson's Island, where most of the prisoners were officers, and where the diet was exceptionally abundant and varied, shows that, open or latent, it was a constant menace to their army. At Elmira there died from it 3 per 1,000 mean strength, and at all the Northern prisons 4.3 per 1,000, in all which it is fair to infer that the cause antedated capture. But at Andersonville, of the Unionists, almost exclusively well when made prisoners, 102.8 per 1,000 mean strength, or more than a tenth of those held in the stockade, were there destroyed in that way alone.

We do not care to revive the unspeakable horrors of Andersonville—horrors which only those who witnessed them or who have studied their details can begin to realize—but it is a lame and useless equivocation for any one to say that this misery arose from the fact that medicines were made contraband. Those people should not have been made ill. The want of quinine, of opium, of calomel had nothing whatever to do with the suffering that insufficient, improper, and uncooked food, contaminated water, and want of shelter caused the victims of the stockade. That blankets and tents were military supplies, and therefore cut off from the Confederacy, is no excuse for the exposure and crowding of these helpless wretches. Mr. Davis writes: "It was not starving but acclimation, unsuited diet, and despondency which were the potent agents of disease and death." The distinction between starvation and unsuited diet is without a difference. Lieut.-Col. Chandler, C. S. A., reported, August 5, 1864:

"The sanitary condition of the prisoners is as wretched as it can be, the principal cause of mortality being scurvy and chronic diarrhœa, the proportion of the former being disproportionately large among those brought from Belle Isle. Nothing seems to have been done, and but little if any effort made to arrest it by procuring proper food. . . . Raw rations have to be issued to a very large proportion, who are entirely unprovided with proper utensils, and furnished so limited a supply of fuel that they are compelled to dig with their hands in the filthy marsh before mentioned for roots, etc."

Despondency might well settle upon men so tortured.

Andersonville, where at one time the 33,000 prisoners present had but 28 square feet per man—a space 7x4 for all the purposes of life—where 2,000 sick men lay in the pen besides those in the hospital proper, where "millions of flies swarmed over everything and covered the faces of the sleeping patients, and crawled down their open mouths, and deposited their maggots on the gangrenous wounds of the living, and in the mouths of the dead" (Jones, C. S. A.), was not alone "a stench in the nostrils" among the war prisons. Danville, with an aggregate of 4,332 cases in the hospital, had a mortality of 28.7, almost identical with that of Elmira, but with a presumably better class of patients to work with. At Salisbury, 3,400 out of 8,600 were infected with typhus, not typhoid, fever, distinctly a disease due to concentrated human emanations developed in confined and unventilated spaces. There was no typhus in the Northern prisons. In December, 1864, 20 per cent. of the deaths there occurred among men of whom the surgeons had no knowledge—men, that is, who had not been classed as sick. And concerning Salisbury it was reported, "It is certain that the men confined in this prison bore the impress of semi-starvation on their arrival in New York, although in the meantime every effort at recuperation had been made by the United States authorities and the Sanitary Commission." By official report, made at the time, of those received from Belle Isle, directly under the eye of the central Confederate authority, as early as October, 1863, "their frames were in most instances all that was left of them," "their appearance was wretched in the extreme," "a majority had scarcely vitality to enable them to stand," "some, indeed, unable to articulate." This account refers to men exchanged after confinement in the environs of Richmond itself, and upon whom the subsequent intermission of exchange could have no influence. Those desirous of determining the facts, regardless of special pleas, are referred to the invaluable third part of the 'Medical and Surgical History of the War of the Rebellion,' prepared under the direction of the Surgeon-General of the Army, from which the most of these data have been taken.

EIGHT YEARS' WORK OF THE IRISH LAND COMMISSION.

DUBLIN, January 1, 1890.

THE report of the Irish Land Commission, just published, gives the result of eight years' work under the act passed in 1881, which, with several amending acts, established fixity of tenure at fair rents in place of tenancy at will as the general rule of tenure for Irish farmers. The chief work of the Commission has been the fixing of fair rents, although an enormous amount of time and money has been spent in disposing of legal objections and points raised to prevent tenants of various classes from taking advantage of the law.

The official figures are as follows: 233,607 rents have been fixed by all methods under the Act—*i. e.*, by rent suits before the Court; by registered agreements; by arbitrations. The farms on which these rents were fixed extend to 6¾ million acres. The old rents amounted to £4,581,761, the new rents amount to £3,650,026; the reduction in the old rents being 20.3 per cent. The number of agricultural holdings in Ireland to which the Act would apply is under half a million; so that in round numbers half the rents in Ireland, on farms covering about one third of the whole area, have been judicially fixed. The judicial tenants have a right to hold in perpetuity as long as they pay their rents, which may be raised every fifteen years. The number of rent suits and appeals now awaiting trial would, at the normal rate of progress for the last year, occupy the courts for two years; and before all outstanding tenancies could be dealt with, those fixed in the earlier years of the Commission would again be capable of being brought before the Court.

The political and social effects of the Land Law are not very encouraging. The country in general is not a whit more favorably disposed towards British law than it was ten years ago; the farmers are still discontented and disappointed with the results of legislation; the lowered rents are not obtained more easily; the landlords are nursing their grievances, and protesting beforehand against further threatened invasions on their estates. A paralyzing atmosphere of uncertainty surrounds the property which the law purported to confer on the tenant as well as that which still remains to the landlord.

The Land Law of 1881 has certainly not been a success; it has done something, but not much. The plan of campaign—that is, combined refusal to pay more than a certain amount of rent—was invented while the Land Law was in operation. The campaign is in full swing in some parts of the country. Arbitration, where one of the judges would be chosen by the tenants, is offered to the landlords, who in reply say: The rent courts are open: go into them, and we will and must accept the result. The explanation of this failure of the law is that it gave the shadow, not the substance, of what it promised; it enacted that "fair" rents should be fixed, but left unrepealed the unfair provisions of previous acts to remedy which the Act of 1881 was passed. The land tribunals, which should have been courts of conciliation, have acted strictly as courts of law; they were manned by individuals almost necessarily drawn from classes more in sympathy with the landlords than the tenants, and their decisions have neither commanded respect nor been considered fair. A fall of 20 per cent. in rents was manifestly insufficient to meet the effect of diminished prices of produce, and left the tenants still paying rent on their own improvements; definite decisions have in many cases been to the effect that valuable works effected by the tenants on their farms belonged by law to the landlords. Large arrears of the old high rents in many cases prevented the tenants from being free agents in agreeing on judicial rents, and they sub-

mitted to whatever terms their landlords proposed.

In this state of the law, and with widespread dissatisfaction among the farming class, it is not to be wondered at that the landlords' estate in the land should be in danger from further legislation. Government for the moment is on the landlords' side; but Parliament is not always an impartial tribunal of appeal; it is apt to be influenced by sinister motives, for each party wants to secure votes, and when five-sixths of the members are not Irish citizens, not acquainted with the intricacies of the subject, not aware of the necessities of the country they legislate for, Irish questions submitted to Parliament are more likely to be dealt with on the grounds of English convenience than of justice and expediency for the Irish people.

As an example of the shortcomings of the Land Law, a large farmer in the County Dublin, whose ancestors for at least four generations held the same farm, on which the present occupant and his father have laid out at least $35,000 in permanent improvements, while it is not pretended that the landlord ever spent anything, has, since 1876, spent in law $5,000 endeavoring to take advantage of the protective clauses of various land acts. He was defeated on technical points in every suit, and the large amount of capital he has sunk in the land is by law his landlord's property. The poorer occupants of smaller farms cannot bear the cost of such suits, and wisely, perhaps, agree to the landlords' terms, lest they should ruin themselves in the law courts.

The dual ownership established by the law of 1881, accompanied by uncertainty as to the respective rights and obligations of the two owners, prohibits improvement and deters from good cultivation. The Land Law has been amended and extended year after year, and now the Government have another Land Bill for Parliament's consideration in February. It is not surprising that a feeling of unrest prevails both among landlords and tenants; their interests are irreconcilable; a satisfactory tenure cannot be secured to the tenants except by getting rid of the landlords. This has been done to a small extent by the Purchase Act of 1885, under which tenants can borrow from Government the price of their farms if the landlord agrees to sell, repaying the loan by an annuity of 4 per cent. for forty-nine years, and having liberty to pay off the whole or any part of the loan at any time. Parliament has, up to this, allocated £10,000,000 for this purpose; and 11,012 loans have been made, amounting to £4,629,655. Even this part of the Land Commission's work is embarrassed by political, legal, and agrarian difficulties. Landlords, taking advantage of arrear debts due by the tenants, have coerced them to purchase at high prices; tenants may also take advantage of the fact that estates in some cases must be sold without reserve, and bid what they like in a market where there is no competition. Not less than £30,000,000 worth of insolvent estates is under the management of the Court of Chancery, where the expenses of lawyers and receivers eat up the greater part of the rentals. Under our antiquated system of title and transfer, the costs of sale are enormous, the delays heart-breaking. The time occupied in making title to an estate, and in distributing the proceeds of sale, may extend to an indefinite number of years.

In this, as well as in their relations with tenants, the landlord class is reaping the fruits of long-continued opposition to every reform proposed. The difficulties connected with title and transfer make the policy of the Purchase Act of very questionable utility. It will, as years go on, be as difficult for the creditors or owners of the small estates now created by the State to sell their properties or realize their securities as it is for the present race of landlords and mortgagees. The same complications of title must necessarily grow up, and the embarrassed peasant proprietor will find himself between Scylla and Charybdis, equally liable to ruin by holding land he wishes to part with, or by trying to sell it under the existing law. Last session the Government introduced a feeble bill to establish local registries of title, but no progress was made with it. An attempt will again be made without doubt to legislate on this subject, but the conservative lawyer element in the House of Commons is opposed to any radical reform, and is strong enough to cause the rejection of, or to spoil, any such measure.

No legislation by the Imperial Parliament can be successful or permanent except on conditions which can hardly exist next session: (1.) Coercion should be suspended, for rents cannot be fairly fixed, nor terms of purchase fairly negotiated, while men can be, as they have been, imprisoned for advising tenants what combined action they should take in such matters. (2.) The assent of the Irish members as a body is essential to any measure which is to be of permanent operation. (3.) The semblance of fairness should be given to the Land Commission by putting on the Board as large a Nationalist and tenant as Conservative and landlord element. No attempt, with the exception of Gladstone's Land Bill of 1886, has ever been made by either Liberals or Conservatives to legislate on the Irish land question in accordance with Irish opinion or even in a spirit of conciliation; it has therefore become an article of faith in Ireland that land-tenure reform can only be carried out by national Parliament. Balfour's contempt for Irish opinion is greater, but his disregard no more than that of his predecessors. It is not possible that legislation carried out in such a spirit can be successful.

AN IRISHMAN.

WILHELM VON GIESEBRECHT.

MUNICH, December 30, 1889.

THE death of Giesebrecht on the 15th of this month will bring surprise and grief to the many friends and readers who knew with what persistent energy the still vigorous old man was working at his life task, and who were hoping with him that he might be permitted to reach the limit he had set as the rational completion of his great work. He was writing still on his 'History of the German Imperial Period,' and was eager to complete the reign of Barbarossa as the crowning glory of the ancient imperial institution. Still, so keen was his sense of scholarly duty that, when the call came from his publishers for a new edition of the third volume, which should be ready before Christmas, he laid aside the inspiring work of composition, and undertook a complete revision of this volume, in order that the new edition might profit by whatever of value had appeared since the former one. To my inquiry in October why he did not intrust this uncongenial labor to some younger scholar, he replied that he could not bring himself to let anything go out into the world which had not passed through his own hands. Three days before his death his pupil and successor, Heigel, found him sitting at his work-table busying himself with the dreary task of making an index to the third volume.

Although the name of Giesebrecht will always be identified with the University of Munich, of which he was for twenty-seven years one of the chief ornaments, he was by birth and by residence for fifty years a North German. He was born in Berlin in the year 1814, the son of a school-teacher, and studied in his father's school and at the University of Berlin. Beginning as a student of classical philology, he was soon attracted by the teaching of Ranke and devoted himself to history, especially to that of Germany in the Middle Ages. His first teaching was at the Joachimthal Gymnasium in Berlin, where he published in the year 1855 the first volume of the 'Geschichte der Deutschen Kaiserzeit.' The reward for this work was the appointment as professor at Königsberg in the same year. Five years later he was called to Munich as the man who was likely to treat the history of Germany in a spirit that would not offend the various groups of German patriots, who were then at hopeless odds with each other as to the true solution of the "German problem."

Sybel, who had filled the same professorship but a short time, had made himself impossible in Munich by reason of his pronounced Prussianism, and had been forced to resign. In this position Giesebrecht continued until his death, though he had not lectured for the past four or five years. He was during more or less of this period also Secretary of the Historical Commission of the Bavarian Academy, a member of the Editing Commission of the 'Monumenta Germaniæ,' of the directory of the Germanic Museum at Nuremberg, and of the School Board of the city of Munich. As a North German and a Protestant, his position in Bavaria was a delicate one, but he filled it with a singular tact which those who have studied his writing will recognize as a characteristic of the man.

As a teacher, Giesebrecht was the centre of a group of young men who are now filling important places in the schools, universities, and archives of Southern Germany. He seems to have inspired them by the force of an amiable intellectual personality, rather than by any exceptional or original pedagogic gift. His influence was catholic and conciliatory, though his own point of view was clearly defined and not to be mistaken. His pupils hold him in most affectionate remembrance.

Yet it is not as a teacher that he will be most widely known. His name will be inseparably associated with the great work to which he devoted the chief powers of his life, the 'Geschichte der Deutschen Kaiserzeit.' The title indicates its scope. It is not a history of the Holy Roman Empire, for that would have called for a very different treatment and would have required a much greater extension as to time. The title must rather be translated, 'A History of Germany's Imperial Period,' and it is in this spirit of patriotic German enthusiasm that the whole work is conceived. It gives us a history of German and Italian affairs from 900 nearly to 1200, seen from the point of view of the Empire. It brings out into prominence as living and breathing men and women historical characters who had hitherto not filled a large place in the traditional history of the German people. Indeed, it has been harshly criticised as being too much a history of persons and too little a history of institutions and of political developments. This criticism may perhaps admit of two explanations. Giesebrecht had the idea, which a certain modern school regards with horror, that a book of history is written to be read; and no book written for a wide reading public, no matter upon how thorough study it may be based, can hope to escape violent criticisms from that school. Then, again, it can hardly be questioned that the emphasis upon personalities goes back of the his-

torian to his material. The writers of the early middle ages were, in this respect, children who retold the tales of their heroes as they heard them from tradition or gathered them from the vague rumors of their own times. Whoever deals with them must be prepared to find his attention fixed upon persons, and it is only by a great effort that the modern historian can glean from the original sources, especially from the mediæval historians themselves, a knowledge of institutions and of parties. It was Giesebrecht's pleasure to emphasize the human and dramatic side of history. If, here and there, he yielded a little to the inevitable temptation of the dramatic historian, it could never be said of him that he allowed himself consciously to warp the evidence of his sources in his own behalf. As a Protestant, dealing with the time of Rome's most audacious claims upon the obedience of the world, he showed the same tact in his writing which he displayed in his personal intercourse with his Bavarian contemporaries. Yet it was natural that he should be drawn into many a literary controversy, and those who know the hateful spirit of petty spite and jealousy which marks German controversial writing, will recognize the self-control and dignity with which he met his opponents.

One cannot think of the loss of Giesebrecht without dwelling upon the conditions and prospects of the historical school in which he played so prominent a part. He belonged in that circle of elder professors and writers who may, without much exaggeration, be called the pupils of Ranke. Many of them were actually his pupils and all were largely inspired by his example. Of this group many have already finished their work—Waitz, Droysen, Nitzsch, and Duncker. Others, Mommsen, Sybel, Wattenbach, are still living and active. Ranke did not discover any new principle of historical composition or investigation. The basis of the "modern historical school" is nothing more than the simple proposition that, when one undertakes to repeat a story, he is in duty bound to make sure that it rests upon evidence as unimpeachable as human testimony can be. Obvious as this proposition seems to be, it had not, in the time before Ranke, been made much use of for pedagogic purposes. Ranke's great merit was that he brought into academic teaching the principle of historical research which he and every other really conscientious historian had always employed—or believed himself to be employing—in the writing of history. In other words, Ranke was the first person who began systematically to train historians as a part of the work of a university. He gathered about him in his *exercitationes historicæ* at Berlin a group of young men whom he inspired with his own love of truth, his accuracy, thoroughness, and diligence. In this school the pupil learned the trade of writing history. He was taught to collate manuscripts, to apply to them all known tests of genuineness, to question their authors as to capacity and accuracy and intention—in short, to prepare his story with all thoroughness before he began to tell it.

But Ranke had also another lesson to teach. He was not merely a collector of materials; he was a writer of admirable force and with no little charm of style. He wrote voluminously, and his books, resting upon enormous research, were singularly free from the smell of the lamp. His pupils gained, therefore, from him the lesson that all their training was a means, not an end. The names of Mommsen, Sybel, Droysen, Duncker, and Giesebrecht are connected each with some monumental work written for the great reading public as well as for scholars, and each already a classic within its field.

But now began with the second academic generation a new phase of the development. The German historian has not been, like the English one, a gentleman of letters, or perhaps even a clergyman or a diplomat. He has been, almost without exception, a teacher, and, like the rest of his countrymen, he has been moved by the laudable wish to magnify his office from its professional side. The children of Ranke became the intellectual parents of a progeny, numbered no longer by units, but by tens. They found it quite possible to apply in their teaching all those principles of research and of treatment which they had learned from their master and had been themselves applying in their own writings. But that other element of the historian, the large grasp upon the movement of human life, the instinctive right valuation of human motive, and the power to present his conclusions in a form to command attention—these things could not be taught to every pupil, could indeed hardly be taught at all. Naturally, therefore, the weight of the "modern historical school" came to be thrown upon the "professional" elements of the study, and its achievement in this direction can hardly be overestimated. In every field of historical inquiry, but especially in that of German history, the sources have been subjected to a searching analysis, and the results have been embodied in the form of improved editions and of countless hundreds of short treatises upon controverted points.

Meanwhile, the family of professional *Historiker* has gone on increasing. The great-grandchildren of Ranke are now to be counted by the score. In the University of Berlin there are at present twenty-one instructors in political history alone, not including those who teach the history of art, science, literature, law, etc. This great increase has been largely furthered by the rapid development of the historical "Seminar." From the modest beginning of Ranke's *exercitationes*, the Seminar has now become a recognized institution by itself. At Berlin and Leipzig it is an organization independent of the University, excepting that its director is a professor. It has its own rooms and its own library, and makes its own by-laws. It has done for the German student the service which we should regard as an essential duty of the University—to give him a quiet place where he may freely consult a considerable number of books. As to its permanent value for the cause of historical teaching and writing, opinions (even in Germany) are very much divided. Evidently its tendency is in the direction of extreme specialization, with all its attendant ills; it is helping to encourage a petty and pedantic view of scholarship, which is sure to react unfavorably upon the teaching as well as upon the writing of the future. It is accused by its opponents of being a hothouse for mediocrity, by means of which talents which might better be occupied with some mechanical work are coddled into a fictitious activity. That there is much danger in this direction must be apparent to any one who examines the voluminous productions of these schools, and tests it by the standards of actual value for the cause of learning. Whether the Germans, by wise measures of restraint, will entirely escape this danger, remains a question. For us in America the warning is a timely one, and we have to see to it that in our haste to copy whatever Germany sets before us, we do not suffer the phrase "a gentleman and a scholar" to vanish from our vocabulary.

In any effort to maintain a fair balance between the two views of history—as a "science" which may be taught, and as a branch of "polite learning" demanding above all an acute mind and wide cultivation—the scholars of the future can hardly fail to point to Giesebrecht's activity as a happy combination of both these elements. E. E.

CHARLES IV. OF LORRAINE.

PARIS, January 9, 1890.

IT is marvellous to see with what zeal historical studies are now pursued; and I do not speak only of general history—each province, each town, of France nas now its local historians. The province of Lorraine is assuredly one which deserves much interest, in virtue of its geographical position, of its relations with Alsace and with the Palatinate, of its dubious diplomacy, which so often threatened the most vital interests of France. In the east of France, there is an old proverb which says, "Lorrain, villain, traître à Dieu et à son prochain." The judgment is severe; it is hardly too severe for Charles IV. of Lorraine, who has recently found his historian. M. des Robert, who styles himself a member of the Academy of Stanislas (Stanislas was the Duke of Lorraine who made of Nancy the fine city which we now admire), has written two long volumes on the 'Campaigns of Charles IV., Duke of Lorraine and of Bar, in Franche-Comté, Alsace-Lorraine and Flanders, and in Germany.' The period embraced by the historian extends from 1634 to 1643.

Charles IV. was the son of François of Lorraine Vaudemont and of Christine of Salm, and was born on April 5, 1604. He was a great-grandson of Catherine de Médicis, and he certainly had in his blood something of the Italian condottiere. At the age of sixteen he took part in the battle of Prague, with his father, who was at the time the General of the Catholic League. He was only twenty when he became Duke of Lorraine by his marriage with the Duchess Nicole, the daughter of Duke Henri II., who was the true sovereign, as the Salic law did not exist in Lorraine. He was not contented with being the Duke Consort, and, in virtue of a supposed will of Duke René II., made in favor of the male line, he invited the States of Lorraine to proclaim his father, François of Vaudemont, Duke, and a few days afterwards his father abdicated in his favor (1625).

His marriage with Nicole was a forced union, and from the first day the Duchess was treated with contempt by her husband. She was a mere child, only thirteen years old, and when she became a woman she never succeeded in captivating her husband's affection. He was leading an agitated life, engaged in all kinds of intrigues. In 1632 he received at his court Gaston d'Orléans, who had fled from France, and who secretly married the Duke's sister. A royal army entered Lorraine, Gaston was obliged to fly to Brussels, and Charles IV. signed a treaty in which he abandoned four of his fortresses to Louis XIII. While Richelieu quelled the revolt of Montmorency, the French army invested Nancy, and Charles of Lorraine was forced to accept the Cardinal's terms, and to surrender more of his towns. Still, he would not cease to conspire with the enemies of the Cardinal; he was declared a rebel, Nancy was taken, and he fled, leaving his duchy in the hands of the French.

We find him in Besançon at the opening of M. des Robert's work. He had thrown his lot completely in with the Empire against France. He was also attracted in this imperial city by the charms of a young lady whom he had first seen in Brussels, Béatrix de Cusance, one of the handsomest women of her time (Van Dyke

has left us her portrait). Charles himself was very handsome, and Béatrix had fallen in love with him. The Duchess Nicole had not followed him into exile; she was living at Fontainebleau, where she was a willing prisoner of France. Charles invited his wife to join him at Besançon, but his invitation was a mere form. M. des Robert gives in his notes the text of six inedited letters from Charles to his wife Nicole, written in 1634. Charles boldly asked for the hand of Béatrix de Cusance, saying that his own marriage, made by force, was null. Her parents refused her to him, and she was married in February, 1635, to the Prince of Cantecroix, who belonged to one of the most illustrious families of Franche-Comté.

The mutual passion of Charles and Béatrix was not diminished by her marriage, and, towards the end of the campaign which the Duke made in Franche-Comté, when he defended that province successfully against the Prince of Condé (the father of the Great Condé), we find him, during an illness, staying at the castle of Belvoir with the Princess of Cantecroix till he could be transported to Besançon. When he was obliged to retire from Franche-Comté by the forces of Bernard of Saxe-Weimar, who had become the ally of France, he left Béatrix at Sierck, a pretty town of Lorraine built on the River Moselle, and retreated by way of Luxembourg to Brussels, where he arrived in the month of April, 1639. He was lodged in the palace of the Cardinal-Infant with Prince Thomas of Savoy, who had also put his sword and his military genius at the service of Spain. Béatrix, who was in an advanced state of pregnancy, asked her mother, the Marchioness of Berzhes, who had a palace in Brussels, permission to visit her for her confinement. But Charles, seeing that her presence was not desired by the Cardinal-Infant, left Brussels and joined her at Sierck.

The Prince of Cantecroix died in September, 1637, and Béatrix was determined to become the wife of the Duke of Lorraine. The Duke was inclined at the time to negotiate with Richelieu and to join his forces with those of France; but the Duchess Nicole was the prisoner and the guest of the King of France, who could not abandon her interests, and Charles was unwilling to abandon the Princess of Cantecroix. He was also unwilling to betray the interests of Marguérite of Lorraine, the unrecognized wife of Gaston d'Orléans, who was in the hands of the Spaniards at Brussels. The Princess now openly called herself the Duchess of Lorraine. The real Duchess, Nicole, had delivered herself to the French after the capture of Nancy. She protested against the illegal union of her husband with Béatrix, which took place under the following circumstances: Charles, while in Brussels, having pretended to have received news of the death of Nicole, went into mourning, received the condolence of everybody, and started immediately for Besançon, where one of his servants, disguised as a priest, married him to the Princess of Cantecroix. The Duchess Nicole had not even been ill, and the comedy was soon the talk of all Europe. The Duchess protested, and a sentence of excommunication was threatened by Pope Urban VIII. against the Duke. Charles forbade his subjects to read the manifesto of his wife, which he pronounced to have been dictated by Richelieu.

Charles had two children by Mme. de Cantecroix—a daughter, who became Mme. de Lislebonne, and, two years afterwards, a son, who became the Prince of Vaudemont. Nicole only died seventeen years after the birth of this last prince, and childless. Béatrix, whom we will continue to call Mme. de Cantecroix, did all she could to hinder Charles from getting reconciled with France, but his situation had become too critical. We have not spoken of his campaigns. He was one of the best generals of his time, a worthy foe of Bernard of Saxe-Weimar, of the Duc de Rohan, of Turenne, who was getting his military education under Cardinal La Valette; but he was poor; he had great difficulty in keeping his soldiers together; he had barely been able to win victories, he was more often in retreat. His ally, Gaston d'Orléans, lived quietly at Blois; could he not live quietly at Nancy? The negotiation with Richelieu was long and difficult. Charles acted boldly; he threw himself almost unconditionally into the hands of Louis XIII. "My cousin," said the King to him at the first interview at St. Germain, "the past is completely forgotten; I think only of giving you in future proofs of my friendship."

Richelieu was not sentimental; he imposed hard conditions on the Duke, and made himself, in reality, the master of all the strongholds of Lorraine. Charles was treated like a vassal; he had to present the King of France with the County of Bar, in his own name as well as in that of the Duchess Nicole. Nancy was to remain in the hands of the King till the conclusion of the general peace. Charles IV. did not stay long in Paris: he hurried back to Lorraine in order to organize his army, leaving the Duchess Nicole in Paris. He continued to live with the Princess of Cantecroix, who was proverbially known as his "femme de campagne" (his camp follower). He began to conspire with the enemies of Richelieu as soon as his forces were reorganized. He certainly was looked upon by the Lorrainers as the representative of their cause. Béatrix also became popular, notwithstanding the irregularity of her position. The Spaniards made him offers every day, and valued him more since he had shown that he could join their enemies. Richelieu knew the duplicity of Charles, and when the Duke asked permission to remain neutral between France and Spain, he was not long in understanding that this neutrality covered a real hostility. In vain did the King of France offer the Duke of Lorraine the command of one of his armies: the Duke insisted upon reëntering into possession of the whole of his duchy. Finally, he threw off the mask and joined the Imperials.

It is impossible not to be struck with a certain analogy between the policy of the Duke of Lorraine and of the Dukes of Savoy, who have also been accused of traditional treachery. Lorraine, as well as Savoy, was between the hammer and the anvil; there was, however, this difference: the princes of the house of Savoy were more or less consciously the representatives of a cause, of the cause of Italy, of Italian nationality. Who would say that there ever was a Lorraine nationality? Italy is a well-defined geographical province; Lorraine has no natural frontier, except on the side of the Vosges; it is too small a province to pretend to be a country. France was manifestly obliged to absorb Lorraine, and the struggles of Charles IV. were of no avail.

It is to be hoped that M. des Robert will continue his work and follow Charles IV. to the end of his adventurous career. He is a most inexperienced writer, but he has taken great pains in collecting documents. An historian will find ample details in his books, which will serve to give us a living image of this singular Don Juan in love, and his politics—this condottiere who lived for nothing but for war, who was never contented with a half sovereignty, and who could never conquer the plenitude of sovereignty; a curious type, on the whole, semi-feudal and semi-modern, with extraordinary vices and extraordinary qualities; not to be forgotten, and deserving to have a place among the men who had something left in them of the spirit of the sixteenth century, though they lived in the seventeenth, and contributed to form the new equilibrium which persisted till the French Revolution.

Correspondence.

PRESIDENT LINCOLN AS A COLONIZATIONIST.

To the Editor of The Nation:

Sir: The Southern people may not be very wise at this time in suggesting the plan of colonizing the colored people as a solution of the race question; but in doing so they are only carrying out Mr. Lincoln's favorite idea. He did not believe that the two races could get on in a condition of freedom. It is to be hoped that he was wrong in this conviction, but it was honestly held; and the Southern people are just as honest in holding it as he was. He pressed the colonization of the colored people in his annual messages to Congress in December, 1861, and December, 1862; in his message of April, 1862, approving the bill for the abolition of slavery in the District of Columbia; in his appeal to the border States in July, 1862; and in his Emancipation Proclamation of September, 1862. Congress responded to his views by provisions for colonization in the acts of April 16, 1862, the section passing in the Senate by a vote of 27 to 10, as a part of the bill abolishing slavery in the District of Columbia; the act of June 7, 1862, for the collection of taxes in insurrectionary districts; and the acts of July 16 and 17, 1862, in relation to confiscation.

The State Department, at Mr. Lincoln's instance, instructed our ministers to promote it with foreign governments having tropical dependencies, as England, France, Holland, and Denmark (Seward to Adams, September 30, 1862; Adams to Seward, October 30, 1862; Seward to Adams, November 18, 1862); but Earl Russell declined to coöperate in the scheme. Mr. Lincoln directed, September 12, 1862, the Secretary of the Interior to procure information as to the best places for the colored people to be sent to; and Central America and the province of Chiriqui in New Granada were favored as points for colonization. Mr. Lincoln persuaded Senator Pomeroy of Kansas, who had opposed the scheme in the Senate, to assist in its execution; and the Ile-à-Vache, a Haytian possession, was finally selected as the place. Mr. Lincoln, with his own signature—an exceptional act for a President and showing his extraordinary interest (Senator Doolittle a subscribing witness)—entered, December 31, 1862, into a contract with one Bernard Kock of New Orleans to ship 5,000 negroes to that island; but this contract being rescinded, another contract was made April 6, 1863, with Paul S. Forbes and Charles K. Tuckerman of New York. A ship-load of 453 colonists, gathered mostly about Fortress Monroe, sailed April 13 to the island, and arrived May 3. They had a sad time of it, and, being thinned by disease, death, and desertion, those who were left—about 300—were brought back by our Government, and reached Washington March 18, 1864. The firm of Forbes & Tuckerman lost money by the venture, and Tuckerman received the Mission to Greece as a compensation.

So ended the attempt, backed by the Govern-

ment, to solve the great problem according to the plan on which Mr. Lincoln had set his heart. *

THE RULE OF APPOINTMENTS TO THE SUPREME COURT.

To the Editor of The Nation:

Sir: When the Supreme Court of the United States was first organized, its justices were appointed from six of the most important States—Massachusetts, New York, Pennsylvania, Maryland, Virginia, and South Carolina. From that time until the civil war the members of that court were, I believe, quite generally drawn one from each judicial circuit. Your recent editorial, "The Supreme Court," quotes President Lincoln's opinion that such considerations should be of weight; but it has not been noticed, perhaps, that the precedents which he disregarded, under compulsion, were somewhat neglected during the terms of his Republican successors, and first revived by President Cleveland in his two nominations. What is now the First Circuit (Maine, New Hampshire, Massachusetts, and Rhode Island), has had one, and only one, representative on the bench of the Supreme Court from 1789 to the present time. The same is substantially true of the Second Circuit, including Vermont, Connecticut, and New York; it had the Chief Justiceship from 1789 to 1800, and has had an unbroken series of associate justices from 1806 to 1890. In what is now the Third Circuit there was one interruption. Justice Washington of Virginia was appointed in 1798 to succeed Justice Wilson of Pennsylvania, but on his death the succession reverted to the Third Circuit in the person of Justice Baldwin, and there it has remained ever since. I think a more careful examination than I have been able to make here in Berlin would show that the same was approximately true in the other circuits. During the civil war the Fourth and Fifth Circuits which included the seceding States, lost their representatives by death or resignation. The Fourth Circuit has not yet regained its position on the bench; the Fifth regained it in 1880 by the confirmation of Justice Woods of Georgia. When President Cleveland entered office, two circuits, the Fourth and the Seventh, were unrepresented, while the Sixth had secured their two members in addition to its own. His nomination of Senator Lamar to succeed Justice Woods was in accord with the precedent of drawing the successor from the same circuit. The death of Chief-Justice Waite, one of the three members from the Sixth Circuit, gave an opportunity to introduce greater equality. The opportunity was accepted in the nomination of Mr. Fuller from the Seventh Circuit, which had been unrepresented since the resignation of Justice Davis in 1877. If a successor to Justice Matthews had been found by President Harrison in the Fourth Circuit, each of the nine would have had one representative. As it is, the Eighth has two. Whether the precedent to which President Cleveland would seem to have returned, and which President Harrison has neglected, be a wise one, others must decide.

Yours respectfully,
Walter F. Willcox.

Berlin, January 6, 1890.

"THE RESIDUUM" IN BALTIMORE.

To the Editor of The Nation:

Sir: While reading the discussions by your correspondents as to the political party to which the bulk of the "Residuum" is attached, it occurred to me that the following facts might be of interest:

In Baltimore city, in 1888, Mr. Cleveland received 44,604 votes and Gen. Harrison 39,559. Of the votes for Harrison, about 12,500 were cast by colored people and 27,000 by white persons—that is, about five white men voted the Democratic ticket for every three who voted the Republican. This proportion was, however, not uniform throughout the city. The fashionable quarter of Baltimore lies between Park Avenue on the west, Centre Street on the south, and Jones Falls on the east and north. This area includes Mt. Vernon Place and the best portion of Charles, St. Paul, and Calvert Streets. Nearly all of this area lies within the First and Second Precincts of the Eleventh Ward, and the Eighth Precinct of the Eighth Ward. In these precincts Gen. Harrison had 315 votes, about 110 of which were cast by negroes, leaving 205 to be given him by the whites. Mr. Cleveland received 867, or more than four times as many. The Third, Fifth, Sixth, Seventh, and Ninth Precincts of the Second Ward, the First and Fourth of the Fourth Ward, and the First, Second, and Fourth of the Ninth Ward include within their boundaries the worst slums in the city, known locally as the "Causeway," the "Meadow," and the "Space." They have within them 417 saloons, brothels, or gambling hells, or about one to every ten registered voters. Gen. Harrison received in these precincts 977 votes, of which about 200 were contributed by negroes, leaving 777 as the number given for him by white men. The vote for Mr. Cleveland was 2,433, or more than three times as great. In the worst precinct of the whole lot, the First of the Ninth Ward, in which there are about 100 saloons and worse places, or one to every five voters, the white vote was distributed about as follows: Cleveland 390, Harrison 30; Cleveland thus getting about thirteen times as many as Harrison. On the other hand, in the First Ward, in southeast Baltimore, and in the Eighteenth Ward, in southwest Baltimore, the population of both wards being largely composed of the better class of mechanics and skilled laborers, largely of American or German extraction, although there are a great many Irish in each ward, the white vote was divided about as follows: Cleveland 4,072, Harrison 3,925.

In other words, in this city the Democratic party comprises the enormous majority of the residents in the fashionable neighborhoods and in the "slums," as well as practically all the Irish vote, while American and German mechanics and laborers are not unevenly divided; and whatever preponderance there is, is probably in favor of the Republican party.

Very respectfully, J. C. R.

Baltimore, January 25, 1890.

NEW MATTER.

To the Editor of The Nation:

Sir: One of the most important subjects with which our Government has to deal in the future is the currency. It is, perhaps, even more important than the tariff, which is in the main a tax upon the many for the benefit of the few, though it has collateral effects which are perhaps even worse. But if we consider how completely every act and condition of our lives is bound up with the currency, that it is as essential to life itself as the atmosphere we breathe, we can understand that its purity is as important as that of the atmosphere. A volume might be written on the misery which has been caused by unsound currencies, and the miracles in restoration of public health which have followed upon their reform.

Our national-banking system is probably, and, in proportion to its development, certainly, the strongest in the world. The requirement of a large percentage of cash reserve against deposits is a rock foundation which has carried us for twenty years without serious disaster, and may do so through many more such periods, if its strength is not too severely tried by the enormous superstructure of State banks called trust companies. It is worth noting that, from the Revolution to the Civil War, all the serious financial trouble of the country came from the State banks.

As regards currency, apart from banking, the case is widely different. We have four kinds already in existence—greenbacks, national-bank notes, gold certificates, and silver certificates—while a fifth is looming up in the future on the fearful and wonderful plan proposed by Secretary Windom. As the Government debt is paid off, the basis of the national-bank notes is disappearing, and if that process should become complete, the whole system would be under the direct control of the Government—that is, of committees of Congress worked by the lobby. Is that a promising outlook?

If we claim that our system of deposit banking is stronger and better than that of Great Britain, we can afford to concede to her the advantage in respect to currency. The system established by the Act of 1844 has proved itself, after half a century, as it is the most scientific in theory, to be also the soundest in practice, of any currency not wholly metallic, and, if transplanted to this country, perhaps with some modifications, would give us in this respect what we most need. But what chance it there of Congress doing this or anything like it? There is not enough plunder in it for the private interests which make up the lobby, which rules the committees. It is conceived altogether too much from the point of view of the public welfare for which nobody cares—that is, nobody who has any power to do anything.

The English Act of 1844 is equally well known as Peel's Act—that is, it was the work of one man; of course, subject to his responsibility to Parliament and public opinion. All our financial success during the war, and, under the circumstances, it was very great, was owing to the fact that Congress, frightened into submission, surrendered the subject into the hands of Mr. Chase. No doubt Congress did save the country from immense disaster by resolutely refusing to allow the greenbacks to exceed $450,000,000; but then that is just what Congress is fitted for and can do best, namely, to hold the one-man power in check, that is, exercise the veto power, which is now so absurdly applied at the other end.

As there is no subject more important than the currency, so there is none which more needs the hand of one man, representing the national interest and authority, and sobered by the consciousness that he has to fight the battle with local interests under the eye of the nation. It may be said that we have no Secretaries of the Treasury available for such work. I answer that our Secretaries are quite good enough for the work we give them to do. If the Treasury were made a first-class place, with first-class work to accomplish and first-class reputation to be won, and the candidates were tried by fire in Congressional debate, we may rely upon it that the right man would, ere long, come to the front, just as in time of dire need there came to us Lincoln and Grant. G. B.

Boston, January 23, 1890.

THE ANCESTRY OF WASHINGTON.

To the Editor of The Nation:

Sir: My friend Mr. Whitmore has kindly sent me a copy of your last number containing an interesting letter from "C." about "The Lost Washington Wills," etc. If "C." will look into vol. 43 (p. 81) of the *New England Historical and Genealogical Register*, or into my 'Gleanings' (Part iii., p. 299), he will find a large abstract of the will of Washington's grandfather, Lawrence Washington (1697), of which Sir Isaac Heard seems to have made an abstract which he enclosed in a letter to Washington. That will, as my 'Gleanings' show, was proved in the Prerogative Court of Canterbury (Book Noel 186), 10 December, 1700, by the oath of Mildred Gale *als* Washington (wife of George Gale), one of the executors, power reserved for the other two, etc. And my English friend Mr. J. C. C. Smith furnished to the *Genealogist* of January, 1883 (vol. 7), some extracts from the will of Mrs. Gale, made during the lifetime of her last husband and with his consent. Her husband took probate of her will and gave bonds for guardianship of the children, John, Augustine, and Mildred Washington. Mr. Smith appended a pedigree from which it appeared that George Gale removed to Maryland, where four sons of his were living in 1712.

I am obliged to "C." for his extract from Lodge's Life of Washington. I wish I had known of it before, when I was in England and *warm* on the subject. I should have liked to ferret out the "C. H." at whose house Col. John Washington was "sometimes seen." I rather wonder that some good friend did not bring this to my notice as a suggestive clue.

I should like exceedingly to have the privilege of looking over Col. Chester's collection concerning the family of Roades. That is a branch of the Washington problem which should receive more attention than I have felt at liberty to bestow upon it. I have, to be sure, some unpublished notes, one of which, I recollect, seemed to me quite important as bringing into intimate relations a respectable family of Roades and that branch of the family of Sandys which was settled in Cambridgeshire, especially important in view of the mention made of places in Cambridgeshire by Dame Margaret (Washington) Sandys, a sister of the Lawrence Washington who, as I suggest, married Amphillis Roades.

Henry F. Waters.

Salem, Mass., January 25, 1890.

Notes.

The third and concluding volume of Fyffe's 'History of Modern Europe' (1848–1878) is in the press of Henry Holt & Co.

A desideratum of long standing has been an edition of Darwin's 'Voyage Round the World,' with views of the places visited and representations of the animals described. This is now announced by D. Appleton & Co. The illustrations are chiefly from sketches taken on the spot by R. J. Pritchett. The same firm will issue also 'Five Thousand Miles in a Sledge,' being a mid-winter journey across Siberia, by Lionel F. Gowing; 'Exercises in Wood-Working,' by Ivin Sickels, M.D.; 'Hygiene for Childhood,' by Francis H. Rankin, M.D.; and 'Evolution of Man and Christianity,' by the Rev. Howard MacQueary.

T. Y. Crowell & Co. are to reprint Prof. Richard T. Ely's 'Problems of To-day' and 'The Labor Movement in America.'

Thomas Whitaker will publish directly 'Church and Creed,' by Prof. Momerie; 'The Battle of Life,' mission sermons by the Rev. Wilmot Buxton; 'Thought-Seed for Holy Seasons,' by the Rev. Robert S. Barrett; and a 'Treatise on Dogmatic Theology,' in two volumes, by Prof. Buel.

John Wiley & Sons have in preparation 'A Technical Dictionary,' by Park Benjamin; a 'Railroad Engineers' Field-Book and Explorers' Guide,' by H. C. Godwin; and 'Simple Elements of Navigation,' by Lucien Young, U.S.N.

Ginn & Co. have nearly ready 'Plant Organization,' a guide in private or class study, by Prof. R. Halsted Ward of the Rensselaer Polytechnic Institute.

Funk & Wagnalls have in preparation 'Wendell Phillips the Agitator,' by Carlos Martyn; 'A Cyclopædia of Temperance and Prohibition,' in a single volume; 'The Economics of Prohibition,' by the Rev. J. C. Fernald; 'The Seven Churches of Asia,' by Howard Crosby, D.D.; and 'Calvary Pulpit,' sermons by R. S. MacArthur, D.D.

King's 'Hand-book of the United States,' edited by the competent hand of M. F. Sweetser, with revision of the various sections by eminent experts, will make a volume of some 700 pages, and be profusely illustrated with maps and pictures.

The Oneida Historical Society of Utica, N. Y., is undertaking a new and more complete list of historical societies in the United States. The Corresponding Secretary is Gen. C. W. Darling, and he is prepared to send blank circulars pointing to the information desired. We miss queries (other than "Annual Expenditures for Publications?") that would help determine the real *life* of such societies beyond mere collection.

Subscriptions are invited by N. Murray, P. O. drawer 2, Baltimore, Md., to a proposed volume of the principal literary essays and studies of Prof. Basil L. Gildersleeeve of Johns Hopkins University. The edition will be limited. The topics are: "Limits of Culture," "Classics and Colleges," "University Work in America," "Grammar and Æsthetics," "Legend of Venus," "Xantippe and Socrates," "Apollonius of Tyana," "Lucien," "The Emperor Julian," "Platen's Poems," "Maximilian, Emperor of Mexico," and Occasional Addresses.

A revision of Flügel's well-known German-English Lexicon by the son and grandson of the founder is now passing through the press in Leipzig.

A flat quarto 'Souvenir Volume of the Centennial Celebration and the Catholic Congress, 1789–1889' (Detroit: Wm. H. Hughes), contains the proceedings of the first American Catholic Congress and the dedication of the Catholic University during the past year. As Dr. Henry F. Brownson, who writes the introduction, thinks "it can hardly be doubted that this is destined to be a Catholic land," Catholic discoverers having been the first to claim it for "Christ's heritage," there ought to be a lively interest in the personality of the divine instruments in this not inconsiderable job. The publisher meets this demand by offering a very large number of portraits of the Catholic clergy and laity associated with the two events mentioned above.

A very ample 'Dictionary of Quotations in Prose from American and Foreign Authors, including translations from Ancient Sources,' edited by Anna L. Ward (Thomas Y. Crowell & Co.), supplements the same editor's 'Dictionary of Poetical Quotations.' There are 6,000 extracts from 553 authors, arranged under catch-words, with indexes both of the authors and the extracts. The editor has made her own choice, without regard to the familiarity of the quotations. The most quoted authors are Alcott, Beecher, Carlyle, Channing, Beaconsfield, Emerson, Hazlitt, Johnson, Ruskin, Shakspere, Holland, Bacon, Amiel, Landor, Lowell, Cicero, and the Hares. Among minor names we notice Birrell, Winter, Stedman, Hamerton, Haweis, Joseph Roux, Mabie, Scudder, Nadal, etc., many of whom are fully represented. These names indicate the quality of the book, which will prove serviceable to those who have occasion for such a volume.

The Rev. Washington Frothingham has collected from his journalistic labors of many years a volume under the title 'Our Book' (G. W. Dillingham), and has coupled with his own name as author that of the late Charlemagne Tower; the share of the latter having been to suggest the work and generously provide funds for its publication. The articles are brief, often hardly more than paragraphs, but also frequently continuing the same subject under a series of minor headings. They are very various in matter—literary, biographical, and historical—and afford a curious monument of newspaper labor, and, we will add, of the direction of the munificence of a millionaire Harvard graduate.

President Andrews of Brown University is the author of a text-book of political economy for the use of colleges and schools, entitled 'Institutes of Economics' (Boston: Silver, Burdett & Co.). A peculiarity of the treatise is the use of heavy type for the chief words, which is, perhaps, convenient for students, but makes the book painful reading for those who are not obliged to cram for examination. The author follows to a great extent the theories of the German writers upon the subject—we can hardly call it science as they treat it—but refers to many opposing views. A valuable feature is the abundance of instructive notes, which form a running commentary upon the text. Owing to the extremely condensed form of the treatise, which numbers only about 225 pages, many statements appear to us to be too sweeping, but instructors in this department will find it a convenient summary of doctrine.

'The Essentials of Physical Diagnosis,' by Dr. J. Wallace Anderson (Macmillan & Co.), a little book for medical students, is clearly written and correctly named.

'Electricity in Facial Blemishes,' by Dr. P. S. Hayes (Chicago, W. T. Keener), is intended for the medical profession, and gives the author's method of procedure, which seems effective but delicate, so that its successful employment will probably not extend beyond expert hands.

'Artists' Wives' and 'Jack' are the two latest volumes by Alphonse Daudet that have appeared in the series of prettily illustrated translations published by George Routledge & Sons. Both bear date of the present year, though they have been out for a couple of months at the least. 'Jack' is the well-known novel of the same name in the French, a somewhat too long and quite too distressing history of a child to whom the *recherche de la paternité* is not permitted by French law. The other, a translation of 'Les Femmes d'Artistes,' has all the appearance of being a collection of magazine sketches, though we do not remember seeing any of them before. They are plainly early work, one of them being obviously a first sketch of the very offensive poet whose full portrait is drawn in 'Jack.' The common theme of all of them—the incompatibility of the artistic temperament with the conditions of every-day life—also, perhaps, points in the same direction. Both translations are by Mrs. Laura Ensor. The illustrations,

some of them very good, have been taken over from the French editions.

We have received thus far of Prof. De Gubernatis's 'Dictionnaire International des Écrivains du Jour' (Florence: Louis Niccolai), the first eleven parts, carrying the work down to Jalabert. When completed it will deserve a place in all public and the best private libraries alongside of Vapereau, 'Men of the Time,' 'Celebrities of the Century,' Kürschner's 'Literatur-Kalender,' and like books of reference. Nevertheless it is a pity that the editing is not characterized by a German thoroughness and exactitude. We note among omissions the Spanish novelist Galdós; the German theologian, Oscar von Gebhardt, Tischendorf's successor as editor of the Greek New Testament, the Fathers, and the 'Texte und Untersuchungen zur Geschichte der altchristlichen Literatur'; Karl Goedecke, author of 'Grundriss der Geschichte der deutschen Literatur,' one of the most important works of its kind, of 'Goethe's Leben,' and editor of all the recent Cotta editions of Goethe and Schiller; H. von Holst; John Burroughs, Dr. O. W. Holmes, Rev. George E. Ellis, author of the 'Life of Rumford,' etc., etc. The American portion needs a thorough overhauling. Mr. Howells's middle name is omitted; the titles of several of his works are enclosed in quotation marks as if one, *e. g.*, 'A Chance Acquaintance, poems'; 'The Garroters' becomes 'The Garreters.' T. W. Higginson and John Fiske are said, the one to have been born, the other to reside, in "New-Cambridge," and the historical works of both these writers are overlooked. Under Willard Fiske, the *Nation* is planted in Boston. Edgar Fawcett is disguised as "Edgard Fawcet." Charles W. Eliot is said to be President of "*Harvard May.*" Such blundering is not confined to English. On p. 997, under Freytag, "Iago and Ingraban" stands for "Ingo," etc.; "Das Rest der Zaunkönige," for "Das Nest," etc.; "Karl Matloy," for "Karl Mathy." On p. 996, under Adolphe Frey, Salis-Seewis appears twice as "Salis-Seervis." On p. 1113, Gescheidlen is entered "Gescheiden." The Italian side of this dictionary is, evidently, the one for which we must be most grateful, and which we can trust most implicitly.

Remarkable accuracy in the printing of English is to be set down to the credit of Egisto Rossi, author (after two visits to this country) of a monograph on 'La Istruzione Pubblica negli Stati Uniti' (Rome, 1889). Rossi is very favorably disposed to our common-school system, and to the spirit of home rule and self-help on which it is based, and which he would fain foster among his own countrymen. He points to Franklin, Morse, Howe, Bell, and Edison as emanations from the common school, and not a spontaneous product of soil or race. The brochure fills 150 pages 4to, and is indexed. It abounds in useful tables and well-marshalled statistics.

A fourth number of the catalogue of the Codici Palatini in the National Central Library of Florence, and a seventh in that of the Codici Panciatichiani in the same library, are before us. The former contains the preliminary matter designed to introduce the completed volume, and two admirable indices to the prose and poetry. Seventy pages of "first lines" offer a tempting field for the imagination of poets of all countries, with many a modern application: "Gallia superba, che d'armata gente"; "O Monarchi Europei, ch' armi tonanti"; "Nel giorno che i duo Re col terzo Mauro" (the triple alliance), etc.

Part 18 of the new 'Stieler's Hand-Atlas' (Westermann) embraces maps of the Balkan Peninsula, of southeastern Africa (with side maps of Abyssinia and Zanzibar), and the West Indies.

The latest issues of *L'Art* (Macmillan) have been occupied still with the Exposition, particularly with the Century of Painters, in connection with which a great number of portraits have been reproduced, as was most fitting. But sculpture and ceramics, and what Chaucer calls goldsmithrie, the art of Japan and of Persia, have also been taken up. In No. 611 P. G. Molmenti speaks sensibly, but with deep feeling, of industrial encroachments upon the beautiful in Venice, and of the general incongruity of the later architecture with that which has made Venice the attraction of the world. A projected post-office promises to be one of the worst examples.

The latest issue of the Bulletin of the Boston Public Library contains an interesting account, with plates, of a signature of the name Wllm Shakspeare, with the words "hundred and twenty poundes" following, found in the binding of a Plutarch of 1603, purchased ten years ago. The question whether this is an autograph of Shakspere is elaborately discussed by the Librarian, who arrives at a conclusion not unfavorable (but also not decisive) to its authenticity. The probability of forging is very slight; the age of the writing is certainly very great; but it is still possible that the name was written by another than Shakspere's hand. Careful comparison with the true autographs is made, and both resemblances and differences are pointed out. The plates aid the reader to an entire comprehension of the facts in the case, and place the material for judgment before the eye.

A portrait of the new Supreme Court Justice, David J. Brewer, stands as frontispiece to the January number of the *Green Bag*, which is otherwise noticeable for an article on "Women Lawyers in the United States," by one of them (Leila J. Robinson), with numerous portraits in the fashion of this journal. "The woman lawyer," we are told, "exists to quite as numerous a degree in the married state as in that of single blessedness," and perhaps a majority began to study after marriage. "Our practice is general in character," writes a lawyer of himself and wife. Miss Robinson herself was the occasion of the Massachusetts laws admitting women to the bar and to justiceships of the peace.

Mr. Stead's new *Review of Reviews* is typographically a reminder of the editor who debased the *Pall Mall Gazette* in the same way. It is cheap-looking to the last degree. It opens with a lot of facsimiles of autograph letters from Gladstone, Salisbury, and other magnates in response to the editor's prospectus and inquiry what they thought of that sort of thing. There is to be a monthly "character sketch" (for January, Henry M. Stanley). There is a list of the new books and blue books of the month, and an index to salient articles in periodicals. The general appearance of the first number of this sixpenny monthly is higgledy-piggledy.

Dr. Schaff is the latest to add a pamphlet, 'Creed Revision in the Presbyterian Churches,' to the flood, past and impending, on the subject of Presbyterian agitation over the Westminster Confession (Scribners). His Lutheran antecedents and Lutheran theology, always frankly avowed during his long service in the Presbyterian Church, make him a fit example and advocate of tolerance in interpreting the creed, and his learning on all the points at issue is, of course, ample. The most significant thing about the progress of the controversy thus far is, however, the small weight that learning and theological expertness appear to be exerting. The anti-revisionists seem to have the best of the argument, logically and ecclesiastically, but the *Zeitgeist*, or something else, has got hold of the vast body of the younger ministers and the elders, who have little or nothing to say in the debate, but who vote with surprising unanimity in favor of revision.

—The February *Atlantic* is a remarkably full number. Old readers of the magazine will not make a mistake if they turn at once to the pages of its oldest contributor, and enjoy the bright wit and latter-day wisdom of Dr. Holmes, who is as happily discursive as ever, and entertains us particularly in this instalment of "Over the Teacups" with a description of life on the planet Saturn, where, it appears, some of our "reforms" have been realized. The most inveterate of theorizers cannot but smile at the conceit of the Isopodic societies, "which insist on bringing back the original equality of the upper and lower limbs," and, by going about on all fours in a private way, hope "to bring the world round to them in the near future"; and no one will wonder at "the endemic disease of the planet, prolonged and inveterate gaping," ending in dislocation of the lower jaw. The Socialists who go under the name of Nationalists will also find instructive matter in the vigorous exposure of Mr. Bellamy's gospel by Francis Walker, in which, sarcastic as the writer is, the most biting passages are his clear statements of the exact meaning of the new doctrines; but President Walker plainly labors at a disadvantage from the flimsiness of the case he demolishes with his root-and-branch logic. Miss Preston's classical paper on the poet Ausonius is a pleasant revival of the early Gallo-Roman civilization, and contains some excellent renderings. The Bering-Sea Question is dealt with to the point that we cannot as a nation make claims the overthrow of which hitherto has been one of the chief honors of our international life. The new Japanese Constitution is outlined in a rather bald way by K. Kaneko; and, finally, there is an unusual number of notices of interesting books in many departments. The magazine may well be congratulated upon such a showing of public and literary topics in addition to the three notable serials which it is giving to its readers.

— The most interesting paper in *Harper's* is Mr. Lathrop's informal report of familiar conversations with Edison, in which he endeavors principally to illustrate the natural inventiveness of Edison's mind, and tells some anecdotes of his early life and the first motions of his genius. It is said that Edison himself insists on the large deductive element in his inventions, and scouts the notion that he discovered anything; he attributes his successes to long and persistent thinking. His career, as here stated, affords a striking confirmation of the truth that it is by taking step after step, and not by making great leaps, that genius attains its power. Another interesting paper of personal reminiscence is contributed by James Hogg, the Scotch writer, upon the habits and ways of De Quincey, in which there is nothing very novel, perhaps, but all is happily told, with a good proportion of that friendly charitableness which De Quincey stands in such need of. Gen. Wolseley's account of the standing army of Great Britain is of the type to be expected, and is handsomely illustrated; the New York banks are described by Mr. Wheatley in the same clear, compendious manner; a long paper on Benvenuto Cellini gives occasion for cuts of his most famous works; Jamaica is

both a travel and a picture subject under the appreciative and artistic hand of Howard Pyle, and the relics of the Lake Dwellers are shown and commented upon in another illustrated paper. Mark Twain makes a humorous contribution by merely printing extracts, from an old medical guide, which do not need his grotesque remarks to appear in themselves monstrous jokes, though otherwise intended. There is a good proportion of verse, but none of it equal to the natural pathos and occasional grace of William Winter's lines upon "The Ship that Sailed."

— *Scribner's* opens with a new number of its African series, upon the Congo savages, in which a good deal of information is given about the tribes and the general characteristics of the Congo State by a competent hand, and the tales of the text are well supported by the physiognomy and surroundings of the natives, including a tree hung with relics of cannibalism. A biographical paper upon Ericsson is principally confined to the facts of the inventor's early life, his Swedish ancestry and bringing up, and a reminder of how much he accomplished. A second paper, however, which may bring the man's individuality nearer, is promised. Mr. Bishop gives a long and detailed account of the literary celebrities of Madrid, of whom he writes with many compliments, and he says a good word for the city itself, usually not highly praised by travellers. The accompanying portraits supply all that is lacking of personal description in the text. The archæological image recently brought from the bottom of a boring in Idaho is the subject of a brief paper; and Mr. Eugene Schuyler tells a pathetic story of a Minnesota emigrant who wandered to Servia and there hunted for his ancestor's treasure, with the assistance and charity of the Servian Prime Minister. He died without success, but there is some reason to think that the treasure was found. The kindness of the Prime Minister is one of the finest traits of this curious story. Mr. Mallock writes sympathetically on the subject of Hungarian castles, with a few prefatory pages of interest upon Palladian architecture. Mr. T. R. Sullivan contributes one of his highly finished short stories upon a romantic motive which belongs to a sort of literature that has passed away.

—The *Century* also brings us a distinctly literary article in a paper of reminiscences of Emerson by a college boy with whom he talked of literature and writing. The notes seem to have been carefully made, and the sentences have the Emersonian manner. The matter is necessarily old, but the picture of Emerson's friendliness with the collegian, his kind companionship and disposition to be helpful, is very happily drawn, and the article is a contribution to Emersoniana worth remarking. The opening paper upon Japan, by John La Farge, is a wonderfully effective rendering in words of artistic impressions of light and color and of the novelty of the Orient, very familiarly and accurately made, and will quicken interest in what is to come from the same pen. The writer has succeeded in the difficult task of giving the sense of enchantment which he felt, and he does it necessarily without effort. Joseph Jefferson deals with Forrest, of whom he speaks with much considerateness with respect to faults of temper, and he closes with an almost photographic glimpse of his first visit to Paris. The religious article is taken up with a discussion of St. Paul's position in freeing the new faith from its Judaizing influences. The Lincoln biography is brought to an end, and the war-paper is really upon Jeff Davis's capture, which is told from all the evidence, and may be regarded as settled in its incidents beyond any further disturbance by the historian. The French Revolution furnishes matter for some striking illustrations. The Congo State is also written of by the U. S. Commissioner, but without the lively directness of the English explorer. The new Constitutions of Washington and Montana, and Greek terracottas, are other subjects, and there is besides a quantity of fiction sufficient for those who do and those who do not enjoy dialect.

—Prof. A. B. Hart contributes to the *Quarterly Journal of Economics* for January an interesting article on the rise of American cities. He points out that in the United States not a city has had its situation determined by considerations of defence, and that in fact most of them are practically defenceless, a striking testimonial to the peaceful character of our age. As to the generalization that "it is much less important for a city to have the length of a great river behind it than to have a good harbor before it," we think that it is of little value, owing to "plurality of causes." The character of the surrounding country and the construction of railroads must be taken into consideration. Nor can we assent to the implication that in manufacturing cities, small and great, the public revenue is more likely to be misspent than in seaports. The returns of taxation do not support this view. The increase of cities having a population of 8,000 and over, from 1800 to 1880, has been from 6 to 286; the percentage of population rising from 3.9 to 22.5. These cities, which have nearly one-fourth of the population, have more than one-half of the foreign element. If the children of foreign parents are counted as foreigners, our large cities have now passed into foreign control. Very striking results appear from the comparison of the ages of Americans and foreigners in some of our cities. In Boston there were, in 1885, 275,000 American-born persons to 132,000 foreign-born. But of the natives 137,000 were minors, while of the foreigners only 12,000 were minors. In New York, of five persons above the age of thirty-five years whom we might meet in 1875, the chances were that four were born abroad. Both in Boston and New York the excess of the female population is due chiefly to the preponderance of foreign-born women. The large requirements of city households for domestic servants partly account for this. We should have been glad of data showing whether the population of our great cities would sustain itself independently of immigration; but it is perhaps impossible to determine this problem. We should be pleased to conclude with Prof. Hart that the government of the cities is likely to improve with experience and the education of the community; but unless this is to be taken as a mere abstract proposition, we fear that it might not be easy to establish it by induction, and we find nothing in this article to support it.

—We noted last March the very severe report of the Cambridge University examiners upon the work of the candidates for commercial certificates. They held it to be almost worthless, and passed only eight out of the forty-nine who were examined. Earlier in the previous year, in July, there had been ninety-seven candidates, of whom no more than seventeen passed. This year's report makes a better showing. In July sixty-six candidates presented themselves, of whom twenty-five obtained certificates. The falling off in the number of applicants was most likely due to the severity of last year's examination and report, but this seems to have been a salutary harshness, for the quality of the work of this year is much improved. A distinct advance has been made in the writing of French and German. The French and German conversation also is improved, many of the candidates having gone abroad during their holidays to get a little practice in it. The examiners say: "The impression left by the examination is that the work, as a whole, was much sounder than last year, and that in some schools the subjects prescribed have been intelligently taught, with results which have a real educational, as well as practical, value."

— A brilliant discovery has been made; and where in the world but at the Peabody Normal College at Nashville, Tenn.? The plan has been invented of intrusting the temperature and the ventilation of each class-room to a committee consisting of students who are particularly interested in that room. These students are instructed in the special method of heating and in the proper means of ventilation for that particular room; they are provided with thermometers, and they doubtless pass an examination as to the delicacy of their sense of smell. They are then made absolutely accountable for the room being always in proper condition. It is singular that so simple a device as this should not have suggested itself to the heads of other institutions: a janitor, even if he were a scientific man, cannot be expected to take a deep interest in the air of a room which he is not obliged to sit in. Future generations will doubtless lament the backwardness of our civilization, when, to take two instances where every place of public resort would do as well, the Peabody Concert Hall in Baltimore has absolutely no means for letting out the intense heat produced by its numerous gas-jets, and when the Johns Hopkins University, the very hot-bed of chemical and physiological learning, holds its public lectures in a room so unprovided with air that persons of any olfactory delicacy find it very difficult to sit them through.

SALTER'S ETHICAL RELIGION.

Ethical Religion. By William Mackintire Salter. Boston: Roberts Bros. 1889. 8vo, pp. 332.

THE devoted leader of the Society of Ethical Culture in Chicago has here collected a number of lectures which were, for the most part, delivered before members of that body. Curiously enough, a volume containing several of these same lectures, in a German translation, was brought out in 1885 in Leipzig, so that Mr. Salter has received a favorable and well-deserved attention abroad before publishing in his own tongue.

The book is, as one might expect from its origin, rather didactic than speculative, and the author disclaims in his preface any other than a practical purpose. Mr. Salter's theory of ethics is, indeed, not entirely kept in the background in the course of the book; nor is he silent as to his opinions upon a number of philosophical and theological problems of a very grave sort. But, on the whole, as he tells us, he writes, not for "scholars," but for "men and women who are in the midst of the stress of life." He hopes to "refresh or invigorate the moral life" of his reader, to stir in some one "a divine discontent with himself and the state of society about him," and meanwhile to "nourish the hope that there is but one outcome of the course and evolution of things, namely, the victory of the good." Such a book must, as far as possible, be received on its own basis, and must be judged as a work of the "literature of power" rather than as a theoretically ambitious treatise.

So regarded, Mr. Salter appears as a distinctly impressive and attractive personality, modest, courageous, simple-minded, generous, and earnest. As for his general doctrine, it is in sum this: Religion is at once "man's supreme interest," and the expression of "man's relation with what is ultimate and supreme in the world." But man's supreme interest is the reverence for the good, and morality is that which, "truly interpreted, does bring man into contact with the final nature of things." This latter proposition Mr. Salter defends by pointing out that, "whatever else I may doubt about, I cannot doubt the law of duty," a law which "is not made and cannot be changed by God or man," and which "belongs to the nature of things." Not only is the moral law, then, a supreme objective fact, but it could not conceivably be otherwise. To one who looks at the matter thus, "morality becomes religion. He alone does a genuinely moral act who does it because he must, because the nature of things bears down upon him to do it. For the crystal, religion would be to become a crystal; to own the pressure that would yield the perfect form. For man it can only be to be a man, to perform the human part of the human task."

This "nature of things" to which Mr. Salter thus appeals is, however, not to be found in the world of sense, as this world now is. Even science, "in the strict sense of the word, knows nothing of right and wrong." "To the pure understanding, virtue and vice do not exist." Facts might "seem as constant as day and night, and yet have no right to be." Nor is the ideal world of morality "another world alongside of the actual world," a Platonic world of eternal essences. Nor has the moral "nature of things" its true source of authority in the will of God. Mr. Salter more than once, in fact, protests against *any* theory which should say that the ideal is, here or elsewhere, as yet *realized*, for "that is an unsatisfactory view of life which leaves us nothing to do." Older forms of faith, too confident of the divine order, have in fact enervated men by assuring them that the right always wins. On the contrary, "justice is always failing in the world"; and while old religions say, "The ideal does rule," the new religion will say, "Let it rule." Even this true religion, like the morality of which it is the "blossoming out," nowhere exists at present (p. 23), but is to come. Its fundamental faith will be that "the note of authority seems to go along with a certain class of ideas," such as humanity and justice. In short, as to this whole relation of the authority of the moral law to the "nature of things," Mr. Salter nowhere speaks more clearly than when he says (p. 19), "The truest revelation, the truest voice of the nature of things, is not in what we see, but in our thoughts of what ought to be. Trust thy dreams, oh Reformer! thou comest never so nigh to the heart and spirit of things as in them."

Our author's "nature of things" is thus very frankly a paradoxical conception, involving a very baffling *esse in potentia* as the "supreme truth" behind our world of experience. In fact, Mr. Salter's moral law, notwithstanding the majesty of its claims, frequently reminds us of the *Homunculus* of Faust, and appears to be saying to humanity:

> "Lasst mich an eurer Seite gehn;
> Mir selbst gelüstet's zu entstehn."

But such potential realities have had, ever since Aristotle, an important place in speculation, and we make no question that the paradoxes of our author's doctrine have a deep foundation in the nature of his topic.

In the further development of his ethics, Mr. Salter, despite his indifference to traditional theology, bears in many respects a strong resemblance to Bishop Butler. One is reminded of the 'Ethical Sermons' by many things in these lectures. In style, to be sure, Mr. Salter is remote enough from the slow-footed Bishop, and moves with the ease of a practised modern speaker, while in many respects his language shows the influence of Emerson. But the doctrine is often very similar to Butler's, save as to matters of theology proper. The appeal is always to the "true human conscience," which, as Mr. Salter explains in his fifth lecture, is independent in its judgments of the accidents of changing custom and opinion. Conscience, or, as Mr. Salter often prefers to call it, "the supreme thought to do what is right," counsels principles which are organizing in their nature, which are rationally supreme over the natural impulses of men's hearts, and which are still not self-executing, but need the coöperation of free agents. The supremacy of these principles is, therefore, as Butler would have said, "authority" as distinguished from "might." The principles are to be found by self-examination. No honest man can doubt them. No higher reason can be given for them than that we know them to be true (p. 70). At the same time, like Butler, our author is glad to appeal, for didactic purposes at least, to the facts of experience, in so far as they illustrate, and even sometimes seem to confirm, those moral truths which are all the while not "matters of fact" at all, but ideals. With a delight in the concrete world such as is very natural for one whose moral ideals must grow occasionally lonesome in their empty heavens, our author follows with satisfaction the partial triumph of morality which Darwinism has made plain as a tendency in human evolution. Very much in the same way, Butler, whose theology was full of somewhat disheartening problems, loved to confirm the divine authority of conscience by appeals to the facts of experience known in his day. And Mr. Salter once more reminds us of Butler in his whole bearing towards what is now called Hedonism in ethics.

We have, of course, no space to follow our author into further details. The lectures are practical discussions, whose chief value lies in the fine temperament that expresses itself in them. They touch upon many interesting modern problems, *e. g.*, in the discussion of the "Rights of Labor"; although as to such matters they have possibly a tendency rather to ennoble than to enlighten Mr. Salter's audience —a criticism which we make in no captious spirit; for what else could be expected of a brief homily upon complex social problems? A still more delicate topic is treated in lectures x. and xi., on the "Ethics of Jesus," where Mr. Salter solves very well the problem of uniting plain speech and pronounced liberalism with a true seriousness of tone that ought to offend no opponent. Unitarianism is ingeniously criticised in lecture xiv., on the ground that while it is "benevolent, humane, philanthropic, as those words go," it still "does not call on us to create a new heaven and a new earth," "does not appeal to the infinite side of human nature," and is enthusiastic over such matters as "supporting old churches whose natural lives seem to be already spent." "Unitarians," says Mr. Salter, "manifest no great discontent with the world about them." These expressions show that Mr. Salter, with all his humanity and gentleness, is not incapable of making sharp speeches, and, accordingly, they rather raise our respect for the charity with which he elsewhere is wont to treat all mankind.

After all, however, the unsatisfactory thing about these excellent lectures, even regarded from the practical point of view, is just the vagueness of the author's moral theory. Morality is rooted in the "nature of things," but not in "natural law," which as such is mere dead fact. The ideal does not "exist anywhere to-day," but is for all that a "truth supreme above all." We know this to be so partly because nothing but the good can survive in the long run. But mere survival, like any other fact known to science, has of itself no moral value, and the course of the world is often unjust. Morality rests upon an "ought" which a man can find only in his own heart. Some men, indeed, *e. g.*, bad men and savages, find no such "ought," or else mistake its true character; but then such men do not count. Meanwhile, the "ought" is not merely in us. So we come back once more from what is in our hearts to that supreme "nature of things" which, nevertheless, we must not call by the name "God," except by way of conjecture or poetry, because to do so might be superstitious. Yet we must remember all the while that this supreme "nature" is nothing merely physical.

So many paradoxes together would form a more serious defect in such a work were they not, as every philosophical student knows, very deeply rooted in the nature of this most perplexing region of speculation. We call attention to them here (we repeat) for a reason as practical as Mr. Salter's own intentions. The Ethical Societies have doubtless their own mission to fulfil, and we hope that they may prosper in that mission. But if they address "men and women who are in the toil and stress of life," they also address for the most part intelligent and reflective persons who, for some reason or other, have abandoned traditional creeds. In such persons the leaders want to arouse moral enthusiasm. Would it not be well to arouse it by means of less obscure and vague accounts of what morality after all is? Noble sentiments and the "nature of things," and even the brute fact of the "survival of the fittest," may be good to appeal to in this lecture or in that; and doubtless this whole movement is more dependent on the personal power of the leaders than on any system of ideas; but is there not danger in these endless paradoxes and unexplained self-contradictions of one's teaching? Would not a systematic and even somewhat speculative theory of ethics be of use to the teacher, and that, too, even if he kept it in the background in his daily teachings? To be all things to all men is, indeed, the privilege of an apostle; but to appeal to anything and everything plausible except theology as a support to morality—is this enough? If one leaves behind what one takes to be superstitions in tradition, may not one end in making one's morality itself a superstition? And if the laymen of the Ethical Societies should chance to note such an outcome, what result could be more lamentable? We hope that Mr. Salter will soon develop the "philosophical views" of which he speaks in his preface.

THE AUSTRIAN STATE.

A History of Austro-Hungary, from the Earliest Time to the Year 1889. By Louis Leger. Translated from the French by Mrs. Birkbeck Hill, with a preface by Edward A. Freeman. G. P. Putnam's Sons. 1889.

A LITTLE more than forty years ago, the cynical Metternich wrote in a despatch, "Italy is

only a geographical expression." No better phrase could be applied to that very Austrian Empire of which Metternich was then, in all but name, the ruler. A State made up of four distinct races—the German, the Magyar, the Slav, and the Romance—not to mention Jews and Mohammedans, and each of these races split up into smaller divisions, as (among the Slavs) the Poles, the Bohemians, the Croats, and the Slovenes—such a State has no parallel in modern times. Other governments are kept together by centripetal forces; the Austrian Government has maintained itself during the past centuries by cunningly neutralizing the centrifugal forces of its component parts. *Divide et impera* has been the motto of its statecraft. The sole continuous element in all this history is the House of Hapsburg (written Habsburg throughout this translation); and it would have been better had M. Leger made the chronicle of the Hapsburgs more prominent, and that of the Polish, Bohemian, and Magyar dynasties, which were finally absorbed by the family of the Austrian Archduke, more subordinate. As it is, he is forced to bring up the history of each in sections, as a general of artillery who is short of horses has to get his batteries into line one by one. So we follow the affairs of Bohemia, for instance, from the fifteenth to the eighteenth century; then we go back to Hungary and help her forward, and so on. Perhaps this is the best method for treating so confused and artificially related topics; certainly only an historian of the first rank, a Gibbon, could succeed by the other method of progressing simultaneously along the whole line.

Owing chiefly to this confusion and to these difficulties, the history of the countries which now form the Austrian State is too little known by western Europeans and by Americans; yet it is, nevertheless, very interesting. If you draw roughly a line from the mouth of the Oder on the Baltic down to the Adriatic, you will have the frontiers along which the wave of Slavic barbarians broke when they pressed westward after the Teutonic invasions; and almost in the middle of this line the Magyars—a Mongolian race, wholly unallied to the Aryan Slavs—drove a wedge which has been the torment of central Europe for a thousand years. The customs of those tribes in their early state—the slacker influence of the old Roman civilization over them than over the Teutonic conquerors in Italy and the West; their conversion to Roman Christianity, in spite of which they retained more local independence than Germany or France in religious matters; their oscillation between the feudal conditions of the West and the Oriental conditions of the Byzantine Empire; their implacable and incessant quarrels among themselves, whereby they finally became the prey of a tyrant who could hardly have conquered one of them but for those quarrels—these are some of the general points of interest dealt with in M. Leger's book. The student of comparative government will find in it much significant material. He will find, for instance, conclusive evidence that an elective monarchy cannot be stable. The reason why Poland, and Bohemia, and Hungary, each of which States had its period of strength and brilliance, fell asunder was that no family succeeded in establishing for any long time an hereditary rule in any of them. So fierce was the rivalry among the nobles that they often chose a foreigner to be their king, and they even allied themselves with the Turks in order to gain an advantage over their Christian neighbors.

The lack of an influential *bourgeoisie*, added to this lack of dynastic solidarity, hastened the downfall. We deplore the annihilation of the Polish State, but really the Polish nobles were incapable of organizing a civilized society, and between them and the peasant serfs there was no intelligent middle class. The lesson we get from the history of Poland, Bohemia, Hungary, and Croatia is, that aristocracies cannot maintain a government adapted to the needs of the modern world. The student of religion cannot afford to neglect the Bohemian Reformation, which preceded by a century the German Reformation led by Luther, and which proved that in intelligence and spirit the Czechs (whom Mrs. Hill phonetically writes *Chekhs*) were worthy to rank with the highest races of the west, and that they might have done so but for their hopeless political condition. Finally, the economist will meet many instructive object-lessons of the banefulness of high protection, as illustrated by the misery into which the component States of the Austrian Empire were plunged whenever an unwise Emperor prohibited foreign trade. At times, the Chinese wall of protection was erected not only on the frontiers of the Austrian State and the rest of Europe, but also between one internal kingdom and another—between Bohemia and Hungary, for example—with the result of beggaring *both* Bohemia and Hungary. The annals of those countries which the Hapsburgs acquired record many heroic deeds and noble episodes; not to go back to the half-legendary Arpád, and to the early Premyslids, we have in historical times the exploits of the Jagellons, of Matthias Corvinus, of Ziska, of Zápolya, of Stephen Bathory, of John Sobieski, of Francis Rákóczy, of Gabriel Bethlen—names as familiar to Slavs or Magyars as those of Cromwell and Marlborough are to Englishmen.

In the later period of his history, from the accession of Maria Theresa down to the present time, M. Leger is usually satisfactory. His account of the reforms of Joseph II., which anticipated many of the reforms of the French Revolution, but were speedily followed by a reaction from which Austria has not yet recovered, is clear and fair. Upon occasions when French vanity or partisanship might be looked for—as in the description of Napoleon's campaigns against Austria—he displays no chauvinism. That well-known historical snarl, the revolution of 1848–'9 in the Austrian State, he disentangles very cleverly, making prominent, but not more prominent than is just, the dog-in-the-manger policy of the Magyars, through which they wrecked not only their own but the efforts of the Croats and Czechs to regain independence. The conflict between Austria and Prussia, between 1850 and 1866, is less adequately treated: a reader who relied solely upon M. Leger's book could hardly understand the relations between the members of the German Confederation, nor the intrigues by which Austria strove to prevent Prussia from usurping her supremacy. One serious defect in the book is the absence of references; many state papers are quoted, and many historians, but we are not told the work and page where we can consult the original.

Mr. Freeman, in his preface, furnishes, in that dry and condescending manner peculiar to him, some general information in regard to the proper titles of the Austrian rulers. Of course, only beginners need to be warned that the expression "German Emperor," when applied to the successors of Charlemagne, is wrong, and that "the Holy Roman Emperor" is right; or that the present Emperor of Austria is really only the Archduke of Austria, which is but a small part of his heterogeneous State. These, and similar facts, Mr. Freeman enlarges upon, perhaps more than is necessary.

The translation is by no means worthy of the substance of the book. We can excuse some awkward phrases, but there is no excuse for the confusion and blunders in the proper names. The very title, "A History of Austro-Hungary," is an absurdity; meaningless, just as "A History of Anglo-Scotland" would be. Why did not Mrs. Hill simply translate M. Leger's title, 'Histoire de l'Autriche-Hongrie'? From such a beginning we might have inferred that when Mrs. Hill came to Slav and Magyar proper names, she would lose herself in solecisms and inaccuracies. In spite of the assistance which, she says, she had from two professors, there is no uniformity, no reason, in her method. Her only rule seems to be to give the most outlandish forms which can be found. It is, admittedly, very difficult to decide how to print foreign names in English, but surely the rule of common sense is to be as simple and consistent as possible; a Polish or Magyar town which we know by its German name, or for which we have a recognized English equivalent, ought not to be given in its Polish or Magyar form. Every reader of history has heard of the Congress of Laybach, but in what history or geography accessible to English readers could we find Ljublanja? or Olomouc for Olmütz? or Brno for Brünn? or Plzn for Pilsen? or Kromerice for Kremsier? Has not Tokay wine been drunk long enough in England to make *Tokaj* look strange? And why call the patron saint of Bohemia, Vacslav? Wenceslaus is the English equivalent; and St. Vacslav (or even Wenceslaf, Mr. Freeman's version) sounds as odd as St. Istvan for St. Stephen. Occasionally Mrs. Hill invents a form of her own, as when she translates the French *Gorice*, Gorica; and she keeps to no single form even when she retains the Slav or Magyar spelling. Two, and sometimes three, varieties of spelling are met with, often on the same page. Thus Casimir is turned into Kazimir (p. 203) and Kasimir (p. 212); Zara is Jadera or Jadara; Ladislaus is Vladislav, Wladyslaw, and Ladislas; Peterwardein is Petervarad and Petervardin; Lemberg is Liwow, Lwow, and Lwów; the Magyar *fo ispan* has several variations, viz.: *fõispan* and *foïspanak*. German words are treated with equal carelessness; here are a few blunders: Insbrück (p. 16); Landesauschuss (p. 511); Windischgratz (p. 530, 545); Zwetschgen (p. 363); Küfstein (p. 413); Wittenburg (p. 323); Königsburg (p. 105, 423). Italian words are also twisted, as for example, Montecuculli (p. 272); condottiero (p. 319); Scarlati (p. 281); Guistiniani (p. 266); Guastella (p. 457); I Miei (for *Le mie*) Prigioni (p. 471); Bocche *de* (for *di*) Cattaro (p. 585); and we are to choose between Capristan (on p. 207) and Capistrano (p. 235). We find, further, such forms as Paskievitch, Schwartzenburg, Machiavelian, Parthenopian, Egean. There are three allowable forms of the Rhenish town and former electorate—Mainz (German), Mayence (French), and Mentz (English); Mrs. Hill invents a hybrid form, Maintz (p. 106). So, too, she wavers between Basel (p. 126) and Basle (p. 405). Eugene being an English name, it is just as unnecessary to write "Prince Eugène" as to write "Albrecht" for "Albert." Why prefer the Latin Misnia to Meissen, Moldava to Moldau, Tisza to Theiss? Would a letter addressed to Dubrornik reach Ragusa, or one to Rieka reach Fiume?

These examples of verbal inaccuracies and inconsistencies must suffice. Misstatements of fact are more serious, and of these we must mention a few: Rhine for Danube (p. 17); Henry IV. for VI. (p. 99); *Ulrich* for *Wolfram* of Eschenbach (p. 124); Reinar for Reimar (p. 139). Pius II. died in 1464, therefore he

could not have excommunicated the Bohemian King in 1468 (p. 210). Charles of Anjou did not defeat both Conradin and Manfred in 1268, but the former only, the latter having been killed in 1266 (p. 218). Comenius died in 1671, not in 1670 (p. 306). Wallenstein took the title of "Admiral [not General] of the Baltic" (p. 307). Zápolya died in 1540, not in 1560 (p. 316). Maria Louisa did not retire to Schönbrunn after Napoleon's first abdication, but to Parma (p. 457). The battle of Metz was fought in 1870, not in 1871 (p. 540). The Franco-Prussian war was in 1870-71, not in 1861 (p. 587). Felix von Schwarzenberg died in 1852, not in 1853 (p. 554). Sadowa was fought July 3, not July 4 (p 569), Lissa July 20, not 16. The preliminaries of peace were signed at Nikolsburg, July 26, not 16, and the peace of Prague August 23, not 3 (p. 570). The date of Solferino is June 24, not June 23 (p. 559).

Convenient tables of sovereigns and of the territorial losses and gains of the Hapsburgs are appended; also an ethnographical map of Austria-Hungary, but its colors are so indistinct as to make it of little value. Four or five good maps showing the extent of the various kingdoms at critical periods would be better than many pages of print. If Mrs. Hill will correct the errors in date and fact, and if she will adopt a uniform spelling for her foreign names—keeping the forms already Anglicized, and preferring those familiar to western Europeans rather than those which only a Slav or a Magyar would recognize—the future editions of her translation will be useful alike to the student and to the general reader. So much good material concerning the history of the Austrian State cannot be found in any other popular work with which we are acquainted.

Narrative and Critical History of America. Edited by Justin Winsor. Vol. VIII. The Later History of British, Spanish, and Portuguese America. Boston: Houghton, Mifflin & Co.

In this last volume of a magnificent series the editor bears, as usual, the laboring oar, not only maintaining the critical and bibliographical portion, but contributing to the narrative, with chapter iv., on Spanish North America. Spanish South America's colonial history and wars of independence are summed up by Clements R. Markham, but the history of Brazil is allotted no treatment separate from the bibliography, and is accordingly looked after in small type by Mr. Winsor. Mr. Markham's strait-jacket of 48 pages of large print (really only about 25 or 30 when the illustrations are deducted) implies a very condensed relation, and Mr. Winsor's supplementary bibliographical note is hardly adequate. Thus, Markham mentions the great Paez, the heroic companion and equal of Bolivar, in but a single line, when his elevation to the Presidency of Venezuela is recorded without any characterization whatever. The romance of Paez's life has not been surpassed by that of any historical American—the moral greatness by few—and he wrote his autobiography while living in this city in 1867. Gervinus had already held him up for admiration in his 'Geschichte des neunzehnten Jahrhunderts.' Neither of these works is referred to by Mr. Winsor, and no one consulting the volume before us would suspect Paez of being anything but a political name—say the Franklin Pierce of a line of Presidents, instead of a Washington. This instance is typical of the defects of the coöperative method of writing history.

There is another instance in the account of Canada from 1763 to 1867, by Prof. George Bryce of Manitoba College. Prof. Bryce knows of no settlement on the River St. John, N. B., except of refugee loyalists—"a military section" of these. This ignores the interesting colony planted in 1763-'4 near Fredericton by voluntary emigrants from Essex Co., Mass., and which was so far from being loyalist that it made its own Declaration of Independence in 1776 before that at Philadelphia, and entreated help from Massachusetts, holding out till British war-vessels came up the river and made resistance hopeless. Glimpses of this settlement are to be had from Hatheway's rare little 'History of New Brunswick,' as well as from the Stickney Genealogy; and the effort to save the St. John and New Brunswick to the future territory of the United States has been authoritatively shown by Frederick Kidder in his 'Military Operations in Eastern Maine and Nova Scotia during the Revolution.' Prof. Bryce is his own bibliographer, and in his long note on the sources we can detect neither Hatheway nor Kidder. Before passing from this chapter, we may remark also the scanty mention of the case of the *Caroline* in the Canadian rebellion—an affair which came near embroiling us with our neighbors and with England. To be sure, it is the subject of a diplomatic footnote in vol. vii., but one could not infer from either narrative how great an excitement was caused by it on both sides of the border.

There remain to be enumerated two of the most readable chapters, having well-defined topics replete with picturesqueness and adventure, namely, "The Hudson Bay Company," by the Rev. Geo. E. Ellis, and "Arctic Exploration in the Eighteenth and Nineteenth Centuries," by Charles C. Smith. Our sole comment on these will be a pictorial one: the portrait of Capt. Cook on page 82 is taken from a French edition of his Third Voyage (1783), instead of the well-known engraving from the standard English oil portrait. In this case the authentic has been sacrificed to the curious; and the criticism we believe to hold good of not a few of the portraits in this series. To the professional iconographer no plate is indifferent, but in an historical work the best should steadily be preferred, unless in the case of a person of whom good likenesses abound and are readily procurable, when, of course, a rare one may be properly rescued from oblivion. In portraiture, charts, views, etc., this final volume, it should be said, is as well equipped as any, and Mr. Winsor shines in his chapter on the historical chorography of South America.

His *pièce de résistance*, however, is his Appendix, with its all but one hundred closely printed pages, indicating the MS. and printed sources of United States history. This is simply invaluable, no matter what shortcomings may be discovered in it—and we should put first of all the absence of bold topical headlines, or some sort of an index. This laborious guide to the student and bookmaker is followed, and the volume concluded, by a very full and convenient "Chronological Conspectus of American History," beginning with Homer's geographical views in the tenth century. This is really an index, for each event entered has its reference to the text, and its limitations arise from that cause. Thus, to take the year 1865, we have only these three items: "Faillon begins his record of the Sulpitian labors in Montreal in his *Colonie Française en Canada*"; "Reciprocity Treaty between U. S. and Canada"; "*Life and Public Services of Samuel Adams* published." The downfall of the rebellion and the death of Lincoln are excluded by the scheme of the Conspectus.

We must say a word of the General Index, which does indeed cover the whole eight volumes, but by no means swallows up or supersedes the several volume indexes. The case of the *Caroline* is again in point, being omitted here, though indexed in the seventh volume. We understand perfectly well the enormous labor and expense and the chance of error involved in an attempt to combine so many indexes, and we regret without reproaches its abandonment. No little service has been rendered under the rubrics Colleges, Discoverers, Forts, Indians, Lakes, Maps and Mapmakers, Military Events, Periodicals, Portraits and Statues, Portraitists, Religious Bodies, Rivers and their Valleys, Societies, Treaties, Conventions and Conferences, United States, etc. To crown the whole, we would have had at the end a *table des matières*, for the several tables of contents are typographically confused, and the title-pages by no means sufficiently enlightening—the backs of the covers not at all so, being distinguished only by the numerals.

Mr. Winsor and his colaborers can never be adequately either thanked or rewarded for their high and scholarly endeavors; but they have made their monument. The editor himself, unexhausted, is, as our readers are aware, already on the eve of producing a work embracing all we know (and more than any one person knows) about Columbus.

Catalogue of the Fossil Fishes in the British Museum (Natural History). Part I., Elasmobranchii. By Arthur Smith Woodward, F.G.S., F.Z.S. London: Printed by order of the Trustees. 1889. 8vo, with cuts and seventeen plates, pp. xlvii, 474.

This catalogue is made up from the specimens in the British Museum and from the many scattered notes, references, and descriptions in the literature. The skeletons being cartilaginous and perishable, the species are usually represented by the teeth—frequently by a single tooth, rarely by an approach to a complete set; and as these differ in shapes and sizes in the two jaws, as also on different parts of each jaw, the difficulty in identifying a species and determining its affinities is often excessive if not impossible. In view of the arduous nature of his task, of the fact that this is a first attempt, not a revision, and of the manner in which he has carried through an undertaking of so much importance in zoölogy and geology, we are inclined to praise the author very highly, numerous points to which we should take exception notwithstanding.

The Elasmobranchii are here placed as a subclass under the fishes, and divided into two orders—the Selachii, including the sharks and the skates, and the Ichthyotomi, which he characterizes as follows: "Endoskeletal cartilage permeated throughout with granular calcifications. Notochord rarely or never constricted; calcifications of the sheath arrested at the most primitive 'rhachitomous' stage, except in the caudal region. Neural and haemal arches and spines long and slender; no intercalary cartilages. Pectoral fins with long segmented axis ('archipterygial')." The original Ichthyotomi were characterized thus: "A basioccipital bone and condyle. Occipital, ? pterotic, and frontal bones distinct. Supraorbital (or nasal) bones present." Like others, Mr. Woodward rejects the idea that there are distinct bones in the skull, but, with different characters and contents, clings to an old name for his group, though certain to produce confusion by doing so. He includes the Pleuracanthidae (*Xenacanthi*), from which the features are taken, and the Cladodonti, which

will not agree in the more essential points, though likely to do so in those common to all the early types. By this the Cladodonts are put in a different order from that of their descendants among recent sharks.

Zoölogists will regret that the author did not use his opportunity to dispense with much that is inconsistent and arbitrary in the nomenclature. A proper application of the rules of priority, by himself invoked in places, would displace 22 of the 105 generic names adopted. Add to this several names wrongly credited as to authorities, ten dated (from their third publication) 1841 instead of 1837, two others dated 1841 instead of 1838, etc., and one may get an idea of some of the possibilities in misleading.

From the condition of the specimens, there are many cases in which identification must remain doubtful until further discoveries. Species of this character were better kept separate; for throwing them together as identical may have the force of positive recognition in preventing study by others and thus perpetuating error. As a whole, the work is very commendable, the objectionable features being made the more prominent on this account.

Our Asiatic Cousins. By Mrs. A. H. Leonowens. Boston: D. Lothrop Co.

THIS illustrated duodecimo volume tells the children about the people in the various countries of Asia, from the Phœnicians to the Japanese. No fewer than eighteen nations are described with some detail. The human and personal traits occupy most of the author's attention, though history and traditions are not forgotten. Having herself lived in one of the countries of peninsular Asia, Muang Thai, or Siam, the author has read her authorities with more sympathy and intelligence than the average maker of books for the young. The result is a very readable book, and one calculated to interest boys and girls. The slovenliness in transliteration and inaccuracies which abound are therefore all the more inexcusable; nor will the attempt to make Asiatic lore interesting succeed very well while so many uncouth names, hideous misprints, and the orthographical vagaries of all grades of European authors, in several languages, are left in an English book. Apparently the author has sought out the most bizarre spelling possible, as Ibrhi for Hebrews, Areib for Arabia, T'sing T'song T'sue for the Chinese, Siet-Eish-Ieu for Japan, etc., etc. This is cruelty to the innocents. The history of Asian kingdoms is repulsive enough without such orthographic caricature. A list of misstatements and strangely mistaken ideas found in the author's pages would be formidably long. She calls Corea "the chosen land," evidently taking the native term Chō-sen (morning-calm) as an English word meaning elect. The same dynasty under different names has ruled this peninsular country for three thousand years, according to the author, which is as true as if a similar statement were made about Great Britain. The Corean names, like the Japanese, are nearly unrecognizable; Hainang Seyool for Han-yang Séoul, T'siangtouwini for Tseng-hou-ni, Khanghon for Kang-hoa; Rose for Roze, the French Admiral's name; Jummi for Jimmu, Jeengho for Jingu, Ohjeeu for Ojin, etc., etc. The statement about the Aino tongue (p. 280) is several years behind the facts, while that about the ronin (p. 301) twenty years after date. Hara Kari should be harakiri. The sacred lake, "overhung for miles with bamboo trellis-work, over which droop vast clusters of wistaria forming an unbroken roof along its banks, under which are placed all kinds of floating pavilions," etc., etc., which the author locates "at Tokio," is a myth, though the original of this marvellous phantasmagoria may possibly be the pond at Uyéno, or Kaméido.

In many respects, Mrs. Leonowens's book is admirable, and is well worth revision and representation. We have pointed out only a few of scores of errors which detract greatly from its value.

The Campaign of Königgrätz: A Study of the Austro-Prussian Conflict in the light of the American Civil War. By Arthur L. Wagner, 1st lieut. 6th U. S. Infty., &c. 12mo, pp. 121.

LIEUT. WAGNER, the author of this little book, is one of the instructors at the United States Infantry and Cavalry School at Fort Leavenworth. It had its origin in a lecture on the Königgrätz campaign of 1866, the "six weeks' war," in which Prussia first took the place of the leading military Power of Europe. The lecture has been wisely expanded into the neat volume before us, and has been illustrated with a profusion of maps unprecedented in American publications; a round dozen of general and special maps enabling the reader to follow with unusual ease the military narrative.

The material for the Königgrätz or Sadowa campaign is so abundant and authentic that the author's chief labor was to make a judicious condensation from the Prussian Staff History, Hosier's two volumes, and other special treatises. But it is no trifling task to make a readable and clear sketch of so great events within the limits which Lieut. Wagner had assigned himself, and he deserves the high praise of saying that it has been done thoroughly and intelligently. If, then, this had been the whole, the abridgment of the history of the great campaign would entitle him to the thanks of his readers, and especially of his brother officers in the army, for a compact and cheap means of acquaintance with events which in Europe ushered in a new epoch in military affairs.

Lieut. Wagner has done more than this. He has, as commentator upon the campaign, pointed out the numerous instances in which our own civil war furnished important military lessons which the Germans learned from our experience, when they did not, by a more costly method, discover for themselves the improvements and inventions, in tactics and in arms, in which we had anticipated them. These portions of the book, though brief, do equal credit to the author's acumen and to his patriotism. They give it an original value far beyond that of any mere abridgment, however well done. They show that some, at least, of our young officers are studying our own history, in comparison with others, with an intelligent and thoughtful analysis which produces valuable fruit, and which will do much to teach the world that our civil war is, as a military history, well worth studying. It proves also that there may be found in this history higher examples of tactical combinations and field fighting than would be possible if veteran skill and courage in the ranks had not been led by generals of really great ability.

Inorganic Chemistry. By Ira Remsen, Professor of Chemistry in the Johns Hopkins University. Henry Holt & Co.

THIS volume forms the "advanced course" of the series of chemical text-books by Prof. Remsen. While the others are small books of 266 and 382 pages, respectively, the one before us is a portly volume of over 800 pages. It is in no sense, however, a mere expansion of its predecessors. Its distinctive feature is the fulness with which general relations and principles are discussed. "Attention is constantly called to analogies between properties of substances and between chemical reactions," and the importance of the bearing of the phenomena accompanying chemical changes on the interpretation of chemical action is continually emphasized. Prominence is naturally given to the general relations discovered by the periodic law, and for the first time we have a considerable text-book whose classification is based on this law. To the periodic system itself a chapter of fourteen pages is devoted, in which three tables, showing as many of the proposed arrangements of the elements, are included. A generous appendix gives details of laboratory experiments (244 in number) in illustration of the text, and contains all but 14 of the 78 cuts. This plan of bringing together, at the end of the book, descriptions of apparatus and directions for experimental work, makes a more connected and logical text possible, and in such a work as this is much to be commended.

On pages 461 and 462 the author proposes an interesting hypothesis in regard to the constitution of the double salts of the halogens. Calling attention to the analogy between these salts and the oxygen salts, and finding as the result of careful study "that the number of molecules of potassium or sodium chloride which combine with another chloride is limited by the number of chlorine atoms contained in the other chloride," he makes the suggestion "that the halogen contained in them [the double salts] has a valence greater than one, and that a double atom" of the halogen "plays the same part that oxygen does in the oxygen salts." He thus assumes the power of two halogen atoms to unite with the formation of a bivalent group, such as -Cl-Cl-or -Cl=Cl-, and this group is considered to act like the linking oxygen atom in oxygen salts. The formula for the double chloride of sodium and aluminium, (NaCl. $AlCl_3$) for example, therefore becomes $Na(Cl_2)AlCl_2$, analogous to that of sodium aluminate $NaAlO_2$ or NaOAlO. On this hypothesis the double chlorides are chloro-salts, and the name of that just given in illustration would be sodium chloraluminate. The evidence on which this view rests has, since the appearance of this volume, been fully presented by Prof. Remsen in the *American Chemical Journal*, and is certainly very strong. But in this, as in all other matters of theory, the author is singularly and admirably free from dogmatism. He discusses the bearing of the facts in evidence in an eminently cautious and philosophical manner, and insists on the tentative, and even speculative, character of many of the theoretical explanations which are given. This conservatism is perhaps most strongly marked in the treatment of the constitution of compounds. Structural formulas receive considerable attention, but in every case the facts which they are intended to represent are given, and the student is made to see clearly just how much and how little they really express.

The style of the book is that of the lecture rather than that of the treatise, and Prof. Remsen is well known as an excellent lecturer. If, in some instances, the text seems unnecessarily simple, it is a fault which the student will readily forgive. As in his former books, the author shows here that he thinks clear and straight, appreciates the difficulties of the student, and knows how to meet them in plain, direct statement and discussion. It is a book which no advanced student of chemistry should

fail to read. It will clear his vision and prove helpful and suggestive at many points.

One does not expect the first edition of a book of this scope to be wholly free from mistakes in matters of detail, and the 'Inorganic Chemistry' contains its full share. We had noted a considerable list, but they are for the most part in matters of minor importance, and do not seriously impair the value of the work.

Essays on the Work entitled Supernatural Religion. Reprinted from the *Contemporary Review.* By J. B. Lightfoot, D.D., D.C.L., LL.D., Bishop of Durham. Macmillan & Co. 1889.

A Reply to Dr. Lightfoot's Essays. By the Author of 'Supernatural Religion.' Longmans, Green & Co. 1889.

THE author of 'Supernatural Religion' made a double mistake when he was so rash as to charge Prof. Westcott with a literary and controversial dishonesty. It was bad enough that, in doing so, he made it evident that his own scholarship was not sufficient to save him from such a blunder as confounding *oratio obliqua* with direct narration, and taking an infinitive for an indicative. But it was still worse for him that this wanton attack roused a friend of Dr. Westcott's, who has long been known as one of the greatest of English scholars, to take in hand the loose and pretentious 'Supernatural Religion,' and riddle it with criticism. Bishop Lightfoot's articles in the *Contemporary* may almost be said to have given the book its death-blow, for it soon passed out of sight, much discredited so far as its critical value and its scholarship were concerned. These articles, together with one on "Some Discoveries illustrating the Acts of the Apostles," make up the first of the two volumes that we have in hand. They do not call for any extended notice, for most students of the New Testament are, we fancy, already familiar with them. To such as do not know them it may be said that, although they are incomplete, and in some sort almost fragmentary, they are precious as the work of a man of vast learning, whose criticism is both acute and enlightening. Such a paper as that which stands second in this volume, on "The Silence of Eusebius," is an example of an almost faultless critical method, as well as a model of controversial writing.

Not so much as this, nor half so much, can be said of the author of the 'Reply.' He chose to make serious charges on the strength of passages which, it has been shown, he misunderstood not because they are obscure, but because they are written in Latin and Greek. No outcry about pedantry can help his case. Indeed, he half gives up the case himself by silently withdrawing or changing parts of his book which his opponent had fatally shaken. He falls back at last upon his inner line of defence, the antecedent incredibility of miracle, which remains just about as strong as Hume left it and this author found it. One thing he has added, not in this volume, but in 'Supernatural Religion' itself: that is, a setting forth in a more vivid way than we remember to have seen elsewhere the universality of the belief in miracles, and the constant expectation of them, in Judæa in the time of Christ. The air was charged with miracle, and a new religion arising at that time would be certain to claim divine attestations of this sort.

When Dr. Lightfoot's book appeared some months ago, it was hailed by many as an assurance of the recovery of the Bishop of Durham from an illness that threatened a great loss to English learning. Unhappily the event has not justified the hopes that then sprang up, for Dr. Lightfoot died on December 21, 1889.

D. M. Ausonii Mosella. Édition critique et traduction française. Par H. de la Ville de Mirmont. Bordeaux: G. Gounouilhou. 1889.

BORDEAUX has always been proud of her poet, a fact attested by a long line of students of Ausonius who have lived and worked in his birthplace. Not one of them all was ever more painstaking than the present editor, and his book has been evidently a labor of love. It differs from most critical editions in an important point: the editor disclaims personal acquaintance with the MSS., but accepts the collations of Schenkl and Peiper upon which to base his studies. In a doctoral thesis he has already considered important questions relating to the verse-structure, date, and style of the poem. In the present work he concentrates his attention upon the printed texts of the 'Mosella.' In an introduction covering two-thirds of his book he gives a full literary history of them all, with a most minute collation of their differences, and five facsimile pages from the most important early editions. Then follows the poem itself, that polished and often beautiful description of the Moselle country. To this is added a French prose translation of merit, a critical appendix, and full explanatory notes. A new map of the country is provided. Ausonius is an author very little known in this country, but to his readers this edition will be a perfect storehouse of materials and information. It is printed on fine large paper, and the press-work is most artistically executed.

BOOKS OF THE WEEK.

Allen, G. Falling in Love, with Other Essays on More Exact Branches of Science. D. Appleton & Co. $1.25.

The Nation

VOL. L.—NO. 1284. THURSDAY, FEBRUARY 6, 1890. PRICE 10 CENTS.

MACMILLAN & CO.'S NEW BOOKS.

Now Ready. Bound in half morocco, gilt edges. $18.00.

The Library Reference Atlas of the World.

By JOHN BARTHOLOMEW, F.R.G.S.

A complete series of 84 Modern Maps. With Geographical Index to 100,000 Places. Folio. Bound in half morocco, gilt edges. $18.00.

This work has been designed with the object of supplying the public with a thoroughly complete and accurate Atlas of Modern Geography in a convenient reference form, and at a moderate price.
Special prominence has been given to the United States and the American Continent.
In the preparation of the Maps no pains have been spared to ensure accuracy of geographical data by reference to the original and most authentic sources. New railways, changes of political boundaries, new towns the results of recent exploration and geographical research, have all been added before going to press.
Special Maps have been included in order to illustrate the leading features of Physical and Commercial Geography.
The extensive General Reference Index at the end of the Atlas comprises the 100,000 places contained in the Maps.

*** *For prospectus, giving list of plates, please apply to the Publishers.*

Public Library

Lewis Carroll's New Book.

SYLVIE AND BRUNO.

By LEWIS CARROLL, author of 'Alice's Adventures in Wonderland,' 'Through the Looking-Glass,' &c. With 56 illustrations by HARRY FURNISS. 12mo, cloth, gilt, $1.50.

"It is a charming piece of work. The illustrations by Harry Furniss admirably supplement the text."—*New York Sun.*

"A delightful fable, amply illustrated by Harry Furniss with excellent drawings."—*Philadelphia Press.*

"The book is a charming one for children. The illustrations are very happy."—*Traveller.*

Now ready, Volume III. of the new and enlarged edition of the collected works of

DE QUINCEY.

Edited by DAVID MASSON, M.A., LL.D., Professor of Rhetoric in the University of Edinburgh.

Vol. III. AUTOBIOGRAPHY and LITERARY REMINISCENCES (*continued*), consisting of London Reminiscences, and the Author's Revised and greatly Enlarged Edition of the 'Confessions of an English Opium-eater.' 12mo, $1.25.

NEW EDITION.

THE LITERARY HISTORY

OF ENGLAND in the End of the Eighteenth and the Beginning of the Nineteenth Century. By Mrs. Oliphant. 12mo, 3 vols., $3.00.

WALTER PATER'S NEW BOOK:

APPRECIATIONS, WITH AN

ESSAY ON STYLE. By Walter Pater, author of 'Renaissance,' 'Marius the Epicurean,' 'Imaginary Portraits,' etc. Globe 8vo, $1.75.

Chesterfield's Letters.

LETTERS OF PHILIP DORMER, FOURTH EARL OF CHESTERFIELD,

TO HIS GODSON AND SUCCESSOR. Now first edited from the originals, with a Memoir of Lord Chesterfield. By the Earl of Carnarvon. With Portraits and Illustrations. Royal 8vo. *Just Ready.*

INDIVIDUALISM: A System of Politics. By Wordsworth Donisthorpe, Barrister at Law, author of 'Principles of Plutology.' 8vo, $4.00.

CONTENTS: The State: Its Growth and Evolution—The Structure of the State—The Functions of the State—What is Property?—What is Capital?—The Labor Question—Labor Capitalization—A Word for Anarchy—The Basis of Individualism—Land Law Reformers—An Analysis of Socialism—Absolutism in Politics.

"Mr. Wordsworth Donisthorpe's great object is to present a system based on individualism, as opposed to a system based on Socialism. . . . The book is to be welcomed as a valuable contribution to the literature of great and perplexing problems."—*Scotsman.*

"The work is boldly and strongly written. . . . A vigorous and original contribution to the most momentous problems of our age."—*Chicago Times.*

"A strong book on political economy."—*Critic.*

"It is mainly a reply to the conclusions arrived at by Mr. Herbert Spencer in his work entitled 'The Man vs. The State.'"—*New York Sun.*

A HISTORY OF PHILOSOPHY.

By JOHANN EDUARD ERDMANN, Professor of Philosophy in the University of Halle. English translation by Williston S. Hough, Ph.M., University of Minnesota. 3 vols., 8vo, $10.50.

MACMILLAN & CO., 112 Fourth Avenue, New York.

Houghton, Mifflin & Co.'s New Books.

Conversations in a Studio.

By William W. Story, author of 'Roba di Roma,' etc. 2 vols. 16mo, $2.50.

Two volumes of fresh, thoughtful, informal conversations on a great variety of topics in art, history, society, and literature.

Dr. Muhlenberg.

Vol. III. of American Religious Leaders. By Rev. William Wilberforce Newton. 16mo, gilt top, $1.25.

An interesting account of the life and effective work of a leader in the Episcopal Church and a saint of the Church Universal.

The North Shore Watch, and Other Poems.

By George E. Woodberry, author of 'Edgar Allen Poe' in the series of American Men of Letters. 16mo, in an artistic binding, gilt top, $1.25.

Very few of these poems have been printed before, and the tasteful volume comprises such poetic power and achievement as first volumes of verse rarely possess.

American Whist Illustrated.

By G. W. P. With numerous diagrams. Attractively bound in full leather, flexible, with colored edges. 16mo, $1.75.

'American Whist Illustrated' is a digest of 'American Whist' and 'Whist Universal,' with all the amendments, revisions, and changes in play required by the application of recent inventions and improvements in the practice of the American game.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

CHARLES SCRIBNER'S SONS

NEW BOOKS.

Vols. III. and IV. Just Published

HISTORY OF THE UNITED STATES

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"A memorable addition to American historical Literature in a work which will take rank with Bancroft's and above Hildreth's, and which is likely to long remain without a rival in the field that the author has marked out for survey. His literary competence, his ripeness of culture, and fullness of information, his breadth of sympathy and unswerving impartiality speak for themselves."—New York Sun.

"There is evidence on every page of acuteness and independence of thought, and the incorporation of new material makes the book an important contribution to our knowledge of fact. In its fullness, accuracy, insight, and impartiality, and in the admirable qualities of its style, it is plainly the work of a master."—*Boston Advertiser.*

"A great mass of new materials has been put in requisition for the preparation of this treatise. The springs of many a movement which were before obscure are here brought to sight. The narrative style of Mr. Adams is vigorous in its grasp of materials, dignified in its tone, and correct in point of literary form."—*The Nation.*

AMONG CANNIBALS.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

"His observations are interesting, and he has a very pleasant and modest style of narrative, so that the book is as agreeable as it is instructive; in short it is one of the most complete of its kind in all respects, and a worthy record of steadfast enterprise. We can infer from the style and fine temper of his narrative that he belongs to the higher class of scientific explorers, who think far more of their work than they do of themselves."—The London Spectator.

The Religious Aspect of Evolution.

By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

A broad, comprehensive, and masterly treatment of the subject, characterized by great clearness of logic and simplicity of style. The substance of the book was delivered as the Bedell Lectures, 1887, but since then Dr. McCosh has added much new matter.

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"As a statement of the essence of Tennyson's poetical art, the book has no successful rival."—*Boston Beacon.*

"The entire volume is one which ought to be enjoyed by every lover of English literature."—*Philadelphia Bulletin.*

SAID IN FUN.

By PHILIP H. WELCH. With preface by ROBERT GORDON BUTLER. With many full-page illustrations by Rogers, Attwood, Bush, "Chip," Frost, Gibson, Herford, Kemble, Mitchell, Opper, Sheppard, Smedley, Snyder, Sterner, Taylor, Van Schaick, and Woolf. Square 8vo, $1.25.

"There is not a pointless jest in the whole collection, and the pictures are abundant and of capital quality. The work of the artists has been entirely a labor of love, for all the profit from the copyright goes to the fund for Mr. Welch's family. Whoever buys the book, therefore, not only secures a copious equivalent in wholesome, clean, genuine 'fun,' but he also contributes something to the needs of the family of one of the gentlest, truest, and best-loved men in newspaper circles, whose death has been widely deplored."—The Boston Journal.

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00, *net.*

"The first satisfactory popular account of the American Railway. It is a striking example of thoroughness and judgment. In the general design, in the selection of writers, in the illustrations, and in the arrangement of the matter the book is a model."—*Christian Union.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo. $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—*N. Y. Observer.*

*** For sale by all Booksellers, or sent, post-paid, on receipt of price by the Publishers,*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York.

Scribner & Welford's NEW BOOKS.

The Marriages of the Bourbons.

By CAPTAIN the HON. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature, and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

The First of the Bourbons, 1595-1610.

By CATHERINE CHARLOTTE LADY JACKSON, author of 'Old Paris,' 'The Old Régime,' 'Court of Louis XIV.,' 'Court of the Tuileries,' etc. In 2 vols., crown 8vo, cloth extra, $9.00.

In Tennyson Land:

Being a Brief Account of the Home and Early Surroundings of the Poet Laureate, and an Attempt to Identify the Scenes and Trace the Influences of Lincolnshire in his Works. By J. CUMING WALTERS. With 12 Illustrations by F. G. KITTON, by drawings from photographs and sketches taken especially for the author. The pictures include representations of Somersby Rectory, The Moated Grange, The Brook, The Mill, Louth Grammar School, Tennyson's Birthplace. Demy 8vo, white cloth, gilt, $1.75.

Days With Industrials:

Adventures and Experiences Among Curious Industries. By ALEXANDER H. JAPP, LL.D., F.R.S.E., Author of 'Industrial Curiosities,' 'Golden Lives,' &c., &c. Crown 8vo, cloth, $2.25.

CONTENTS: Quinine and its Romance—Curiosities of Canary Culture—Rice—Pearls—Amber—Common Salt—Burton Ale and Dublin Stout—Petroleum—Electric Telegraphs—Railway Whistle—Historical Bedsteads—Knives and Forks—Arsenic in Industry—Famous Diamonds—Artificial Diamonds—Postage Stamps.

Hayti; or, The Black Republic.

By Sir SPENSER ST. JOHN., K.C.M.G., formerly Her Majesty's Minister-Resident and Consul-General in Hayti, now Her Majesty's Special Envoy to Mexico. New Edition. Revised, with a Map, large crown 8vo, $2.50.

"One of the most astounding books ever published. . . . It deserves to be read by everybody, even at the risk of being made sick with horror and of regretting that our race ever developed from monkeys into such men and women as are depicted in the pages."—*Illustrated London News.*

NEW VOLUMES OF THE IDEAL SERIES.

Matthew Prior's Selected Poems.

With an Introduction and Notes by AUSTIN DOBSON. With Portrait from Michael Dahl. 12mo, cloth, gilt top, $2.00.

A New Pilgrimage, and Other Poems.

By WILFRID SCAWEN BLUNT, Author of 'Love Sonnets of Proteus,' etc. 12mo, cloth, gilt top, $2.00.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD,
743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 6, 1890.

The Week.

THERE never was a more striking illustration of Philip drunk and Philip sober than is afforded by contrasting Mr. Reed's position now with his position ten years ago:

PHILIP SOBER.

If it was my purpose to reply to the gentleman who has just taken his seat, it seems to me that it would be a suitable and proper reply to say to him that the constitutional idea of a quorum is not the presence of a majority of the members of the House, but a majority of the members present and participating in the business of the House. It is not the visible presence of members, but their judgments and their votes, that the Constitution calls for.—*Thomas B. Reed, January 30, 1880.*

PHILIP DRUNK.

The clerk announces the members voting in the affirmative as 161 and 2 who voted in the negative. The Chair thereupon, having seen the members present, having heard their names called in their presence, directed the call to be repeated, and, gentlemen not answering when thus called, the Chair directed a record of their names to be made, showing the fact of their presence, as bearing upon the question which has been raised, namely, whether there is a quorum of this House present to do business or not, according to the Constitution of the United States.—*Thomas B. Reed, January 29, 1890.*

Speaker Reed's performances are quite as novel as the manner of robbing the Sixth National Bank, so that it is difficult to form an opinion as to the course the Democrats should follow. There has been nothing quite like them in parliamentary annals. There have been cases of great tyranny on the part of majorities, and there have been cases of occasional unfairness in rulings on points of order on the part of Speakers, and there has been a case where a Speaker was held down in his chair to prevent his abandoning his post before a motion was put; but there never before has been a case where a persistent refusal of the majority to adopt rules of procedure was followed by the assumption on the part of the Speaker of complete control of the procedure without regard to rules, and by the daily display of contempt for the minority and disregard even of their customary parliamentary rights. Consequently the Democrats have no precedents to guide them, and are placed in a position of some difficulty. To leave the House in a body, as has been proposed, would be a clear abandonment of their duty to their constituents. They are as much bound to stand their ground and oppose the present course of the Speaker and the majority, day in and day out, as they are to participate in orderly legislation. But what kind of opposition? Well, every kind short of violence. They are bound to obstruct by all peaceable means the transaction of business until rules are adopted, and protest against the Speaker's conduct, persistently and vociferously, whenever the occasion arises. In short, everything should be done to make outrages of this sort in parliamentary government slow and difficult in their operation, and at the same time clear and comprehensible to the country. We are, with hardly a doubt, witnessing the death-throes of the Republican party, and the Democrats must make the scene as hideous and uncomfortable as the death of a hardened old sinner ought to be.

The last Republican Speaker before Mr. Reed was chosen in December, 1881. In November, 1882, a new House of Representatives was elected. The *Tribune Almanac* for 1883 thus stated the membership of this new House: Democrats, 191; Republicans, 119; other parties, 13. The incident lends point to these remarks by that independent Republican journal, the Philadelphia *Ledger:* "Mr. Reed thinks he has won a great victory over the Democrats. Well, let us wait and see. An appeal lies to a higher court, whose decision may oust Mr. Reed from the Speaker's chair at the end of the present Congress."

The Republicans finally rallied a quorum of their own members on Monday, and utilized it to seat a Republican who contested the seat of a Democrat from West Virginia. The procedure appears to have been abundantly justified by the facts, the Democrat's claim to an exceedingly narrow plurality resting upon the Governor's interpretation of the letters "twe" in a clerk's return as twelve instead of two, which the evidence showed that they stood for. It is reported that there is so much dissatisfaction on the Republican side against going along indefinitely under the "one-man-power" system which Mr. Reed has established, that the Committee on Rules will soon make their report and allow the House to "determine the rules of its proceedings," as it ought to have done the first thing after it met last December. Mr. Carlisle has made an exceedingly strong presentation of the Democratic position, in demanding the adoption of rules as the essential preliminary to the transaction of any business in the Fifty first Congress, as in every one of its fifty predecessors.

Mr. Wilson of West Virginia made on the same day a powerful speech upon the anomalous state of things in the House, and brought out very clearly one point which has not yet been much thought about—the bearing of "the one-man-power" system upon the question of the lobby. "In this new era [acting under general parliamentary law]," he said, "the lobbyist would be a power in legislation. He [the lobbyist] would not be obliged to go around and give checks to individual members. What had members to do with legislation? The Speaker passed the bills; the Speaker approved the journal. The lobbyist would have to come here, not to bother with members, but to 'see' the Speaker as a much more effective and cheaper way of lobbying." The truth is, that there never has been seen under representative institutions a display of such power as Thomas B. Reed would enjoy if things went on through his term as for the past few days. It is a power which ought not to be wielded even by a George Washington.

The "Bill to Promote Mendicancy" was on Monday made the regular order in the Senate. Four years ago it passed the upper branch of Congress by a vote of three to one. Two years ago it secured but ten majority, so that a change of five votes would have prevented its passage. This time it ought to fall far short of a majority. The country will hail such a result almost without a dissenting voice; the representative organs of public opinion, both North and South, being now next to unanimous in declaring their opposition, and urging the Senate to reject the scheme. "Nobody Wants It" is the title of an editorial article in the St. Paul *Pioneer Press*, which rejoices over the fact that "there is every probability that it will be defeated as it should be. There has, indeed," it says, "seldom been an instance where public opinion suffered or experienced a change so considerable, and where the people spoke so emphatically against any measure before Congress." In the same tone, the Keokuk *Gate City*, a leading Republican journal of Iowa, says that "it would be a Pandora gift to the South, both whites and blacks," and that "it has already done much harm and hindrance to the cause of public education in the Southern States by making the people think that Congress was going to take the work, and duty, and expense off the people." The *Gate City* declares that "the people of Iowa and Illinois can scarcely be expected to foot the bill for the public-school work that is to be done in the South," and adds that "they may make it unpleasant if any of their Congressmen or Senators should vote to have them do it."

The plan proposed by the silverites in Congress—it has not yet been introduced, but there is no doubt that it will be offered as a substitute for the Windom bill—contemplates the withdrawal and cancellation of all outstanding gold certificates and silver certificates as fast as the Government can get hold of them, and the issue thereafter of "coin certificates" only. This is one of Senator Beck's odd fancies. It has been introduced by him several times. The object of it is to abolish the distinction between gold and silver, so far as the law can accomplish this purpose, but, singularly enough, the distinction reappears in another part of the same bill, where it is provided that "coin certificates" may be issued on silver bullion "when the *market price* of such silver bullion is not less than 99 cents for 412½ grains." Of course, this means market price in gold, and thus the distinction between gold and silver which it is sought to repudiate and extinguish, comes in again, like the bottle imp which the wicked ma-

gician never could bury so deep or throw so far that it would not come back to him. But what would be the working of the measure if it should pass? Holders of gold certificates would draw the gold at their leisure—they need not be in any hurry about it—and when they wanted to make a fresh deposit of gold, they would put it in a bank instead of in the Treasury vaults. The banks will furnish ample facilities for receiving it and paying it out on checks. For their own purposes the banks will use clearing-house certificates instead of Treasury certificates, and business will go on as before. The "coin certificates" will all be silver certificates. The bill proposes to make the coin certificates legal tender. This would be a measure not covered by any Supreme Court decision yet pronounced. What the Court has decided is, that the Government may make its own debt legal tender. The certificate is a warehouse receipt, not a debt. There is a plain distinction between it and the greenback. Perhaps the Court would hold that the warehouse receipt might be made legal tender also, but perhaps not.

In one of the saddest leading articles that ever appeared in a newspaper, the *Times* of Tuesday came to the conclusion that the World's Fair project is dead. So deeply was the editor affected by the disastrous ending of a campaign in which he had been so vociferous a leader, that in passing final judgment his usual calm judicial equipoise failed him. He says in his opening paragraph that the project has been "killed by the poison of politics administered by the New York Senate at the command of Thomas C. Platt," and then, in a most illogical manner, goes on to say that the legislation which the poison killed would of itself have killed the Fair if the poison had not been administered. The passage in which this complicated view of the situation is taken is so comprehensive a confession of the blundering policy of the entire campaign that we give it in full:

> "But the opposition to this legislation on other grounds than those afforded by politics might have proved fatal to its purpose. The owners of property whose interests were affected, through the counsel who appeared at the Committee hearings in Albany, avowed their intention of contesting its validity in the courts and fighting the issues which they raised to the tribunal of last resort. Considering the facilities for causing delays in such a litigation as was threatened, and the uncertainty of a prompt decision by the courts, it would hardly have been possible to proceed with the necessary expedition under the proposed law. There could have been no assurance until the contest was decided that the proposed financial aid of the city could be relied on. It would not have been practicable to issue the bonds, for if the authorities were not prevented by injunction from taking action, bonds could not be sold when their validity was open to question. The combined opposition of Republican politicians and self-interested property-owners has doubtless killed the plan of legislation under which it was proposed to operate. Does this mean that the whole project is dead? We are very much afraid that it means just that. It does unless a new departure can be taken upon other lines."

There is scarcely a statement in that confession which was not as apparent six months ago as it is to-day. The "whole project is dead," because the lines upon which it has been pushed since its inception in July last were foredoomed to failure.

Senator Saxton has made an extraordinary confession in regard to his course on the $10,000,000 Fair Bill. The bill appeared in the Senate on Friday, January 24. An effort was made to rush it through both houses on that day, but was not successful. It was passed by the Assembly on the following Monday. On the next day a public hearing upon it was held by the Special Committee of the Senate. The bill was by that time lying in printed form upon the desks of all members, including Mr. Saxton's. At Tuesday's hearing, Mr. James C. Carter's unanswerable argument against it was presented, and was also distributed in pamphlet form among the members. On Wednesday the bill came up for passage in the Senate. Mr. Saxton was present and had a copy of the bill, for he made an amendment changing its phraseology in a comparatively unimportant particular. He also heard the manly speech of Senator O'Connor against it. Yet he voted for its final passage. He now confesses that he examined the bill for the first time carefully on Saturday, and is frank to say of it: "A more outrageous one I never read," and to confess: "I am ashamed that I did not join Senator O'Connor and vote against the bill."

It was evident at a glance that the drafters of the Fair Bill relied for escape from the Constitutional "snag" in concealing the real nature of the measure. It will surprise many of our readers who have had no opportunity of seeing the bill, and who probably think that it is filled with provisions for the holding of a World's Fair here in 1892, that there is only one mention in it of any such scheme, and that an incidental mention. The title is, "An Act to Provide for Exhibitions of Arts, Sciences, Manufactures, and Products of the Soil, Mine, and Sea in the City of New York." There is not a word in it about Columbus or the discovery of America, or of a celebration of any kind in 1892, until we get to the twenty-eighth section, near the end, where it provides, *en passant* as it were, that the use or occupation of lands seized on under the act may be granted "to any corporation that may be incorporated by an Act of Congress for an international exposition." This is the sole allusion to the great "World's Fair." The rest of the bill provides for the seizure of lands for the purposes of a permanent fair-ground at the upper end of the island, for all sorts of exhibitions, under the control of a permanent commission. The object of this concealment is, of course, plain. It is to "get around the Constitution" by keeping out of sight the real nature of the bill. Mr. Carter, in his opinion, points this out, saying that the bill was "drawn with great skill and adroitness, and apparently with a view to obviate what were felt to be serious difficulties."

The complaint is heard in Boston that Senator Dawes goes frequently to the White House to hold long consultations with the President concerning the distribution of the Federal offices in Massachusetts, but that he is not bestirring himself at all to get a hearing from either the President or Congress for the demands which Republican manufacturers are making for free raw materials. What excuse he offers to the complaining manufacturers for his apparent indifference to their sufferings is not stated, but it may be similar to the one which his colleague, Senator Hoar, is credited with having made to one of the most persistent of them, who was assuring the Senator that unless he had free raw materials he could not continue his business. Mr. Hoar's reply is said to have been a confidential assurance that relief would come soon by means of reciprocity with Canada—in other words, that while the Republican party in Congress is ostentatiously shooing free trade away from the front door, it is slyly preparing to let it in by the back door.

A Washington correspondent of the New York *Commercial Bulletin* tells us that "the Supreme Court has decided in favor of the legality of the act of March, 1839, by which the right to appeal to the courts was denied to importers." Not at all. The majority of the court said that the law of 1839 left to an importer an action of trover and of replevin, wherein the legality of a customs tax could be tested; but the McKinley bill cuts those away. The correspondent adds:

> "The Republican Senators who framed the Senate Tariff Bill say that they took the opinion of many eminent jurists upon these points, and are satisfied that leaving the determination of facts to an executive board is within the Constitution. The right of trial by jury is so precious, however, to the American people that Congress may not care to take it away in these customs cases, even though convinced that they have the constitutional power."

Who were those "eminent jurists"? We wish we could see such an opinion in writing from even one of them.

The part borne by the Supreme Court in settling the Government of the United States has been made the subject of many learned tomes, and is as far from being exhausted as the greater subject of the development of constitutional government in England, which embraces our own institutions as well. No subject is more worthy of study, since it includes the larger part of the machinery by which society is kept in its proper orbit. The celebration this week of the Supreme Court's centennial will give a new impulse to this study, and supply a fresh stimulus to that undoubting faith in the permanence of our institutions which upheld us in the great struggle of a quarter of a century ago, and which now binds the uttermost parts of the republic together. As long as the Supreme Court retains the confidence of the people in its rectitude, its learning, its industry, and its courage, the country has a sheet anchor which even party rage—the most dangerous menace to free government—cannot dislodge. It is agreed upon all hands that the present court possesses this confidence as fully as any of its predecessors. The court over which Marshall presided, and which had more to do with hewing the Constitution into its present shape than all its successors, enjoyed a much smaller measure of confidence, not because

it deserved less, but because the substructure of the Government was not yet hardened. It is the glory of Marshall and his associates that they made a strong foundation for those who should come after them. It is the glory of the present court that they have built upon this foundation with intelligence, firmness, and integrity commensurate with the noble ground plan supplied to them.

The operations by which the Sixth National Bank, one of the soundest institutions in the city, was partially gutted and closed, have come upon the community like thunder out of a clear sky, and every one is asking whether every bank in the United States is exposed to a similar peril, and, if not, why not. Here was an institution having deposits of $2,000,000, a large surplus fund, and a reputation of the very first class, (its stock selling at 400 in the market), suddenly extinguished by the simple process of a transfer of a majority interest in its shares. The shares of all banks are salable. Nobody is required by law to refuse a satisfactory offer for his property invested in such shares. Persons who have acquired a standing in the community by a long career of probity and prudence in business are under only moral obligations to preserve that a priceless possession. It is needless to say that the national-banking system lives only by virtue of the rigorous enforcement of the safeguards that have been thrown around it. These cover every kind of fraud that a bank officer can commit. The offence committed by Claassen looks like embezzlement, for which the law provides a penalty of not less than five years in the penitentiary. There are other provisions of law which appear to have been violated as soon as Claassen got his hands on the assets of the bank. One such provision is, that not more than one-tenth of the subscribed capital of a bank shall be loaned to any one person or firm. The capital of the Sixth National is $200,000. Yet Claassen made three loans of $60,000 each to himself, on very bad security. If the security had been good, the law would still have been violated. It appears further that Claassen had never been legally elected President of the bank, his acts being, therefore, entirely unauthorized, even if they had been proper in themselves. Here is a case, if there ever was one, for making an example of bank depredators, and we have no doubt that the enginery of the law will be put in swift operation.

The letters of Presidents Adams and Hughitt withdrawing their roads from the Inter-State Railway Association have an undertone of defence against the prevailing opinion of railroad men that the Union Pacific and the Northwestern, by their contract, violated both the letter and spirit of the inter-State agreement which both gentlemen exerted themselves to form. It is evident, also, under the conditions of withdrawal mentioned in the letters, that both roads expect the Association to be reorganized upon lines which will permit alliances between members. What the actual effect will be upon the railroads of the Association must be a matter of conjecture. The Northwestern has always been conservatively managed, and is not a rate-cutter. The danger is in the effect of these combinations and alliances upon the shorter lines. The Chicago, Milwaukee and St. Paul has no line west of Omaha. Theories of the rectitude of the Union Pacific-Northwestern contract will not restore to this road the proportion of traffic it is losing. It cannot be expected to bear this loss patiently for the general good. It will claim, rather, that the general good requires a surrender of a fair share of business to itself. Now, when all roads are doing a good business, the break-up and re-formation of the Inter-State Association is a matter of speculation only; but when traffic falls off later on, the roads outside the much-discussed contract may think that rate-cutting is the only salvation for them. It is a difficult problem for all concerned, and the contracting roads, by insisting on their agreement at whatever cost, and not even suspending the operation of it pending reorganization, have certainly not helped to clear the general situation.

A double-leaded editorial article upon "The Southern Problem" in the Topeka *Daily Capital* of last Wednesday holds out in its opening sentences the hope that this question has been taken in hand by a master. The editor commends Senator Ingalls's recent speech as a great one, but open to criticism in the fact that it failed to point out a remedy, and thus increases the reader's confidence that he has at last found the man who comprehends the necessities of the situation. This confidence grows when one reaches a sentence which begins with the words "The first step"—for here surely is something practical:

> "The first step towards legal and political justice to all men in the South is to recognize that the problem affects the constitutional rights of men all over the South regardless of color, and that the remedy can only come through the Republican party and national legislation. The time has come for the Republican Senators and Representatives to say to the South this MUST stop, and to follow their utterances with such legislation as will bring it about. Empty platform utterances do not meet the case. Double, treble, and quadruple the Federal courts if necessary, with powers to protect citizens against the outrages, legal and political, that have made Southern States Democratic monarchies for the past fifteen years."

But, after all, the reader is disappointed. It is easy enough to talk about such legislation as will stop the trouble, but what kind of legislation would that be? Would it be such legislation as the Kuklux Act and the Civil-Rights Act? The Republican judges of the Supreme Court declared those acts unconstitutional. Surely, the editor of the *Capital* would not have Republican Senators and Representatives waste time in passing laws only to have Republican judges annul them on the ground that they are not constitutional. What he should do is to formulate a bill which Mr. Justice Miller and the other Republican justices of the Supreme Court will not throw out because it interferes with "the autonomy reserved to the States under the Constitution," to which, by the way, the last Republican National Convention reaffirmed the party's "unswerving devotion."

An interesting illustration of the influence of the railroad in cultivating a distaste for farm life is furnished by a writer in the Concord *Monitor*. Coös County is the northernmost county of New Hampshire, lying almost entirely above the White Mountain range, and for the most part without direct communication with the outside world. The *Monitor* writer describes his observations of deserted farms in the southern part of the State, and emphasizes the absence of young men upon the farms, declaring that almost invariably the men who are working the farms are men of middle age and past that age to old men. But in Coös County, he says, the situation is different. Up there "vacant or deserted farms are hard to find. The young men are with their fathers on the farms, and take their places when they get through with this world and its cares and pass into that world where the fields are ever green; and when the home place is left, many of them build a log house or a small frame one, and make them a new farm out of the wilderness. Perhaps if they were nearer the large cities and manufacturing centres, they would do as the young men in the counties further down in the State do—leave the farms; but the fact remains that they stay on the farms and occupy their fathers' places, and that deserted or vacant farms are scarce in Coös County, while further down in the State, where the farms are nearer a market and advantages in many ways are greater, the boys leave the farms, and vacant farms are more or less plenty." It is thus one of the anomalies of the situation that the building of a railroad, instead of operating to improve the status of the farmer, tends to make him dissatisfied with his occupation, so that fewest deserted farms are found in that county of a State which has smallest railroad privileges.

The awful calamity that has come upon Secretary Tracy's family moves every one to ask what is to prevent a like calamity in any household in the land. Only a few can build fire-proof houses to live in. Hardly anybody ever does build such houses. On the contrary, the fashion is to build with the greatest amount of woodwork, and oil, and varnish, so that when the flames get hold of the structure they spread with the utmost rapidity. In this case it appears that the house servants, or some of them, were about their work while the fire was licking up the polished wainscotting of the parlor and stairway, all unmindful of what was going on, and that when they perceived the fire it was too late to save the lives of those who were still sleeping. Slow-burning construction has been applied to factories without much addition to their cost. Ought not this calamity to teach the guild of architects how to apply slow-burning construction to private houses? If it does not have that effect, it will be a costly lesson that brings no return.

"THE VERY BRINK OF A VOLCANO."

In the closing days of the Forty-third Congress, the radical wing of the Republican party, under the lead of Gen. Benjamin F. Butler, sought to push through the Force Bill, a measure designed to enable a Republican administration of the Executive Department to secure the return of a Republican Congress by Federal interference with elections in the South. The Republicans had a large majority in the House, but a number of their members—including such men as Eugene Hale of Maine, Henry L. Dawes of Massachusetts, William Walter Phelps of New Jersey, and Charles Foster of Ohio—did not sustain the Butler programme. The opponents of the Force Bill, following an unbroken line of precedents since the meeting of the First Congress, attempted to defeat its passage by refusing to vote when their names were called, although present in their seats, and thus preventing its friends from securing the votes of a quorum on their side when the roll was called.

On the 24th of February, 1875, the Butler wing became convinced that they could not secure a majority of the whole House, although it was evident that a majority of the whole House were present in the chamber, and they resolved to try a new experiment in parliamentary methods. On one question the vote stood, yeas 142, nays none, not voting 145—so that the roll showed the presence of less than a quorum, although everybody knew that there were many more than a quorum in the hall. "I call upon the Speaker," thereupon said Gen. Butler, "to declare the presence of a quorum, if he believes there is a quorum in the hall." James G. Blaine was then Speaker of the House, and he promptly replied: "The Chair cannot declare a quorum against a yea-and-nay vote," pointing out that "when the roll-call is resorted to, that is the last mode of certification, from which there is no appeal." Gen. Butler tried to argue the matter with the Speaker, insisting that the latter knew, by the evidence of his own eyes, that there was a quorum present; but Mr. Blaine could not be shaken from his position. "The gentleman," he answered, "sees the utter absurdity, if he will excuse the expression, of the Chair putting an opinion in against a record on the roll-call. He only knows there are 142 present."

Mr. Coburn of Indiana came to the support of Gen. Butler, and urged that, when a member was present, but did not answer to his name, another member might point out the fact of his presence and ask that his name be recorded, and that a record might thus be made that the member in question was present and not voting. We quote *verbatim* what followed (*Congressional Record*, Forty-third Congress, second session, vol. iii., part 3, page 1734):

"The Speaker—The Chair never heard of that being done. He begs to remind the House, whereas that might and doubtless would be true, that there is a quorum in the hall, the very principle enunciated by the gentleman from Indiana has been the foundation probably for the greatest legislative frauds ever committed. Where a quorum, in the judgment of the Chair, has been declared to be present in the House against the result of a roll-call, these proceedings in the different legislatures have brought scandal on their names.

"Mr. Coburn—It would be a record made by the House.

"The Speaker—*There can be no record like the call of the yeas and nays; and from that there is no appeal. The moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the hall, why, gentlemen, you stand on the very brink of a volcano.*"

A similar question arose in the House of Representatives on January 29. That body now consists of 330 members, and 166 are required to constitute a quorum. The roll was called on a motion to take up an election case, and resulted in a total of 161 yeas and 2 nays—three short of a quorum. The point that no quorum had voted was immediately raised, but was overruled by the Speaker, who directed the Clerk to record as present and refusing to vote the names of a number of Democrats whom he had observed to be in their seats. This action was promptly and justly denounced by Representative Breckinridge of Kentucky as "revolutionary," and various other speakers on the Democratic side showed clearly that it was without a shadow of precedent in the hundred years during which there has been a Congress. The ruling of Speaker Blaine just cited was quoted. There was also quoted a speech by Gen. Garfield, who, when it was proposed, ten years ago, to allow the presence or absence of a quorum to be determined by "ocular demonstration," said: "The Chairman of the Committee of the Whole or the Speaker of the House is to see with his own eyes that there is a quorum present. Who is to control his seeing? How do we know but that he may see forty members more for his own purposes than there are here in the House? And what protection have gentlemen if the Speaker says he sees a quorum if he cannot convert that seeing into a list of names on the call of the roll by the clerk? I think my friend from Virginia will see that he lets in the one-man power in a far more dangerous way than ever has occurred before in any legislative assembly of which he and I have any knowledge. Sir, the moment you get over the line, the moment you cross the boundary of names, the moment you leap over the iron fence of the roll, that moment you are out in the vague, and all sorts of disorders may come in." Worst of all for the Speaker, there was quoted his own speech on this very point only ten years ago, sustaining the very principle which he now rejects, as having been recognized "since the foundation of the Government," and as one which must always be sustained in order to secure good government.

To oppose a century's unbroken array of precedents in the House of Representatives against him, Speaker Reed had only to present a ruling of "Dave" Hill when presiding over the New York Senate years ago, that he might order recorded the names of members present but not voting; and a similar decision by a Speaker of the Tennessee House. Of course, neither of these precedents had the slightest parliamentary bearing upon the proceedings of Congress, which acts under the Constitution of the United States, and not under the Constitution of New York or Tennessee; while from the moral standpoint nothing could be imagined more ridiculous than the idea of a Republican Speaker at Washington seeking support in a revolutionary position by quoting the authority of the "peanut politician" at Albany.

THE STRUGGLE IN THE HOUSE.

It is a mistake to suppose, if anybody does suppose, that the public look with indifference on the struggle now going on in the House of Representatives at Washington. Although everybody understands that it cannot last for ever, very few are unconcerned about it, and nearly everybody is trying to make out the merits and to divine the motives on either side. That the House ought to have rules is acknowledged on every hand. The clause of the Constitution which says that "*each* house may determine the rules of its proceedings," was inserted evidently not for the purpose of giving them authority to establish rules, but to negative the idea that both houses must have the same rules. Authority to establish rules is inherent in deliberative bodies because business cannot be carried on otherwise. All political and all religious conventions have rules which they adopt for their own guidance and government. Even the prize-ring, the race-course, and the cock-pit have rules, because nobody can know what he may do and what he is forbidden to do without them. The presiding officer of the deliberative body is the interpreter of its rules, subject to the superior judgment of the body itself, taken under an appeal from the decision of the chair; but rules are necessary to determine how and when an appeal may be taken. In the absence of rules, the will of the presiding officer stands in the place of rules, and this means that it stands in the place of legislation. If the Speaker can declare that a quorum is present when the roll-call shows the contrary, he can declare that a bill is passed when the roll-call shows the contrary.

To what must we attribute the present turmoil in the House of Representatives? First, of course, to the absence of rules. But why have there been no rules? We will presume, until a better explanation is offered, that the Speaker and his party wanted to decide certain contested elections before adopting rules, so that they might be reasonably sure of having a quorum on hand at all times without the presence of any Democrats. There have been occasions in the past when the House was more evenly divided between parties than it is now, and when party spirit was at higher tension than it is now, but it never occurred to anybody before to attempt to do business without rules. Probably nobody before Mr. Reed's time ever thought such a thing possible. But if anybody did so think, he must have thought also that the remedy to be invoked against a turbulent and obstructive minority was to put them in the wrong before the people, or let them put themselves there, and then take judgment against them at the next election. This is the American way, and the rational way, and the only practicable way to deal with a minority which behaves itself in a repre-

hensible fashion. The minority must first be shown to be acting reprehensibly, and then the people may be trusted to take care of them.

Speaker Reed and his supporters have taken the opposite course. They have not given the minority any chance to put themselves in the wrong. We will suppose that the Democrats had it in their hearts to filibuster against the reports of the Committee on Elections, using the customary rules for this purpose, and that in order to prevent filibustering the rules have been kept back. It will not do for Mr. Reed and his backers to go before the people nine months hence and say that they feared there would be filibustering, and that filibustering is revolutionary. They must be able to show some act; and even if they could show it, it would be a fair argument to say that revolution is a disorder to be doctored by the people at the polls, and not by setting up an arbitrary power in the Speaker's chair unknown to any civilized country. But no such act can be shown to have taken place prior to the revolutionary acts of the Speaker himself. The Speaker's apprehensions cannot be accepted in lieu of the facts which might be relied upon to justify him.

And what are the grounds for his apprehensions? Two months have passed without any rules for the government of business in the House. During that time several bills have passed, one of which was extremely distasteful to the minority. Nothing more distasteful is likely to come before them than the McKinley Administrative Bill, which abolishes trial by jury in customs cases. Yet they showed no factious opposition to it, they resorted to no obstructive tactics. They tried to amend it, and they voted against it as a whole, but they did not filibuster against it. There is no reason to suppose that they would filibuster against the reports of the Committee on Elections. Neither party has ever done so in the past. Everybody knows that filibustering does not take place upon personal grounds, because the people would not sustain a party on such grounds. It takes place on such measures as a Union Pacific funding bill, or a subsidy bill, or a national-bank bill, or a land grant, or a measure of some kind that "has money in it," where a few members think that they can gain some éclat at home by making a tremendous battle against "Wall Street." Both parties have demagogues and strikers who are up to this kind of business. The filibustering in the last House was obviously not in the interest of the Democrats, because they were then the majority. They contributed their quota, but the Republicans contributed theirs also. There is no reason to suppose that filibustering in the present House would be on party lines, or that Mr. Reed fears that it would be.

Whatever his motives may be, he is doing enormous harm to free institutions by destroying the good understanding which enables free institutions to work. Parties carry on government by pulling and pushing against each other within certain prescribed limits. Beyond these limits they cannot go without involving themselves in a common ruin. They must not, for example, abolish the Supreme Court or impeach the President merely because the incumbents are distasteful to them. They must not attempt to legislate without rules, since that procedure substitutes the will of one man for the will of Congress. All such acts lead to chaos. Mr. Reed's acts have led to chaos already. They have produced a state of feeling which has not been known in the halls of legislation since slavery disappeared. The minority cannot be expected to succumb to the new and strange dispensation in the Speaker's chair. They must fight against it at all hazards and to the last extremity. The only safe outcome is the adoption of rules for the government of the House. This is a remedy which can be applied at any time. Then, if the Democrats adopt obstructive tactics, the people will know how to teach them good manners. So, too, will they know how to instruct Mr. Reed and his party if they persist in attempting to set up an unheard-of one-man power in the House of Representatives.

The unfavorable comments of the unmuzzled portion of the Republican press have drawn from Mr. Reed a sort of apology for his conduct, which he has seen fit to send out through the Associated Press instead of delivering it from the floor of the House, as he has the right to do, and as he ought to do. Such a proceeding on his part shows clearly that he is "rattled," and he well may be. What he has to say in defence of his conduct is embraced in two paragraphs, all the rest being in the nature of invective against the supposed wicked intentions of the Democrats. He says that Mr. Carlisle frequently put motions and declared them carried when less than a quorum of members voted—when, for instance, 80 members voted aye and 20 voted no. He might have added that motions are frequently carried and bills passed when nobody votes on either side. By parity of reasoning, therefore, the House might transact business when nobody but the Speaker was present, and to this complexion is Mr. Reed coming very rapidly. The passing of bills *nem. con.* is a method of legislation sanctioned by immemorial custom and by common sense. When nobody objects to a bill, everybody is understood to assent. When nobody raises the question of a quorum, everybody is understood to agree that a quorum is present. What everybody agrees to is the law parliamentary everywhere.

The other point made by Mr. Reed is that the House is acting under a body of rules that the American people use in all their assemblies. What are these rules? Is the following one of them?

> "When the *roll-call* discloses the absence of a quorum, the Chair cannot go outside of the record in deciding as to the presence of a quorum." (Smith's 'Manual,' page 364.)

A precedent of some note in the present controversy which has not been drawn into the debate is the one set by the Speaker of the House of Commons when Charles I. presented himself in that body with a file of soldiers to arrest five members. The members had received warning, and slipped out before Charles came. "Where are they?" demanded the angry King. "The Speaker has eyes to see and ears to hear only what the House, whose servant he is, shall decide," replied Speaker Lenthall. If Mr. Reed had been in the chair, would he have answered, "I saw them slip out of that door just before you came in"? If not, why not?

SMUGGLERS AND UNDERVALUERS.

WHY is it that the Republican party commits itself to legislative projects which exclude taxpayers from the courts, banish juries, and deprive New York importing merchants of rights held in this country for a century and in England for more than five centuries? What are the essential limitations of legislative and executive powers which the Republican leaders and the Harrison Administration endeavor to obliterate?

The reckless imposition of customs taxes by Congress since 1861 has worked results similar to those produced in England down to 1841. It has elevated smuggling and undervaluing into an industry and an art. Any history of English taxes and taxation and any history of English crime will tell what happened in that country during the era of protective taxes. During the eighteenth and the early years of the nineteenth century, defrauding the customs revenue became in England a national trait and pastime. A great smuggler was a civic hero. Adam Smith wrote of a smuggler and an undervaluer as "a person who, though no doubt highly blamable for violating the laws of his country, is frequently incapable of violating those of natural justice, and would have been in every respect an excellent citizen had not the laws of his country made that a crime which nature never meant to be so." Charles Lamb said, "A smuggler is the only honest thief." English courts upheld contracts to evade the customs laws of a foreign country as not illegal. But after Peel had well begun his great work of reducing taxes on imported goods, the crime of smuggling and undervaluing fell into comparative insignificance, and is now chiefly confined in England to tobacco.

The United States is going through a similar experience of attempting to stop, by severe penalties and punishments, of which the McKinley bill is a type, evasions of the customs revenue. The dodging of present customs taxes is not everywhere in our country considered immoral. Thorold Rogers, in one of his lectures delivered at Oxford in 1887-'8, said he had four times crossed the Atlantic, and "always met people of American descent who *reckon* that they will pay the price of their passage tickets by the difference at which they will buy clothes at Poole's in Savile Row, as compared with the price in Broadway." No customs law can be enforced when women and clergymen see nothing immoral in its evasion. What they do, importing merchants are not likely to consider very reprehensible. They will look on tariff taxes as on the horse-cars when crossing Broadway—as things to be

avoided and evaded. The paying of money to a custom-house inspector by an arriving traveller is a State's prison offence, but who regards the law excepting slyly to disregard it?

When our customs taxes on a woman's gown costing in Paris $200 are $160, Mr. McKinley's proposed law to *simplify* the collection of that tax will be in vain when aimed at charming women—their husbands, brothers, friends, and admirers. Where is the protectionist who would hesitate, if a customs inspector were not in sight, to bring for a friend a dutiable seal-skin jacket or coat across the Canadian border, and thus evade or defraud our revenue? Would Mr. McKinley? Does not the fact that the beneficial effects of protective taxes have not yet generally received moral recognition or cognizance prove a great deal?

Taxes, to be collectible, must be equitable, and not inflicted only for the benefit of a class. Secretary Windom's screed against defrauders of the customs revenue reads like what was said in the days of mediæval England, and by sovereigns of the houses of Tudor and Stuart, and in the early days of the house of Hanover, before Peel and Gladstone put decency and good sense into the system of British taxation.

And now what is the answer to the second question asked at the beginning of this article? It can be seen in Blackstone, and in every accepted writer on the constitutional history of England since the days of Henry VII. We will quote from the early pages of Hallam, which describe the boundaries that determined the prerogative of the sovereign, the liberty of the people, and the rights of the taxpayer:

"The essential checks upon the royal authority were five in number: (1.) The King could levy no sort of new tax upon his people, except by the grant of his Parliament. (2.) The previous assent and authority of the same assembly were necessary for every new law, whether of a general or temporary nature. (3.) No man could be committed to prison but by a legal warrant specifying his offence, and, by an usage nearly tantamount to constitutional right, he must be speedily brought to trial by means of regular sessions of jail delivery. (4.) The fact of guilt or innocence on a *criminal* charge was determined in a public court, and in the county where the offence was alleged to have occurred, by a jury of twelve men, from whose unanimous verdict no appeal could be made. *Civil rights, so far as they depended on questions of fact, were subject to the same decision.* (5.) The officers and servants of the crown, violating the personal liberty or other right of the subject, *might be sued* in an action for damages to be assessed by a jury, or, in some cases, were liable to criminal process; *nor could they plead any warrant or command in their justification, not even the direct order of the King.*"

The first of these checks the Treasury has violated since Harrison came to power. The fourth and fifth Mr. McKinley, egged on by the Harrison Administration, proposes to overthrow in this country.

PRESERVATION OF THE YOSEMITE VALLEY.

ALTHOUGH the æsthetic sense is the highest product of civilization, and less developed in the average man than even the moral sense, it has on occasion proved a victorious antagonist of even the utilitarian and business instinct. Were it not for the sentiment for the beautiful and sublime, Niagara Falls would have been utilized long ago for flour and saw-mills, and the geysers of the Yellowstone Park converted into Chinese laundries and steam factories. But perhaps in these cases a patriotic pride in having the biggest wonders in the world coöperated with the æsthetic sense in securing the desirable result of Government protection. An opportunity will soon be afforded for a fresh exercise of these sentiments. It is being gradually recognized that a mistake was made by Congress in 1864 when it reserved merely the Yosemite Valley and its immediate surroundings as a public park, and placed it under the protection of the State of California. Perhaps it would have been better had it remained national property, like the Yellowstone Park. But one thing is certain—the grant should have included a much larger territory. Those who have visited the Yosemite, and have had time to inspect not only the valley itself, with its precipitous surrounding peaks, but also the neighboring cañons, cliffs, and lakes, or who have read a description of them in Prof. Whitney's admirable manual (now unfortunately out of print), are aware that the Yosemite Valley is merely the grand climax of a series of cumulative natural wonders which make the heart of the Sierra Nevada Mountains the most romantic and sublime region in the world. It needs no argumentation that these neighboring wonders also should be reserved for all time as national property, for the benefit of the thousands who in future generations will spend their summers here in pursuit of health and pleasure.

At a meeting of the Yosemite Commissioners last June, it was suggested that the National Government should enlarge the Yosemite grant, making it include about fifty square miles instead of eight. Unless this is done, the lumber-men will ere long despoil these wonderful mountain-sides of their superb forests, as they have the shores of that gem of mountain lakes, Tahoe, for the purpose of supplying Carson City with fuel and Virginia City with planks for the mining shafts. It is expected that Senator Stanford will introduce a bill during the present session of Congress in accordance with the suggestion of the Yosemite Commissioners, and if this is done it should enlist the active support of the entire press of the country, for it must be borne in mind that the disappearance of forests in the vicinity of the Yosemite would cause the snow to melt much sooner, and thus dry up very early in the season the many waterfalls which are the chief glory of the valley.

The laudable action of the Yosemite Commissioners in urging an additional grant cannot, however, disguise the fact that the past management of the valley has been open to serious reproaches. The sensational attacks on the management printed last winter in a San Francisco newspaper were too obviously prejudiced and exaggerated to do any good. But the January number of the *Century* contains an editorial article and letters by Mr. R. U. Johnson, G. G. Mackenzie, and Lucius P. Deming, which give a startling picture of errors of commission and omission in the treatment of the valley. What takes the matter entirely out of the field of controversy, and shows that the allegations are bare facts, is the circumstance that Mr. Johnson is in possession of about a hundred photographs on which the sins committed in the valley are recorded indelibly. We have seen these photographs, and can testify from them and from personal observation last May that the strictures in the *Century* are not exaggerated or fanciful. Notwithstanding the Congressional enactment that "the premises shall be held for public use, resort, and recreation," a portion of the floor of the valley has been fenced in and the ground made to bear, instead of the beautiful flowers and grasses which naturally clothe it, hay for the horses of the transportation company, although it has been proved that the hay could have been more cheaply brought in on wagons. Horses and cattle have also been turned loose and allowed to trample down the wild azaleas and other flowers that constitute one of the special attractions of a trip to the Yosemite. Some of the finest trees have been needlessly destroyed, and Mr. Mackenzie writes that "there are places in the valley where one is forced to wonder why the axes themselves did not turn and smite the men who were putting them to such base uses." Mr. Johnson writes that "near the Yosemite Falls an unnecessary swath has been cut through the forest, to the sacrifice of some of the noblest oaks in the valley, the bolls of which lie where they were felled. The object of this is represented to have been to open a vista from the bar-room of Barnard's Hotel, to rival the natural view of the same fall from the Stoneman House."

Among the artificial attractions of the valley last spring were the carcass of a horse, and several huge piles of cans, one of them just behind the chapel, where all tourists pass on their way to Glacier Point. The State hotel was so badly constructed that it has been condemned as unsafe. One of its outhouses is a pigsty, which is sometimes so offensive that tourists are obliged to leave the piazza. The hotel is surrounded by a field of blackened stumps, and its location is as inconvenient as possible to all the chief sights, obviously to compel tourists to hire carriages or horses. The roads and bridges are laid on the principle of convenience, without reference to specially artistic view-points; nor are there any foot-paths or benches. It is said, however, that the poetic Governor who is at the head of the Commission, has suggested the introduction of horse-cars for the convenience of those who are too poor to hire horses; and an active member of the Board has threatened to cut down all the trees under thirty years old, because "underwood" is dangerous in case of fire; in reply to which it may be stated that dead logs and heaps of dry bushes, which are much more liable to spread a fire than green underbrush, are lying about everywhere. Some of the grossest nuisances in the valley will doubtless be remedied now that the venerable pioneer, Mr. Galen Clark,

has been appointed guardian; but after all he is only an executive officer subject to the orders of the Commissioners. These Commissioners receive no salary, and meet only twice a year, and cannot be expected to give to the valley the attention it needs. It is therefore imperatively necessary that a salaried landscape expert be appointed to superintend the valley, and a provision for his salary should be included in the proposed new grant.

PARÁ, THE PORT OF THE AMAZON.

PARÁ, Brazil, December 23, 1889.

To the radical, positive-minded American, determined at any cost to have something definite, to know at least the altitude of his star of destiny, Brazilian politics must, it seems, continue inexplicable, guided by a spirit whose motions are to him incomprehensible. At a distance of 3,000 miles, some dimness was to be expected in our view of the situation. We were ready to infer many active plans of reorganization which despatches failed to reveal. We could not but hope that great things were rapidly evolving out of the old imperial system. We looked forward to witnessing the stir of a new-born era. But, landed here in Pará, the signs of change and reconstruction are yet more indistinct, as a dim picture examined with a lens loses even the form which appeared to the unaided eye.

The recent history which Brazil has been making for herself is a series of unaccountable acquiescences. An Emperor is deposed by a soldier in the name of the people. The Emperor bows, gives his benediction, and departs. There is no grand rallying of the populace following this event, no enthusiastic ratification meetings—merely a quiet acquiescence, accompanied with some surprised rubbing of the eyes. The work the Republicans had contemplated doing in some uncertain future was accomplished for them, and they smiled good-naturedly and accepted it. Next comes a decree from the Provisional Government declaring universal suffrage. This might be fraught with grave consequences if there were elections pending, but what matters it when there *are* no elections—none even called as yet? In almost any other portion of the globe there would have been need for the Government to show good cause for so arbitrary a proceeding. Here it only occasions a shrug of the shoulders, and all bide the next news from Rio.

A Provincial Governor, appointed by Gen. Deodora da Fonseca, is the ensuing act. Dr. Justo Leite Chermont, at one time Brazilian Consul at New York, introduces martial law in Pará, as the incumbent of honors from the President, seconded by a Vice-Governor, Dr. Paes de Cavalho, likewise of Presidential appointment. These are well-known, honorable, and trusted Paraenses, not eager for power; so martial law does not weigh heavily upon Pará. The Brazilians, drinking their café amid much animated political conversation, may seem on the eve of violent opposition; but political crises do not brew thus in Brazil. A smile passes around on the 14th of December when the Provisional Government declares all foreigners resident within the country on that date to be citizens of the new Republic. There is a secret joy over this, and the foreigners find no sympathy in their dilemma. It is a blow aimed at a class whom Brazilians—for a reason comprehensible in the United States—cannot view with composure. The Portuguese, coming in thousands, live and make money, and by and by return to their native land, having in no wise enriched Brazil, and having never assumed any of the duties and responsibilities of citizens. In the event of war this will at least render them subject to draft for the army. It remains to be seen whether the foreign governments may not have a word to say on this matter, if the case comes to an extremity.

All that has been done has been by dictatorial decree. Laws have been made, and suffrage has been extended to thousands, from whom, whether advantageous or ruinous, it can never be wrested. Brazil is setting hard problems for herself to solve in the years to come. Meanwhile steps have been taken for organizing a constitutional government. It is currently believed that the Constitution will be, not only similar to that of the United States, but an exact copy of it. This is a hasty conclusion of over-confident Republicans, showing ignorance of our institutions, and of the human soil which nurtured them. They imagine that the same loom will weave the same fabric out of Brazilian fibre; in short, they fail to recognize the fact that, however faithfully they may endeavor to approach to our system, the conditions of life and the social traditions in Brazil give birth to peculiar national needs, with full cognizance of which their Government, to be stable, must be designed.

As a case in point, one rumor, recently circulated, has startled many people here, and elicited some mutterings that savor of resistance. The Provisional Government, in its alteration of the old régime, has, it is said, taken under consideration the question of severing Church and State. Should this decree be issued, the northern provinces, Pará and Amazonas in particular, might prove wanting in allegiance to the new Republic. These provinces have long recognized their great importance as a revenue-producing territory for the central Government. Successive famines and derangement of the sugar market have practically ruined the trade of Ceará. Maranham, Pernambuco, and Bahia have tributary to them provinces of comparatively small extent, while Pará and Manaos are the depots for the products of the richest valley in the world, whose vast resources are accessible by not less than 50,000 miles of inland waterway. Being fed thus by the great valley of the Amazon, controlling the rubber market of the world, exporting large quantities of cocoa (cacáo), able to furnish a hundred articles of value, woods, nuts, and spices, medicinal plants, oils, and perfumes, these cities, standing representative of the two provinces of the Amazon, occupy a position entitling them to consideration and respect. Their importance is enhanced by the Brazilian system of deriving support for the Government solely from export and import duties, and from fees of two principal kinds. There is no taxation upon either real or personal property, but when a piece of real estate is sold, the purchaser is required to pay a fee to the Government of 5 per cent. on the selling price. All stores are obliged to obtain a license, for which a fee is exacted, the amount varying with the kind of trade. The duties are extremely heavy; that upon exports of rubber being 23 per cent. ad valorem, and that upon cocoa 14 per cent. The total exportation of rubber from the two Amazon ports, Pará and Manaos, amounts approximately to 15,000 tons annually, having a value in round numbers of $13,000,000, which alone would yield a revenue of $2,990,000. Of cocoa 6,000 tons are shipped annually to France, worth in the aggregate about $1,000,000, yielding $140,000 revenue. There are also exported 120,000 hectolitres of Brazil nuts (castanha), worth $500,000; 20 tons of copaiba oil, at 750 reis per pound, footing up $16,000; $15,000 worth of tonka beans, representing an exportation of fifteen tons, together with hides, isinglass (from the fish Gurijuba), farina, tapioca, piassaba (invaluable for stiff brushes and brooms), and many more, swelling the sum so that, in the absence of exact statistics, it may still be safely estimated that the tax upon exportations alone will exceed $4,000,000.

A still greater revenue is obtained from importations, so that these two provinces must send not far from $10,000,000 yearly to the public treasury at Rio de Janeiro. This from a population, exclusive of savage Indians, amounting to somewhat less than one and a half millions, is enough to give these provinces a value to the nation such as to cause them justly to feel entitled to consideration and respect, and to a voice in the Government that rules them. So it behooves the new rulers to see well to it that disaffection does not arise in Grão Pará and Amazonas. It is to be hoped that their best interests will not be opposed by insistence upon the increased tax on rubber, by which it is said the new Government has sought to subsidize a single company, and that a constitution will soon be in force binding the Brazils into a united people for the good of all.

There are immense possibilities attainable for Brazil if legislation be only directed with intelligence towards facilitating the development of her gifts of nature. In 1851 the value of the exports from Pará was $1,424,801. This is small beside the outward commerce of to-day, but a comparison of gross values alone is deceptive. The increase has been in rubber only. In every other case there has been a marked decrease. Cocoa in those days brought no more than three cents per pound in Pará, and yet 8,000 tons were sent across the seas. It is now worth over eight cents, and the shipments will not exceed 6,000 tons. There were then shipped 400 tons of sugar, 38 tons of sarsaparilla, 12,000 bushels of rice, 400,000 hides, 55,000 feet of lumber. To-day none of these articles appear on the bills of lading, save a paltry 30,000 hides. Rice is now brought from abroad to a country which can produce a quality as fine as that of our Carolinas; cattle are shipped to a province abounding in fertile pastures; lumber forms the cargo of ships from New York to a land possessing, scattered in lavish profusion over thousands of square miles of unbroken forests, sixty-seven varieties of the most valuable woods for structural purposes in the world. Something is radically wrong where such paradoxes exist. The answer lies not so far off as the explanation of Brazi ian politics. Nature's prodigal efforts have been undone by restrictive tariffs, which have tied the hands that would have opened the resources of the Amazon to commerce. What was raised was taxed; what was bought was taxed; duty was levied upon the product of labor, and once more upon the payment for that product; so the world simply could not buy of the Brazilian, and the Brazilian had nothing with which to purchase from the world. Thus the industries that were kindling into life have been stifled; the cattle ranches have not prospered; cocoa plantations one by one have been abandoned to the encroaching forests, and the chief occupation in the interior has become the gathering of rubber, a wild business, adapted to the Indian and partaking very little of that spirit of true husbandry which, by creating estates and wealth, gives dignity and strength, and builds up a class of citizens fostering the arts and refinements of a progressive and cultured age.

Pará, instead of 80,000, might as easily furnish homes and employment for 800,000 people. Awaking from her dull, half-slumber, she might attain the prosperity which her position favors. The city is built within the angle between the rivers Pará and Capim. Its cathedral towers above the red-tile roofs—a cathedral in name, but abandoned to the decay which speedily follows upon disuse. A fine architectural pile it is, however, and splendid buildings cluster around it and spread away to the south and east, with the domes and belfries of other churches rising above them, while the feathery tops of the palms wave over them all. Following the narrow streets, filled with men in cool garments of gleaming white, the northern eye is surprised at the sight of rows of buildings faced with glazed tile of delicate hues of blue and brown and pink. It gives an appearance of elegance, of sumptuousness even, which is heightened in the residence portion of the city, where these exquisite houses, product of the combined arts of potter and architect, peep from the luxuriance of tropical gardens, overhung by palms, and embellished by surrounding clusters of gorgeous bloom. The streets here are wide, and rows of splendid mangos (dense, heavy-foliaged trees) arch overhead, forming these mblance of a nave wherein a cathedral twilight reigns throughout the sunniest day. There is a singular charm about Pará. Its soft, balmy airs, laden with perfumes; its daily cleansing showers, quaint streets, and lovely vistas—all impress a newcomer with delight. But ever present is the dread thought of fever, the great bane of this favored spot. When at last there shall be done here what has been done in Calcutta, and a system of sanitary protection, sewerage, and quarantine, vigorous to the ultimate detail, be adopted, then will Pará be perhaps the most delightful city in the world.

THE TUDOR EXHIBITION AT THE NEW GALLERY.

London, January 13, 1890.

Last year at the New Gallery a series of historical exhibitions was inaugurated by a show of Stuart pictures and relics, which was noticed at the time in your columns, and which proved one of the most popular ever held in London. This year the Tudor Exhibition which has succeeded it promises to be no less successful. This success is not to be wondered at, since both shows have appealed less to the artistic sense than to sentimental and historical interests, which Englishmen can best understand. That which insured the popularity of the Stuart experiment was not so much the no small number of really fine Vandykes and Lelys as the plentiful supply of bits of hair and shreds of raiment of the Stuart martyrs and rakes. For those who then visited the New Gallery principally to see these relics, the Tudor Exhibition provides a very similar assortment. The tooth of Katharine Parr, the tippet, stained with blood, which Anne Boleyn wore at her execution, the baby clothes Elizabeth made for Mary when the latter thought she was about to become a mother—these, and many other treasures of a like nature, will satisfy the expectations of the general public. But, on the other hand, the hitherto unparalleled collection of Holbein portraits and drawings would alone give artistic importance and distinction to any show, however trivial. It is but fair to add that, even without the portraits, this Tudor gathering would not be altogether trivial, since it also includes a fine display of arms and armor, of coins and medals, of MSS. and printed books. Still, the fact remains that the chief artistic interest of the show centres about the Holbeins.

Of course, the exhibited portraits begin before the Holbein period, with Henry VII., the first Tudor sovereign. But the small group which marks his reign is interesting (on the whole) historically rather than artistically. The pictures in this group which have also an art value are by Jan de Mabuse and one by Lucas van Leyden. But several attributed to the former artist were most probably never painted by him, or else have been all but ruined by ill-judged restoration; while it is difficult to understand why Van Leyden's "Card-Players," noteworthy as it is for its brilliant color, its attempt to deal with light, the expression and movement of its figures, should be included in a Tudor Exhibition. The finest Mabuse is a portrait of Henry VII., lent by Earl Brownlow, in which the color is unusually good; this and several others of the King show the same refined, sad, intelligent face, with long, thin nose and firmly-set mouth—such a contrast to the coarse, sensual, brutal head of Henry VIII. The others are notable almost entirely either for their subjects—as, for example, the pictures of Henry's mother, Margaret Beaufort, his Queen, Elizabeth of York, his sister, Mary Tudor, in which the conventionality of the early painters is but aggravated by the stiff female costume of the day (the diamond-shaped head-dress reducing all the faces, young and old, to one conventional type), and the portrait of Prince Arthur of Wales, wearing the badge of St. John the Baptist, by an unknown artist, the only one of the young prince in existence—or else they are interesting as historical or artistic curiosities, as in the case of the "Marriage of Henry VII. and Elizabeth of York," which belonged to the Strawberry Hill collection, and which Walpole explained to his own satisfaction, but not at all to that of modern critics, who declare it does not represent a marriage, and was not painted by Mabuse, as he asserted; or the picture of "Henry VII. and his family," with the royal sons and daughters (as on so many old fifteenth and sixteenth-century tombs) kneeling in two rows behind the King and Queen, while in the heavens above are St. George and the Dragon and allegory enough to suit those modern artists and art critics who would reduce all art to a system of symbolism; or the portrait of Sir Thomas Wyat in prison, with the cat whose love he won, according to the old story, bringing him a pigeon. But it is only with the next reign that the portraits begin to be valuable as works of art for all time.

Whatever may have been the faults of Henry VIII., he must at least be given due credit for having had the sense to appoint as court painter Holbein, whom he discovered when the artist was in this country visiting his first English patron, Sir Thomas More. As a consequence, while, later, Elizabeth's reign was destined to be one of the most glorious literary periods England has ever seen, Henry's proved one of the most brilliant artistically. His name is so closely associated with things which have absolutely no relation to art, that one is apt to forget him in his character of art patron. But it is thus he figures at the New Gallery, where the walls of the largest room—save for the small space reserved for Henry VII.—are hung with portraits (the greater number of note and a few masterpieces) painted during his reign. Of these, fully one-half are attributed to Holbein. That all are his work, however, is more than doubtful; there is nothing in many to suggest his technique, and never was a painter made responsible for so many canvases by lesser artists as he was. Some were probably done by his pupils and assistants, and were never even touched by the master. To others his name was attached in a later generation, when it became the practice to call almost all portraits of that date Holbeins. Unfortunately not a few, about the genuineness of which there can be no question, have suffered from long centuries of neglect and from restorers of larger enthusiasm than knowledge. But there still remain many in a fair state of preservation, and it must be remembered that Holbein's finest portraits were painted in this country, where he remained for years devoting himself so entirely to this branch of his art that Englishmen are apt to overlook the fact that he also could and did paint subject pictures, for which, indeed, he is best known on the Continent.

There are three in particular here which, if they alone had been exhibited, would still have given the show its artistic distinction. The third Duke of Norfolk—from the Windsor Galleries—in velvet and ermine, with the wands of office, is a triumph of delicate modelling, exquisite finish, rich color, and dignified composition, and is usually considered the best of the several Holbein portraits of the same nobleman. The Christina, Duchess of Milan, the simple, graceful figure in rich black robes, against a dark background, the hands twisting a glove, the sweet pale face set in a close-fitting black hood, is the property of the Duke of Norfolk, but has for some time been hanging in the National Gallery, and therefore, fortunately, is one of the best-known Holbeins in the country. It was to this masterpiece that Zucchero referred when he said he had seen nothing so good in Rome. The third is the beautiful study of Sir Thomas More—not quite spoiled by the retouching of the face—with its fine feeling of repose and dignity, and bits of brilliant color in the costume; the one from which copies have so many times been made.

There are innumerable Henrys ascribed to the same master, several of well-sustained authenticity. Though it is plain that Henry, with Elizabeth, attached chief importance to a faithful and careful rendering of his gorgeous dress—of the slashed doublet, the feathered cap, the jewelled bands—it was impossible for Holbein to make of him a mere figure of convention, such as Elizabeth became in the hands of Zucchero. For all his silk and satin gorgeousness, for all his insignia of royal office, Henry is every inch a man, and a very common, hopelessly sensual man at that; for the German showed him with the honest realism with which he rendered all his subjects, though for doing so, were he a modern, he probably would have been treated in the same fashion as Bastien-Lepage when he really painted the almost equally fat and coarse present Prince of Wales. It is curious to contrast with Holbein's frankly vulgar Henry the portrait of the same sovereign by Paride Bordone — the somewhat famous "Henry VIII. with scroll," painted in 1535, the year "the King commanded all about the Court to poll their heads; and, to give them example, he caused his own head to be polled, and from thenceforth his beard to be knotted and no more shaven," in which fashion his beard and hair are here treated. The Southern painter, more refined in conception if not in execution, evidently sought to subdue the repulsive grossness of his royal sitter, and to trim down his superfluous flesh, with the result, however, that commonness and fat are, if anything, more pronounced. This painting hangs ordinarily in that marvellous old hall of the Merchant Tailors in the

City. Of all the Henrys by Holbein, one of the most noteworthy is the large, vigorous cartoon made for the mural picture destroyed with the Palace at Whitehall in the fire of 1698, and owned by the Duke of Devonshire; it contains portraits of both Henry VII. and Henry VIII., the latter in his favorite position, legs stretched apart, his "good calf" showing, arms akimbo. Scarcely less important is the "Henry VIII. granting the Charter to the Barber-Surgeon's Company," in which the King stands surrounded by seventeen figures, almost every face in the group stamped with an individual character. Holbein did not live to complete this picture, but the composition, as well as the greater part of the work, is his.

It would be here impossible, and perhaps useless, to mention the other distinguished examples by the same master, but I must at least refer to several which are simply catalogued "Of a Man," but which, as a rule, are marked by strong character, as if Holbein even felt greater freedom when painting ordinary mortals; and also to the "Henry VIII., Anne Boleyn, and Others," known as "The Dancing Picture," in which, according to Sir Peter Lely, the male figures were painted by Holbein, the female by Janet (François Clouet).

I believe that in the National Portrait Exhibition of 1866 there were as many genuine and so-called Holbein portraits as there are now at the New Gallery. But that which gives double interest to the present show is the fact that it includes the marvellous collection of Holbein drawings from Windsor Castle, exhibited to the public for the first time. There are eighty-two of these drawings, many being the original studies for portraits hung on the near walls, so that an unequalled opportunity is now presented for the study of Holbein's methods. The drawings are made as a rule with colored chalks or crayons on white paper, which in many cases has been first covered with a pale salmon-tinted wash. In some a man's hair or beard, in others a woman's head-dress or the decoration on her collar, is worked out or suggested with pen and ink, now in a few bold, vigorous lines, and again by much careful work, expressing all the modelling of the head or the growth of the beard, or the design of an intricate pattern. In the simplest, as in the most elaborate, will be found the same breadth of treatment, simplicity and delicacy of modelling, reserve and dignity of pose and composition which characterize Holbein's finished portraits, many of which were painted from these studies and not from nature. It can only be regretted that a collection so valuable to the student should not, instead of being hidden away at Windsor, be given to the nation and placed on permanent exhibition at the National Gallery or the British Museum.

After Henry VIII. the artistic interest of the show begins to grow gradually less. Among the very few portraits representing the short reign of Edward VI. there are two by Holbein, who painted that monarch when he was a chubby baby, but as the artist died when Edward was in his sixth year, the others attributed to him, showing the King as a boy of ten or eleven or older, can hardly be considered genuine. Queen Mary's reign does not boast of a large number of portraits. Sir Antonio More had become court painter, and he is responsible for most of the pictures of the Queen arrayed in a dress which, for stiffness, can vie with Elizabeth's more elaborate costume, and with a face strongly marked with the Tudor energy, developing into fierce cruelty in the curious "Hungad Petition," by Lucas de Heere. A small Philip II., with the Austrian mouth very marked, and a certain richness of color, is ascribed to Titian; and there is a curious Cranmer, by Lucas Cranach, with parchment-like face, contrasting with the sensual features so conspicuous in all other paintings of him.

When we come to Elizabeth's reign, we find the portraits far exceeding in number those of Henry VIII.'s period, but Zucchero takes the place of Holbein, with the result that the pictures are of far less importance. Whether, however, this Queen would ever have submitted to the frankness and realism of a Holbein, is a very doubtful question. In all her existing portraits—and she was painted, if anything, oftener than Henry—even in those which show her as a child, she appears as a mere royal dummy on which to hang the most marvellous costumes, the most gorgeous stuffs and rarest jewels. Set in by great masses of reddish hair and enormous ruffs and headdresses, the face is invariably colorless, expressionless, and lifeless. In her portraits, therefore, it is the dress at which one looks, and Zucchero's painting of costume, of brocades and embroidery, is simply wonderful. No pre-Raphaelite ever approached, or even attempted, such careful and accurate working-out of detail as that which one finds in his rendering of her hideous short, wide skirts of gold and silver brocade, her jewelled stomachers, her barrel-like sleeves, her high-standing lace ruffs. His portraits of her might serve as working drawings for the embroiderer or the silk-weaver at his loom. Perhaps the only one in which there is the least suggestion of something human is by the same artist, painted on the background of a cabinet, on the doors of which are, curiously enough, the busts of her four courtiers, Leicester and Essex, Lord Burleigh and Sir Walter Raleigh.

While the greater number of the Elizabethan group are characterized by the same artificiality, they naturally are not without a very decided historical value. No matter how badly they may be painted, one cannot look with entire indifference at Essex, with his "goodly person," or Sir Walter Raleigh, bearded and bronzed, his son standing at his side, or Lord Burleigh, or Leicester, or Lord Bacon, or the many other great Elizabethan courtiers, statesmen, and heroes. But of all, the most interesting are unquestionably the seven reputed portraits of Shakspere. Hanging together are the doubtful Felton or Fenton portrait, just showing the head, with its vast brow and without the familiar short beard of the others; the better-known Zucchero, in which the painter of courtiers gives him a courtier-like face and bearing; the fine Charlcote head, the badly drawn "Burbage" portrait, and the one with the earrings which most fully realizes the popular ideal of the poet. There are also two heads of Ben Jonson, with full red lips and ruddy cheeks; and two of "Poet Fletcher," with a mass of yellowish hair falling about in confusion above a fair face with short, fair beard. But it must be admitted that, after the Holbeins, even these seem insipid enough.

One can but hope that Mr. Cameron, who made such superb photographs of many of the Stuart pictures last year, will preserve a similar record of the most notable in the Tudor collection. His photographic studies often have the richness and color of mezzotint, and he has never surpassed his Stuart series.

I have left myself but little space in which to speak of the many other exhibits. But the truth is, the portraits lead so enormously in interest that they first claim and hold one's attention, while the other articles exhibited mount into so many hundreds, those of importance often being lost in a sea of commonplaceness, that it is impossible really to look at them all. However, I must say a word about the arms and armor which most picturesquely fill the main hall. The Elizabethan was the most glorious age in arms, and all the finest collections in the country have been borrowed from. Famous suits of armor, like that of the Baron de Cosson, considered the most beautiful example in England, are here; and a group which must attract every visitor to the gallery is that formed by the russet and gilt cap-à-pie armor worn by the Earl of Pembroke at the battle of St. Quentin, and the blue-steel, elaborately gilt, colossal suit of De Montmorency, Constable of France, and the russet and gilt suit of the Duc de Montpensier, Pembroke's two prisoners at the same battle, their armor having from that day to this remained in his family. Coming, however, fresh from the reading of Mark Twain's 'Yankee at the Court of King Arthur,' it must be confessed that this armor, exquisite as it is in design and workmanship, suggests chiefly the discomfort and awkwardness of the wearers. There are also many curious and interesting examples among the large collection of swords, rapiers, and daggers, and queer old wheel-lock guns and pistols.

While the selection of MSS. does not show very great discrimination, many letters and official documents are of decided interest; and in the cases of Printed Books are to be seen valuable first editions of Bibles, Missals, and Layman's Prayer-Books. But these, as well as the coins and plate—I must at least mention the Cellini shield presented by Francis I. to Henry VIII., and lent by the Queen—would require a letter to themselves. Of the relics I do not purpose to say anything. A few, as for example Queen Elizabeth's famous fiddle, with its wealth of carving, are not without artistic merit; but as a rule they bear to the Holbeins very much the same relation that the jewelled bambinos in Italian churches have to the masterpieces over the altars.

But though much that is trifling finds a place in these historical exhibitions, taken altogether they have one advantage which cannot be overestimated: they give the average Englishman a chance to learn many things about the history of his country which he might otherwise never be able to study for himself so pleasantly. For, thanks to a strong and influential committee made up of leading names, which in England count for so much, with the Hon. Harold Dillon as Secretary, all the great old English houses and royal palaces have been drained of their treasures—treasures often unappreciated even by their owners, which have hitherto been uncatalogued and absolutely out of reach of the common man. And nowadays so many of just such treasures, hitherto handed down as heirlooms in the old English families, are being dispersed, owing to the indifference or impecuniosity of their present possessors, and bought up by men of genuine taste like the Duc d'Aumale, for example, that one wonders if in a few more generations such loan exhibitions will be even possible.

N. N.

A CONSUL TO BE REMEMBERED.

ALGIERS, January 1, 1890.

ALGIERS is becoming a favorite winter resort for the English and Americans. Its charming views, its agreeable climate, its interesting people, its opera, libraries, schools of science and literature, churches, shops, furnished and unfurnished villas, present an unusual combination, in which the attractions of

a French capital are added to those of a half-civilized Oriental town. The mail steamer comes daily from Marseilles, bringing advices from Paris that are only forty-eight hours old when they reach Algiers. This week a new sign of progress has been seen. The great English steamer *Orizaba*, of more than 6,000 tons burden, came within the mole for the first time, making here its second stop on the long voyage from Plymouth to Sidney.

As we drew near the shore in this fine ship, and were surrounded by the boats of the Algerines, dressed in Oriental garbs and chattering in a strange mixture of tongues, as we saw them fight and quarrel for the persons and property of travellers, it was easy to believe that these Arabs were descended from the pirates who were the terrors of this coast three and four-score years ago. We were not very far from the scene of those great achievements of our brave countrymen, Decatur and Bainbridge, which preceded and led up to the subsequent victory of Lord Exmouth, and began the triumph of civilization over barbarism which the French at length effectually completed.

But except to a reminiscent eye there is nothing in the harbor or in the streets of Algiers to remind the American of the famous exploits of his countrymen. One-half of Algiers remains Moorish, while the foreign half is as truly French as Marseilles or Bayonne—French in language, laws, schools, cabs, boulevards, newspapers, cafés.

Thinking over the wonderful transformation of the tyrannical government of the Deys into the republican ways of France, I went on Sunday morning into the English Chapel, which stands just within the upper walls of the city, not far from a statue which commemorates the exploits of Marshal Bugeaud. One of the guide-books says that the chapel is built "in the Anglo-Saxon style," and I expected to find a very simple early-English structure. It is rather Romanesque than Anglo-Saxon or Gothic, pleasing in appearance both without and within, and it was beautifully decorated at the time of the Queen's Jubilee with a dado of Algerian marbles. I had hardly taken a seat when my eye was arrested by a large white-marble tablet inscribed with these words:

WILLIAM SHALER, M.A.,
Consul-General United States of America at Algiers from 1815 to 1829.

During his residence here he displayed great ability under trying circumstances. His valuable work, 'Sketches of Algiers,' was translated into French, and served materially to insure the success of the Expeditionary Force which captured Algiers. In it the first suggestion was made that, in the event of any future operations against this city by a Christian Power, the landing should be made at Sidi-Ferruch instead of to the East.

He subsequently became Consul at Havana, and died there 29 March, 1833, æt. 55.

Erected as a tribute of respect to his memory by R. L. P. 1878.

I almost rubbed my eyes as I read this simple eulogy, signed with the well-known initials of the British Consul, Sir Lambert Playfair; and, as I turned around, another tablet, of red marble, placed face to face with a tablet which commemorates the Queen's Jubilee, arrested my attention. This read as follows:

In memory of a distinguished citizen of the United States of America, Commodore Stephen Decatur, who, in connection with Captain W. Bainbridge and W. Shaler, Esq., concluded a treaty with the Dey of Algiers, thus being the first to break through the intolerable bondage in which many Christian Nations were held by the Barbary States.

This tablet is erected 20 June, 1887, by citizens of the United States grateful for the privilege of associating this commemoration of their countrymen with the Jubilee of that Illustrious Sovereign Lady, Queen Victoria, who has made the name of England dear to children and to children's children throughout all lands.

There were many other memorial tablets upon the walls, two of the most interesting bearing the names of the celebrated African explorer, Bruce, and the noble British clergyman, Rev. Devereux Spratt, who would not accept the ransom from Algerian slavery that was offered him because he preferred to stay and cheer by his presence his companions in bonds.

But my mind kept recurring to the Consul, William Shaler, whose name is not on everybody's lips, like the names of Decatur and Bainbridge, but whose brave services in this distant land have been so conspicuously honored by her Majesty's representative. I knew the name of Shaler and the general story of his career in Algiers, but I was curious to know more; so, early on Monday morning, I found my way to the American Consulate to inquire into the records which are here preserved. Here I found a representative of the United States, Mr. Grellet, who fully appreciates the honorable services of his predecessor, and who placed in my hands, with commendable pride, two large volumes, bound in leather, containing copies of consular accounts and of consular despatches during the official career of Tobias Lear, and of his successor, William Shaler. If I understood him correctly, later archives were sent to Washington long ago, but these two volumes were astray. At least, they were hidden in Marseilles, and it is only within a short time that they have been recovered and replaced in the Consular Office in Algiers. In addition to these books there are many original letters and papers pertaining to the American Consulate upon the Barbary coast. Among them are several letters of Charles Folsom, who was Chargé-d'affaires at Tunis in 1818–'19, and others which bear the signature of Commodore D. Porter. Sir Lambert Playfair, the British Consul, has made ample use of these manuscripts in preparing the later chapters of his book on the 'Scourge of Christendom' (London, 1884). "Not a single document," he says, "connected with Lord Exmouth's victory exists in the British Consulate, but the admirable despatches of Mr. William Shaler fully supply the deficiency." "At my urgent solicitation, Mr. Alexander Jourdan traced them out, and rescued them from the oblivion of a garret at Marseilles." This remark applies to one of the volumes; the other was recovered subsequently by Mr. Grellet.

I have taken a great deal of pleasure in poring over these original records. Here are the items of "boodle" distributed among the courtiers of the Bashaw, in addition to the stipends paid in person to "his Highness" (as the barbarian was styled by all the Christians), in order to secure his good will, or rather to lessen his animosity. Here are the memoranda of the interviews which the Consul had with the Dey. Here are copies of his official reports to the United States Government, and of his private letters to James Monroe, the Secretary of State. Here is a narrative of the circumstances under which the treaty of peace was negotiated at the end of June, 1816—the first effective limitation of the power of the Dey by a Christian force; and here is the diary which Shaler kept during the English attack upon Algiers a few months later.

As I have no access to printed books, I do not know what parts of these documents have already been published, and so I hesitate about making long extracts from them, particularly as my object is only to bring to mind the services of a forgotten Consul, who ought to be held in grateful remembrance by all Americans, but especially by those who visit this salubrious resort. Shaler was here in a very critical period, when piracy and barbarity were giving way to modern ideas of law and order, and he bore himself with dignity, manliness, and good sense, contributing not a little towards the advent of Christian civilization.

In the official commission authorizing three Americans to negotiate a treaty with the Dey of Algiers, the name of Shaler precedes that of Decatur and Bainbridge. The two naval commanders had prepared the way for negotiation by their captures on the open sea, and the presence of a strong squadron in the Mediterranean was a great auxiliary to the work of diplomacy. Nevertheless, it required vigor, tact, and bravery to bring the Dey to terms. All these qualities were manifested by the American Commissioners, who compelled the Bashaw, in the course of two days after their arrival in the port of Algiers, to sign the memorable treaty by which the Dey renounced his claim for tribute or payments of any kind; agreed to restore the property which had been taken in violation of the former treaty; promised to release the American captives, and to place the United States upon the footing of the most favored nations.

After this treaty was negotiated, Shaler remained in the position of Consul-General for a period of fourteen years, a period of innumerable difficulties and annoyances. In this difficult position he was of the greatest service not only to his own countrymen, but to the Europeans who from time to time required his aid. Lord Exmouth, the British admiral, warmly acknowledged these services at the time they were rendered, and so did Mr. McDonnell, the British Consul; and recently they have been brought to mind by the inscription which has been already quoted, and by the writings of Sir Lambert Playfair.

Shaler's other claim for remembrance—his sagacity to perceive, and good sense to publish his perception, that Algiers could best be attacked by European forces, upon the west, at a point known as Sidi-Ferruch, and not, where other attempts had been made, in front or toward the east—is traceable to a book which was published in 1826, and soon afterwards translated into French. His suggestions were acted upon by the French in 1830, when they made their successful descent upon this coast. There is good authority for saying that they used the volume of Shaler as a handbook during their famous expedition.

Indeed, the contemporaneous papers show that Shaler, without any pretence or bravado, was a brave man, full of resources, conscious of the dignity of an American representative, undismayed in the presence of a cruel and unscrupulous despot, able and willing to protect and shelter the people of other countries, as well as his own compatriots. He was a capital public officer, holding his station contrary to his own preferences, for an inadequate compensation, under the most trying circumstances, simply that he might serve his Government and be useful to his fellow-men. To his firmness, tact, and intrepidity is largely due the abolition of Christian slavery in Algiers, and to him, indirectly, perhaps, the subsequent successful conquests of the forces of France.

I have never met Sir Lambert Playfair, and it is doubtful whether these lines will ever fall under his notice; but if they should happen to do so, I wish they might convey to him the gratitude of a small party of Americans, spending New Year's Day in Algiers, who have

been instructed by him in an interesting chapter of their country's history, and who admire the generous candor with which the British representative in Algiers has commemorated in such enduring ways the services of an American consul who might otherwise have been forgotten by the English, the French, and even the American visitors to this reconstructed capital. D. C. G.

Correspondence.

THE SEPARATE PARTY COLUMN.

To the Editor of The Nation:

Sir: It seems to us in Massachusetts that you do not understand the quarter part of the evils of the method of separate columns for parties under the Australian ballot system. You say: "The objection to it is that it is in the interest of strict party voting, thus acting as a check upon complete independence of action by the voter in marking his ballot." The real evils of this method are more fundamental. It deprives the system substantially of its secrecy. A voter who votes a straight party ticket has to be in the marking compartment but a few seconds, while one who votes independently, even as to one candidate, has to stay in the compartment one or two minutes. Now, the question usually is, not which party a man belongs to, but whether he is going to vote "straight," or to scratch (for example) Gov. Hill on the Democratic ticket or some particular candidate on the Republican ticket. This the party workers can ascertain under the party-column system almost as well as under the old system of party ballots. In Connecticut the way it was told whether a voter voted his party ticket or altered it was on the same principle—by noting the length of time spent in the booth; and it worked to a charm wherever there were any active party managers on the watch.

Another disadvantage is, that it practically admits the use of party ballots, because, as there has to be on the official ballot a blank column in which any voter may paste names, it is only necessary to furnish to each voter a blanket paster with the names of the party candidates or any combination that may be got up by a trade, and this the voter is quickly to paste on to this blank space, and pass through the compartment. Indeed, it may be an advantage for a party to make no nomination for the official ballot, so that all its members *must* use the blanket paster. That pasters can be readily used with great success was shown in two of the city elections in Massachusetts last December. But with the Massachusetts official ballot a blanket paster cannot be used, as pasters can only be put in the separated blank spaces at the foot of each list.

The above objections seem to us the most serious; but, in addition, will there not be wrangles as to who shall be entitled, as between Tammany and County Democracy, for example, to the regular Democratic column? The board that has the summary decision of this question will have a vast power in its hands. —Yours respectfully, R. H. Dana.

Boston, January 31, 1890.

PARTY NAMES.

To the Editor of The Nation:

Sir: The communication from "J. J. J.," in No. 1282 of the *Nation*, was in general sufficiently answered by that of "C. B. W.," which just preceded; but permit me to add one specific point in reply.

In Columbus, Ohio, from which "J. J. J." writes, is located one of the leading colleges of that State. I have known a number of young men who went there Republicans and left Democrats, but I have never heard of a single change in the opposite direction. This change is not due to any influence exerted by those officially connected with the institution, but to an intelligent study of practical economic questions, added to the general liberalizing tendency of higher education. A great many young men learn while at college that party names are less important than party principles, and that while the party names remain the same, party principles change. Naturally, these young men gravitate to that party which offers them a living principle.

"J. J. J.'s" estimate of the proportion of Republicans among professors and college students would not have been extravagant ten years ago, but it is true no longer. In one of the State universities of the West, in a strong Republican State, one-fifth of the Faculty are former Republicans who will no longer act with that party on national questions. There is no doubt that the proportion is greater in the large Eastern colleges.

One of the Converted.

January 27, 1890.

HISTORY AS IT IS WRITTEN.

To the Editor of The Nation:

Sir: It may be of interest to your readers to see the following extracts in close connection:

During the last thirty years of her protective system, and especially during the twenty years from 1826 to 1846, Great Britain increased her material wealth beyond all precedent in the commercial history of the world. Her development of steam-power gave to every British workman the arms of Briareus, and the inventive power of her mechanicians increased the amount, the variety, and the value of her fabrics beyond all anticipation. Every year of that period witnessed the addition of millions upon millions of sterling to the reserve capital of the kingdom. . . . At that moment Great Britain had reason to feel supremely content.—*James G. Blaine, in North American Review for January, 1890, pp. 30, 31.*

England is full of wealth, of multifarious produce, supply for human want in every kind; yet England is dying of inanition. . . . With fifteen millions of workers, understood to be the strongest, the cunningest, and the willingest our earth ever had, . . . some baleful fiat has gone forth saying, "Touch it not, ye workers, . . . no man of you shall be the better for it; this is enchanted fruit." . . . Of these successful skilful workers some two millions sit in workhouses, poor-law prisons, or have "out-door relief" flung over the wall to them, the workhouse Bastille being filled to bursting. . . . In thrifty Scotland itself . . . there are scenes of woe, and destitution, and desolation, such as, one may hope, the sun never saw before in the most barbarous regions where men ever dwelt.—*Thomas Carlyle, in Past and Present, chapter 1 (written in 1843).*

Surely the champion of a system which is so loudly asserting its love for the laboring man, must have forgotten himself in saying that "Great Britain had reason to feel supremely content" at a time when, "as every schoolboy knows," the destitution among the working classes was general and most deplorable.

Tariff-Reformer.

THE TREASURY ACT OF 1789.

To the Editor of The Nation:

Sir: The original Treasury Act of 1789 created an accounting department to consist of a Comptroller, an Auditor, a Treasurer, and a Register. This was apparently in imitation of the ordinance of September 11, 1781, "for the more *effectual execution* of the business of the Treasury, and the settlement of public accounts," which established similar offices. Can you or any of your readers inform me from what State or colony, if any, this system of checks was borrowed? The system requires the stating of accounts by one officer, their revision and certification by another, their filing and the recording of the certified balances by a third, and their payment by a fourth, not upon presentation of the settlement certificate itself, but upon a distinct warrant issued by the head of the department, reciting the settlement, which warrant must be countersigned by the Comptroller and recorded by the Register. In the multitude of checks there is safety!

E. I. Renick.

Washington, D. C., January 27, 1890.

THE SWISS CABINET.

To the Editor of The Nation:

Sir: If enough has not already been said on the subject of Cabinet Government, allow me to point to a country where the Federal Executive appears to occupy ground midway between the parliamentary and the congressional systems.

The Federal Council of Switzerland is a committee of seven members elected by the Federal Legislature in joint session, not, however, to serve as long as the majority pleases, but for a definite term of years, namely, three. Of these officers, one is designated, also by the Legislature, to act for one year at a time as President of the Confederation. Executive power, however, is not vested in one man, but in the Committee as a whole. Individual discretion is of course called for in the administration of the departments, but in law the Council is supposed to act as a unit.

In addition to the routine duties of executive secretaries, the Committee is charged with the proposal of legislation; it has no autocratic rights of initiative, even within its own party. Any member of the Chambers may move the adoption of a bill, but all are submitted to the Council for an opinion, and must be returned within a certain time. The Budget is especially its work. It may propose any class of legislation. In short, all bills, whatever their source, at some time pass through the hands of the Council and are stamped with its approval or disapproval. Legislation does not thereby escape the scrutiny of members of the Chambers. The representatives of the people may examine projects as much as they please, but, at some time in their progress, laws are reviewed by those who are actually in the executive saddle and comprehend their bearings upon existing institutions. Members of the Cabinet have the right to explain their motions in either house, and are liable at any time to interpellation upon matters of public policy.

When, however, bills urged or approved by the Council are rejected by the Legislature, the ordinary parliamentary result does not take place. No one feels obliged to resign. The Cabinet is elected for a given time, and, being thus established, sudden and frequent crises are avoided. In fact, such a thing is hardly known. Men who have proved capable administrators are kept in office term after term. Of the Cabinet of 1889 one had been in service since 1863, another since 1866, and nearly all more than one term. It is needless to mention the good effect of this on the conduct of business.

This long tenure has been partly due to the fact that the same party, or some shade of it, has been in power most of the time; but parties have not always upheld the projects of their own ministers and have yet given them reëlection. They have kept them in office

because they knew the business, and it has happened that good executive qualities have brought men of different parties into the same cabinet.

Whatever may be thought of such a result, the chief objection to party government—violent and rapid changes of ministries—would seem to be overcome by a compromise which secures both responsibility to the majority in the Legislature and a known tenure of office.

JOHNS HOPKINS UNIVERSITY.

CHAUCER EMENDATION.

TO THE EDITOR OF THE NATION:

SIR: Your kind words about Dr. Skeat's edition of Chaucer's 'Legend of Good Women' will be approved by all that are glad to see the great poet made more easy of approach. In respect, however, of v. 415, the difficulty in scansion of which both you and Dr. Skeat speak, is not, I think, real. For this verse is but one of a somewhat large class of verses in which Chaucer gives double length to the second accented syllable of his pentapody, by cutting off the unaccented part of his second trochee. Thus the line, if the stress syllables be italicized, is found to read,

"Yet *hath* he *mad* ‖ *lew*-ed *folk* de-*ly*-te,"

a form that demands no emendation. Here, while the first stave is iambic, the second is trochaic, a variation that Chaucer much loves; and the second stave has his favorite alliteration on L. The same syncopation of the second foot is found in vv. 91, 195, 218, 251, 272, 286, 342, 5 and 40 of the Prologue, and doubtless in many others, both masculine and feminine.

In Shakspere also this form is common, *e. g.*:

"Poor *Cassio's smiles* ‖ *gestures* and *light behaviour*."
—*Othello, iv. 1. 103.*

"On *horror's head* ‖ *horrors accumulate*."
—*Id. iii., 4, 370.*

Respectfully, THOMAS R. PRICE.

COLUMBIA COLLEGE, January 30, 1890.

Notes.

THE third and fourth volumes of Henry Adams's 'History of the United States,' which relate to Jefferson's second Administration, will shortly be issued by the Messrs. Scribner. They announce also 'Emigration and Immigration,' by Prof. R. M. Smith of Columbia College, and 'Literature and Poetry,' by the Rev. Dr. Philip Schaff.

Macmillan & Co. have nearly ready 'Problems of Greater Britain,' by Sir Charles Dilke, in two volumes; 'Leaves from My Life,' reminiscences by Montague Williams of the English bar; and 'Notes on American Schools and Colleges,' by Dr. J. G. Fitch. They will be the publishers, in time, of a life of the late Edward Thring, by Prof. George R. Parkin of Fredericton, New Brunswick—the third undertaking of the kind now in progress.

Cassell & Co. publish directly 'Star-Land,' talks on astronomy with young people, by Sir Robert S. Ball.

The Diary of Walter Scott is on the eve of being given to the world; and the Memoirs of Marshal MacMahon are said to be in type, but for printing in an edition limited to the author's family.

The seventh volume of the 'Henry Irving Shakespeare' (Scribner & Welford) includes five plays, with the usual prefaces and notes. The illness of the late editor, Mr. Frank A. Marshall, lessened his share in the work, but he had the good fortune to supply his own hand by that of Mr. Joseph Knight in the preparation of the stage-histories, one of the interesting features of the edition, while Dr. Richard Garnett, Mr. Arthur Symons, and other friends give assistance in the introduction and notes. The work is of the same general high average of discretion and scholarship hitherto shown. We observe that Dr. Garnett argues earnestly for the theory that "The Tempest" was written for the court in the winter of 1612–13, specially for the occasion of Princess Elizabeth's marriage, at which time it was certainly performed. This would make it the last of Shakspere's plays, and his true farewell. Mr. Knight, however, upholds the earlier date of 1610. Dr. Garnett's comments on this play have more originality and literary interest than have characterized the other introductions. The illustrations are of the same inferior character as those that have gone before. Mr. Marshall's death, on December 28, 1889, before the completion of his enterprise, is much to be deplored.

The 'Mirabilia Urbis Romæ,' the mediæval guide-book to Rome, makes its first appearance in English in the translation of Francis Morgan Nichols, under the title 'The Marvels of Rome, or a Picture of the Golden City' (London: Ellis & Elvey). This most interesting topographical and archæological relic dates from the twelfth century, and was in vogue in revised forms for three hundred years. It consists of a list of the principal antiquities then extant, a collection of legends, and a tour of the city. It has been published several times under the editorship of antiquarians, of whose text the translator has made use. He gives the work in its first form, but, by an ingenious arrangement of brackets, includes also the later additions of its revised forms, so that one can tell by the eye the different parts of the text. He also furnishes at the end five cognate papers — the 'Marvels of Roman Churches,' compiled 1375, an extract from the 'Itinerary' of Benjamin of Tudela, extracts from a book of 'Processional Routes,' two topographical bulls, the list of relics in the Lateran, and a map dating from mediæval times. Copious notes are printed at the foot of the page. The volume is small and admirably printed, and bears every mark of competent scholarship. It possesses interest as a memorial of the guide by which scholars and pilgrims saw Rome in the awakening centuries of the revival of antiquity, and also as a record of the city while many ruins now gone were standing. The tone of the work, too, is an excellent illustration of the mind of the time, and its legends, though now grown familiar, are most attractive in their original simple and credulous form.

The town meeting still obtains in Plymouth, Mass. (which, by the way, "was never incorporated, nor ever by any act of colonial legislation created into a municipality"). On April 4 it voted to reprint in one volume the earliest records of the town down to the eighteenth century, at a cost not to exceed $1,000, and in the expectation of a sale which would make the treasury whole. This volume has just appeared in good shape, under the editorship of a committee consisting of Messrs. Wm. T. Davis, Arthur Lord, Chas. G. Davis, W. W. Brewster, and Thos. B. Drew—names which mean competency and accuracy; and is for sale by W. B. Clarke & Co., No. 340 Washington Street, Boston. It covers the period 1636 (for the town was long without a clerk) to 1705, and has been taken verbatim from the original records, but with comparison of official copies made at various times. The enterprise will go on if the town is reimbursed, as it is to be hoped it will be without delay. By far the bulk of the entries relate to grants and bounds of lands, but miscellaneous topics are not wanting, as, cattle marks, the killing of wolves and blackbirds, the impeding of the run of herring and other fish, the restraint of loose swine, tax rates, fort-building, etc., etc. Fines were imposed for slack attendance at town meeting. There are several lists of voters at such meetings. A few notes, historical, topographical, and etymological, have been added, and there is an index of names and things.

The first publication in book form regarding the great Pennsylvania disaster of last May is entitled 'Through the Johnstown Flood, by a Survivor,' namely, the Rev. David J. Beale, D.D. (Philadelphia: Hubbard Bros.). The editor has done his part simply and in good taste, and with much descriptive power, and for a just idea of the catastrophe nothing more will be required. There is a morgue record of names, but the numerous photographic illustrations are as little painful as possible, and not at all sensational.

The third volume of Prof. Masson's new edition of 'The Collected Writings of Thomas De Quincey' (Macmillan) embraces the London reminiscences; recollections of Lamb, Walking Stewart, Edward Irving, Talfourd, Allan Cunningham, etc.; the account of DeQuincey's estrangement from Wordsworth; the Story of a Libel, with Thoughts on Duelling; the Confessions of an Opium-eater, etc. The frontispiece consists of three miniatures of De Quincey's father, mother, and uncle, Col. Penson—his resemblance to the last-named (as to the mother) being greater, one would say, than to his father.

There has been prepared and printed for the members of the Pan-American Conference a report upon extradition, which contains not only much valuable information, arranged in convenient form, concerning the practice and rules of various countries, but a most interesting discussion of the subject in a general way by Mr. John B. Moore, the Third Assistant Secretary of State. No available source of information has been neglected in Mr. Moore's researches, of which the fruits are now made accessible to all. His report contains in its 214 pages every extradition treaty or convention of the United States with foreign Powers. To these he has added an analysis of offences, from which one can learn at a glance what in any given country constitutes an extraditable crime under our treaties with it. More than one hundred pages are given to the practice of extradition in foreign countries — every country with which we have a treaty being mentioned except Spain and Sweden - Norway. The introduction contains some important remarks and suggestions upon the questions: Should citizens be surrendered? Should a person surrendered for one offence be tried for another, before he has had an opportunity to return to the jurisdiction from which he was taken? Which demand should be first complied with when several demands are presented by different governments for the surrender of the same individual? To what extent may a government intervene in behalf of one of its citizens who is in a foreign country and is made the subject of a demand of extradition by a third State?

The delayed October number of the *New England Historical and Genealogical Register* accompanies the January issue. The definitive tracing of the Washington pedigree by Mr. Henry F. Waters in the former number is already known to all our readers, but a large amount of supplementary matter on the same topic is published in the January instalment of

the "Genealogical Gleanings in England." Here, too, we find wills and other data concerning the families of Oxenbridge, Whittingham, Snooks, Pawlett, Alsop, Fairewether, Jobson, Northend, Isham, Tookie, etc. We remark also some genealogical notes on the Lees of Virginia, with a table, by J. Henry Lea.

The *Book-Buyer* for February has a noteworthy portrait of Mr. F. Marion Crawford, the novelist, who is said never to have been pictured in public before. The face will not disappoint his admirers.

Mr. Paul Leicester Ford, in a privately printed pamphlet, 'Who was the Mother of Franklin's Son?' goes over the ground of what he calls this "historical conundrum," and makes a small contribution to its solution, not as decisive, but only as suggestive. A pamphleteer of 1764, writing 'What is Sauce for a Goose is also Sauce for a Gander,' contrives an epitaph for Franklin, which points out "his Hand Maid Barbara, A most Valuable Slave, The Foster Mother of his last Offspring," etc.

At the beginning of the year the Johns Hopkins Hospital opened for the benefit of graduate physicians five advanced courses, viz.: in Pathology and Bacteriology, with special laboratory advantages; in Medicine, including bedside and dispensary teaching, laboratory work, and lectures; in Surgery, in Gynæcology, and in Hygiene. Among the physicians admitted to this advanced instruction are three women, two residents of Baltimore and one from Chicago.

"A. T. L." writes to us from Boston: "Your reference, in your issue of January 16, to the Schuylkill Fishing Company as 'the oldest English-speaking club in the world,' reminds me that we have in Boston a society, the 'Scots' Charitable Society,' founded January 16, 1657, and which had its 235th annual meeting last month. The records of the first meeting, in excellent condition, are in the Society's possession."

— Mr. Bishop's account, in the February *Scribner's*, of the two or three writers of contemporary Spain whom he met in Madrid, is frankly a sketchy article, and yet it may be worth while to point out a few inaccuracies into which he has fallen. His naming 'Doña Perfecta' as Galdós's "first" novel will be rather surprising to the Spanish critic who recently said that the novelist's genius was at once perceived with the appearance of his first work, 'La Fontana de Oro,' in 1868. In fact, 'Doña Perfecta' stands pretty well down the list. 'Miau' is said to be his latest, though at least three have followed it. 'Miau' was the latest at the time that the little biographical sketch of Galdós was prepared for the series of "Celebridades Contemporáneas," and it was from that account of the novelist, by the way, that both his photograph and the facsimile of his manuscript were taken, without acknowledgment, for the *Scribner's* paper. The perilous nature of the attempt to keep tally of the productions of writers of such fecundity as Spanish novelists, is also shown in the reference to the "latest book" of Emilia Pardo Bazán, said to be 'Los Pazos de Ulloa'; it really is 'Morriña.' Mr. Bishop's surprise at hearing of "one Spanish woman at least who writes," would have been somewhat tempered if he had seen the "Notes for a Biographical Dictionary of the Female Writers of Spain in the Nineteenth Century," now publishing in *España Moderna*, and already including several scores of names, though only down to the M's.

—In a recent number of the *North American Review*, Canon Farrar gives the reasons "why he is an Episcopalian." He admits that in order to be the best of Christians one has no need to be an Episcopalian at all, and that Episcopacy has no reason to arrogate the title of *the* Church in any exclusive sense. But among the superiorities which he claims for the Episcopal organization one is progressiveness, and as a conspicuous illustration of this excellence, he points to the Church of America. He adds: "As regards the Church of America, I am told that *alone*, or almost alone, of the religious communities on the Western continent, it is steadily, if but slowly, *adding to its numbers*, lengthening its cords and strengthening its stakes." The growth of American Episcopacy has been rapid. According to Bishop Perry, its standard historian, its communicants, who in 1853 were 105,136, after thirty years, in 1883 or 1886, had become 407,481—almost four-fold. But while rejoicing in this increment, how could the Canon be blind to the advance of other American sects? His own London 'Statesman's Year-Book' shows him in the same column with 407,481 Episcopalians, 3,716,000 Methodists in 1885 — more than nine to one. Has the Methodist increase shown a less percentage than the Episcopal? By no means. The Methodist progress, on the whole, has been more than nine times faster than the Episcopal, for there were many Episcopal churches in the country before the first Methodist church was formed. Nor has *recent* growth among Methodists been unknown, as Canon Farrar fancies. On the other hand, it has been faster than that Episcopal expansion to which he points with pride. Bishop Simpson sets down the Methodists in 1865 as 929,259, which is less than one-fourth their census, as given above, in 1885. Regarding Baptists, Presbyterians, Lutherans, Disciples, and Congregationalists, statistics tell the same story. The six sects which now outnumber what most of them call the Church of England seem likely to do so still.

— A Sabbatarian Frenchman is not so very rare as might be imagined, if we are to believe the *Réforme Sociale* of December 16. That periodical, which is the bulletin of the Société d'Économie Sociale, and of the social peace unions, prints the programme and statutes of "La Ligue populaire pour le repos du Dimanche," and says in its editorial introduction to these that "the unions having for their programme the Eternal Decalogue have always put in the first rank of their *desideranda* the restoration of the Third Commandment." Certain religionists have been in the habit of dwelling fondly on the phrase "the Everlasting Gospel," but the "Eternal Decalogue" is quite another sort of thing, as well as a quite new locution. That Sabbatarianism, properly so called, should establish itself during this or the next century in France, or anywhere else, we do not think likely. It is proper to note, however, in this connection, that the Ligue is not Sabbatarian in itself, though there are some Sabbatarians among its promoters. It is merely a league for the Sunday rest; and Turks, infidels, and heretics are doubtless included in it, as well as Jews and Christians. Especially it has for an object to obtain one free day in the week for workingmen, and it will attempt to demonstrate the necessity and benefits of the Sunday from the point of view of hygiene, of morals, of the family, and of the State. No one doubts, so far as we know, that this will be a useful and praiseworthy undertaking, and the names that are signed to the programme of the Ligue indicate clearly that the support of it comes from no single sect, or party, or church. Among them are those of Jules Simon and Léon Say, of two Protestant pastors, of an apostolic missionary (a Roman Catholic of course), of several managers of railways, of the architect of the city of Paris, and of other persons of distinction in various callings.

—For a hundred and fifty years, Whiston's translation of Josephus has held its place, less from its own merits than from the fact that scholars have shrunk from the labor of constructing a revised text and giving a new rendering. For the 'War,' indeed, we have Traill's translation, which is fairly good, but for the 'Antiquities' there has been up to this time only Whiston. Pending the formation of a better text, a new translation has just been brought out in England (London: George Bell & Sons; New York: Scribner & Welford); Whiston's rendering being revised by the Rev. A. R. Shilleto, and topographical notes added by Sir C. W. Wilson, whose geographical work in Palestine is well known. Mr. Shilleto (the translator of Plutarch's 'Morals') seems to have done his work well, correcting Whiston's errors and awkwardnesses of rendering, and dealing freely with his notes, some of which are ridiculous. This first instalment gives us the 'Life' and the 'Antiquities' in three handy volumes; two more volumes will soon follow containing the 'War' and the 'Tract against Apion.' The translator has added a few critical notes, and might profitably have given more, pointing out Josephus's omissions and errors, especially as these have been made clear by recent discoveries. Thus, it might be noted (i, 325) that he fails to mention Gideon's ephod; that the title "Pharaoh" (ii, 99) is not now supposed to mean "King"; that the Assyrian King Pul (ii, 191) is generally identified with Tiglathpileser; that it was not Shalmaneser (ii, 199), but Sargon, who took Samaria; that the Assyrian king whom Josephus describes as besieging Tyre (ii, 200) is thought by George Smith ('History of Sennacherib,' p. 69) to be Sennacherib; that this monarch survived the disaster in Palestine not a "little while" (ii, 205), but twenty years. Such notes would take up little space and would be very useful to the general reader. But the translation, as it stands, is a great improvement on Whiston, and will commend itself to all students of Josephus.

—The twenty-first volume of Leslie Stephen's 'Dictionary of National Biography' (Macmillan) ends with Gloucester. The four Georges, who are described with a frankness that does not spare the feelings of their numerous living posterity, collectively receive fuller treatment than any other personages, averaging nearly fifteen pages each. An actor, Garrick, gets nearly twelve; Owen Glendower gets seven; Gibbon, who is favorably summed up by Mr. Stephen himself, gets six. Other prominent names in this volume are William Gifford of the *Quarterly Review* (by Mr. Stephen), John Gay, Gillray, Mrs. Gaskell, and Mrs. Gilbert (Ann Taylor). We should also mention Sir John Gladstone (father of the Prime Minister)—"Gladstones" until he got permission by royal letters patent February 10, 1835, to drop the final *s*. The famous Mrs. Hannah Glasse is shown, as the dictionaries have already admonished us, not to have used in her 'Art of Cookery' the instructions, "First catch your hare." Her words were, "Take your hare when it is cased" (*i. e.*, skinned). Thomas Geeran was one of the false centenarians whom the late W. J. Thoms took delight in exposing. Among pioneers here commemorated are William Gascoigne (1612–1644), who invented the micrometer and its application to the telescope; William Ged (1690–

1749), who invented stereotyping; Dr. William Gibbons (1649–1728), who made mahogany fashionable in England; Joseph Gillott (1799-1873), who first employed machinery in the making of steel pens; Thomas Girtin (1775–1802), "the true founder of the modern practice of 'painting' as distinguished from 'tinting' in water-colors," "laying in the object upon his paper with the local color, and shadowing the same with the individual tint of its own shadow"; and Joseph Glass (1791–1867), who humanely suppressed chimney-boys by his unpatented machine for cleaning chimneys (Act of Parliament July 1, 1842). Garrick, too, was the first stage-manager in England to light the stage by hidden lights. There is also sometimes a distinction in being last, and Elizabeth Gaunt, whom William Penn saw burnt alive at Tyburn on October 23, 1685, for treason (she had given money to speed an outlawed conspirator in the Rye House plot), was the last woman executed in England for a political offence. Three names are especially associated with America, viz., Sir Humphrey Gilbert, who planted the first English colony in this hemisphere; Sir Thomas Gates, that Governor of Virginia whose account of his wrecking on the Bermudas helped Shakspere to his "Tempest"; and the much-married Lola Montez (Marie Gilbert), who died in this country, but at Astoria, not at Asteria (p. 333). And since we close with mention of a typographical error, let us revert to vol. xx. in order to point out (in the article on Gen. Thomas Gage) the printing of "John *Harvey*" for John Hancock, as excepted from Gage's offer of pardon, and the assigning the collision of April 19, 1775, at Lexington to the *return* march of the regulars.

— The death of Mrs. Prudence Crandall Philleo at Elk Falls, Kansas, on January 28, removes an historic figure cast in the same mould with John Brown, and an earlier combatant than he with the Slave Power. She died almost to a day on the fifty-seventh anniversary of a decisive interview in Boston with the editor of the *Liberator*, regarding her purpose to convert her flourishing school at Canterbury, Conn., for white girls into one for black, having "for some months past," as she had previously written Mr. Garrison, "determined, if possible, during the remaining part of my life, to benefit the people of color." When these words were penned, such a profession — the most Christian, certainly, that could be made —was unpopular, odious, even "unconstitutional." It was especially resented by an organization pretending to aim at the same object, viz., the American Colonization Society, whose local agent became at once the leading persecutor of Miss Crandall and her school. The story of this persecution, through inhuman boycotting and a law expressly procured from the Legislature, making it penal to bring colored children into the State to be educated, is too well known to be repeated here. The law was repealed in the course of five years, and its victim was, when past eighty, pensioned by the State by way of atonement. She lived to see slavery abolished by the war, and Kansas, her chosen home, peopled by colored refugees from the Gulf States with no law, Federal or State, to hinder. The spirit of caste, however, which evoked the opposition to her benevolent plans, has but little abated at the North since 1833: the higher education of colored Americans, though now obtainable in the first institutions in the country, still leads only to an *impasse* in most employments; political advancement is grudged them, and social equality denied absolutely. Moreover, the old colonization mania, now more preposterous than ever, is revived as the solution of the "negro problem" at the South, where stringent statutes make intermarriage a crime and put a premium on illicit intercourse, and where the endeavor of white educators "to benefit the people of color" is rewarded with social ostracism. Wonderful as was, therefore, the revolution witnessed by Prudence Crandall in her long life, it must be confessed that the people of this country, whatever party name they assume or whatever section they inhabit, are still leagues behind her simple Christian principle and practice.

—The Rev. Dr. Richard Frederick Littledale, who died in London on January 11, was not only a learned controversialist, but an extremely witty and clever and versatile contributor to English newspapers and reviews. He had hardly passed beyond the bounds of middle life, having been born in Dublin in 1833, and having graduated at Trinity College in 1854 with great distinction. He began to write early, and his work with the pen has been continuous for nearly five and thirty years. His chief works of an ecclesiastical sort are his 'Commentary on the Psalms,' a continuation of the work of his friend, Dr. John Mason Neale; a 'Commentary on the Song of Songs'; 'The Petrine Claims'; and 'Plain Reasons against Joining the Church of Rome.' Under the same head may be put his 'Offices of the Eastern Church' and a multitude of liturgical and ritual pamphlets and essays. Dr. Littledale belonged to the so-called "advanced" or Ritualist School of Anglicans, and was a merciless and perhaps not always too scrupulous controversialist on its side. He never could be more than an advocate in writing upon any religious question, and his wit and great learning and ready memory made him a very uncomfortable antagonist to meet. Many even of those who most nearly agreed with him must regret that he did not employ his great abilities and acquirements more steadily in constructive and permanent work. Dr. Littledale was a regular contributor to the *Academy* almost from its beginning, reviewing in it for the most part novels and light literature. His ability to work was astonishing. Besides what he did with the pen, he was all the time actively engaged in clerical work and in lecturing, though for the last twenty-five years of his life he was the victim of an obscure spinal disease that kept him in constant pain.

THE AUSTRALIAN ABORIGINES.

Among Cannibals: An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By Carl Lumholtz. Translated by Rasmus B. Anderson. With portrait, maps, four chromo-lithographs, and woodcuts. Charles Scribner's Sons. 1889. Pp. xx, 395. 8vo.

It would be difficult to find a more perfect picture of savage life than this account of the North Queensland black. It is written with great simplicity and directness, and with a descriptive power which is shown especially in the individuality given to the natives. In most books of travel people of a low type have rarely more separateness than the different members of a herd of cattle, while the companions of Prof. Lumholtz, Willy, Jacky, and Yokkai, are as distinct personages as Robinson Crusoe's Friday. This fact alone furnishes strong evidence, not only of the carefulness of his observations, but also of the truth of his descriptions. His familiarity with native life was not acquired easily. For more than a year he lived with the blacks, sharing their grass huts, eating their food, enduring their unspeakably repulsive habits, in constant peril of his life at their hands. One can scarcely imagine a more self-denying life, more full of privations, which were the harder to bear as all the comforts of civilization were meanwhile close at hand. Such enthusiasm in the pursuit of knowledge the reader cannot but feel was worthy a higher reward even than the adding four new mammals to the fauna of Australia, and the raising of an enduring monument to a race which, but for the writer, would in a few decades have perished without leaving a trace of its existence.

Prof. Lumholtz went to Australia in 1880 to collect for the museums of the University of Christiania as well as to pursue studies of his own. After spending several months at a cattle station near Rockhampton, in Queensland, he went some eight hundred miles into the interior. The regions visited did not, however, prove favorable for his purposes. He found that the monotony of the inland scrubs, "with their gray or brown masses of stiff, often shadeless trees," was "rarely broken by the sight of a bird or any other living thing," while the hardships from the fleas and the flies, the bad water, and the heat, were very great. The natives, he says, "astonished me by their bodily structure; neither before nor since have I seen them so tall, and upon the whole so well nourished, as in the tribe near Elderslie. Some of the women were even monstrously large; their hair was generally straight. Their food consisted chiefly of fish, snakes, rats, and clams."

The native police in this region showed great skill in throwing the boomerang, and the author suggests "that the idea was discovered in their games." He says: "I have frequently seen them fold the leaf of a common palm into a square, give the two corners a little twist, one to each side, and throw it into the air, making it skim round and return. A white man told me that his black boys, while round the camp fire, used frequently to amuse themselves with the leaves of the Brigalow-acacia, which have a striking resemblance to the boomerang. They gave them a flick with the finger, causing the leaves to start off, but to return in the same manner as the boomerang." This weapon is of two kinds, the one plain, the other returning. The former only, which is far less curved than the other, is used in war or in hunting, as "it is impossible to aim accurately with the returning boomerang."

Being obliged to relinquish further researches in this region, Prof. Lumholtz took up his quarters at a deserted cattle station some forty miles from the mouth of the Herbert River in Northern Queensland. It was apparently some two days' journey from the nearest sugar plantation, so that, except for the white keeper of the station, who was not many degrees above his black neighbors in refinement, our traveller was entirely dependent upon the natives for companionship. The country was parcelled into districts called "lands," each of which was inhabited by a tribe of blacks, who rarely went outside the limits of their own land. Accordingly, whenever Prof. Lumholtz wished to hunt in any district, it was absolutely necessary to obtain the help of some of the tribe to which it belonged. This added both to his difficulty and to his peril, as the further he went from the station, the wilder were the blacks. These were divided into the "civilized" and the "myall," or savages, upon whom the former looked with great contempt. To be civilized, however, it is only required that they should "know that they will be killed if they

murder a white man, to be fond of wearing the garments and ornaments of white people, and to smoke tobacco"—certainly a not very advanced stage of civilization.

Friendly relations having been established with the tribe in whose land the station was, by judicious presents of tobacco, which takes the place of money with them, Prof. Lumholtz immediately began to collect. He soon found traces of what seemed to be two mammals unknown to science, and a keen search was at once instituted for them. It was his intense desire to obtain specimens of these creatures, called by the natives the "yarri" and the "boongary," more than a purpose to study human nature in its most degraded and repulsive form, that led him to endure the privations and dangers of a fourteen months' close companionship with the blacks. His fruitless efforts to obtain either in the mountains near the station, led him further and further afield, until at length he found himself alone among tribes which have never before come in contact with a white man. Although they were treacherous and thoroughly untrustworthy, the only precaution which he took was to regularly fire off at night his revolver ("the baby of the gun," the natives called it), giving the impression to his companions that he never slept. He secured at length one specimen of the yarri, which proved to be a rare, but not unknown, marsupial tiger-cat. As the blacks insisted that it was a small one, the author is "convinced that there exists a large animal of this kind that has not yet been discovered." This specimen, however, was nearly three feet long from the snout to the tip of the tail, apparently much larger than those previously described. Prof. Flower, for instance, speaks of it as the size of a common cat.

With respect to the boongary, Prof. Lumholtz was more fortunate, though his search was much more protracted. He had hunted for it many days in vain when his companions suddenly declared that it could only be got with a dog. This want it was not easy to supply, as the Herbert River blacks have very few dingoes. These as a rule are of pure blood, being rarely bred in captivity; they are found as puppies in the hollow trunks of trees and carefully reared, and not all receive the special training needed to hunt the boongary. When, with the aid of a dingo, a specimen of this animal was finally procured, it turned out to be a tree-kangaroo of a species similar, though more variegated in color, to those inhabiting New Guinea. The skin of the first one captured was unfortunately devoured by one of the camp dingoes, but several others were taken, which Prof. Lumholtz succeeded in carrying safely to his headquarters. His main object being accomplished, he returned to the coast and to civilization.

The North Queensland black is regarded by our author as the lowest of the human race in point of culture. With this assertion we can hardly agree, although very likely none lower have been so carefully observed and fully described. In both Central and South Africa, and, if we are not mistaken, in New Guinea and some of the East Indian islands, to say nothing of Tierra del Fuego, there are tribes distinctly below the Australian savages in intelligence and habits of life. The latter, for example, though living upon the grossest food, almost invariably cook it, never eating raw meat. Fire is made in a few seconds by what Mr. Tylor happily calls the fire-drill—that is, by twirling a stick rapidly between the hands on a soft piece of wood. They ornament their shields with patterns (which "differ in each man's shield, and thus constitute his coat of arms"), and can draw pictures, though only of the crudest kind, yet "still not without symmetry; the left side [of some human figures] was precisely like the right." Their songs are not mere expressionless sounds, but are words set to different tunes, a few of which are "tolerably melodious," though they have a better ear for rhythm than for melody. "It is a remarkable fact that they themselves sometimes do not understand the words which they sing, the song having been learned from a tribe which speaks another dialect. Thus a good song will travel from tribe to tribe." While the vocabulary is small, "their language is rich in words describing phenomena that attract the attention," there being various names, for example, for flame and coals. A rude form of sign language also exists among them. They send information to other tribes "by the aid of figures scratched on a 'message stick' made of wood, about four to seven inches long and one inch wide." The men plait baskets—the women never—which are "wonderfully fine and strong, and are often painted with red, yellow, or white ochre, and sometimes with stripes or dots of human blood, which the maker takes from his own arm." Now, all this implies a condition many removes above that of the lowest of the human race.

The Queensland blacks resemble the Bushmen in many particulars, but, singularly enough, have no knowledge of the bow and arrow, the principal weapon of this African tribe. In fact, they rarely use any weapons when hunting in the scrub, killing their prey by flinging sticks of wood at it. Spears are used in a wallaby hunt, and huge wooden swords and shields in their duels or tournaments, as they might be called. One of these "borbobys," in which the members of different tribes engage, was witnessed by Prof. Lumholtz, who describes it with great vivacity. The men fight in pairs, using a sword so heavy that the combatant is "obliged to let the weapon rest in front on the ground a few moments before the duel begins, when he swings it back and past his head against his opponent. When one of them has made his blow, it is his opponent's turn, and thus they exchange blows until one of them gets tired and gives up, or his shield is cloven, in which case he is regarded as unfit for the fight." In these combats, where "all disputes and legal conflicts were settled, not only between tribes, but also between individuals," bloodshed is rare, though many women change husbands, the victor taking possession at times of his opponent's wives. They know of but one crime (save the murder of a member of the same tribe), viz., theft, and the most common theft is the stealing of women. "Inchastity, which is called *gramma*, *i. e.*, to steal, also falls under the head of theft." As the women largely exceed the men in number, the more powerful or richest of a tribe have several wives, whom they generally treat kindly, and some even generously. They are fond of their children, and have the redeeming trait of being "very kind and sympathetic towards those who are ill." Prof. Lumholtz, however, regards them as very treacherous, and incapable of the sentiment of gratitude. There was but one among them all who showed the slightest signs of attachment to him, notwithstanding his constant efforts to win them by liberal gifts of food and tobacco. At last he felt that there were few who would not have killed him, if they had dared, for a stick of tobacco.

Their tribal organization is very loose, any man leaving his tribe and joining another if he chooses, and without any acknowledged chief or head man. The most influential, according to our author, is often the one who is most skilful in procuring *talgoro*, *i. e.*, human flesh. Although he gives many instances of their cannibalism, yet it is to be noted that he himself apparently never witnessed or came upon any direct traces of a human feast. In regard to the religious conceptions of the natives on Herbert River, Prof. Lumholtz says: "It is my opinion that they do not believe in any supreme good Being, but only in a demon, and it was even difficult for them to give any definite account of this devil. On the other hand, it must be admitted that the natives are very reluctant to give any information in regard to their religious beliefs. They look upon them as secrets not to be divulged to persons not of their own race." Their numbers are rapidly diminishing under the combined influence of opium, introduced by the Chinese, and the almost universal prostitution and consequent barrenness of the women, as soon as they come into contact with the whites.

We have left but little space to speak of the author's contributions to other departments of science. He brought back with him "about seven hundred specimens of birds, a large number of reptiles and batrachians, numerous fishes, also some insects and lower animals." He discovered four new mammals, a tree-kangaroo, and three opossums. In an appendix is given a short account of the flora and fauna of the country. The book is profusely and excellently illustrated, and contains good maps and an index.

DR. GRISANOWSKI.

Dr. E. G. F. Grisanowski: Mittheilungen aus seinem Leben und seinen Briefen. Von Elpis Melena. Hanover: Schmort & Von Seefeld. Pp. 376. 1890.

THIS is a sketch of the life of a very interesting man, who, had he had more ambition, more selfishness, less modesty and reserve, would have had a world-wide reputation. It is written by a warm friend, Mme. Espérance de Schwartz, a lady of German parentage but English citizenship. It consists also of letters written chiefly to herself during a friendship of forty years. Some may perhaps consider that this friendship has colored the author's views and biassed her estimate of the subject of her memoir; but a large circle of friends and acquaintance in Germany, England, and America will bear testimony to their truth.

Ernst Gryzanovski (or Grisanowski, as the name is usually written) was born in Königsberg, in 1824. He was of Polish descent, although his father and grandfather were also Königsbergers, and of course Prussian subjects. He entered the University at Königsberg, and in 1845, before he was twenty-one, received the degree of Doctor of Philosophy, after an examination in mathematics and Oriental languages. He was also a deep student of the Hegelian philosophy. After leaving the University he went to Berlin, where he was well received by the Minister Von Caunitz; but it was two years before he obtained an appointment. In 1847 he was made attaché to the Prussian Legation in Rome, and there acted as Secretary to the Ambassador Von Usedom. It was here that, in the following summer, he met with M. and Mme. de Schwartz, just returned from a winter in Algeria, to take up their residence in Rome.

Those were stirring times in Italy. The appetite for freedom naturally grew with its food, and reports of popular risings kept the usual influx of strangers at a low ebb. Grisanowski and his friends were on intimate terms with Von Kestner, the Hanoverian Minister, and Geheim-

rath Alertz, physician to the Prussian Legation. These gentlemen had easy access to Antonelli, and even to Pope Pius himself; and to them at least it was no surprise when, after the assassination of Rossi, his Holiness left Rome on the night of November 24 in the suite of Count Spaur, the Bavarian Minister, wearing the livery of his servants, and fled to Gaeta. The legations all followed, and our Doctor was obliged to take up his residence in Mola di Gaeta, an exile from his beloved Rome. That his situation was not agreeable appears clearly enough from his letters, which partake of the flavor of the lemon-juice with which, for secrecy, some of them were written.

What happened in Rome after the Pope's flight is generally known. Mazzini proclaimed the Republic, and Garibaldi prepared for the defence of the city against the French, Louis Napoleon having undertaken to reinstate Pius IX. He found it more of "a big job" than he had expected. After a few months in Gaeta Grisanowski left for Berlin with despatches. By this time he had become disgusted with diplomacy, its tortuous ways little harmonizing with his direct nature. In the following April he threw up his office, and writes triumphantly from Berlin: "*Italiam! Italiam!* I am free." He found his friends in Sorrento, who had managed, with the help of Kestner and Alertz, to escape from Rome in the night. Kestner joined the party later, and a very agreeable summer was passed in that earthly Paradise. It may be interesting to the lovers of Goethe to know that Kestner, then an old man, was the son of Werther's Lotte, famous for cutting bread and butter.

After a residence of two or three years, partly at Rome, partly at Genzano, supporting himself by teaching mathematics, Grisanowski decided to follow a taste which had always been strong with him, and began the study of medicine. He studied in Pisa, Montpellier, and Heidelberg; and at the last-named university took his degree of M.D., "insigni cum laude," in 1855. He practised his profession at different periods in Florence, Pisa, and Leghorn. His residence at Florence was for him a very agreeable one. He found there a constellation of literary stars, *e. g.*, Savage Landor, the Brownings, Trollopes, Villaris, Mignatys, Miss Cobbe, Donati, Karl Hillebrand, Louis Ehlert, etc. This was a society that could well appreciate him. With Americans, too, he had the pleasantest intercourse, and the Motleys, Storys, Crawfords, Nortons, Lowells will all bear witness to the learned Doctor's various accomplishments. He removed to Pisa on the invitation of the English Consul, the official physician there having died suddenly. In 1865 he married an English lady, Miss Wright of Exeter.

If, as his biographer says, he sought happiness, late in life, in marriage, he certainly found it. Whether he chose wisely in his profession, may be doubted. It was the science that attracted him so powerfully, but he was ill-fitted for the practice. In a shifting public, like the foreign population of an Italian town in winter, it is hard to establish a reputation. It is building a house on a quicksand. Other arts are necessary besides medical skill. Dr. Grisanowski was never so happy as when at his desk. It was during this period that he corresponded with the *Nation*, and also, from 1871 to 1877, wrote many articles for the *North American Review*. These may serve as a monument to his admirable English. Indeed, the editor at that time used to say that Dr. Grisanowski was his best contributor; and it was Mr. Adams's habit not to look at his MS., but wait until he saw the article in the proof-sheets! His subjects show a remarkable variety, *e. g.*: "The Rise of Popular Opinion in Prussia," "Regeneration of Italy," "International Workingmen's Associations," "Schopenhauer's Pessimistic Philosophy," "The Roman Church," "Comtism," "Wagner's Theories of Music." The last title is a reminder that Grisanowski was nothing if not musical. In the present Wagner mania, an extract from a letter, speaking of a visit he made to Bayreuth in 1882, may be of interest:

"Wagner's 'Parsifal' has made a deep and abiding impression on me. Who hears with the ear only will certainly get no satisfaction. Wagner, too, does not pretend to give 'absolute music.' But one gets, as compensation, something of a most peculiar kind, which can be compared to nothing before known. Eye and ear become one sense; and the double sense leads, not only to the emotions, but also to the intellect, on which the scenic representation and the combination of mysticism and philosophy in the poem have the highest claim." "The first act seems to me perfect, in spite of its length. I had not expected that the musical *motifs* would impress themselves so easily upon me. They are not melodies, and yet they can't be forgotten. This kind of art is too original to have a future; and Wagner must be received as a *semel factum*."

There are many who will say amen to this.

After Pisa and another trial of Florence, a seaside residence was found better for Dr. Grisanowski's health, and in 1877 he removed to Leghorn, where he occupied a beautiful villa outside the walls. Before this, President Eliot had offered him the professorship of German in Harvard College, which, however, he felt himself obliged to decline. Thinking little of his practice, he now gave himself up to his favorite studies. While in Florence he had become much interested in efforts made by the humane societies in England and Germany to check the practice of vivisection. It was his biographer, Mme. de Schwartz, who first suggested to him to take up the pen in behalf of suffering animals. The members of these societies soon learned to appreciate its power when animated by his sympathetic nature, and the Sage of Leghorn, as he was called, found little rest. The rule is held a good one by these bodies, "not to urge a willing horse," but they forgot that some consideration was also due to the nobler being. The Doctor's willingness is proved by his works, a review of which, by Pastor Knodt, is appended to the memoir.

In January, 1886, Dr. Grisanowski had a slight stroke of paralysis, which his medical attendants attributed to overwork. It was followed, a few months later, by one more violent. It failed to kill, but he was left with the loss of speech and of the use of his right arm and leg. Fortunately, his wife had the aid and companionship of her two sisters, who hastened from England on receipt of a telegram announcing the first attack; and, indeed, all their assistance was required in the complications that followed. It was necessary to give up the villa they had occupied for eight years; a new dwelling was to be found, the furniture to be moved, and the Doctor himself, though in so low a state that his physician would not take the responsibility of the change. The heroic wife was equal to the emergency. After a long search, she found a suitable house near Lucca, distant some thirty miles; she contracted for the moving of the furniture, and at the last moment asked her husband what he would do. "Go," he said—for he was able to articulate single words. A mattress was spread in an open carriage, and he was laid upon it. The change of air revived him, and, in his new abode, he was able to survive for two years. It is situated in a beautiful country; and, though the house has not the charm of his former villa, there can be no doubt that he enjoyed it as much as one could enjoy anything in the state to which he was reduced. The following summer he was taken to the health establishment of Dr. Krüche, near Munich, but with little profit. During these last two years, who can describe the devotion of his wife, by day and night his constant attendant, from whom alone he would receive help or food! At last his heart was affected to such a degree that breathing became more and more difficult, till, at the end, he lay for a week gasping for breath, occasionally uttering the word *sterben* in a tone that must still ring in the ears of all who heard it. The Italian doctor would willingly have shortened his suffering by morphine, but Grisanowski would not allow it. He died on the 31st of May, 1888, and lies buried in the English cemetery at the Baths of Lucca.

Mme. de Schwartz has done her work well.* It has evidently been with her a labor of love. Some may think she has exaggerated the picture of her friend. Not so.

"The more," she says, "the reader penetrates into the intellectual wealth of his letters, the more difficult it will be to take leave of a man whose modest nature, shrinking like a sensitive plant from the world and its applause, concealed an affluence of ideas, an extent of wisdom, a clearness of perception and expression, such as one seldom has found united. His real worth consists in this, that he knew how to combine all these intellectual endowments by the purity of his life, by his extreme self-abnegation, by his warm sympathy for others, into an harmonious whole which entitles him to a lofty place in the ranks of noble men."

Unfortunately, all these letters are written in German, and a translation of them would fail to represent the spirit of the originals. It would be well if the large circle of English-speaking friends with whom Dr. Grisanowski corresponded would make a collection of their letters, and follow out the work so well begun by Mme. de Schwartz.

As the poetical side of this many-sided man has been least dwelt upon, we would remind our readers of some Latin verses, addressed to W. S. Landor on his birthday, which appeared in a late *Nation* (No. 1271). As they may have escaped notice, perhaps an English version of them will not be unacceptable:

TO LANDOR ON HIS BIRTHDAY.

Who taught thee to invoke a foreign Muse?
From whom didst learn to strike the Roman lyre?
Did Sabine nurse perhaps give suck to thee,
Or was it thine to drink from Castaly?
Alas! the ruined temples prostrate lie.
No longer in celestial halls resound
The echoes of the banquets of the gods.
But there, where Homer and where Sappho quaffed,
The gentle murmur of Castalian waves
Is ever heard. Surely Melpomene,
Weeping at sight of ruin such as this,
Forbids the fountain e'er to cease its flow.
Nor can the Goddess brook a vain delay.
After whole ages to the Muse denied,
Landor now claims a cup from Hippocrene.
O fortunate old man (if age can come
After such charms), whose happy lot has been
To live in the enjoyment of these gifts!
Whether thy songs move or to tears or mirth,
Posterity will hail thee gratefully.
Behold, Rome opens wide her gates! Return
The sacred Deities in Cæsar's train!
Vanish the mitred rulers in the realm
Of gloom and sadness! Landor, while thou liv'st,
All love of high Olympus cannot fade;
Nor wilt thou ever, Landor, wholly die.

RECENT NOVELS.

By the Western Sea: a Summer Idyll. By James Baker. Longmans, Green & Co. 1889.

The Spanish Poniard: Being the Story of the Remorse of Ambrose Drybridge. By Thomas R. Pinkerton. London: Swan, Sonnenschein & Co. 1890.

* The reader will naturally not expect any of the stirring adventures which our lively authoress narrates in her 'Recollections of Garibaldi,' but he must not fail to read the Walfisch story on page 136.

The Golden Days of '49: A Tale of the California Diggings. By Kirk Munroe. Dodd, Mead & Co.

With Gauge & Swallow, Attorneys. By Albion W. Tourgée. Philadelphia: J. B. Lippincott Co. 1889.

Lily Lass. By Justin Huntly McCarthy, M.P. D. Appleton & Co. 1890.

Standish of Standish: A Story of the Pilgrims. By Jane G. Austin. Houghton, Mifflin & Co.

Gerald Ffrench's Friends. By George H. Jessop. Longmans, Green & Co.

A Summer in a Cañon: A California Story. By Kate Douglass Wiggin. Houghton, Mifflin & Co.

Tentée. Par Th. Bentzon. Paris: Calmann Lévy; New York: F. W. Christern. 1890.

'By the Western Sea' is essentially a book for artists. Its plot, incidents, and characters cannot be appreciated except by that marked caste the chief business of whose life it is to look for beauty in nature or man, and immediately think if said beauty can be represented in words, colors, clay, musical notes, or whichever artistic medium comes most naturally to the individual. Almost every one of the art discussions of to-day is touched, incidentally to the idyll—an idyll, by the way, which towards the end gets quite beyond the Theocritean or Tennysonian idyll, and dangerously near the romances of chivalry. But there is a large class not wholly composed of stupid Philistines, and yet not always looking out for beauty or considering how objects "compose." To this class, no less than to artists, the central theme of the story will be touching if not very new; the characters, principal and subordinate, real, breathing men and women, and the knot of events generally well unwound. But it would be a relief to have half the descriptions of scenery bodily cut out; to follow the hero and heroine, their friends and enemies, without eternally having to stop and observe a "bit"; and besides the mischievous boy, who happily is without the slightest feeling for art, to find some prominent character who dares to entertain an emotion, opinion, or passion which has not been awakened through the eyes searching for beauty—in short, to have the minds, hearts, and souls sometimes put into a night express train so as to carry on the story without the possibility of seeing a subject.

'The Spanish Poniard' is a very careful and meritorious, but not very profound or successful, attempt to portray the lives of a number of quiet people living in the town of Warwick in the days of Charles I. They hear very little of all the exciting events of the reign, and yet from time to time are swept into the whirlwind of violent preaching and other resistless forces which were waking up all the great centres of England to an implacable contest. In the intervals of these general furies, the little knot of persons whose life the book tells are kept in excitement by the mystery, not very obscure, of a blind scholar and writer, a drowned Spanish woman, and the Spanish poniard of the title, which is always turning up to make things lively and painful, as if it were the magic sword of one of Ariosto's champions. Only at the very end are the characters swept into the full tide of civil war; and the siege of Warwick and battle of Edgehill are well described. The book is not exactly bad, but the author has laid out a scheme too heavy for him, and the result is tame.

An honest story, somewhat in the old Mayne Reid style, is Kirk Munroe's 'Golden Days of '49,' telling in straightforward English the regular difficulties, failures, and successes, which every one knows by heart now, that attended the "Forty-niners." It reads much like a boy's book, and very much indeed like an old book, revived and vamped up in the hope of its passing as new. The last paragraph, separated by stars from the rest of the book, and wholly unnecessary for the story, begins, "Forty years have passed." But this seems to have been written on. There is not one word in the rest of the book that need have been written since 1850; not one allusion to the development of the country, or to any event or man made prominent since that year. The volume has a gorgeous red, black, white, gold, and buff binding, and is illustrated in the highest form of the "Scotch-mist" style—pictures that do not let you see exactly any man or thing, but merely gauge the different "values" of fog.

Judge Tourgée, in his preface to 'With Gauge & Swallow,' exalts the power of a lawyer in a strain of eloquence that is really too lofty to be quoted, and reads like an address before some very Western law school. He passes on to the commonplace that the lawyers are more likely to become acquainted with the extraordinary incidents of human life than any other profession, and continues with the important remark that neither laymen nor lawyers have succeeded in incorporating such incidents skilfully into a novel—the layman sinning from ignorance, and the lawyer from over-technicality. Hence the popularity of tales where some miracle is made to take place by the complete overthrow of bench, bar, and court officers, and in the teeth of all rules of law. His idea is, that lawyers show their real powers by the skilful handling of what seem to be unmanageable facts; bringing, in fact, the extraordinary and troublesome into the sphere of the ordinary and easy, and enabling not merely law, but ordinary human life, to flow its own peaceful course without having constantly to fight with stumps and rocks. He offers us, then, a series of tales (most if not all of which have appeared separately, but are here arranged to form a continuous romance) as told by a clerk in an eminent law firm which has successively to seize and tame these wild animals that infest our life.

There is a good deal of sense in this preface, but the plan is strangely carried out. True, the case in every story comes into the hands of Gauge & Swallow; but sometimes their dealing with it is a minimum; sometimes the whole arrangements of their office are upset to investigate a strange case, so that the supposed narrator tells us that the ordinary run of a New York office was upset about once a month for some queer case; sometimes the partners or their assistants are turned into detectives. Again, the profound rule of law which is made to control the exciting case is slipped in at the end of a story, and in short the whole book is a mass of wild, sensational magazine tales pure and simple, with just enough law (right, no doubt) thrown in to be evidence, two centuries after the author's death, that a certain romance-writer named Tourgée was probably an attorney's clerk, if not, indeed, an actual practitioner.

The little story called 'Lily Lass' is written in direct defiance of all realistic theories, old and new. It has heroes and heroines of strange and rare beauty, doubly crossed in love, inaccessible castles, secret passages, set fights and sudden brawls, with a very interesting chorus in the person of an elderly Oriental scholar, who surveys nearly all that goes on in this stormy season with curious impartiality. The tone of the whole is certainly inflated, yet the English is very good—not always improved by American proof-reading—and the story runs easily and entertainingly. But—and the "but" is a large one—the aim of the novel is avowedly partisan. The scene is laid in Ireland during the last dropping shots of the uprising of 1848. It is obvious that Mr. McCarthy the younger wrote this book with the expectation and desire of arousing people's strongest feelings as to the rights and wrongs of that contest. His two heroes are both devoted followers of John Mitchell and Smith O'Brien. Few persons in the United States under forty years old have troubled themselves to read the contemporary record of the events in Ireland in 1848; and such opinions as they have are formed mostly at second or third hand. But among those who are older, and have read those records, there are three irreconcilable views of the leaders of the uprising; and none knows this better than Mr. McCarthy. To one party they are exiled heroes; to another, vile traitors, who got off far too easy; to the third, they are hot-heads, in all whose proceedings there is an unquenchable vein of the ludicrous. The first party will read 'Lily Lass' as a noble tribute to the martyrs; the second, as an unprincipled defence of the traitors. The third will inevitably be reminded much less of Ivanhoe than of Rebecca and Rowena.

In a prefatory note to 'Standish of Standish,' Mrs. Austin promises that the tale shall not mislead as to the stern facts of those far-away years when the Plymouth colony was establishing itself in the midst of countless perils—albeit much of the romance woven around them is her own. And, in fact, if nothing else be gained from this book, at least a clearer light is thrown on all the persons and incidents of the time depicted. The delineation of Standish himself is everywhere strong and impressive, particularly in the first description of his outward appearance, and in the tender farewell scene with Rose, his wife. Gov. Carver, too, is drawn with a sure and loving touch. Priscilla Molines, with her coquettish love of fun, and John Alden, "the scholar," are, especially in the well-known love scene, very daintily treated. Although the story can boast no plot and no tantalizing social complications, it is wholesome and effective.

Six stories, or more properly sketches, are covered by the title 'Gerald Ffrench's Friends.' All of the incidents are "based on fact, and several of them are mere transcripts from actual life, with no more material alteration than seemed necessary to throw the veil of fiction over the identity of the characters." Mr. Ffrench, himself an Irishman of gentle birth, goes into journalism on the Pacific Coast, remaining five years. During this time it is his fortune to meet many countrymen in a more or less intimate way. The sketches describe a few characteristic specimens of the native Celt, as yet unmixed in blood, but modified, of course, by the new surroundings; and all of the six are unusually successful and entertaining. The opening one, "The Rise and Fall of the '*Irish Aigle*,'" is the most, indeed the only, purely humorous one; the others are all rather sad. The most sensational is "Queen of the Angels"; but perhaps the strongest is the last, "Under the Redwood Tree," in which the big lumberman is described in a few bold and telling phrases, while his devotion to his little boy, and the child's death, are powerfully portrayed.

It has been said that opening situations are half the battle in writing a book, just as a brilliant first sentence may be in a short article, or a happy title for anything. The situa-

tion in which the hero and heroine of 'The Bursting of a Boom' find themselves at the start is certainly sufficiently striking. The young man discovers that in his journey from Los Angeles to Ventura he has exchanged trunks with some young woman bearing the same initials as his own. The trunks having precisely the same locks and outward appearance, he does not become aware of the mistake until he has opened the trunk in the seclusion of his own room. A tempest of emotions takes possession of his soul as he sees the pretty dresses and bonnets within, and the dainty lace and linen, while he imagines with horror the consternation of the lady—young, of course—when she gazes upon the coats and shirts and shaving-brushes promiscuously tumbled into his own box. Beyond this rather piquant opening the book has nothing noteworthy. Of course, he finds the girl; of course, he duly falls in love and marries her. The history of a Western land "boom," in which this young man gains some sad experience, is interspersed with more or less description of California scenery and manners. The language is far from elegant, often incorrect, while shall and will, should and would, are continually interchanged in the bad fashion of to-day.

'A Summer in a Cañon' is a bright and taking little story, which does not have to be labelled "for young people." It is unmistakably theirs. The fun is infectious, and many of the situations and speeches are irresistibly comical. The bane of American youth, however, is slang, and this otherwise healthful tale does not wholly escape it. Dr. and Mrs. Winship undertake the charge of a dozen or more persons during a camping expedition on a large scale. For three months the happy party live in tents in Las Flores Cañon, under the spreading oaks and sycamores, hung with mistletoe and gray Spanish moss, which temper the perpetual sunshine of a California summer. Evidently the descriptions of the region were written *con amore*—even at the beginning occurs an almost eloquent passage expressive of the early-morning beauty of the day upon which the expedition sets forth. Some entertaining information about the old-style *rodeo*, and the early California days, is given picturesquely "round the campfire."

Mme. Thérèse Blanc, who writes under the name of "Th. Bentzon," has long been a steady contributor to the *Revue des Deux Mondes*. She might almost be called the foreign editor of it, if one considers the amount of work she has done in the way of translating and condensing American novels and criticising the authors of them. She is herself the author of sundry novels and tales, one of which Mr. Andrew Lang found worthy to be included in a recent volume of translations. The book that we have in hand is made up of two stories, of which the longer gives its title to the volume. 'La Tentée' is Mrs. James Nevil, the Parisian widow of an Englishman, who makes speedy use of her freedom to leave the land of fogs and chill decorum and go back to the city of her heart. She finds her old school friend married to a literary man of the modern sort—Parnassian, *décadent*, impressionist, Heaven knows what—whom his wife loves, but, as is usual in such stories, does not understand. After the usual fashion, also, Mrs. Nevil sets out at once to make her friend's home happy by flirting violently with the superior husband. This connection, however, stops at about one millimetre this side its natural ending, and the heroine returns to England to marry Lord Melton, and several castles, and countless acres, and a great deal of money in the Bank. The book might quite as well have been called "Tenté." It is of no great value; the English characters being wooden and dead, and the French ones not alive. "Faëlle," the second and shorter story, has rather more merit. It is a tale of the disordered and precocious love of an Italian model of twelve years old for an English walking-stick of a painter, and of her self-sought death. It is not a story to be praised without stint, but there are touches in it of feeling and observation.

Essays on Government. By A. Lawrence Lowell. Boston: Houghton, Mifflin & Co. 1889.

THIS little book has an importance that is inversely as its size. It is a duodecimo of scarce 200 pages, but it contains more wisdom than is to be found in many elaborate and voluminous treatises. In fact, we do not know that any writer except Mr. Lowell has clearly distinguished the vital and essential principle of our form of government, and certainly none has stated it so forcibly. It is probably the case that some of our political thinkers, as is indicated here in the essay on "Cabinet Responsibility," were carried off their balance by Mr. Bagehot's comparison of parliamentary with Presidential government. His persuasive power is such that it is always difficult not to be led by him; and when he maintained that parliamentary government was the more efficient it was impossible not to be convinced. Mr. Lowell does not possess the style of Bagehot, nor does he display that incomparable imaginative power which enables such writers as Bagehot and Maine to divine the constitutions of early societies. This brilliant and captivating gift, however, has its corresponding defects. It sometimes misleads the possessor; it sometimes dazzles the beholders; and neither of these remarkable men was an altogether safe guide. In the breadth of his view of the general nature of government, in the solidity of his reasoning, and in the soberness of his judgment, Mr. Lowell will take rank among the first. In the essay above referred to, he points out, in the first place, that whatever the respective merits of the two forms of government, it is impossible to combine them—that a responsible ministry involves the fusion of the legislative and executive functions: and in the second place, that efficiency is by no means the only thing to be thought of in government.

This latter truth is more fully developed in the essay entitled "Democracy and the Constitution." It is almost hopeless to attempt to condense so concise an argument as is here presented, but we may briefly state its leading features. For the development of individual character and enterprise it is necessary that there should be freedom of activity, secure enjoyment of the fruits of labor, and a possibility of calculating the future from the past. These conditions can only be realized under a government of laws and not of men. They cannot be realized where absolute power is vested in any man or body of men, even if this body be the majority of the people. Hence the wisdom of "checks and balances," hence the written Constitutions and Bills of Rights of America. The Constitution of the United States owes its distinction to the ingenuity and success with which limitations upon arbitrary power were devised and applied. It was a deliberate attempt to restrain the power of the majority, and especially to prevent legislative tyranny. Although the Supreme Court has in recent years practically destroyed these safeguards by the Legal-Tender decisions, yet the fact that they endured for the greater part of a century has developed a conservative spirit in our democracy that may for a long time repress the manifestations of arbitrary power.

In illustration of Mr. Lowell's development of this idea, we quote a passage from his description of the process or art of framing a limited government. This art, he observes, consists not only in fostering the habit of self-control, but even more in making that self-control as little irksome as possible. He proceeds:

"Now, there are three devices which are capable of promoting this result: (1) an arrangement such that no organized political body can feel that the laws depend solely upon its own will—can feel, in other words, that it has power to do whatever it pleases; (2) the creation of several independent political bodies, each of which is restrained by the presence of the others; and (3) a process by which every possessor of political power can be made amenable to some final authority which will prevent him from overstepping the bounds prescribed for his action."

The first device means that in a democracy the mass of the people must not be an organized body, and that there must exist no single body of representatives which has absolute authority to express the popular will. The second device means that in the United States power is divided between the Federal and the State Governments, and in each of these is distributed among several representative bodies, deriving their authority from independent sources. The third device is, in short, the regulative control exercised by our courts over our legislatures. This bald statement of Mr. Lowell's argument deprives it of all appearance of originality; but those who follow it out in detail will find, in place of the vague generalities which constitutionalists are prone to indulge in, a lucid, systematic, and singularly compact theory of the Constitution. It is all contained in the sixty pages of the chapter entitled "Democracy and the Constitution."

The essay upon "The Responsibility of American Lawyers," although intrinsically meritorious, is, compared with the rest of the book, rather slight in substance. That upon the theory of the social compact is an historical summary which well deserves to be expanded into a separate treatise. The final chapter, upon "The Limits of Sovereignty," is a trenchant (although not in our opinion altogether unanswerable) criticism of Austin's well-known theory. Of this, too, it may be said that its value would be increased if it were expanded into a volume. It is a grave responsibility, in this age of diffuse writing and innumerable books, to suggest addition and multiplication to any author, but Mr. Lowell has displayed such unmistakable evidences of rare talent in the line of his choice, that a different rule applies in his case. As it is, he has rendered a great and to his own country a patriotic service in his exposition of the true character of the relation between the American Constitution and the American society. Those persons who find themselves disposed to yield to the allurements of modern socialism, although perhaps not intellectually so constituted as fully to appreciate this book, may yet understand from it how it is that clear-headed men look upon the hopes of the socialists as vain, and oppose all tendencies in that direction with unalterable sternness.

Marie Bashkirtseff: The Journal of a Young Artist. 1860–1884. Translated by Mary J. Serrano. Cassell & Co.

THIS much-talked-of diary of a young Russian artist of noble birth, in which she has deliberately exposed her private life as directly and intimately as was in her power, in order to win

what she knew as "fame" after death, is certainly a remarkable book, and its present vogue is not wonderful; it falls in with the appetite of the time for "revelations," and it is highly spiced with sensation. It is very sure, however, that these confessions exhibit to our eyes a very different person from the Marie Bashkirtseff that its author supposed herself to be unveiling. Even to a greater degree than most autobiography, the volume tells more than was meant. It would have been scandalous in another to draw such a picture of this romantic and ungoverned young woman; and it is ungallant at least to analyze and sum up her career and nature from the material she has furnished by admitting all men into the penetralia of her life. Indeed, there is fortunately no occasion to enter upon such a discussion, since her achievement in life was of no real importance, and curiosity regarding her concerns only her individuality, which those who wish will seek for in her own writing. They will do best, it must be said, to seek in the original French, as the present translation is not an excellent one, and falls far below the diarist's own words in vigor, directness, and charm.

It may not be amiss, however, to remark upon the extremely foreign character of her temperament, which happily has but slight analogy with anything in our own intellectual life. She was a "fair barbarian." Though the words may sound harsh, they are accurately descriptive. She was personally attractive, and was besides endowed with a great deal of talent. She was also feverishly ambitious—in the narrowest and lowest sense—not to live nobly, but to live on the lips of men. She was not sparing of industry, and she made an imperious will serve her purpose; she devoted herself to the means of excellence, and accomplished something by her effort. In fact, she died, or at least hastened death, by her wilful persistence in work, where alone she could work, in Paris. She was a varied linguist, and read the masters, but one does not observe in her diary any thinking or any regard for ideas, except in a few pages upon her own subject, art. Of intellectual life, properly speaking, one does not see the traces. Yet, notwithstanding this interest in the things of civilization, she remained a "barbarian." Her contact with them was mainly external.

One realizes this in two ways. In the first place, there were in her nature itself elements which are known to us principally from the Middle Ages. Her religion is not intelligible except by this gloss. She was superstitious, and the forms of her superstition were those of what to us is a long-past age. She intimates that the miracle of her cure at a Russian shrine, which failed to be wrought, might have come about if she had firmly believed in the power of relics. As it was, she resents the fact that she got more cold in the vaults. She gives in charity, and hopes fervently that she will get something back for her money. She is angry with God, like a child, and says she would call him unjust but for the fear of suffering worse things from him in consequence. She prays as to an idol, and with the materialism of a pagan peasant. The whole state of her mind upon religious matters, though confused by knowledge of modern ideas, is a survival from the thirteenth century, and has more affinity with material than with spiritual religion; in a true sense, it is that of the "barbarian." Secondly, there is no moral element in her conception of how life is to be led—none of that sense of responsibility, of that unselfish devotion to noble ends for their own sake, of that ideal of virtue in which the individual disappears by becoming one with the will of heaven, which belong to the modern and civilized mind and heart. This deficiency of the moral idea is the explanation of much in her book which seems abnormal. The traits which divided this brilliant and eager Russian nature from the Paris of which she seemed a part were fundamental; the separation they effected was a great gulf, unknown even to herself.

There is, however, a pervading quality, a femineity rather than womanliness, which lends attraction to her pages. To mention but one phase of it, her frequently expressed delight in the beauty of her person has a simplicity hardly to be rivalled in the books of women. Again, her confessions of her waywardness, of her treatment of her family and her opinions of them, and the repeated acknowledgment of her "second thoughts" in her actions, of her absorption in "the effect," of her consciousness of the lurking question, "What will the reader think of this?" belong to the same side of her nature; and her frankly expressed jealousy of her rival, her bitter words and ignoble thoughts, read more like some character in a play than like the voice of a living woman to a public. The verisimilitude of such passages gains from the liveliness and directness of her style. And here one should speak of her conversations with her lovers, of her confessions about love, of the candidates for her hand, and all that part of the narrative, but we omit reflection upon these. She was romantic, and the treatment of passion and of love by such a one without any discrimination in speech, however innocent and modest in her simple garrulity, can be parried only by the reader's delicacy in silence. She was a brilliant woman, evidently adapted to shine in society and to enchain admiration, convinced of her power and not unwilling to use it, often in a cold way. But she was not content with this natural supremacy, and sought for power of a different sort—the supremacy of genius through its works; she strained after it with all her force, and she gave her life—unnecessarily and imprudently, it is true, but she gave it—with the hope of obtaining personal distinction. One admires much in her; but, after allowing for the alien element in her temperament, there is no inconsiderable part of her confessions about which one keeps silent.

Annales de Domingo Francisco de San Anton Muñon Chimalpahin Quauhtlehuanitzin. Sixième et septième relations. Publiées et traduites sur le manuscrit original par R. Siméon. Paris: Maisonneuve. 1889. 8vo.

Of Mexican and Aztec history a goodly number of volumes have come down to our age, but much of it is contradictory, and what little we think to be true is likely to become modified in many points by the recent publication of Chimalpahin's 'Relations.' Nobody will deny that the history of the Mexicans, like that of all other ancient nations, contains elements of uncertainty on account of the imperfect art of writing, of a deficient chronology (for the early periods), and of the miraculous and legendary element in historiography. From these defects Chimalpahin is more free than his predecessors and contemporaries. He descended from the family of the local chiefs of Amacameca-Chalco, and was born in 1579. Notwithstanding his Indian origin, he made a careful study of all the branches of knowledge then taught in Mexico by the Spanish conquerors, combining with these the history and topography of his own country. The antiquarian Boturini succeeded in obtaining for his collection a part of his manuscripts, and a portion of these finally came into Mr. Aubin's possession. Of these the most important part, extending in time from 1258 to 1612, has just been published, Aztec text and French literal translation standing opposite, by Mr. Rémi Siméon.

What disposes us from the start to think favorably of this work is the fact that it was composed in the native language and by an educated man of the Indian race. His style is neither rhetorical nor diffuse, like that of many contemporaneous Spanish Mexicans, but concise and entirely matter-of-fact. There are two ancient reports in existence concerning the mode by which Montezuma met his death; Chimalpahin agrees with Sahagun in giving the more credible account of this occurrence by stating distinctly that the Spanish invaders strangled him and fled during the night; that they also strangled the ruler of Tezcuco and that of Tlatilulco. Chimalpahin's statement concerning the immigration of the Nahua into Culiacan is more simple than that of other writers: the immigrants, whom he calls Teochichimeca, came in the year 50 of our era from an island of the ocean into Teocolhuacan-Aztlan, a place called by him also Aztlan-Chicomoztoc. Other historians, who found the same names in the annals, made two or three different places of them, and, although our writer says nothing about the position of that island, it seems almost illogical to seek the old home of these immigrating Nahua elsewhere than upon the shores of the Pacific Ocean and in districts other than those where dialects of Nahuatl were spoken in Montezuma's time. Concerning the Mexican modes of warfare, Chimalpahin drops a very interesting remark. He states that sometimes the brunt of the battle bore chiefly upon the leaders and the nobility, while the common warrior was spared; such wars were called wars of the dung-people—tlaçolyaoyotl. But when the warriors alone had to fight and suffer, the men of distinction having "made themselves scarce," such a war was called a flower-war, or xochiyaoyotl.

The date of the Mexican arrival at the lagoon is stated by Chimalpahin to have been the year 1325, and this Mr. Siméon considers to be the correct date. He differs from other writers in the number of years assigned to the reigns of three rulers, Acamapitchtli, his son, Huitzilihuitl, and Quaquauhpitzahuac; and as the differences are considerable, historical criticism will have to consider the matter. The carefulness of the author in registering the exact date of eclipses will perhaps help in clearing up doubtful points in chronology. The profusion of details accompanying certain events testifies to the assiduity which the Mexican scribes used in composing their annals, which afterwards became the originals of Chimalpahin's work. It appears from several passages that some Mexican towns, if not all, had extensive annals of their own.

Of the eight "relaciones" which Chimalpahin composed, the learned editor has selected for publication two only, the sixth and the seventh, for these are much more helpful than all the rest for the study of Mexican history. The appendix joined to the text and its translation contains all the proper names, personal and local, occurring in the text, and to the majority of them the etymology is added.

Fanny Burney and her Friends. Select Passages from her Diary and Other Writings. Edited by L. B. Seeley. With nine illustrations after Reynolds, Gainsborough, Copley, and West. Scribner & Welford.

The vivacious pen of Miss Burney gives excel-

lent material for a volume of this sort, which paints her life among literary and royal persons with as much regard for her surroundings as for her own individuality. The opening scenes, among her father's musical parties and the solitude of his country retreat, are most pleasant; and as soon as 'Evelina' appears, the figures of society add a new interest, and in particular the entrance of Johnson and Burke among her admirers is important, both of these great characters being admirably drawn. The life at court, on the other hand, is melancholy reading, notwithstanding the near view it permits of royalty in its domestic life; one realizes the misery of the situation (and none of it is spared in the telling) too keenly to take interest in the senseless ceremonial routine; and the most vivid sketch of all—that of the King escaping from his keepers and walking and conversing with Miss Burney—is a painful exhibition of a weak and infirm old man. The resignation of her office by Miss Burney comes as a happy relief to all this, though there remained trials enough for her in her wedded life. Readers of the diary will understand how brilliant the page is on which only Miss Burney's most lively and direct passages occur, and may well be tempted to renew acquaintance with her life by such admirable editing as Mr. Seeley has done. The portraits which interleave the pages are excellent reproductions of excellent paintings, and add value; but the attractiveness of the text is due to the extraordinary reality of Miss Burney's writing, her observation of details that are most significant, and, not in a small degree, to the simplicity and modesty of her own character. The book is a delightful résumé of one of the best memoirs of the century.

Some Eminent Women of Our Times. By Millicent Garrett Fawcett. Macmillan & Co. Pp. 231.

MRS. FAWCETT has done a good thing for her sex—that is to say, a good thing for humanity in general—by recounting the stories of twenty-four women who have had a marked effect, in one way or another, upon the time in which they lived. The accounts are brief and straightforward and simple—they were written for the *Mothers' Companion*, and addressed chiefly to working-women and to young people—but the remarkable character of their contents is all the more striking on that account. In nearly every case, from Dorothy Pattison, who was obliged to leave home in face of her father's opposition and to work hard for three years as village schoolmistress, living without a servant and polishing her own grate, before becoming Sister Dora, to Mrs. Somerville, whose mother thought that all a woman needed to know was to write well and to keep accounts, these women who have accomplished important work have done it in the face of active resistance, as well as chill repression, on the part of all their relatives and friends. The loss which has accrued to the world from the fact that many other women have failed to carry out worthy undertakings because they lacked the supreme courage necessary to unsex themselves in the eyes of all whom they loved, cannot easily be estimated.

Sydney Smith, writing in 1810 upon the extraordinary folly of closing to women all the ordinary means of literary education, remarked, as Mrs. Fawcett reminds us, that one consequence of their exclusion was that no woman had contributed anything of lasting value to literature. Sydney Smith had a logical mind; the juxtaposition which the common man usually gives to two such facts is this: Women have never accomplished anything in literature, therefore they must be excluded from all means of literary education. As far as literature is concerned, the battle has now been fought and won: women have, in the first place, entered the field of literary production and taken full possession of it, and they have, in the non-natural order, *afterwards* gained entrance into the great strongholds of literary instruction. As regards the active bettering of the world's condition through agitation and other practical means of reform, they have already made a brilliant record. Elizabeth Fry in prison-life, Elizabeth Gilbert in the condition of the blind, Florence Nightingale in nursing, the abolitionists, the advocates of a better life for women—these have had a marked effect upon the stream of events. But the great nursery of heroic and self-sacrificing action—a family life and a social life in which self-indulgent frivolity is the thing that is frowned down upon instead of a love of action—is a thing yet to be created.

The world changes rapidly: Hannah More devoted the second half of her life to the service of the poor, but she allowed no writing among her protégées, because writing was unfitted to their station. Such a book as this of Mrs. Fawcett's, if it could be put into every family in the country, would have a tremendous effect in making a life of activity and value seem to be an easy and a natural thing to all spirited young girls.

BOOKS OF THE WEEK.

Beale, Rev. D. J. Through the Johnstown Flood. Philadelphia: Hubbard Bros. $2.

General Digest of the Decisions of the Principal Courts in the United States, for the year ending September, 1889. (Vol. IV. of the annual series.) Rochester: Lawyers' Coöperative Pub. Co. $6.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

PARLIAMENTARY LAW AND PRECEDENTS.

Principles of Procedure in Deliberative Bodies.

By George Glover Crocker, President Massachusetts Senate in 1883. 16mo, cloth extra, 75c.

The questions: What constitutes a quorum, and the counting of members present, but not voting, receive extended consideration.

Crocker's Manual is a convenient and valuable compendium of parliamentary practice and procedure.—*John J. Ingalls, U. S. Senator from Kansas since 1873.*

The book must take rank at once as the standard beyond any other, both of authority and of the grounds of authority, upon the subject of which it treats.—*Robert R. Bishop, President Massachusetts Senate, 1880, 1881, 1882.*

SPRINGFIELD, July 18, 1889.

I have examined the volume with some care, and I regard it as a very valuable book to be read by all persons desiring to know parliamentary law governing deliberative bodies.—*S. M. Cullom, Senator from Illinois.*

. . . I was very much pleased with its simplicity and the clearness with which his rules are laid down and his points stated. It seems to me to be an admirable book for those who desire a knowledge of the ordinary rules of parliamentary practice.—*James A. Beaver, Governor of Pennsylvania.*

PUBLISH:

Handbook of Commercial Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc.,

Fellow of the Royal Geographical and Statistical Societies. With 29 Maps.

8vo, 528 pages. $5.00.

"The volume will form not only a useful work of reference, but will be also an indispensable handbook to teachers of commercial geography, and will also prove of the greatest use to pupils who may pursue the highest branches of modern business education."—*Chamber of Commerce Journal.*

"Taking the book as a whole, probably no handbook of commercial geography in any language is equal to it."—*Proceedings of the Royal Geographical Society.*

"What may be termed the commercial energy of the trading nations of the world is strikingly exhibited in this handbook . . . which has a wider scope than any book of the kind we have seen. . . . Information is both clearly and concisely conveyed."—*Saturday Review.*

READY THIS WEEK:

THE SKIPPER IN ARCTIC SEAS. By W. J. CLUTTERBUCK, one of the authors of 'Three in Norway,' 'B. C. 1887,' etc. With map and 39 illustrations (19 full-page). Crown 8vo, 277 pages, $2.25.

*** One of the authors of 'Three in Norway' has here recorded with the same rollicking humor and the same narrative skill a voyage in the waters between Greenland and Spitzbergen. There are many illustrations, and there is a map, showing the course of the vessel.

HISTORIC TOWNS. Edited by E. A. FREEMAN, D.C.L., and REV. W. HUNT, M.A. (*New Volume.*) WINCHESTER. By G. W. KITCHIN, D.D., F.S.A., Dean of Winchester. With maps and plans. Crown 8vo, $1.25.

*** Winchester was once the capital of England, and it was also (under the Danes) the capital of a Scandinavian Empire. For years it more than rivalled London, politically and commercially, and its recorded city government began nearly a thousand years ago. The Dean of Winchester has prepared a compact and yet comprehensive volume on "this most historic of English cities."

A HANDBOOK OF FLORIDA. With 49 County maps, plans, and folding map of the State. Part I. Atlantic Coast. By Charles Ledyard Norton. 12mo, paper covers, 50 cents; cloth, 75 cents. (Ready Feb. 15.)

EAST AFRICA AND ITS BIG GAME: The Narrative of a Sporting Trip from Zanzibar to the Borders of the Masai. By Captain Sir John C. Willoughby, Bart., Royal Horse Guards. With Postscript by Sir Robert G. Harvey, Bart. With 14 full-page Illustrations in Monotone by G. D. Giles and Mrs. Gordon Hake—those of the latter from photographs taken by the Author; four plates containing 22 Lithographic Illustrations of Game, and a colored Map of the Game Country. Pages xii.–303. Royal 8vo, cloth, ornamental cover, $7.00.

THE NEW REVIEW NO. 9. February now ready. 15 cents per number. Yearly subscription, $1.75. Vol. I. June—December, 1889, is now ready, bound in cloth, with a cover specially designed by Walter Crane. $2.00.

Messrs. Longmans, Green & Co. will be glad to send their New General Catalogue to any address upon application.

THE OPEN COURT.

A Weekly Journal of Philosophy and Science.

Articles and contributions by:

Prof. Max Müller,	Prof. E. D. Cope,
George J. Romanes,	Moncure D. Conway,
Alfred Binet,	Prof. Joseph Jastrow,
Th. Ribot,	Wm. M. Salter,
Ludwig Noiré,	Gen. M. M. Trumbull,
Prof. Ewald Hering,	Dr. Felix L. Oswald,
Prof. Ernst Mach,	T. B. Wakeman,
Prof. G. V. Gizycki,	G. M. Gould,
Prof. Aug. Weismann,	Prof. Calvin Thomas,
Prof. H. Oldenburg,	Lucien Arréat,
Prof. C. Heinrich Cornill,	Prof. W. Preyer.

The current numbers of *The Open Court* contain valuable original articles from the pens of eminent scientists and *littérateurs*. Accurate and authorized translations are made in Philosophy, Science, and Criticism from the periodical literatures of Continental Europe, and reviews of all important recent investigations are presented. It is the pronounced object of *The Open Court* to conciliate religion with science; and the philosophical problems that bear upon this important question are editorially treated in its columns. A wide range of discussion is allowed all who will participate. *The Open Court* is neither exclusive nor sectarian, but liberal; it seeks to aid the efforts of all scientific and progressive people in the churches and out of them towards greater knowledge of the world in which we live, and the moral and practical duties it requires.

Subscription Price, Post Free, for 12 months, $2.00.
Specimen Copies Free.

(London Publishers: Messrs. LONGMANS, GREEN & Co., 39 Paternoster Row,)

RECENT PUBLICATIONS.

SECOND EDITION.

In the Garden of Dreams:

LYRICS AND SONNETS.

By LOUISE CHANDLER MOULTON. With illustrations by H. Winthrop Pierce. 16mo. Uniquely bound in white and green cloth, gold stamped. Price, $1.50.

ENGLISH REVIEWS.

From first to last there is not a crude line in the book. It is a fair "Garden" indeed. . . . As a sonneteer Mrs. Moulton has been ranked by good judges as the best in America after Longfellow. Each of her numerous sonnets in this book is excellent.

Mrs. Moulton is one of our sweetest and most tender singers. There is an exquisite finish, a charm, a delicacy, one might almost say a perfume, about her poems which are to be found in those of few other writers of the day. . . . In saying this we acknowledge Mrs. Moulton's right to a place among the true poets of our day.

Thos. Hardy, the English novelist, says: "The poems are penetrated by the supreme quality, emotion, without which verse is not poetry. The illustrations are such as really help the poems, which illustrations so seldom do in England."

TRANSLATED BY MISS WORMELEY.

The Bagpipers.

By George Sand, author of 'Mauprat,' 'The Snow Man,' etc. 12mo. Half Russia. Uniform with our edition of 'Balzac's Novels.' Price, $1.50.

George Sand is nowhere more charming in a pastoral way than in 'Les Maitres Sonneurs,' which Miss Katherine Prescott Wormeley has rendered into English under the title 'The Bagpipers.' In it that personal love for nature and for rural life which shows itself so often in the novelist's work is felt with a warmth and a fulness such as one encounters in very few of her books. There is so intimate a sympathy with the peasant character, and the contrasts afforded between the opposed characters are so striking that the book is one of the most charming its author ever wrote. It is not weighted with theories and lurid with mysteries, like 'Consuelo,' which is in some respects so enchanting; and it is free from the theories of the relations of the sexes, the wild outbursts of passion, and of social revolt which make other of the author's novels so little relished by many. The plot of the tale is simple, and yet it is of sufficient interest to hold the attention of the reader, while the whole atmosphere of the tale is delightful. Miss Wormeley's translation is in thorough harmony with the spirit of the original, and will commend itself to every reader of taste and judgment.—*Boston Courier.*

Albrecht.

A Story by Arlo Bates, author of 'A Lad's Love,' 'Berries of the Brier,' etc. 16mo. Cloth, Price, $1.00.

There is neither a forced situation nor an unnatural expression in the volume. Sharply-contrasted characters are delineated with equal definiteness and grace. In the working out of the problem of companionship, the author's gift of subtle analysis displays itself most perfectly, yet there is hardly a chapter which does not unmistakably reveal the power of his knowledge and the penetration of his thought. His style is luminous, picturesque, gracefully unornamented. There are bits of description—introduced, it may be noted, not as an end but as a means—which will stand beside any in contemporary fiction. The dialogue is as well adjusted as spontaneous. The half dozen lyrics that adorn the conversations are imaginative and daintily felicitous. In brief, 'Albrecht' is charming to read and weighty to consider. Absolutely free from the dilettante pessimism which has been the keynote of too much of Mr. Bates's work, it marks such a distinct advance in his art as to give no small warrant for the hope that Hawthorne will yet have a successor.—*Boston Times.*

The New Priest in Conception Bay.

A NOVEL. By ROBERT LOWELL, author of 'Antony Brade,' and 'A Story or Two from an old Dutch Town.' A new revised edition. One volume. 12mo, cloth. Price $1.50.

When first published this story was thought to be the great American novel for which all were looking, and it was as popular at that time as 'Robert Elsmere' is of late years. The *North American Review* said: "This tale challenges our admiration on many grounds either of which would merit for it a foremost place among works of its class. Its scene is laid in Newfoundland, to most of us an unknown region, and presenting, as is now evinced, unsurpassed materials, whether for the description of Nature or the delineation of rare and piquant types of humanity.

"The tale is one of unflagging interest, and the several stages of its development are managed with exquisite artistic skill."

Sold by all booksellers. Mailed, postpaid on receipt of price, by the publishers,

ROBERTS BROTHERS, Boston.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 13, 1890.

The Week.

THE President has added one more to the list of muzzled newspapers by the appointment of Mr. Charles Emory Smith, editor of the Philadelphia *Press*, to the Russian Mission. It is true that the *Press* had already all the characteristics of a muzzled journal, and in all human probability would never under any provocation have criticised the Administration. But this appointment not only saves it even from all weakness or temptation, but rewards Mr. Smith for past services. Daniel Webster would have condemned the appointment in sonorous language, but we do not. It is a good one for President Harrison—far better than Mr. Thorndike Rice's, which was probably paid for in campaign cash. But—one can praise no act of Gen. Harrison's without the use of a "but" or two—where does this leave Elder Shepard of the *Mail and Express?* He, too, has been a faithful editor to the Administration. He is a powerful writer, and perhaps the foremost publicist in Republican journalism. He is, too, deeply religious, and an evangelist by nature and temperament. The Russians, including the Czar, belong to the Greek Church, and the members of that denomination, we learn from the *Cumberland Presbyterian Review*, are "as destitute of a pure Gospel as the heathen world itself." Now, what a chance of bringing over to the Presbyterian Church at least the Czar and his family, and the aristocracy of St. Petersburg, President Harrison has missed by his failure to despatch Elder Shepard to that corrupt and vicious capital.

Editor Shepard and Gov. Hill are holding a wake over the remains of the World's-Fair Bill, each in his peculiar way. All others are attending the funeral in an orderly manner. The Governor has borrowed the cap and bells from the editor long enough to tell the Legislature that if they will now pass the bill "substantially" as it came from New York city, he will sign it. There is as much latitude in Hill's "substantially" as there is in *Touchstone's* "if." We would advise the Legislature to avoid it. He not only tells them this, but he says *substantially* that if they put the names of the new incorporators into the bill, he will veto it. This is the last nail in the coffin. And then he throws in a whole sermon on the importance of casting aside partisan motives, and the need of taking up the subject in a patriotic spirit. If there is any political capital to be made out of the corpse, the Governor is sure to be the chief mourner. We are still looking for any signs of rejoicing at Chicago and St. Louis over the discomfiture of New York in the competition for the Fair. But, strange it is, the more our chances fade away, the more dim becomes the perspective and the more profound the silence in those quarters. If they want either an editor or a Governor to "keep up the racket," we can spare one of each.

The contributions which Republican leaders are making to the World's-Fair discussion are uncommonly interesting, but not entirely harmonious. Senator Chandler's views easily hold first place both in picturesqueness and originality. He has grave doubts of our ability to get up a World's Fair either in 1892 or 1893, or, in fact, at any other time, because "our high protective tariff is a serious obstacle to exhibitors from abroad," who would be obliged to give heavy bonds either to pay duties on their exhibits or to reëxport them at the close of the Exposition. For this reason he is afraid that we could not get up a Fair which, compared with that recently closed in Paris, would not be disappointing. But what we might do, he says, would be to get up a "United States National Fair" at Chicago, to which foreign countries would be invited, not to bring goods, but to come as spectators "to see how little need we have of foreign goods." This, he is positive, "would overtop all expectations, would be the wonder of the century to foreign visitors and the greatest possible triumph of the protective system." But a World's Fair, even if we could get one, he has reason to fear, would be turned by Tammany "into a free-trade crusade." If Tammany did not do that with it, Mr. Chandler has no doubt whatever that Mayor Grant would use the Fair for political advantage in the Presidential campaign, because he regards the Mayor's act in making the New York city Police Board entirely Democratic the "boldest political wrong of the decade north of Mason and Dixon's line." Mark you, he does not allow himself to be too sweeping. He limits his denunciation to the present decade, and this side of Mason and Dixon's line. He is "amazed" at Mr. Depew and Warner Miller that they have not realized the enormity of the wrong, and insists that no Fair Bill should be passed at Albany which does not contain a provision that the Police Board shall be divided equally between the two parties.

If this addition to the Fair Bill which Mr. Chandler proposes, would not secure a veto in case the measure were passed with it attached, Mr. Depew's latest proposition would be certain to do it. He has a scheme for the addition to the list of Commissioners of as many eminent Republicans as there are Mugwumps now on it, the additional names to be selected by the Mayor and sent to Albany with his approval. Mr. Depew thinks that if the Mayor were to do this, everybody's confidence would be restored, all suspicion of politics in the bill would vanish like dew before the morning sun, and we should have a Fair that would be, to quote Mr. Depew's own words, "the most wonderful thing of the kind the world has ever seen, which will be of incalculable benefit to the city and to the country at large." At this writing there are grave doubts that Mr. Depew's suggestion will be accepted by anybody besides himself. It certainly will not be by Mr. Chandler, because the Police Board reformation is not included. It undoubtedly will be accepted by another Republican leader, Congressman Belden of Syracuse, formerly of the Canal Ring. He says boldly, and with no fear of Chandler before his eyes, that the political aspect of the movement has been absurdly exaggerated, and that his motto is "Anything for the Fair." That has been the motto of all the Fair boomers in these parts for some time, and it is the chief source of all the present complications. It led them to sacrifice first the Central Park, and then the State Constitution, and then the rights of citizens to control their own property. They would have succeeded if they could have swept away the courts, or had the editor of the *Times* been empowered to act during the necessary period as an especial court of last resort, with full authority to revise and correct the judgments of all inferior judicial tribunals. We have not the slightest doubt that he would have accepted the position with alacrity.

Senator Hoar's defence of the removal of the Collector of Boston is, like all that venerable political pettifogger's utterances, chiefly interesting for its calm superiority to anything like a moral obligation in politics. He says:

"The Collectorship of Boston is a political office, the greatest in New England, and its incumbent should be changed with every administration, just as the members of the Cabinet are. The Collector of Boston is the chief representative of the National Administration in New England, and ought to be in political sympathy with it. Then, too, he ought to be a protectionist under a Republican Administration. I would as soon think of getting a pagan to preach the Christian religion as of getting a free-trader to interpret our protective tariff. Again, it was necessary to make this change now, a few weeks before the commission of Collector Saltonstall runs out, because the other Massachusetts appointments depend somewhat upon the chief one. The residence, the age, the civil or military service of the man appointed Collector, must be considered in appointing the Surveyor, the Pension Agent, and the District Attorney. I think Collector Saltonstall should have appreciated this consideration and resigned. There is no question of civil-service reform in this, except to those who do not know the proper limits of that reform."

Plainly stated, this amounts to a confession that the President broke his solemn personal pledge because he wanted a good protectionist for Collector of Boston, in order to secure a basis for getting political possession of other important offices. Mr. Hoar is quite frank and truthful in saying that "there is no question of civil-service reform in this." The full truth in the whole matter was stated in much the same way by one of the Democratic Congressmen from Massachusetts, Mr. O'Neill, who said of the change: "It simply shows how hungry the Republicans are for

office, and how little there is in this civil-service-reform pretence."

There is a story in Wall Street that the Sugar Trust contributed $100,000 to the Republican campaign fund in 1888, on the promise that the tariff should not be altered to their detriment during the next four years, but that the Republican leaders are now going back on the bargain. If any such bargain was made—and we think that the evidence points that way very strongly—it would be well to go back on it as soon as possible, because it was a very one-sided arrangement, being virtually a bargain to sell the privilege of plucking the American people of several millions per year in return for the beggarly sum of $100,000 cash down. The best authorities on international law uphold the right to denounce a treaty, after a reasonable time, if its terms are found to be oppressive to one of the parties. In this case a reasonable time has passed. One-third of the period has expired, and the Trust has been recouped at least one hundred times over for its campaign subscription. No reasonable complaint can be made if one party now gives notice of termination of the treaty. That such notice has been given, or will shortly be given, we infer from a correspondence between the editor of the Washington (Iowa) *Press* and the Hon. J. H. Gear, a member of the Committee on Ways and Means. The editor wrote to Mr. Gear urging him to "knock the tariff higher than Gilderoy's kite" so far as it protected any Trust, but especially the Sugar Trust. Mr. Gear replied in a cautious way, but he did say: "I am in favor of largely reducing the differential or discriminating duties which have existed ever since the foundation of our Government between raw and refined sugars." Mr. Gear also said that he "would much prefer to take the tax off the necessaries of life than that on tobacco, as the tobacco tax is purely voluntary with those who use the noxious weed; the same is true of whiskey." Mr. Gear is an important spoke in the tariff wheel just now.

That rather sleepy body the Chamber of Commerce waked up on Thursday to the fact that a bill has passed one branch of Congress the effect of which would be eminently disastrous to the commerce and prosperity of New York. The high-tariff faction made every effort to prevent any action by the Chamber adverse to the bill, but they were beaten, and beaten, too, by the votes of Republican members of the Chamber. What is wanted now is speedy action by the enlarged Committee on Foreign Commerce. This Committee, by the way, seems to have been originally constituted of a majority of men opposed to foreign commerce, on the principle of *lucus a non lucendo*. In its enlarged state—enlarged for the purposes of the McKinley bill—it comes much nearer to expressing the ideas for which such a committee may be supposed to exist.

The report of Mr. Blair's speech on Thursday suggests serious doubts of his sanity. In face of such facts as the quadrupling of the school fund in Texas within the past eight years, and an increase of 2,400 per cent. in the amount expended for school purposes in Arkansas within the past sixteen years, "he doubted whether the conditions were being improved in a single State." Later in his speech he said that "in the North the common-school system was trembling in the balance, if, indeed, it had not already died." Really, a commission *de lunatico inquirendo* seems called for when a United States Senator talks in this way.

Mr. Halstead's testimony before the Senate Committee in regard to his publication of the celebrated ballot-box forgery in Ohio, during the last campaign, was infantile in its frankness. The most inexplicable thing about his conduct has been from the first his failure to see anything suspicious in the presence of the names of Senator Sherman and Congressmen Butterworth and McKinley on a paper which convicted them of being engaged with leading Democrats in a gigantic swindle. Yet on this point he said on Thursday:

"I told the Governor that I felt so exasperated at the idea of Sherman and Butterworth and McKinley going in with John McLean in such a matter that I felt tempted to explode it under them. It was something more than policy and almost a public duty. But Campbell was the only one before the people as a candidate for public office, and it might, therefore, be proper to use only his name. There was another reason why all of the signatures could not be printed in civilized society at that time, and that was because it was the day of Sam Cox's funeral, and I felt convinced of the genuineness of his signature. So I published part of the paper, with Campbell's signature, which I thought was the proper course. Campbell could not be drawn out on this matter, and I advised Gov. Foraker to leave the matter to me, as I felt more competent to take care of it. It was a cracker that had to be touched off at one end only. I am not insensible to the picturesque effect that attaches to this theory, now that I see the general effect of touching it off."

That makes the matter worse than ever. He not only believed the three leading statesmen of his party were capable of taking a hand in a swindle, but he almost felt it a public duty to expose them. When he touched off his cracker at the Democratic end, his fear was, not that he should burn his own fingers, but that the explosion might extend to the Republican end and hurt the party. It is the picturesque aspect of the failure which amuses him now, and he still thinks it was a "proper use" for an editor to make of a document to publish only such parts of it as would injure his political enemies, and hold back those which would equally injure his friends. The "picturesque" side of that kind of journalism is certainly much stronger than the moral one.

One of the humors of the political situation is the fact that the Hartford *Courant* is quoting, in defence of Reed, a speech delivered by J. C. S. Blackburn of Kentucky in the House of Representatives, in the very same discussion in which Joseph R. Hawley delivered a speech demolishing Mr. Blackburn's argument, and insisting that "we are causing no hardship whatever in taking the ground we do against this new rule [giving the Speaker the power to count a quorum], and I think we do no serious wrong to the country at any time when we sit in our seats and decline to vote. If the majority desire to have a bill passed in opposition to our wishes, then let the majority come here and pass it over our heads." In this same speech Gen. Hawley sustained the old system in Congress on the ground that it was in consonance with the methods employed in many Legislatures, and that "the modern State constitutions are all tending in that direction, that a bill shall not be regarded as passed unless an actual majority of the members elected shall vote for it." It would be interesting to know whether the *Courant* considers this drift of modern State constitutions a drift in the wrong direction; and if not, why it would make it easier to pass a bill in Congress than in the Legislature of New York, or New Jersey, or Pennsylvania, or Illinois, or Minnesota, or California.

The plot to give the Louisiana lottery a fresh start in the new State of North Dakota has broken down under the storm of popular disapproval provoked by the passage of the bill in the Senate, and its supporters in the House took refuge on Monday in its indefinite postponement. The State and the nation are thus saved from a threatened disgrace. There is one moral of the incident which should not be lost upon Congress, and that is the folly of haste in erecting Territories into States. The Senate Committee on Territories has decided to report in favor of the admission of Idaho, but the recommendation ought not to be acted upon. With North Dakota controlled by politicians who are capable of such business as this lottery plot, and Montana presenting a spectacle of legislative disorder, the country is in no mood for more new States at present.

The report of the Public Examiner of Minnesota on the affairs of the American Building and Loan Association—one of the so-called "national" concerns—is only what any one conversant with the subject might have expected. The whole matter may be summed up in a nutshell. By means of building and loan associations, managed strictly on the coöperative principle, hundreds of thousands of dollars of savings have been accumulated by men of small means, and thousands of such men have been assisted to own houses of their own in a most economical way. In the coöperative associations the expenses are a trifle (most of the officers serving without salary); and as the loans of each association are made only in its own locality, there is the safest knowledge of the property loaned on. Taking advantage of the success of this system, persons in this and other States have stolen its good name, and appropriated the special statutes passed in regard to it, to organize so-called building and loan associations which spread their business all over the country, and pretend to offer to investors and borrowers the same advantages that the coöperative associations afford, while at the same time incurring heavy expenses for

rentals, clerks, and agents, and admitting (when closely pressed) that they have in view the accumulation of a fund for the profit of the officers. A bill is making progress at Albany which will check in this State the operation of these "national" associations organized in other States. What is wanted in addition is so plain an amendment to our own existing laws that "national" associations organized in this State will no longer be allowed to masquerade under false colors.

Last month an "Afro-American League" held a convention in Chicago, and last week another convention of colored men was held in Washington. Both gatherings proceeded upon the assumption that the men of black skins in the United States should hold themselves a separate class in the citizenship of the nation, and that they may properly demand the enactment of class legislation in their behalf, such as never would be thought of for any other portion of our population. Both gatherings will strengthen the growing resentment against those blind leaders of the blind who are thus organizing an element which constitutes only about an eighth of our inhabitants, in a way which would be thought intolerable if it were proposed by Irish-Americans, or German-Americans, or Italian-Americans, and which is exactly as inadmissible in the case of Afro-Americans. The lesson that the negro needs to master first of all is that which was taught by the Supreme Court of the United States when it annulled the Civil Rights Act, which had been passed in his interest, and declared that the time had come "when he takes the rank of a mere citizen, and ceases to be the special favorite of the laws, and when his rights as a citizen, or a man, are to be protected in the ordinary modes by which other men's rights are protected."

Señor Castelar, the great Spanish orator, has a letter in *Galignani's Messenger* of January 30, in which he discusses the Pan-American Conference and its objects with considerable freedom. He points out that from the very first the Spanish-American republics parted company with their Northern sister on the question of intercourse with the outer world. They chose free trade as their policy, opened their ports to all the world, and on this have built up an enormous foreign commerce, in which they are prospering, and which they thoroughly understand and will on no account surrender. He says:

"In Uruguay, for example, half of its importations come from France and England, while American productions count only an eighth part of the total importations. How can any Customs Union induce Uruguayans to buy exceedingly dear American products when they can get them in abundance and cheaper from Europe? The South American States are not tempted to imitate the Saxon Republic, where an over-abundance of riches has produced a plethora—'the surplus'—and brought the country into the apoplectic condition of the human body when there is an excess of blood coursing through the veins."

He cannot understand how such a positive people as the Americans should have a minister with such "a Utopian and dreamy intelligence" as Mr. Blaine's, and he insinuates that Mr. Blaine dreams of conquest in the guise of commercial union; but nothing can come, he predicts, of any such scheme. He also pleasantly warns us against attaching much importance to the eulogies on our material growth extracted from the Pan-Americans when Mr. Curtis was carting them round the country. "In such Platonic tributes," he says, "no race can excel ours. In the end, both nations will have spoken much, but nothing will have been accomplished." In short, Señor Castelar exposes the folly of a union based on geographical considerations only, and setting at naught differences of race, traditions, language, religion, and economic ideas. Our treatment of Canada brings this folly out all the more glaringly. We refuse to Canadians—men of our own blood, language, and faith, for the most part—the very things we are trying to force on the Spanish Americans, and we flatter ourselves that the Spanish Americans do not see the contrast and ask themselves what it means.

The explanation of it is simple enough to any one familiar with the workings of the protectionist mind. Canada is neglected or repelled under that curious old mediæval delusion that a great nation cannot profitably trade with a small one, because it offers a large market to the wares of the small one, while the small nation offers only a small market to the wares of the large one, and would thus be able to take more "gold out of the country" than the large nation could get back. In the protectionist imagination, all nations trade as nations *en bloc*, like a family, and sell nothing except for "gold," and find out whether they are trading profitably by counting up their "gold" once a month or so. You cannot get the fact that international trade is barter into a protectionist head without a surgical operation. Even the Custom-house returns make no impression on it. It sees "gold" everywhere, and is always trying to get hold of it. Therefore, the protectionist hates to let any one into his market, especially a small dealer, lest he should get away with some of his "gold." If Canadians are allowed to bring their goods over the border, he feels sure they will take nothing back but "gold." But if he can get down with his goods into the great South American markets, he thinks he can make large sales, and get off with the "gold" before the South Americans notice what he is up to. If you ask him how it is that trade between a big State like New York and a small State like Rhode Island is so profitable, he simply gets angry, calls you a "British free-trader" and an "enemy of the Fair."

We can well believe that the German Emperor's rescript to his Minister of Commerce, affirming that "it is the duty of the State to so regulate the duration and the nature of labor as to insure the health, the morality, and the supply of all the economic wants of the workingmen," has caused a great sensation in parliamentary circles. The sensation will not be confined to parliamentary circles, nor will it be confined to the country over which the young Emperor presides. It is, indeed, the most extraordinary step in the direction of socialism that has been taken by any ruler in our time. The despatches say that the rescript was not signed by any responsible Minister. We should presume not, for although Bismarck has gone further than anybody else in authority in carrying out the dogmas of state socialism, he might well pause before putting his name to a paper which holds out the hope that the state will charge itself with the supply of all the economic wants of everybody. In so far as the rescript looks to the gathering of information and to the establishment of rules for the arbitration of disputes between workingmen and their employers, there is nothing unusual or revolutionary in the rescript. France and Belgium have long had tribunals of arbitration, as also has the State of New York. All civilized communities have machinery for collecting information touching the condition of wage-workers. Our bureaus of labor statistics are in this category. But to go beyond these limits, and to become responsible for the support of any class, or seem to, or hold out the hope of becoming so, is a step of the utmost peril, and one which Germany can less easily afford to take than any other government under the sun.

The reasons why Germany in particular cannot afford to take this step are two-fold. One is that she has taken so many already that she cannot easily turn back when she finds herself in the wrong. She has carried state socialism to a dangerous pass. The workingmen's insurance laws, by virtue of which the taxpayers, the employers, and the workingmen jointly contribute an eleemosynary fund, are only one part of the system. The other and most harmful part is that which seeks to build up trade monopolies inside the empire for the benefit of the employing class. Protection, Trusts, and combinations of one sort and another have reached so high a stage of development that logically something must needs be done for the benefit of the employed, and the misery of the situation is, that there is nobody endowed with omniscience to tell where to stop. But there is one person who, although not omniscient, is omnipotent, or nearly so. That one is the Emperor. And here we find the second reason why Germany is peculiarly exposed to socialistic disorders. The Emperor's rescript is fraught with perils much graver than any which could assail a parliamentary government, where a ministry is responsible to the people's representatives for every step taken and for every word uttered. There are seeds in it whose germination and fruitage nobody can now forecast. That they are seeds of ill to imperialism itself can scarcely be doubted.

HOW "ONE-MAN POWER" WORKS.

In his forcible warning on January 28, 1880, against the suggestion of giving the Speaker power to go behind the roll-call and to count a quorum himself, Gen. Garfield said: "I think my friend from Virginia will see that he lets in the one-man power in a far more dangerous way than ever has occurred before in any legislative assembly of which he and I have any knowledge." Later in the same speech he said: "Sir, the moment you get over the line, the moment you cross the boundary of names, the moment you leap over the iron fence of the roll, that moment you are out in the vague, and all sorts of disorders may come in."

After our recent experience of this "one-man power," it is easy to show that Gen. Garfield's impressive protest was well grounded. On Wednesday, January 29, the roll was called on a motion, and resulted in 161 yeas and 2 nays. According to all the precedents since the first Congress was organized, this was a defeat of the motion, inasmuch as no quorum had voted, and this point was immediately raised by a member. But Mr. Reed, without any rules to justify him in exercising such unprecedented power, proceeded to count a quorum himself. The report in the *Congressional Record* reads:

The Speaker—The Chair directs the Clerk to record the following names of members present and refusing to vote: Mr. Blanchard, etc., etc., *Mr. Outhwaite.*

Mr. Outhwaite—I wish to state to the Chair that I was not present in the House when my name was called, and the Chair is therefore stating what is not true. It is not for the Chair to say whether I shall vote or not, or whether I shall answer to my name when it is called.

In the course of the discussion which followed occurred this passage:

Mr. Outhwaite—If the gentleman will permit me to interrupt him at that point, I want to state in the presence of this House that the Speaker has announced myself as being present at the time the roll-call was taken, when in fact I was not in my seat. I was not on the floor of the House after the beginning of the calling of the roll until the end of the same, yet I am put upon the record as being present and refusing to vote!

Mr. Crisp—Mr. Speaker, I ask again, in the language of Mr. Garfield, "Who is to control his seeing?" The statement just made by the distinguished gentleman from Ohio (Mr. Outhwaite) illustrates at once the force and clearness of the argument of Mr. Garfield when he asks in this debate: "Who is to control his seeing? How do we know but that he may see forty members more for his own purposes than there are in the House? And what protection have gentlemen if the Speaker says he sees a quorum, if he can convert that seeing into a list of names on the call of the roll by the Clerk?"

Before the House adjourned, the Speaker was forced to confess that he had made a mistake in the case of Mr. Outhwaite, attempting to excuse himself on the ground that "his name was pronounced by accident."

On Tuesday, February 4, a vote was taken on a motion, which resulted in 157 yeas, no nays, not voting 172. Less than a quorum had answered to the call of the roll. Thereupon, according to the *Congressional Record*:

The Speaker—In addition to those recorded as present and voting, the Chair desires to announce the following members as present and declining to vote: Mr. Blount, etc., etc., *Mr. Stone of Missouri*, etc., etc. The yeas are 157, the noes none; and there being a constitutional quorum present, the previous question is ordered.

On Wednesday, February 5, after the reading of the journal, Mr. Stone of Missouri rose and said, according to the *Congressional Record:*

Mr. Speaker, I did not hear that portion of the journal read which announces the names of members present and not voting on the last yea-and-nay vote yesterday; but I take it to be the same as appears in the *Record*, and if so, the journal is incorrect. The statement in the *Record* is that I was present and not voting on this last call. As a matter of fact, I was in the northwestern part of the city at the time looking for a house, having recently been burned out.

Again, for the second time within a week, the Speaker had to confess that an error had been made, and that, under the power which he had usurped, he had "for his own purposes," in Gen. Garfield's words, declared present and not voting a man who was at the time in a distant part of the city.

When, fifteen years ago, an Indiana member insisted that the Speaker possessed and should exercise this power of counting a quorum, Mr. Blaine replied for himself that "the Chair never heard of that being done," and added: "He begs to remind the House, whereas that might and doubtless would be true, that there is a quorum in the hall, the very principle enunciated by the gentleman from Indiana has been the foundation probably for the greatest legislative frauds ever committed. Where a quorum, in the judgment of the Chair, has been declared to be present in the House against the result of a roll-call, these proceedings in the different Legislatures have brought scandal on their names." The Outhwaite and Stone incidents are sufficient to show what "legislative frauds" are possible when the Speaker goes behind the roll-call. When such "accidents" as this are possible, under the power which Mr. Reed has usurped, is it not plain that Mr. Blaine was right when he said: "The moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the hall, why, gentlemen, you stand on the very brink of a volcano"?

Another new rule which has been favorably reported to the House by the Republican members of the Committee on Rules, is one which provides that "no dilatory motion shall be entertained by the Speaker," and proposes to leave it to the discretion of the Speaker to determine what a dilatory motion is. How this would work we can see from the *Congressional Record*, which gives the proceedings in the House on Tuesday, February 4. About the middle of the afternoon a motion to refer a bill to the Committee on the Judiciary having been defeated, Mr. McCreary, a Democratic member from Kentucky, moved that the House adjourn, saying that he understood the Committee on Rules would be able to report the following day. Mr. Reed declined to entertain the motion. What followed is thus given in the *Congressional Record:*

Mr. McCreary—I rise to a parliamentary inquiry.

The Speaker—The gentleman from Kentucky.

Mr. McCreary—My parliamentary inquiry is this: The motion to adjourn having been voted down some time ago, and other business having intervened, if a motion to adjourn is not in order now, when will it be in order?

The Speaker—The Chair desires to say, in response to the parliamentary inquiry of the gentleman from Kentucky, that ordinarily the motion to adjourn is in order when the changed situation of the House is such as to render it probable the House desires to take that action. But the proceedings to-day have been of the same character as those of preceding days, and it is evident to the Chair that these motions are used for the purpose of obstruction and delay. That being the state of the case, and the ordinary time the House has indicated it is its pleasure to adjourn not having arrived, the Chair feels it is carrying out the wishes of the House in making that ruling.

Mr. McCreary rose.

The Speaker—The Chair has replied to the gentleman.

Mr. McCreary—I rise to a question of personal privilege.

Mr. Springer—He has a right to reply.

The Speaker—There cannot be a question of personal privilege pending at this time, the previous question having been ordered.

Mr. McCreary—I made my motion in good faith. I made the motion to adjourn because it is now nearly four o'clock, and because I heard a member of the Committee on Rules say it was probable the Committee on Rules would be able to report the rules to-morrow.

The Speaker—The gentleman from Kentucky must perceive that is not a question of personal privilege.

Mr. McCreary—I make my statement in response to the statement of the Speaker impugning my motives.

The Speaker—The Chair does not impute motives to the gentleman from Kentucky.

Mr. McCreary—I understand the Chair——

The Speaker—The ruling of the Chair is not a personal ruling. It is not personal to the gentleman from Kentucky.

Mr. McCreary—The Chair imputed to me the making of a dilatory motion, when such was not the case; for my motion to adjourn was made in good faith, and because I believe, under all the circumstances, the House should adjourn.

Half an hour later—nothing having intervened but a call of the roll—according to the *Congressional Record*, Mr. McKinley, a Republican member from Ohio, made the same motion which Mr. McCreary had made, the Speaker entertained it, it was passed, "and accordingly (at four o'clock and sixteen minutes P. M.) the House adjourned."

On Wednesday, February 5, according to the *Congressional Record*, "the House met at twelve o'clock M."; the journal was approved by a yea-and-nay vote, after Mr. Reed had corrected the "accident" in Mr. Stone's case; Mr. McKinley moved that the House adjourn; the Speaker entertained the motion, and it was carried; "and accordingly (at twelve o'clock and forty-two minutes P. M.) the House adjourned." The same Speaker who refused on Tuesday to entertain a Democrat's motion to adjourn "at nearly four o'clock"—upon the ground that "the ordinary time the House has indicated it is its pleasure to adjourn has not arrived"—on Wednesday entertained a Republican's motion to adjourn "at twelve o'clock and forty-two minutes P. M."—more than three hours before "the ordinary time"! This is what "the discretion of the Speaker" means regarding a motion which for a century has been held in order.

The proposed changes in the rules are now under discussion in the House. They are important, radical—we may even say revolutionary—changes in the system under which legislation in Congress has been conducted during the first century of our history. They seem to us changes fraught with danger to

our institutions, because they tend to make our Government a government of men and not of laws, and to give the Speaker a power which resembles that of a dictator too closely to be safe.

POLITICAL BLIND STAGGERS.

THE Washington correspondent of the *Tribune* about ten days ago telegraphed the following account, undoubtedly semi-official, of the theory on which Speaker Reed and his followers have been acting during the late series of parliamentary outrages:

"The country wants results, and doesn't care much in what way they are obtained. Hence it was a mere waste of time to quote Speaker Reed himself or Mr. Blaine, or any precedent in the entire parliamentary history of Congress, against the proposal that a minority shall no longer be able to block public business by acting unlawfully."

This sage deliverance has been widely copied by the Republican press as a complete answer to the criticisms on Speaker Reed's performances, and it has evidently got into the heads of a considerable number of the promoters of the Fair in New York as a justification of their extraordinary bill. But we venture to say a more direct attack on the fundamental principles of free government has never appeared in a French, Russian, or Prussian newspaper. The history of Anglo-Saxon freedom is the history of a prolonged, desperate, heroic, and successful struggle to convince rulers that the way in which results were obtained was far more momentous than the results themselves.

The history of American Government is also the history of successful efforts to stake out the path by which Legislatures shall seek results, and to provide punishment for all aberrations from it. The Federal Constitution, and every State Constitution, are solemn declarations by the people that they consider the way in which results are obtained of infinite importance. This is what is meant by the conclusion to the Massachusetts Bill of Rights, which says, in memorable language, that what it aimed at was "a government of laws and not of men." In no country and in no age has such a confession as the *Tribune* utters on behalf of its employers, that "the country wants results, and doesn't care how they are obtained," meant anything but that the people are tired of freedom and wish to put themselves in charge of a dictator. This is in substance what Cromwell said when he turned the Long Parliament out of doors and put the key in his pocket. It is what Augereau said when he arrested the Corps Législatif on the 18th Fructidor, and what Lucien Bonaparte said when, under his brother's orders, he cleared out the Council of Five Hundred on the 18th Brumaire. In fact, the order to the grenadiers was couched in almost the exact language in which the *Tribune* justifies Speaker Reed's usurpations. They were told that the Council was oppressed by assassins and brigands hired with British gold, and were ordered to rescue the majority from this oppression by clearing the hall. So they charged with fixed bayonets.

This, too, is substantially what Louis Napoleon said when he executed the Coup d'État in 1851. He said the country was tired of debate and obstructions, and wanted results by the quickest means. He accordingly dispersed the legislature and abolished the Republic, and undertook to furnish prompt government out of his own head. To this hour the Bonapartists in France preach the Reed doctrine, and ask for a restoration of the Empire on the ground that there ought to be no restrictions on the will of the majority.

The population of nearly every large city in the Union is to-day nearly one-half composed of persons of foreign origin, who knew nothing of constitutions until they came to this country, and do not yet understand their value. Among them, and besides them, there is a vast body of discontented Socialists, Anarchists, and Nationalists, eager to attack vested rights of every description, and, above all, the rights of property, and turn the American Union into a parcel of phalansteries, each presided over by an absolute Boss To all of these the restraints on the holders of power, created by centuries of sacrifice, and consecrated by the tears and prayers and devotion of many generations, are so much useless lumber, to which they would be glad to put the match to-morrow. What they want is results, and they, most emphatically, do not care how they get them.

In the presence of these facts—for none will deny that they are facts—the openly avowed indifference of the native-born Republicans in Congress not only to the rights of minorities, but to the long-standing precedents restricting the power of majorities, is surely an extraordinary and alarming phenomenon. Hardly less so is the openly avowed indifference of the majority of the New York Legislature to-day, and the promoters of the Fair Bill outside the Legislature, to the restrictions of the State Constitution. Not only do they make no account of the constitutional objections to their scheme, although urged by some of the ablest interpreters of the Constitution in the State, but they do not take the trouble to answer or even discuss them. Their mental condition on this subject is apparently very much like that of a French Jacobin club. They dispose of all opposition by an epithet. They tell everybody who shows them the law of the land, and asks them to respect it, that he is "an enemy of the Fair," and that Citizen Depew says it is all right, and that "the country wants results, and does not care," etc.

What is the worst of all this is, that there can be no reasonable doubt that money, simple cash, is behind both these alarming and even dangerous aberrations from the straight and narrow way of American polity. In Congress, behind Speaker Reed's usurpations lies the unvarnished desire to get a majority that will repay money advances made for electioneering purposes by taxation for the benefit of unsuccessful manufacturers, rendered desperate by the attacks made on the help they already receive from the public Treasury. In New York there is no longer any trace left in the Fair scheme either of honor for Columbus or of rejoicing over his great discovery. It has almost from the first become a Fair in reality as well as in name—that is, a place in which to make large sales of wet and dry goods, and boom real estate, in which the undertakers will be guaranteed against loss by the taxpayers. It is for this we are asked to surrender the most valuable thing we have, that reverence for law, and above all for the organic law, which has made America "the land of liberty" par excellence, and without which we should soon get our "results" from a Dictator ruling through forty-two Satraps.

THE SALTONSTALL CASE.

IN his now famous "hearty prayer" which Gen. Harrison "lifted up" while Senator in 1886, he recognized only two lines of policy which a President might pursue in reference to removals from office. One was the "civil-service policy pure and simple and upon a just basis, allowing men accused to be heard, and deciding against them only upon competent proof and fairly"; and the other was the "frank and bold, if brutal, method of turning men and women out simply for political opinion." Senator Harrison's prayer was: "For God's sake, let us have one or the other!" Since his accession to the Presidency, Gen. Harrison has adopted a third kind, which is unlike either of the two he named, and unlike any which his predecessors have followed. It can best be defined as the exact opposite of the "frank and bold" policy. The President made his first conspicuous use of it in October last, in the case of Gen. Manson, a collector of internal revenue in Indiana. Gen. Manson had been a distinguished soldier in the war, and, we believe, had been a companion of the President in the struggle. But he was a Democrat, his office was wanted, and the President was in great distress of mind about it. He went to Indianapolis, ostensibly to assist at the laying of the corner stone of a soldiers' monument, but Manson's office was on his mind all the time, and he was much troubled because he had to return to Washington without having had a private conference with him about it. Soon after his return he sent the General the following letter:

"Mr. Ransdell informed me that you had said to him that you would address me a letter relieving me of a possible embarrassment connected with a change in the Collector's office held by you, and I have been expecting to hear from you. *I do not wish to make any official request or suggestion to you, but a change cannot much longer be deferred, and my desire has been that it might be made in a way as agreeable to you as possible.* This is the object of this personal note. Please inform me of your purpose."

This was brutal, but it was not "frank and bold." It merely amounted to a personal appeal to an old comrade to help a distressed brother out of a tight place. Put in frank, bold English, it would have read: "I want your place for a Republican who is worrying me beyond endurance for immediate possession of it. I cannot remove you without violating the pledge which I made in my letter of acceptance to make no removals save in the 'interest of the public service.' Now,

as you will have to go anyway, won't you oblige an old friend by resigning, and thus spare him the disagreeable necessity of publicly breaking his promises?" Gen. Manson, for reasons which have not been divulged, acceded to the request, sent on his resignation, and that great problem in statesmanship was rolled from the President's mind. He had succeeded in depriving an old soldier and a faithful official of his office, and there could be no clamor about it, since the man had resigned. What mattered it if a little later the correspondence in the transaction got into the newspapers, compelling a former supporter, who had voted for Gen. Harrison because he believed he would be a better civil-service reformer than Cleveland, to exclaim: "The President appears at his littlest in this transaction, and few Presidents have done littler things. He is the President of sixty millions of people, and yet he carries about in his mind, on the most solemn occasions, the edging of an efficient officer out of his place."

Publicity does not appear to have convinced the President of the unwisdom of his new policy, for the correspondence in relation to the Boston Collectorship, published on Friday, shows that he made use of it again there. He has been badgered for months by the two Massachusetts Senators, Messrs. Dawes and Hoar, to remove Mr. Saltonstall before the end of his term, and to appoint Mr. Beard in his place. Mr. Saltonstall was a most efficient officer, who had given entire satisfaction to men of all parties. His term was to expire on May 5 next, and, outside the machine politicians of the party, there were no Republicans who favored his removal before that time. But Messrs. Dawes and Hoar kept on impressing the mind of the President with the need of immediate change. They convinced him early in January that he must not any longer allow his pledges to stand in the way, but they failed to convince him that the "frank and bold, if brutal," course would be the best one to pursue. He tried the opposite, or Indiana one, again, but even less directly this time than before, for he persuaded Secretary Windom to join him in the experiment. The Secretary sent the following letter to Mr. Saltonstall on January 17:

"My Dear Sir: The President is ready to make a change in the Collectorship at Boston, but would be glad to do so in a way that would be most agreeable to you."

It will be seen that the phraseology of this precious missive is almost identical with that of the Manson letter. The President is desirous in both to make the process of decapitation as "agreeable" to the victim as possible, in order that it may at the same time be less discreditable to himself. Mr. Saltonstall was less obliging than Gen. Manson had been. He put the matter straight before the minds of the President and his Secretary by sending a very "frank and bold" reply, containing the following reasons for declining to accept the proposition:

"In reply, I beg to say that, placing entire confidence in the declaration of the President concerning tenure of office, I am prepared to serve the term of four years for which I was commissioned on the 5th of May, 1886, unless removed by the authority of the President for such cause as he has announced to be controlling in such cases. If such cause exists, I respectfully request to be informed of the same.

"In the conduct of this office I have endeavored to perform its important duties with fidelity to the Government, in a manner satisfactory to the merchants of Boston, and to conform to the spirit as well as the letter of the civil-service laws. I therefore cannot stultify myself by any act which would imply the consciousness of dereliction on my part, and prefer to leave the decision of this matter in the hands of the President, to whom I forward a copy of the letter."

The President's reply to this reached the ears of Mr. Saltonstall first in the form of an announcement of the appointment of his successor. Having no "cause" to give for the removal, and having no longer any possibility of accomplishing that object by indirect and secret means, he boldly took the ground of an open violation of his pledge and made the change for political reasons only. There has been a faint pretence in one of the disreputable Republican organs of Boston that a cause did exist, in an alleged inability of Mr. Saltonstall to give his personal attention to the duties of his office, but this was promptly disposed of by another Republican organ, the Boston *Advertiser*, which said on January 22:

"The Collector, in fact, has been remarkably attentive and punctual to his duties at the Custom-house. The talk about his neglecting the duties of his office is simply an excuse, and a very poor one at that, to induce the President to remove him. This is not civil-service reform, nor even fair treatment, and we do not think it will avail."

But this "poor excuse" has availed, and we have the word of the most orthodox Republican organ of New England that in yielding to it the President has taken a step that is "not civil-service reform, nor even fair treatment." Upon that point there can, therefore, be no further discussion. But what have the Republicans of Massachusetts and New England to say of a President who devotes his time to such petty ends and accomplishes them by such means? What have they to say to their two Senators who persuade him into taking such a course? The whole of New England is on the brink of a political revolution because of the failure of the Republican Congress to hear the demands of her manufacturers for relief from oppressive tariff exactions. The petition of one branch of them, the iron and steel-workers, has been signed by 150 names of firms, many of which are the most powerful in their several States, praying for such a breaking down of tariff walls as will save their industry from destruction. Yet Messrs. Hoar and Dawes cannot spare time to listen to these calls upon them to devote themselves to one of the highest duties of statesmanship, the making and shaping of wise and salutary economic laws. The President has no time or thought to give to such an exercise of the functions of his office as to counsel Congress to heed these cries. But the three together give up weeks and months to considering the best means by which to grab an office, decide at first to try to gain possession of it by stealth, and, when that fails, seize it in defiance of personal and party pledges, thus obtaining by methods which cause public scandal an office which would have dropped into their hands in the natural course of events only three months later.

COURTS, TAXES, AND SPOILS.

If all the lawyers assembled in this city on Tuesday last to celebrate the organization of the Supreme Federal Court one hundred years ago had been in sympathy with the McKinley bill, and with Allison, Aldrich, and Beck, who, as a Senate Committee, devised and vindicated that measure in the Senate, some of the speeches on Tuesday week would have been exquisitely droll. Those who uphold that bill, contend that Congress can exclude the judicial power from jurisdiction of any common-law suit whereby the Federal courts can interpret a tariff law or can say that its execution by the Executive has not been what the law has commanded. If Congress can thus exclude the judicial power when the property of the citizen is to be taken by taxes, why not when his property is to be taken under any of the other powers committed to Congress by the Constitution? All agree that a citizen cannot be "deprived of life, liberty, or property without due process of law."

Protectionists insist that Congress can levy and collect any taxes, duties, imposts, and excises which, in its opinion, the "general welfare" requires, and the judicial power cannot revise the opinion of Congress in regard to the taxing which the "general welfare" requires. Concede all that; but is a taxing enactment "due process of law" which excludes the citizen, required to pay a tax thereunder, from contesting in court the right of the Executive to collect, under that taxing law, the whole sum demanded? It would be inconvenient and intolerable for the judicial power to be permitted to stop, *by injunction*, the collection of a tax which has the color of law, but can Congress prevent the Federal courts from inquiring, by any sort of a suit, after the collection has been enforced, whether or not the Executive has obeyed the law? Can Congress enact that, under certain circumstances, the Executive shall have power to imprison an importer of consigned goods, and the judicial power shall not have power to try the question whether or not the Executive has obeyed the law?

It will not avail to make moot-court discussions over the power of Congress to prevent a taxpayer from suing a Federal tax-gatherer, however illegal the conduct of the latter. The Constitution does not impart jurisdiction to the Federal courts in the absence of a Congressional mandate, excepting in the single case of suits "affecting ambassadors, other public ministers and consuls, and those in which a State shall be a party." Congress can prescribe the only cases in which the Supreme Court can exercise appellate jurisdiction. The "inferior courts" have no jurisdiction whatever over any case till Congress gives it. Only the Federal circuit courts have now by law jurisdiction of suits by taxpayers against Federal tax-gatherers. Congress can take it all away, and the protectionists have shown

they will, when "protection" demands it. The Federal courts are really very weak as against Congress, and in restraining Congress from doing whatever bad thing it wishes to do, provided the doing of the thing is not peremptorily forbidden by the Constitution.

The original Constitution says nothing about jury trials excepting for crimes. Only the severe condemnation of the omission secured the seventh amendment, which the McKinley bill evades and nullifies by refusing to taxpayers a suit "at common law," in which alone a jury is required. How Senator Beck could have tolerated it is inexplicable. On the theory of the McKinley bill, the law can empower such executive officers as collectors of ports and general appraisers to fine importers and imprison them for something said to have been done in making an entry of merchandise, and put the inculpated merchants beyond the protection of the courts. And yet, while all this is going on, or threatened, in Congress, Democrats and tariff-reformers are mute; or, if not dumb, they protest feebly, or, what is still more incomprehensible, vote for the measures.

Apart from the existence of a power in Congress to do what the McKinley bill proposes, why should Congress seek to exclude its own courts from trying, according to the common law, the question whether or not the Executive has taken more money as taxes than Congress authorized? And, especially, why, if our Supreme Court really be what we were last week told that it is? Who has seen an answer to that inquiry? What are the motive and purpose inspiring Windom, McKinley, Allison, Aldrich, Beck, the Senate, and the House? They cannot deny that the Executive has recently collected illegal rates and sums. The six-million case confronts them. In the House the other day, Carlisle and McKinley each confessed, when proposing an immediate amendment of the hat-trimmings law, that the Treasury had levied taxes not permitted by Congress. Is it not odd that straightway Congress goes to work to prevent the judicial power from trying any more similar questions? Why do so if our Supreme Court is really, as ex-President Cleveland said, the "light" of our Federal system and our Federal world? What is behind the effort?

We have read the recent House debate—a most inadequate debate it was—on the McKinley bill in order to discover; but in vain. Levying ad-valorem rates consists of identifying the article by the *name* Congress has prescribed, appraising its *value*, fixing its *classification* in the tariff, ascertaining and applying the lawful *rate*, and figuring out the total tax. It was said that as Congress had always excluded the judicial power from meddling with value, so it could and should with name, classification, rate, and sum. The inference is illogical and not compulsory. No one asks for a judicial meddling with values. And why does the McKinley bill give the courts a limited power over *rates*, and no power at all over names, classifications, sums, and the *facts* on which they depend? If the Executive says woollen is worsted, or silver ore is lead ore, or, as Mr. Edmunds put it, a horse is a cow, why now exclude courts and juries from trying the question as they have for a hundred years? What, we repeat, is behind this concerted effort? Cannot Congress trust its own courts? Is Congress afraid of jurymen? Will the protective system be destroyed if the people, as jurors, are permitted to intervene between tax-gatherers and taxpayers? How droll it all is!

The real underlying motive and purpose we fancy to be these:

The Republican protectionists have now the President and the House. The Republicans think they have the Senate for the next decade. Amendment of the law of 1883, in the interest of higher rates, may be of questionable expediency, but the McKinley bill, once on the statute-book, cannot, as the protectionists believe, be repealed while the Senate is Republican. That bill, if law, will enable the Executive, by its power over the nine new appraisers, to classify imported articles in defiance of the courts, and so, in effect, change rates. No new legislation will be needed to carry out the behests of the manufacturers. A Democratic President can, to be sure, turn out the nine appraisers in 1893, but the Republican Senate could refuse to confirm their successors. The whole taxing business of the nation, the levying of more than $300,000,000 a year, will then swell the scandals of the spoils system and the protective system.

COMPROMISE IN THEOLOGY.

THE most surprising thing about the doctrinal dissensions into which the Presbyterian Church has fallen is the suddenness and unexpectedness of their precipitation. There has long been, it is true, sporadic and unconcerted talk within the Church about the need of revising the creed, but there was no premonition of the present agitation in that. When the matter came up before the General Assembly last May, it was thought to have been shelved deftly by a reference to the presbyteries; at any rate, no one but the professional alarmists pretended to foresee the theological disputes which have followed. The leading Presbyterian divines and newspapers kept on with their customary complacent allusions to the doctrinal solidarity of their Church, and the security it was certain to enjoy from the theological innovations which were troubling others. It is only within three months that the Presbyterian Church has waked up to find itself almost torn in two. Such a result has really been inevitable, we can now see, ever since 1869. The reunion of the two branches of the Church effected in that year was a marriage of incompatibles. Neither old-school men nor new-school men abated their antagonistic views a particle at the time of union. They simply agreed not to fight each other openly any more. They thought they had devised a scheme of doctrinal comprehension broad enough to reconcile opinions which in reality never can be reconciled. Men who cling blindly to the past may, indeed, agree to unite for certain ends with men who have the modern spirit, but such a union must be at the sacrifice of theological conviction and consistency, or else it must prove to be simply a patched-up truce, which open war will be certain to break through as soon as an exciting cause appears.

What is perfectly clear now, has all along been evident to the discerning—that old-school and new-school theologies were only mechanically mixed, not fused. The distinctions have been steadily kept up. Certain presbyteries in the reunited Church have been jealously trained in the old-school tradition and certain others in the new. The case has been similar with theological seminaries, religious newspapers, and elective officers of the various church organizations. The unity all along has been hollow. There has been no real uniformity. Pastors are prominent and honored in New York city who would have been tried for heresy if they had been settled in Pittsburgh, and if they had ventured to preach and publish there as they have done here. If Prof. Briggs were under the jurisdiction of a Philadelphia presbytery, or were a member of the Princeton Faculty, everybody knows—for it has been frankly declared by responsible Church authorities—that his trial for heresy would have come off long ago.

For what ends, then, was this union of theological opposites brought about, and for what ends has it thus far been maintained? Why, in reality, for the sake of material prosperity. It was to make the denomination numerically stronger; to enable it to build more and more costly churches; to prevent the waste of money involved in covering the same field with two branches of the same church; to provide for a more active sectarian propaganda in the West and in New England—in short, to give the Church greater prestige in the eyes of the world. That this is a true description of the facts is shown by the tone adopted now by those who fear a dissolution of the union. They speak of the great prosperity of Zion under the united Church. They refer to the vast property interests now at stake, and deprecate scission, not because it will unsettle faith, but because it will unsettle titles. No voice is heard to speak of any theological advantages that have accrued, of any incitement to profound investigation, of any broadening of knowledge and charity, of any real simplification or unifying of the belief of the Church at large.

The result shows that theological compromises are as dangerous and as fruitful mothers of evil as are political compromises. It proves once again that antagonistic convictions cannot come permanently together on the basis of a mere sentiment. Let us waive our theological differences, said the men who brought about the union of 1869, and unite for practical Christian work. The Puritans knew better than to believe such a thing possible. They were not very lovely, but they were very logical when they said, "How can two walk together except they be agreed?" and carried out that principle to minute shades of theological opinion. Waiving theological differences is only another name for mental reservations, non-natural interpretations of

creeds, ambiguous subscription, and all that miserable feeling of being in a false position, so much of which has been revealed in the current debates.

It is instructive to contrast the history of the Congregational Church, during the last twenty years, with that of the Presbyterian. The former has had its sharp theological discussions. It has seemed at times to be on the verge of disruption. But everything has been all the while open and in the light of day. Innovators have been heard, not suppressed. It has not been thought more important to keep up the rate of yearly ecclesiastical enlargement than to maintain the rights of free investigation and free speech. Meanwhile, the Presbyterian Church has been looking down from its secure fortress upon the troubles of its Congregational friends, devoutly thanking God that it was not as they, and boasting of its inaccessibility to change. Now that the occasion has come, the world sees a generation of Presbyterian laymen educated in ignorance of the real creed of the Church, and revolting at it, and Presbyterian elders and ministers who have gone through the form of subscribing to it, and promising to teach it, now in great numbers repudiating its most characteristic tenets. It appears thus that to check a theological debate really bound to come in the end, is like checking the measles: the disease simply takes a more acute and dangerous turn.

There is warning in all this for those who are given to the great schemes of comprehensive church union, so much in vogue today. If churches can be brought to confess that their inherited theologies are too cumbrous armor for modern warfare, to drop them each for itself, and to make the basis of membership in the separate denominations merely a desire to do all the good possible, then there is hope that the separate denominations can be brought into a union on the basis of desiring to do all the good possible. But if theology really has any vitality, it will not long be kept down by sentiment. Sentimental union without theological union simply leads to mutual distrust, uneasy consciences, and final rupture.

POSITIVIST CHURCHES IN LONDON.

LONDON, January, 1890.

MR. FREDERIC HARRISON'S New Year's address before the Positivist Society in Newton Hall, Fetter Lane, has led to a very pretty war of words. The *Times* of January 2 published a condensed report of the address, and then devoted a leading article, a column long, to pouring contempt on Mr. Harrison and all his works. Mr. Harrison at once sent a brief letter to the *Times*, pointing out that its report of his address was "incorrect," and "entirely altered the sense of much that he said." Nevertheless, the *Spectator* followed up the *Times's* attack with two bitter paragraphs, founded entirely on the report to which Mr. Harrison had already taken exception. This drew from Mr. Harrison a savage article which appeared in the *Pall Mall Gazette*. "Of all actual journals but one," he says, "the *Spectator* is the most untruthful in matters of fact." And of the *Times's* attack on him he asserts:

"I was fully prepared for it, for I knew the rancor of which I am the object for the part that I took in enforcing the lesson of the Pigott forgeries. I am content to leave all decent and honorable men to judge between me and them. And I warn them, to begin with, that the paymasters of Pigott deliberately publish to the world as his 'own words,' in inverted commas, words that a public speaker did not utter, and then proceed to palm off upon him a phrase which is a mere invention of the reporter."

It occurs to me that the echoes of this controversy having probably reached America, there may be some of your readers who, though perfectly familiar with the Positivist doctrine and with the names and writings of its English champions, may yet be quite in the dark as to Newton Hall and the goings-on in that sanctum-sanctorum of Positivists; and that others of your readers may even be surprised to know that there is a sufficient body of "professing" Positivists to require a hall for public worship; for, according to my observation, the Oxford Don is by no means alone in his opinion who described the Positivist movement as consisting of "three persons and no God."

The truth of the matter seems to be, however, that Positivism has been making considerable progress in England during recent years. At present there are at least three places in London alone where followers of Comte come together to celebrate the glories of Humanity, viz., the Church of Humanity, whose High Priest is Dr. Congreve; Newton Hall, already referred to, where Mr. Frederic Harrison and Prof. Beesly are the presiding spirits, and the meeting-place of the recently organized North London Positivist Society. This North London Society is an offshoot of the Newton Hall Society, and, being in direct sympathy with it, needs no further special mention. But, as regards the Church of Humanity and Newton Hall, it must be noted at once that they represent two different schools of Positivist doctrine and practice, and that there is already, to quote Mr. Harrison's own piquant phrase, "a definite bifurcation in those who profess the religion of Humanity."

On the one hand, there are those who hold with Dr. Congreve to the genuine original Comtean ceremonial, and who "insist on putting into practice the entire scheme of Comte textually and immediately"; and, on the other hand, there are certain more moderate and less ecclesiastical spirits, likely Mr. Harrison and Prof. Beesly, who shrink from going the whole length of the Comtean ritual, and regard the development of strong social sympathies and the cultivation of the intellect as the immediate duties of good Positivists. The profane outsider cannot but suspect that the repudiation of High-Church Comtean ritual by these latter Positivists is due rather to their keener sense of the ridiculous than to any other reason. But, however this may be, the judgment of the non-ritualists seems sanctioned by the result: the Newton Hall school of Positivism certainly has a far larger following than the Church of Humanity. It is also more closely in harmony with the French Positivist Society and with the teachings of the present "Chief of Positivists," M. Lafitte. Accordingly, this letter will henceforth concern itself solely with the Newton Hall branch of Positivism.

The situation of Newton Hall in Fleur-de-Lis Court, Fetter Lane, is, despite the romantic name, distinctly unfortunate, and its exterior uninviting. But once you have toiled up the narrow flight of steps and entered the sacred precincts, you forget the unpleasant approach, and realize that you are in an atmosphere where the highest intellectual ideals reign. The walls of the chapel-like Hall are adorned with busts of the greatest philosophers, statesmen, and poets of all ages. Homer, Plato, Aristotle, Julius Cæsar, Charlemagne, Shakspere, Descartes are kept continually before the eyes of Positivists to remind them of the debt Humanity owes to its men of genius. In one corner of the Hall stands a small pipe-organ; to the right of this and behind what we may perhaps call the lectern, hangs a fine reproduction of Raphael's Sistine Madonna, which at this time of the year is surrounded with a beautiful double wreath of white flowers and evergreens. Various legends from the works of Auguste Comte are inscribed on the walls: "Live Openly," "Live for Others," "The Foundation, Order," "The Principle, Love," "The End, Progress," "Family," "Country" "Humanity."

The regular weekly meeting of the Positivists is held each Sunday afternoon from October to May inclusive. The meetings are open to the public, and there is usually a good sprinkling of strangers present; but the main body of the audience is made up of regular members of the Positivist Society. The exercises begin with the singing of a hymn; a very respectable choir of perhaps a score of young people musters behind the lectern and has been drilled into a fair degree of efficiency. Loose sheets of paper containing the hymn are distributed through the audience, Positivist poetry not yet having assumed sufficient proportions to justify a hymnal. Some of the hymns have been fashioned, by dint of judicious alterations, out of old hymns by Anglican or Unitarian authors —Unitarians preferred; others are the direct offspring of the Positivist muse. They are all marked by a certain constraint; "Humanity" is rarely brought fairly and squarely into the metre, but is usually darkly referred to as a "sacred presence" or a "holy influence." After the hymn there follows a reading from the "Hebrew Scriptures" or some other accredited sacred book; and then the main discourse of the day is pronounced. This discourse is a lecture rather than a sermon—scientific, not ethical or hortatory. The topics discussed are ordinarily historical, the general aim being to get a clear understanding of the various stages through which the spirit of a great and glorious Humanity has had to pass on its way to its present altitudes. During November a course of four lectures was delivered on "The Age of Dante." The lectures for the present month are on "Irish History." During February Mr. Harrison will discuss "Some Great Books of History," and will sketch "A Scheme of Historical Reading"; and during March Mr. Henry Ellis will consider four "Types of Historical Theory"—(1) The Theological: *Bossuet;* (2) The Revolutionary: *Condorcet;* (3) The Theologico-Utilitarian: *De Maistre;* and ("the diapason closing full in man") (4) The Positive: *Auguste Comte.* (It may be noted, by the way, that your true Positivist never says simply *Comte*, the nasal monosyllable being quite insufficient to express his veneration for the great master: the full name *Auguste Comte* is always used.) Occasionally theoretical discourses on the nature and significance of the great movement in which Positivists are engaged, take the place of purely historical dissertations. During December, for example, Mr. Harrison gave four lectures entitled, "The New Era," "The Conception of Humanity," "Are Positivists Socialists?" "Are Positivists Democrats?" Such, then, are the subjects on which the Positivist lecturer discourses each Sunday afternoon for perhaps three-quarters of an hour. At the end of the lecture a second hymn is sung, and the meeting breaks up.

These Sunday meetings, however, by no means exhaust the activity of the Positivist

Society. Believing that their work must for the present be largely educational, they are carrying on several evening classes for the study of various subjects:-there are, for example, two French classes, one advanced and one elementary, which meet once a week under the direction of a competent instructor; and once a month an additional meeting is held for the purpose of reading a French play. The Society also comes together once a month, under the presidency of Prof. Beesly, for the discussion of social and political questions; and there is finally a monthly meeting of a purely social character, which is enlivened, like similar gatherings among unenlightened Churchmen, by amateur music, etc., etc.

In addition to the main Positivist organization, there have recently been started a guild of women and a guild of youths; and as a further proof of the success of the Positivist propaganda, Mr. Harrison points to the fact that branch Positivist societies have recently been formed in the north of London and in Manchester.

One important series of the Society's "functions" still remains to be mentioned—their pilgrimages to spots especially associated with memorable men or memorable events in history. A year ago the Society went *en masse* to Horton, where Milton lived after leaving Cambridge, and where "L'Allegro," "Il Penseroso," and "Comus" were composed. In the year just passed, the Society, to quote Mr. Harrison's own words, "has made pilgrimages to the tomb of Thomas à Becket and to Westminster Abbey, and visits to the British Museum and the National Gallery. On all these occasions addresses have been delivered. But, above all, the Society has had a successful and brilliant visit to Paris." It is understood that this visit to Paris was the occasion of a genuine Positivist love-feast between the followers of M. Lafitte and those of Mr. Harrison; and that English as she is spoke and French of Stratford-atte-Bowe were taxed to the utmost for expressions of mutual esteem and of reverence for Auguste Comte.

Now, all this will seem to the ordinary observer ludicrously far from justifying Mr. Harrison's recent boast, that "the conception of Humanity . . . holds in its grasp the future of the world." But, on the other hand, any one who keeps the run of Positivist literature, and follows at all closely the various forms which Positivist activity is taking, must admit that Positivists, however wrong-headed, are thoroughly sincere and thoroughly in earnest; and that their propaganda has been making progress during the last few years. Those who care to keep track of movements of this kind, and who watch with interest, though from a distance, the development of intellectual tendencies in England, may, perhaps, be glad of these details as to the present state of Positivism.

LEWIS E. GATES.

THE DIAMOND NECKLACE.

PARIS, January 23, 1890.

M. CHAIX D'EST-ANGE was one of the leading lawyers under the second empire. The lawyer leaves little behind him, and his eloquence exhausts itself without leaving any trace in literature. The son of M. Chaix d'Est-Ange also followed the law, but he devoted himself at the same time to historical studies. He died young, and his son has just published a volume which the father had prepared on Marie Antoinette. The book has two parts: the first is devoted to the famous trial of the diamond necklace; the second is the trial of the Queen herself before the Revolutionary tribunal.

Carlyle has spoken with his usual originality of the first trial; he has well described the effects produced by its scandalous revelation, and measured their terrible consequences. Royalty received a terrible and unmerited blow in this drama, which had for its principal actors a Prince of the Church, Cardinal de Rohan; Cagliostro the adventurer; a profligate woman, Mme. de Lamotte, and her miserable husband; a prostitute, Mlle. d'Oliva, and some other actors, now entirely forgotten. Even in these years 1784-'85, after Voltairianism had had all its effects, Prince Louis de Rohan, Cardinal, Grand Almoner, Bishop of Strasbourg, Prince of the Empire, scandalized everybody by his mode of life and his immorality. Madame de Genlis said of him in her memoirs: "He was nothing of what he ought to have been." Louis XVI., who was an honest man, disliked him. Marie Antoinette, though she has been described in the pamphlets of the Revolution as frivolous and fond of easy pleasures, had for Cardinal de Rohan an extraordinary aversion, mixed with contempt. She did not try to conceal these sentiments, and she signified her resolution never to receive him. Was there any secret reason for this dislike? Madame Campan says that Cardinal Rohan had criticised at Vienna the manners of Marie Antoinette, after she had married the Dauphin, and had spoken harshly of her, making himself in this the echo of the courtiers, who thought that the young Austrian Princess was too impatient of etiquette and too much given to favoritism. The Queen's aversion to the Cardinal became a sort of torture for Rohan. His intellect was narrow, his passions were obstinate. He conceived a mad passion for the Queen (who despised him) because she despised him; and he thought of nothing but of finding the means to change her sentiment, and turn her aversion into an indulgence which, by degrees, might become an even warmer feeling.

It is incredible that a Prince of the Church should have conceived such a project; much more incredible are the means to which he resorted. The association of a Cardinal with a charlatan like Cagliostro was the first scandal. The acquaintance was made at Saverne, in Alsace, where Rohan built a fine castle, which is now used as a barrack. Part of my childhood was spent in Saverne, one of the loveliest places at the foot of the Vosges Mountains; the Cardinal's château was my Versailles. I vaguely remember terrible stories which were told about the Cardinal, his prodigality, his disorders—stories which, as a child, I could not well understand. The Cardinal brought Cagliostro to Paris, and introduced him into society. At the beginning of 1785, Cagliostro gave himself out as an alchemist and a magician; he said to some that he was born at the time of the deluge, to others that he was one of the guests at the marriage at Cana—he had the secret of prolonging life indefinitely.

The memoirs of Beugnot, which are among the most interesting of our time, give us curious details on another actor in the drama. Madame de Lamotte pretended to descend from a natural son of Henri II., and she had some of the Valois blood in her veins. She was married, but was the mistress of a rake, called Villette, whom Beugnot calls "le Philinte des escrocs." The intrigues which ended in the trial of the diamond necklace are well known: Madame Campan, Beugnot, all the memoirs of the time have told us how M. and Madame de Lamotte and Villette worked upon the passion which Cardinal de Rohan felt for the Queen; how they arranged an interview between him and Mlle. Oliva, in the night, in the gardens of Versailles, and profited by the great likeness between Marie Antoinette and this complaisant young woman; how the Cardinal was made to put large sums of money for the Queen's charities into the hands of Madame de Lamotte; how he finally bought for the Queen a diamond necklace which the Queen had repeatedly refused to buy from the crown jeweller, on account of the price; how Madame de Lamotte, her lover, and her friends disposed of the diamonds for their own use. Though much has been written on the subject, nobody knows exactly at this time what became of the beautiful stones of the necklace; we know the design of it, but nothing more.

M. Chaix d'Est-Ange used the official documents concerning the trial in the National Archives. The Revolution, the Empire respected them, from the first acts of the judicial proceedings to the Parlement's *arrêt*. M. Campardon had already used these documents, and even given their complete text. M. Chaix d'Est-Ange in reality only gives a résumé of his work. He shows also, with great force, how unjust a corrupt public opinion was towards the Queen, who was as innocent of the evil designs of Madame de Lamotte and her associates, and as ignorant, as a new-born babe. But was she not a foreigner—*l'Autrichienne?* Was not every weapon good enough against her? Were not the revolutionary feelings which were already predominant in Paris, ready to seize any pretence, any opportunity? Did not Beaumarchais say, in his "Mariage de Figaro," "Calumniate, calumniate! Some of it will always stick"?

Curiously enough, some sympathy was felt for the Cardinal, and he was considered to have been too harshly treated because he was for a time sent to the Bastille. The trial took place before the Parlement of Paris, and for sixty years the Court and the Parlement had been at war. Chancellor Maupeou had tried in vain to establish new courts of justice; when Louis XVI. ascended the throne, the Parlement was reëstablished, with all its privileges, by Maurepas. The magistrates, embittered by persecution, had become almost hostile to the State and to the Crown. The Prince de Ligne, in his 'Historical Notes on the French Revolution,' said: "It was the fashion to disobey Louis XVI. as much as it was the custom to obey with trembling Cardinal Richelieu, and the magistrates plumed themselves, in the evening, in society, on any impertinence they had offered during the day to royalty." The trial was conducted without reference to the dignity and majesty of the Crown, in a hostile spirit. The Cardinal was acquitted, and his acquittal was received all over Paris with a mad enthusiasm. When he went back to his palace, the *dames de la halle* brought him a bouquet; he showed himself on the balcony to the people, with Cagliostro beside him. It was, indeed, the prologue of the Revolution. Mirabeau wrote on June 1, 1786 ('Memoirs of Mirabeau'): "Thirty years ago, the Cardinal would have been lost without any resource."

Marie Antoinette felt bitterly the insult. Mme. Campan tells us in her memoirs that the Queen said to her: "Condole with me. The intriguer who tried to ruin me, or to procure money by using my name, has been fully acquitted. But," added she, with energy, "you must also, as a Frenchwoman, receive my condolence." To her friend Mme. de Polignac she wrote: "Come and weep with me. The judgment which has just been pronounced is a horrible insult. What ingratitude! But I will triumph over the wicked by doing three times as much good as I have always tried to do." She did not triumph over the wicked. Louis XVI. was indignant at the Parlement;

he asked Cardinal de Rohan to resign his charge of Grand Almoner, and to go to one of his abbeys, the Chaise-Dieu in Auvergne.

Mme. de Lamotte was thrown into prison, but she contrived six months afterwards to escape from La Salpétrière. Some people dared to say that Marie Antoinette helped her away, and denounced it as a proof of complicity. But surely if Marie Antoinette had been guilty of any connivance with Mme. de Lamotte, she would have preferred to have her die in a prison, where she had no communication with the outside world, than to see her at large, in London, where Mme. de Lamotte joined her infamous husband and wrote libels against the Queen. This wicked woman never returned to France (though Mirabeau asserted once that she had made her appearance in Paris at the end of 1789). She lived in misery in London, changed her name, and history loses trace of her. Quérard, in his 'Supercheries Littéraires,' says that she committed suicide. M. de Lamotte lived in London on the money he procured from the necklace, which had been pawned, in 1783, at a jeweller's named Gray. We find him in Paris during the massacres of September, borne in triumph by the assassins. He only died in 1831; towards the end of his life he was in a state of great misery.

Cagliostro was banished by the King and retired to London. He travelled in Switzerland and Italy, and had the impudence to go to Rome, where he was put in prison, in virtue of the law against the masters and disciples of witchcraft. He died in 1791. As for Cardinal de Rohan, he became at first a supporter of the Revolution, and was elected to the Constituent Assembly. Was he not a "victim of despotism"? His views changed as soon as the Assembly confiscated the lands of the clergy. He became an ardent enemy of the Revolution, retired to the principality which he had in Germany, gave men and money to the Prince de Condé, and helped the émigrés with the remainder of his revenues. He resigned the bishopric of Strasbourg at the time of the Concordat, and died in 1809. Unworthy of the great name which he bore, he is one of the meanest actors in the great Revolutionary struggle in France; abhorred by the Royalists and despised by the Republicans.

Correspondence.

THE "PROTECTION" OF AMERICAN ART.

To the Editor of The Nation:

Sir: The admirers of the present system of taxation of art for the better protection of it from unhealthy competition, might like to explain the following absurdity: The work of American artists being admitted free of duty, out of consideration for the artists' pockets, the Government charges them $2.50 for the certificate which is to prove their identity, and, what is worse, puts them to the inconvenience—sometimes very great—of having to go to the nearest American consul to make the declaration and take out the certificate, and all for the sake of getting a protection which is about as agreeable as a cloak of sheet-iron on a cold day. A curious case has just come to my knowledge which illustrates luminously the utter want of common sense which pervades the tariff legislation of the U. S. A.

A certain eminent wood-engraver, who is living in Italy and working for a well-known magazine, engraving pictures of the early Italian masters *in situ*, and who is at the present moment working at a great distance from any American consulate, is obliged, when he has finished his block and wishes to send it to the publishers, to go a day's journey to get the certificate, and then must send the block by express with a declaration that will satisfy the Custom-house that it is the work of an American artist, while, but for the system of protection of his interests, he might send it by parcels post at the expense of a small fraction of the present tax on his pocket, to say nothing of that on his time and patience; and the block is from a month to two months on the way, when, if he were not protected, the unfortunate man could get it to the office in ten or twelve days. There is probably not another Government out of Asia capable of such utter imbecility as is involved in this arrangement for the protection of men who beg to be relieved from protection, and which gives the Consul an amount of unnecessary work, the artist a very great amount of unnecessary trouble and expense, and the publishers a great deal of inconvenience—and all to raise a tax that is not wanted and which falls on the men who are protected.

The service of the parcels post which is in operation all over Europe is made impossible by our Custom-house regulations between the United States of America and the Old World, so that when I, as an American, wish to get from America an article which falls within the limits of the parcels post, I am obliged to have it sent by the tedious, expensive, and troublesome channel of the trans-European express, instead of which I prefer to get the best English substitute for it, even if it costs a little more in the prime cost. We are an extremely clever people in the way of contriving measures for cutting off our noses for the sake of spiting our neighbors' faces.

Yours in the bonds of ignorance, W.

Rome, January 22, 1890.

MARCOZZI'S PHOTOGRAPHS.

To the Editor of The Nation:

Sir: Allow me respectfully to call the attention of your readers to the photographs that Marcozzi of 7 Piazza Durini has just taken of all the important pictures in the Poldi-Pezzoli collection. Tourists know how impossible it is for love or money to get good photographs of any pictures save the few favorites. They will be delighted with Marcozzi's, which are perfect reproductions, rivalling Braun's, and at a tenth of the latter's prices. It is to be hoped that the sale of these photographs will be great enough to induce Marcozzi to undertake other collections. B. B.

Milan, January 19, 1890.

THE LATE JOSEPH M. WELLS.

To the Editor of The Nation:

Sir: In the death of Joseph Morrill Wells the architectural profession has suffered a grievous loss. That fame is not a measure of ability, was never more strikingly shown than in the fact that to many, even among architects, the news of his death was perhaps the first knowledge they had that he had lived. Strong in his convictions, inflexible in maintaining them, impenetrable on short acquaintance, but loyal and warm to those who had won the favor of his friendship, never yielding the principles of his art to the demands of expediency, nor wishing to force himself into public notice, he was content to work quietly with his friends in New York, where, in good-fellowship, fraternity, and mutual esteem, he led a peaceful and contented existence. Shortly before his last illness he said he did not expect, and certainly did not desire, any better opportunities than his work of the last few years had afforded him. Simplicity and purity of design he was ever striving for. His work was as unaffected as himself. He was a respecter of good tradition, and originality for originality's sake he abhorred. The common-sense sturdiness of his opinions and his terse manner of expressing them show in the following remarks of his, which I am able to quote literally:

"If you have a desire to make a good piece of architecture, be sure and use as small a number of materials as possible (*one* best of all, even should it be nothing but mud). No more curds and whey." Deploring the tendency, in much of modern design, to mere prettiness at the expense of form and proportion, which he considered essential and fundamental factors of good work, he maintained that "architecture does not depend on the color of brick, or size of joints, or texture of stone or terracotta. Nearly all buildings are compromised from this cause." The truth of this needs no demonstration. His enthusiasm and interest were by no means confined to his profession. Speaking of a young architect of his acquaintance, he once said: "X——, I think, ought to develop into something. But this is an obscure subject. A new architect is always a surprise and drops down from the skies. If he designed as well as he plays base-ball, he would already be at the top of the profession."

The interval between his Boston career and that in New York he gave to a diligent and exhaustive study of Italian Renaissance; and by making careful drawings of the Farnese and the Cancellaria palaces and others, he cultivated an intimate acquaintance with them, even to the minutest detail. It is safe to say that few architects knew and understood Renaissance as Wells did. Would there were more in the profession willing to study as patiently, and with the capacity to study as understandingly, as he; and, having so studied, able to express the result of their studies in their practice! It is not enough to have principles: we must know what to do with them when we have them. Wells knew.

Cambridge, February 8, 1890.

SHELLEY'S SKYLARK.

To the Editor of The Nation:

Sir: Prof. Corson, in his letter on Browning (in the *Nation* of January 9, 1890), quotes the great poet's opinion upon the now famous "unbodied joy" of Shelley's "Skylark." According to Browning, "unbodied" is "nonsense" in this connection. Whether it be indeed nonsense or not, the Harvard MS. of Shelley shows conclusively that Shelley at any rate wrote it. And as Shelley was not a careless user of words, it remains for his readers to justify him. May I make an attempt—namely, by indicating the steps by which Shelley, we may conjecture, was led to this peculiar form?

Spenser, in his "Shepherd's Calendar," November, line 166, writes thus of the subject of his dirge:

> "She hath the bonds broke of eternall night,
> Her soule unbodied of the burdenous corpse."

Spenser uses here the word "corpse," as frequently, for body in general. And the prefix *un-* is scarcely the negative; rather it is the English equivalent of the German *ent-*, and "unbodied" is the same as our modern "disembodied." The soul of the risen Dido has shaken off the load of the body.

Just before Shelley wrote his "Skylark," Byron had said in his "Manfred," act i., scene 2:

"The natural music of the mountain reed—
For here the patriarchal days are not
A pastoral fable—pipes in the liberal air.
Mixed with the sweet bells of the sauntering herd;
My soul would drink these echoes. Oh, that I were
The viewie s spirit of a lovely sound,
A living voice, a breathing harmony,
A bodiless enjoyment—born and dying
With the blest tone which made me!"

(First ed. of 1817, p. 22.)

Two thoughts suggest themselves to me. The first is, that Shelley caught his idea, his situation, so to speak, from Byron. Manfred's enjoyment is literally "bodiless"; whatever view the physicist may take of sound, to the ordinary mind the echo of a mountain pipe or cattle-bell has no body. But Shelley, in substituting Spenser's "unbodied" for Byron's "bodiless," has demonstrated for the thousandth and thousandth time his perfect sanity of taste and speech. Shelley's lark, rising from the earth like Spenser's Dido, shakes off—*to the eye of the listener*—its body, it becomes a mere sound, an "unbodied" joy.

It surprises me that Browning should have failed to detect Shelley's daring metaphor. He seems to tax Shelley with the gross blunder of treating the lark as a thing without a body, whereas the poet merely "figures" the lark into a spirit that has shaken off its body.

PEN-NAMES AND REAL NAMES.

To the Editor of The Nation:

Sir: In the kind and complimentary notice of 'Selections from the Greek Anthology' that appeared a little while since in the *Nation*, your critic, in speaking with warm commendation of the translations by Alma Strettell, flatters me with the conjecture that "Alma Strettell" may be a pen-name of my own. Therefore, I thought it might interest you to know that this is not so, but that Miss Strettell writes under her own name, and is the author of a very fine collection of Spanish and Italian folk-songs, published some two or three years ago.

Will you do me the great kindness of giving publication to the fact that I, also, write solely and simply under my real name, and that I am not, nor have ever been, a Mrs. Sharp?—Believe me, dear sir, yours very truly,

Graham R. Tomson.

20 St. John's Wood Road, London, N, W., January 31, 1890.

THE WASHINGTON ANCESTRY.

To the Editor of The Nation:

Sir: A few facts as to Ann Pope, the widow of Walter Brodhurst and the second wife of John Washington, the Virginia immigrant, may interest some of your readers.

Her first husband, Walter Brodhurst, was in Virginia as early as 1650, and in 1653 represented Northumberland County in the Legislature. There is a deposition of his, dated August 30, 1655, in which he mentions that he was about thirty-six years of age, and it is known that he was the son of William Brodhurst of Lilleshall, Shropshire, England. Mr. Crallé of Northumberland County, Va., informs the writer that among the old records of that county there is a judgment dated July, 1656, in favor of Walter Brodhurst, and that the next reference to him is in a suit brought on September 30, 1659, by Anne Brodhurst, relict and administratrix of Walter Brodhurst.

In a note on page 80 of the last (January) number of the *New England Historical and Genealogical Register*, the writer alluded to the baptism in September, 1659, of a young son of John Washington, and suggested that he was a child by the second wife—which is a mistake, as at that time she had not married Washington. When the widow Brodhurst became his wife, she had a son, Walter Brodhurst, who went to England and lived and died at his father's birthplace. By John Washington she had a son Lawrence (the ancestor of Gen. Washington), who was buried, in 1697, at Bridges Creek, Westmoreland County, Virginia.

BLOOD-CURDLING ITEMS FOR SENATOR INGALLS.

To the Editor of The Nation:

Sir: The *National Economist*, the official organ of the National Farmers' Alliance and Industrial Union, published in Washington city, has, in its issue of the 25th ult., two items, bearing on the race problem in the South, of such unparalleled atrocity and cold-blooded fiendishness that it is a wonder they could have escaped the eagle-eyed Mr. Ingalls, as, scissors in hand, he daily scans the newspapers for gory material for his Senatorial scrap-book:

Item first:

Proclamation is made (by Andrew J. Carothurs for one and R. M. Humphrey for the other) that the two colored alliance organizations are now consolidated and to be known as the Colored Farmers' National Alliance and Coöperative Union, with headquarters at Houston, Texas. Thus following in the line of consolidation by the organizations of white farmers, this noble work has been done. The following proclamation we clip from the organ of the order, the *National Alliance* (Houston, Texas):

"Whereas, In the providence of Almighty God, the great leaders of the opposing colored alliances have this day met, and, sacrificing their own interests and all personal ambition, have agreed to unite and consolidate our jarring and discordant orders into a single grand alliance; and whereas, our dissensions heretofore have divided our churches, broken up our schools, embittered our communities, and created discord in our families; and whereas, less than three years ago, our order came into existence without a membership and with an empty treasury, and we now have a million members, with business activities in more than twenty States, exchanges permanently established in half a dozen great cities, and we are everywhere enjoying the greatest good will and the hearty coöperation of the white inhabitants of all the States. Wherefore it well becomes us, the recipients of such countless blessings and boundless prosperity, to remember the Almighty Giver of all good, and humbly to look up to Him from whom all our strength comes.

"Now, therefore, I, R. M. Humphrey, General Superintendent of the Colored Farmers' National Alliance and Coöperative Union, do issue this, my proclamation, recommending to all colored alliances of every name and order in the United States, and all colored persons friendly to the alliance and the progress of their race, to observe Saturday, the 22d day of February, A. D. 1890, as a day of solemn prayer and joyous thanksgiving to the God of nations.

"(1.) Let your National and State exchanges and coöperative stores and all your places of business be closed for that day. Do no work of any kind. Make it a day of rest to all your people.

"(2.) Let the members of your hitherto discordant alliances seek each other out, and let them mutually forgive one another—burying every grudge and all envy, hatred, and malice, renewing among yourselves pledges of brotherly love, Christian fellowship, alliance, good-will. Let peace and love reign.

"(3.) Assemble yourselves at your churches and places of worship promptly at ten o'clock A. M., and continue your devotional exercises until two o'clock P. M.

"Finally, all organizers, trustees, superintendents, secretaries, and others, no matter to what alliance they have heretofore belonged, are charged to read this proclamation in the lodges and congregations, and see that it is published to all the people. Let your meetings be conducted soberly. Spend no part of this, your sacred day, about the streets nor in idle gossip."

Item second:

NOTICE.

To the Colored Farmers' Union of Louisiana:

Arrangements have been made with T. A Clayton, State Agent of the Farmers' Union of Louisiana, by which the Colored Union of Louisiana can trade through the agency and receive all the benefits of cheap goods without the expense of a separate agency, and thus unite the financial strength of both orders. It will certainly be to the advantage of both, and, as both organizations are working for the same objects, the Colored Farmers' Union will coöperate with the Farmers' Union whenever it is possible to do so.

A. L. Plummer,
Gen'l Supt. C. F. U., Funny Louis, La.

Now, these extracts show a truly lamentable state of affairs. Within the brief period of the three past years, *one million* negroes in the South have, at the muzzles of Winchester rifles and shotguns, been driven and hunted and hounded by the whites into this coöperative movement among themselves, and under the fear of torture and death been "bulldozed" into acquiring property, into selling their agricultural products for higher rates, and into buying the necessaries of life for lower.

Something must be done, and that at once, to put down this brutal lawlessness in the South, and secure more "justice" for the poor defenceless, down-trodden blacks, or the country is irrevocably gone to the demnition bow-wows. Valuable suggestions might be given the Senator in this dire emergency by those philanthropic ex-Confederate statesmen, Gen. Mahone of Virginia and Chalmers of Mississippi. "A National Suppression Law" should be passed at once, for, if these horrible outrages continue in such barbaric deviltry, there is no telling but that at the next Presidential election these million members of the Colored Farmers' Alliance and Coöperative Union may be intimidated by their white alliance neighbors and friends—a majority of whom are, of course, Democrats—into voting for tariff reform and against Trusts, monopolies and similar pet schemes, dear to the heart of the G. O. P.

In explanation, I would add the significant fact that the colored and the white alliances in the South, while working side by side for a common end—the better protection and development of the agricultural interests of the country—*are entirely separate and distinct as to membership.* And in this effort of the negroes to improve their material condition, and to become more responsible and trustworthy as citizens, they always receive substantial help and friendly counsel from the whites, as is proved, in part, by the "notice" quoted above.

Respectfully, Frank Noland.

Hewlett's, Hanover Co., Va., February 6, 1890.

AN OBJECT LESSON IN CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: The following extract from the report of an interview with Capt. A. H. Reed, a local Minnesota politician, published in the St. Paul *Pioneer Press* of January 27, would serve as an effective tract for the civil-service reformers. The interview had reference to the efforts of Capt. Reed in favor of Capt. Danahower, candidate for the office of Collector of Internal Revenue of Minnesota.

"The facts," said Capt. Reed to a *Pioneer Press* correspondent, "are these: I was for Capt. Danahower for Collector, and I did not care who knew it. I pleaded with Senator Washburn without avail, but he told me he would recommend Capt. Danahower for Marshal. I called on Senator Davis for a letter of introduction to Secretary Blaine. After receiving it I said to Senator Davis: 'Senator, are you willing I should interest myself in Capt. Danahower's behalf?' 'Yes,' he said, 'but do not use my name in doing so.' I went to Secretary Windom on a matter of my own, and incidentally asked the Secretary what the trouble was that Capt. Danahower could not be appointed Collector of Internal Revenue for Minnesota with the war record and the backing he had. The Secretary said

the President would not appoint until the Senators could agree, and he did not wish to interfere, as it was a Senatorial appointment. I said to the Secretary that the President had taken it upon himself to appoint Mr. Hay District Attorney without the Senators agreeing, and to even the thing up he ought to appoint Capt. Danahower.

"I kept track of the matter by calling at Mr. Byrnes's office, and a few days after was told by the appointment clerk that the President had sent over that day for the 'briefs' in the Minnesota Collector's case. I asked if he supposed I could get to see the President that day, and he said as it was Cabinet day he thought not. I then went to Gen. Bacheler, First Assistant Secretary, who I was told would take an interest in the 'old soldiers.' I laid the case before him in as strong terms as I could. I told him that *the Republicans of Minnesota were getting mad to see the Democrats holding down the best offices under a Republican administration, and they were getting d——n mad, and I was one of them.* Mr. Bacheler said: '*You go right to the President and talk to him as you have to me.*' From there I went to Gen. Mason, Commissioner of Internal Revenue, and told him the situation of things as to appointment of Collector for Minnesota. He said it was a matter of the Secretary's. I told him that the Secretary had said to me that he did not wish to interfere, upon which the Commissioner remarked, 'If the Secretary will intimate that to me, I will settle the matter in short order.'

"The next day I called on the President, sent in my card, and was ushered into his presence. He met me with extended hand, and, as I wanted to get on the soft side of him, if possible, I introduced myself as a comrade who had served with him in the Army of the Cumberland. I saw at once he was bound to be as cold as the St. Paul ice palace. I said that I had called on a business matter, in behalf of the old soldiers of Minnesota, who wanted Capt. Danahower appointed Collector of Internal Revenue of Minnesota, and *I wished he would move in the matter at once, as the Republicans of our State were getting impatient.* He said, in substance, this: 'You are not supposed to understand the difficulties we have to labor under and the pressure brought to bear. Within the last twenty-four hours some forty letters and telegrams have come in asking for a new man. It is thought a Scandinavian ought to be appointed to that office.' *I did feel somewhat hot,* and said: '*If such men as Capt. Danahower, who rendered the country the service he did from 1861 to 1865, must be turned down for a Scandinavian just because he is a Scandinavian, then it is time we knew it.*' *I turned and left him without further remarks,* and came across Secretary Blaine in the room below, who, it appeared, had heard my conversation with the President, for he asked, '*What were you and the President having such a racket about?*'"

In all this graphic recital it is hard to know whom to pity most—foot-sore and heart-sick Capt. Reed; Capt. Danahower turned down, it is to be feared, in spite of his record, for a new man; the two Minnesota Senators standing between the cross-fire of "old soldiers" and Scandinavians; the various Cabinet officers and other public servants vainly trying to snatch a few moments for their official duties between the invasions of office-hunters; President Harrison with his forty letters and telegrams in twenty-four hours; or the people of the United States. F. B. T.

St. Paul, February 2, 1890.

ARE WE IN NEED OF A NAVY THAT SHALL "SWEEP THE SEAS"?

To the Editor of The Nation:

Friend: In a speech, made a few days ago by William E. Gladstone, at the old town of Chester, not far from his home at Hawarden, surprise and regret were expressed that this Republic—turning aside from its traditions of the past—should of late have embarked upon the policy of building up and burdening itself with a great navy, according to the bad way of the old European nationalities. From one who, when he was leader of the party in power in England, deliberately withdrew from a war (that of the Transvaal) which he was convinced had been unjustly undertaken, this observation upon the mistaken and dangerous policy—as he conceives it to be—which we have entered upon, comes with a good grace, and may be freely accepted as proffered in all sincerity and as dictated by a pure purpose of helpfulness. It is the language of wisdom, large experience, and common sense, and I feel assured that our people would do well to heed its friendly intimations.

Only about two years have elapsed, I believe, since a highly respectable delegation came hither from Great Britain, bearers of a memorial signed by between two and three hundred members of Parliament, commending to our President and Congress and the American people generally the desirability of entering into a definite treaty of arbitration between the two countries. Since then there has more than one international dispute been peaceably adjusted by the good offices of arbitrators. So that, since the beginning of the century, as we are told, not less than sixty cases of disagreement have been amicably settled. With such a record before us, pointing the way to the happy disposition of all international disputes, how is it that we are suddenly awaking to the discovery that we are practically defenceless, and that the immediate creation and equipment of a powerful navy, second to none in the world, is an imperative necessity?

Then there is the calling together of the delegates from all the American republics, a widely published purpose of which gathering is to formulate a plan for the prevention of all wars between the States represented, by entering into an agreement to submit all cases in dispute, not otherwise adjustable, to arbitration. This clause in Secretary Blaine's address of welcome to the delegates certainly reads well: "We believe that friendship, crowned with candor and maintained with good faith, will remove from American States the necessity of guarding boundary lines between themselves with fortifications and military force." Now, that has the sound of having been written with "candor," and framed in "good faith," and there is not apparent any reason why we should "read between the lines." Were there the remotest reason for believing this to be so, the Spanish-American delegates now at the national capital would straightway gather together their *impedimenta*, and report at the capitals of their respective republics with the greatest celerity. Obviously, the great clamor for navy preparation which has arisen at Washington, and is seconded in some other quarters, does not contemplate anything of aggressiveness in connection with our sister republics of this continent.

Well, then, what have we done, or what are we about to do, that all this haste for providing ourselves with an irresistible fleet of war-ships, monitors, dynamite-cruisers, torpedo-boats, etc., is deemed to be urgently necessary? We do not propose to quarrel with any of our neighbors all the way down the west Atlantic and east Pacific seaboards to the mingling of the waters at the Straits of Magellan—a waterway that a few years ago was declared by Chili and the Argentine Confederation to be neutral, and upon the shores of which the fortifications of neither nation, nor of any other nation, were ever to be erected. And as regards England, France, Germany, and the other European Powers, is there any reason why our reciprocal intentions and behavior should not be attended with as much "friendship," "candor," and "good faith" as our intercourse with the States of Mexico and the several republics of South America? At any rate, would it not be wise on our part, and reassuring and helpful to the nationalities on the other side of the Atlantic, burdened as they are with the accumulated charges for past wars, and of a state of preparation for possible impending conflicts almost equal to the cost of war itself, to worry along about as we have in the past, to deal openly and justly with our neighbors and acquaintances, whether they be Spanish-American, European, or Mongolian, and so make it apparent that friendship, candor, and good faith are a better defence than a big standing army, elaborate coast defences, and a navy that is warranted to "sweep the seas"? Josiah W. Leeds.

Philadelphia.

THE INVESTIGATOR AS TEACHER.

To the Editor of The Nation:

Sir: In the discussion on the subject of teaching in colleges and universities, your correspondents have ignored (or, at least, have not clearly stated) the purpose of the so-called higher education, namely, the training of the judgment. A teacher, to be competent from this point of view, must have learned to exercise his own judgment. This is only possible when he has investigated some subject for himself—that is, when he has learned to form an independent opinion based upon his personal observations and experiments. Our opinions in practical every-day life are not considered of much importance until we have had experience upon which to found our opinions. In the great realm of apparently conflicting facts in the literary and scientific world, a clear and independent judgment is a necessity, if we are to gain lasting benefit from college or university training. Mere facts are soon forgotten, and are of little use unless we know the relation between them. Facility in forming an independent opinion is also that which gives an educated man the advantage over an uneducated one, even though he begin his career later than the latter.

It is true that an original investigator is often a poor teacher, and sometimes so fully absorbed in his own specialty that the student learns little from him aside from this specialty and how he has come to this or that conclusion in a certain line of work. On the other hand, a student learns from a teacher who is not himself constantly learning new facts and exercising his judgment in new questions, more facts, perhaps, but not how to use them.

The question being agitated in your columns has already been discussed in Germany, and when a new position is to be filled, the qualities of the candidate as a teacher and as an original investigator are both carefully weighed. From thirty to forty years ago the experiment was made of filling teachers' positions with those who were most successful in the reproduction of others' ideas; but the result was not satisfactory, and at present it is customary to elect such men to professorships as have become prominent through their original investigations. Students who have spent years in study under the direction of those who only reproduce the ideas of others, find that when they come to compete with those who have studied with original workers, they have missed the most important part of an education—the habit of forming an independent opinion. A. L. G.

Zurich, January 24, 1890.

A DIFFERENCE IN GERMAN AND AMERICAN UNIVERSITY METHODS.

To the Editor of The Nation:

Sir: One of the chief factors in the advancement of scientific knowledge in Germany is

what is known as the Privatdocenteuwesen. Du Bois-Reymond, in one of his inaugural addresses, calls this institution "the principal source from which our universities derive that spirit of bold research and penetrating inquiry which is perhaps the most distinctive quality of German scholarship." And, indeed, a glance at the position filled by the Privatdocent shows that there is hardly a place within the university more honorable or more influential. Any young man who has won his doctorate, and who has convinced the faculty of a German university that he is an independent searcher after truth, may be admitted at once to exactly the same kind of teaching in which the oldest members of the faculty are engaged. In entering upon this work he assumes none but self-imposed obligations; he is not encumbered with conducting examinations; he has no share in the wearisome administrative work of the university; his whole time is given to an absolutely independent pursuit of the line of investigation and instruction which he has chosen.

The success which this institution has had, both as to the number of persons availing themselves of its privileges and with regard to the work done by them, is remarkable. As to the first point, it must be remembered that, aside from the scanty fees paid by the students and from occasional pecuniary aid granted by the Government, the Privatdocenten receive no money remuneration; and surely, from a worldly point of view, their position is not enviable. Nevertheless, the average proportion of Privatdocenten to the total number of the University teaching force during the fifty years from 1830–80 was about 25 per cent., and the last five years show a very decided increase even beyond this limit. With regard to the second point, it is significant that a larger percentage of Privatdocenten than of "ordentliche Professoren" are engaged in special and advanced teaching.

The following table is compiled from the *Lectionsverzeichnisse* of the "Philosophische Facultäten" of Berlin and Munich Universities for the current year. Under "general courses" are classed such subjects as the political or literary history of a people, the elements of philosophy, the outlines of a certain branch of science; under "special courses," such subjects as the history of a special institution, the study of an individual author, the study of a single physical phenomenon. As it was my aim to get at the two extreme ends of the academic scale, the "ausserordentliche Professoren" were left out of consideration; and as every university teacher without exception conducts a seminar, or a course corresponding to it, this element also was omitted from the comparison. The figures indicate the percentage:

	Courses.		
	Gen. only.	Spec. only.	Gen. and spec.
(1.) Berlin—			
Ordentl. Professoren	37.2	25.5	37.2
Privatdocenten....	19.3	52.6	28
(2.) Munich—			
Ordentl. Professoren	58.3	8.3	3.3
Privatdocenten....	25	58.3	16.6

It is evident from this table that the number of professors who lecture exclusively on general or elementary subjects is at Berlin almost, at Munich more than twice, as large as that of Privatdocenten engaged in the same kind of subjects; that the number of Privatdocenten who lecture exclusively on special or advanced subjects is at Berlin more than twice, at Munich more than seven, times as large as that of professors engaged in the same kind of subjects; while in both places a considerably smaller proportion of Privatdocenten than of professors lecture both on advanced and elementary subjects.

This, then, is the distribution of work in the two largest German universities, which I have selected as specimens to illustrate what is a general tendency of German university education, namely, to let the older men do the bulk of fundamental instruction—to intrust the special investigation and research mainly to the young men.

From the following table of the distribution of work at Harvard and Cornell we may derive some information as to the methods pursued in this respect in American colleges. Here also only the two ends of the academic scale, the "full professors" and the "instructors," are considered. With reference to the different character of work done in American and German universities, I have here used the expressions "elementary" and "advanced" courses, instead of general and special:

	Courses.		
	Elem. only.	Adv. only.	Elem. and adv.
(1.) Harvard, '89-'90—			
Professors.....	00	27.02	72.9
Instructors.....	56.5	8.7	34.7
(2.) Cornell, '88-'89—			
Professors.....	7.6	19.2	73.3
Instructors.....	68.9	6.8	24.1

It appears, then, that at Harvard there is no fraction, at Cornell a very small one, of professors who teach elementary subjects only, whereas more than half of the instructors at Harvard, and nearly three-fourths at Cornell, are engaged in just that kind of work exclusively; that the number of professors who teach advanced subjects only is in both institutions somewhat more than three times as large as that of the instructors engaged in advanced teaching exclusively; finally, that in both places the majority of the professors and a minority of the instructors are giving both elementary and advanced instruction.

If I add that in the graduate department at Yale thirty-six professors and only four instructors offer independently advanced instruction (the rest of the instructors who figure in the announcement of the department act either as assistants in a professor's course or offer nothing beyond elementary work); if I add that at Johns Hopkins of the ten "associates" only two are exempt from undergraduate work, it seems perfectly evident that the prevailing tendency in American universities is to let the young men do the bulk of elementary instruction, and to intrust the advanced instruction mainly to men of long experience and of established reputation.

That the German system is considered a success in Germany there can be no doubt. It is universally felt that the professors, through wider experience and practical efficiency, are best adapted to represent the foundations and the system of their science in their accepted form; that the Privatdocenten, full of the enthusiasm of youth and unhampered by official routine, are best fitted to reach out into new fields and to train investigators; that the competition of one with the other furnishes a continual source of rejuvenation to the university.

In America we are now making earnest efforts to put our graduate instruction upon a more scientific basis than it has had heretofore. Can we not learn from the German experience?

Respectfully, KUNO FRANCKE.

HARVARD UNIVERSITY, February 5, 1890.

Notes.

IN our recent review of McCarthy's 'Lily Lass,' we said that the English of this novel was "not always improved by American proof-reading." Messrs. Appleton inform us that they used for their edition stereotype plates made in England. We regret the faulty but not unnatural inference from the American imprint. It was not, we may add, in our thought to cast a slur on American proof-reading, or to compare it at all with British.

Charles Scribner's Sons announce that they have acquired from Mr. Henry M. Stanley all the American rights for his personal narrative of the expedition for the relief of Emin Pasha. Prior to the appearance of the complete work, *Scribner's Magazine* will publish an article upon his last journey by Mr. Stanley. It will be illustrated.

Longmans, Green & Co. publish immediately, in their series of "Historic Towns," 'Winchester,' by G. W. Kitchin, the Dean of Winchester; and 'The Skipper in the Arctic Seas,' by Walter J. Clutterbuck.

Vol. vii. of the "Bankside Shakspere," "Titus Andronicus," is about to be distributed to subscribers. The introduction is by Mr. A. A. Adee. The "Hamlet" introduction will be from the pen of Mr. E. P. Vining.

Ginn & Co. will publish in April 'The Best Elizabethan Plays,' exclusive of Shakspere, edited by William R. Thayer.

In acknowledging the issue of 'The Year's Art,' for the current year (London: J. S. Virtue & Co.), it cannot come amiss to restate the nature of this standard work edited by Mr. Marcus B. Huish. The sub-title correctly reads: "A concise epitome of all matters relating to the arts of Painting, Sculpture, and Architecture which have occurred during the year 1889, together with information respecting the events of the year 1890, with full-page illustrations." In addition to the regular and indispensable features, such as the accounts of exhibitions and the directory of artists, we have this year more photo-engraved memoranda of the principal pictures and statuary, and a fresh batch of portraits, viz., of artists of the Royal Society of Painters in Water-Colors. Mr. Huish has also been at pains to procure a list of artist birthdays, arranged by months, with an alphabetic key. In short, 'The Year's Art' is better than ever, and nothing further need be said.

Macmillan & Co. have become the American publishers of the sixth edition of the Royal Geographical Society's 'Hints to Travellers,' of which we spoke in praise a few weeks ago.

Mr. P. H. Emerson's 'English Idyls' we likewise commended, but still more recently; and the dainty "pictures of East Anglian life" have now passed to a second, revised edition (London: Sampson Low & Co.).

We have received from Mr. John Osborne Austin, Providence, R. I., a leaf of Additions and Corrections for insertion in his admirable 'Genealogical Dictionary of Rhode Island.' Nearly the whole alphabet is involved, and many of the leading families, as, Almy, Chad Brown, Bull, Jeremiah Clarke, Durfee, Greene, Obadiah Holmes, Roger Williams (thanks to Mr. H. F. Waters's late discoveries), etc.

The Railroad, Telegraph, and Steamship Builders' Directory, issued annually by the Railway Directory Company of this city, comes to us with its second number. It occupies a field of its own, and has an obvious value for its special patrons. The print is very good.

For another class—yet not wholly distinct—has been devised the 'Route and Reference Book of the United States and Canada,' for the use of commercial travellers, merchants, and others (New York: Gibb Bros. & Moran). It is a sort of handy gazetteer, with maps and the needful local statistics as to trade. Not only is the distance between stations indicated on the maps, but the fare to the chief places. The editor justly observes that many of the features of this publication will serve the tourist for pleasure as well as the traveller for business. The design seems very well carried out.

'The Land and the Community' is the title of a small book by the Rev. S. W. Thackeray, M.A., LL.D. (D. Appleton & Co.). The basis of the author's argument consists of two assumptions—one, that the squalid civilization of the early clan was "politically perfect"; the other, that political economy "has declared that private property in land is fundamentally wrong and unjust in principle." There is nothing that deserves notice in the book; but the introduction, which is furnished by Henry George, contains a delightful passage wherein it is graciously intimated that he may be persuaded to exempt the estates of the Church and the institutions of learning from confiscation—provided the clergy and the professors will embrace his theories. The Koran or the sword!

A recent number in the "Questions of the Day" series, published by the Putnams, is entitled 'Monopolies and the People.' The author, Mr. Charles Whiting Baker, points out the various kinds of monopoly, which are extremely numerous under his definition, and shows that, under the modern conditions of competition, such monopolies are unavoidable. Their evils, in his view, might be checked by combining governmental regulation with private management, and a "practical plan" of control is submitted. One of the obstacles which such a plan would encounter would be, in our judgment, the Constitution of the United States; others would be found in the constitution of human nature. But as the application of the remedy is to be postponed until "all good men and true . . . join hands to put only men of wisdom and honor in places of public trust," there will be ample time to smooth the road. While the author exaggerates the evil results of so-called monopolies, his tone is far more moderate than that of most of the writers who have favored the public with their speculations upon these subjects. As he proposes no general confiscation, he cannot expect to obtain much popularity.

The publishers of *Babyhood* have begun to give fresh currency to much good matter hid away in the bound volumes of that excellent periodical. Hence a pretty little series of Nursery Health Tracts, on scarlet fever, diet for young children, diptheria, and sound teeth. The mother can make these into a "card catalogue" for ready reference.

The 'Complete Index to Littell's Living Age' (Philadelphia: Edward Roth) advances another stage in the department of History (France—United States).

The Essex Institute Historical Collections for July–September, 1888, is mainly occupied with the part taken by Essex County, Mass., in the organization and settlement of the Northwest Territory—and no mean part, as all the world knows. Seven of the nine names most conspicuously associated with the passage of the Northwest Ordinance "belong distinctively" to that little bit of territory. The editing consists of extracts from well-known and authoritative sources, without comment, but not without notes.

Strange as it may seem, statistics show that there are 133 villages in Massachusetts quite without town libraries. On Wednesday, January 29, a meeting of ladies and gentlemen was held in Boston, at the house of Mrs. Phillips, to confer as to the best methods of improving this surprising state of things. Gen. Francis A. Walker presided, and letters expressing cordial sympathy in the work were read from James Russell Lowell and George W. Cable. Interesting remarks were made by many persons, in several cases relating to their own experience of starting libraries in small places. It was unanimously agreed that the effort should be made as far as possible from within, by the people themselves, and that extraneous aid should not be too obvious. Among the speakers were Judge Chamberlain, Prof. Palmer, and Mr. Green of Worcester. A committee was appointed which will report later upon the work laid out.

The *Library Journal* for January announces the withdrawal of Mr. R. R. Bowker from the co-editorship with Mr. C. A. Cutter, his place being taken by Mr. Paul Leicester Ford. It begins, with an account of the library of the United States Geological Survey, a series of papers relating to special collections; and reference is made to a scheme for the extension of the card catalogue so as to indicate such collections, or important books, not accessible in any given library. The editor has hopes that in 1900 a great Catalogue of American Books of the Nineteenth Century can be undertaken, "providing the final basis for American trade bibliography." Mr. W. I. Fletcher's 'Index to General Literature' (*i. e.*, books of essays, travels, biography, etc.) is well advanced for publication in or soon after 1891.

A plate by Cruikshank, in the *Studio* for February 1, surpasses the other illustrations in interest in three particulars: it has never before been published, it was an essay of a title-page for the 'Sketches by Boz,' and it is a sample of the "process work" of 1836, the invention of Charles Louis Schönberg. The account of this autographic lithographic "etching in relief" (if the phrase is tolerable) is by Mr. James Schönberg, presumably a descendant of the inventor.

The Boston *Transatlantic*, with its customary enterprise, furnishes its readers, in its issue of February 1, with a portrait of François Coppée and a translation of his drama "Le Pater," interdicted by the censorship. Ibsen's "Rosmersholm" is continued.

M. Octave Uzanne's *Le Livre Moderne* is a typographical success. The specimen number before us expressly omits the *gravures hors texte sur papier d'épreuves*, and of these we cannot speak. "Hodiernus non hesternus" is the motto; but yesterday claims its rights in a reminiscential sketch of the late Champfleury, with three capital caricatures. ("We must begin to save our pennies," said a bibliophile on hearing of the death of this collector, whose precious things must ere long come under the hammer). Backward-looking might also be thought the head-piece to page 1 of a January magazine, showing a Bacchanalian performance *libertate decembri*. There are some informal book notices, some reports of sales, and a variety of matter intentionaliy unsubstantial.

A somewhat despondent view of the tendency to conflict among our manifold jurisdictions is taken by Mr. Wm. M. Meigs in Nos. 24 and 25 of vol. 29 of the *Central Law Journal*. Many years ago the Supreme Court of the United States took the position that in cases involving "general principles of jurisprudence" they would not hold themselves bound to follow the law of the State in which the case arose. The lower Federal courts have naturally followed this precedent, and Mr. Meigs cites cases showing that some State courts have taken similar action, and refused to apply the *lex loci contractus*. The disastrous results of such a practice, should it become generally adopted, are obvious; but it scarcely seems to us that the tendency is marked enough to cause present alarm. It is perhaps well, however, that attention should be directed to it. Mr. Meigs states the rule of Federal decisions in citizenship cases to be that Federal courts will apply the law of the proper State, except: (1) where "general principles" are controlling; (2) where the meaning of a written instrument is involved and the State court has not settled it; (3) where recent State decisions overrule prior ones in force when the contract was made; and (4) where there is no State ruling to follow.

'Troldtöj' (Troll Stories), now in course of publication by Ernst Bojesen of Copenhagen, is without doubt the most artistic Scandinavian book of the season. The first number appeared in December, and the whole will form ten monthly parts. The text, which consists of both prose and verse, is by Holger Drachmann, the subjects being taken from the popular superstitions of the present day. A special feature of the first two numbers is the illustrations, which will consist of woodcuts and full-page photogravures by well-known Danish artists. The price for the whole work will be between sixteen and eighteen kroner (say five dollars), and subscriptions may be sent to any Danish publisher.

The results of the double expedition sent by the Royal Astronomical Society of London to observe the total solar eclipse of December 22 have been disastrous in both cases. Clouds prevented Mr. Taylor in West Africa from taking even a single photograph; while the fears of Father Perry's friends, caused by the delay in receiving his report, are but too sadly confirmed in the melancholy news of his death, from dysentery, December 27. The weather at the Salut Isles, off French Guiana, where he was stationed, was but moderately good. Successful exposures were made with the Abney four-inch lens, but the development was not carried out. Successful photographs were also obtained with the twenty-inch mirror, but these, again, were not developed. Father Perry has been a member of more astronomical expeditions than any man now living, and he was always a cheerful sufferer in the cause of science. Of the climate encountered by the other English expedition, Mr. Taylor seems not at all enamoured, writing of the stifling heat—98° in his cabin at night off Bonny, at one of the mouths of the Niger. He had a pleasant interview with Commander Pullen, who was determining the latitude and longitude of Bonny, although he had suffered from the coast fever severely. His sad death occurred before Mr. Taylor left. At the mouth of the Congo the country was found to be open, hilly, and pleasant. Mr. Taylor himself had an attack of the fever, of which he speaks as "simply awful." Temperature in the sun at Loanda was 135°, 90° in the shade. The English and American parties were established nearer one another than was at first contemplated. The health of our expedition on the *Pensacola* seems to have been uniformly good and without a touch of the fever.

Several interesting papers were read at the

meeting of the Royal Meteorological Society on December 18. The most technical in character were by Mr. W. H. Dines (1) "Report of the Wind-Force Committee on the Factor of the Kew pattern Robinson Anemometer," and (2) "On testing Anemometers." Others were by Mr. G. J. Symons, F.R.S., "On the Rainfall of the Riviera," and a "Report on the Phenological Observations for 1889," by Mr. E. Mawley. The last was a discussion of observations on the flowering of plants, the appearance of insects, the nesting and song of birds, and other attractive subjects of study.

The American Economic Association sets a singular example of mingling business and *réclame* in announcing the award of a prize offered by Mrs. Amélie Rives Chanler, with the proceeds, we are told, of "some exquisite sonnets which were published in *Harper's Monthly* for 1888, and which were by some pronounced superior to Mrs. Browning's 'Cry of the Children.'"

A fund is being raised to procure for the University Library at Cambridge, England, a bust of the late William Wright, Professor of Arabic, an approved model having been already made by J. Hutchinson. Half a guinea is the subscription, and this sum can be addressed by Americans to Prof. R. Gottheil, Columbia College, N. Y.

The late Dr. Döllinger has bequeathed his large and valuable library to the University of Munich, with the stipulation that it shall be sold and the proceeds devoted to stipends for poor students of all departments. Among his posthumous papers is an interesting correspondence with several dignitaries of the Catholic Church, touching the promulgation of the dogma of the papal infallibility and other doctrinal and ecclesiastical questions. The correspondence will be published at an early date.

"E. P. E." writes to us from Munich as follows: "The interesting letter by 'E. E.' on 'The Kulturkampf in Bavaria,' published in the *Nation* for December 5, 1889, contains an error which, even after the lapse of so many weeks, it may be well to correct. Baron von Lutz is not a Protestant, but a Catholic, although a very liberal one. It would surely be an anomaly if the Minister of Worship in such a stronghold of Catholicism as Bavaria should be a Protestant. Indeed, no Protestant, however great his ability might be, could ever attain such a position in the Bavarian Government."

Apropos of our notice last week of the life of Dr. Grisanowski, a genial Königsberger of ripe years sends us this amusing anecdote:

"'Grisanowski, Du musst belohnt werden!' Your *Nation* of to-day brought to my mind the old Königsberg proverb. More than seventy years ago every boy knew it and used it frequently. The grandfather, I think, was the hero of the story. It was then customary to get together at lunch time and be rather merry for an hour or so, of course over a glass of wine. Now, Grisanowski had decided to drop the habit. Accordingly, the next day he passed the wonted door and proceeded on his way. Suddenly he stopped short, and said: 'Grisanowski, Du musst belohnt werden.' Then he turned back, entered the door, and took his daily glass!"

— The Bahrein Islands, in the Persian Gulf, are the subject of an unusually interesting paper by Mr. J. Theodore Bent in the January Proceedings of the Royal Geographical Society. These islands, which in the last four centuries have been successively in the possession of the Portuguese, the Persians, and Arabians, are now ruled by an Arab sheikh, under the protection of Great Britain. They have lost most of their ancient commercial importance, but are still noted for their pearl fisheries, which produce the best pearls in the world; for their excellent breed of horses and donkeys and their fine dates. One of the two principal towns, Moharek, gets its water supply from a spring which at high tide is about six feet below the surface of the sea, when water is brought up either by divers who go down with skins, or by pushing a hollow bamboo down into it. There are several similar springs on the coast, and the Arabs say they come from the Euphrates, which they believe flows in an underground channel beneath the Persian Gulf—a legend as old, at least, as Pliny's time. In the northwestern part of the principal island, which is about twenty-seven miles long by ten miles broad, are a great number of sepulchral mounds, covering an area of many miles and varying from over forty feet in height to mere circular heaps of stones. One examined by Mr. Bent consisted of two chambers, one above the other. No inscriptions or objects of glass were found among the bones, drapery, ornaments, and other objects. Their great antiquity is inferrible, and from this Mr. Bent regards the tombs as of Phœnician origin, and believes Bahrein to be "the land of Punt from which the Puni got their name" and from whence they migrated to the Mediterranean. In the discussion which followed the reading of the paper before the Society, Mr. Cecil H. Smith of the British Museum said that, "as far as the evidence went at present, he thought the Museum authorities were prepared to admit that the Bahrein Islands probably represented a primitive site of the Phœnician race." He also added that these excavations would reopen the controversy which had raged among Egyptologists as to the identification of the land of Punt.

—The *Revue Internationale de l'Enseignement* for December 15 is a number especially worthy of notice from an article upon Giordano Bruno which it contains. The writer is M. Georges Lafaye, and we do not remember to have seen among the very great number of reviews of Bruno's life and work that have appeared since the dedication of his statue in Rome last summer any one that seemed fairer or more trustworthy than this appears to be, and none that is so interesting. One misses in it the striking comparison of Bruno with Shelley that we had in the *Westminster Review*, but there is in its place a very instructive paragraph upon the influence of Rabelais upon Bruno. M. Lafaye is not at all concerned to hide the less attractive characteristics of his philosopher, his uneasy restlessness, his boastfulness, his readiness to upset everything. But these shadows only heighten the light that he throws upon what was in many much more important regards a very high and noble character. Bruno seems to have been looked upon with much less favor by those scholars of his time who more or less shared his opinions than by the universities, the corner-stone of whose teaching he was eager to tear out. Except at Geneva, he was generally received not only with hospitality, but also with what seems a very considerable degree of open-mindedness, when one remembers that at that time the infallibility of Aristotle was much more thoroughly believed in than the infallibility of the Pope. Besides M. Lafaye's article, the *Revue* contains the conclusion of a paper on "Pedagogic Preparation in Germany," by Prof. Voss of Christiania; an article by M. G. Monod on the "Study of History in France," which is of bibliographical value, but rather heavy reading; and the usual *Chronique*, which contains the full text of article 23 of the French military law of which we lately spoke.

—The late distinguished Spanish actor Rafael Calvo is made the subject of a biographical sketch and the occasion of some remarks on the modern Spanish theatre in the last of the 'Literary Pamphlets' of "Clarin" (Leopoldo Alas). Born at Seville March 19, 1842, Calvo came of good actor stock and early went upon the stage, not from choice, but to earn a living. His first success was won under the spur of mortified pride: he overheard his manager telling his father that he would never do as an actor. That night he threw such passion into his acting that he carried off all the glory of the company, though his part was a minor one. After that he appeared as *galán jóven* in all the principal theatres of Spain, everywhere applauded and admired, and at twenty-four was offered the position of leading actor in a good provincial company. It was not long before he was at Madrid, sustaining the principal rôles in the most famous plays of Calderon, Lope, Tirso, Alarcón, Rojas, and Moreto. He often presented modern plays, and was an intimate friend of Echegaray's; but his preference and his peculiar aptitudes led him chiefly to the classic drama, of which he was acknowledged to be the best interpreter of his day. The lyric outbursts of Calderon and Tirso came to new life on his lips, and the heroic figures of the ancient theatre successfully competed, in him, with the milliner's men of the French imitations. In 1883 he undertook a tour through South America, which brought him new glory and welcome cash. He died of smallpox, September 3, 1888, at Cadiz. Long a friendly rival of Antonio Vico, his death leaves the latter at the head of Spanish actors.

— On January 28 a very important event took place at the British Museum. There was a private view, in the late afternoon, of the galleries lighted for the first time by electricity. For the past five or six years the electric light has been used in the reading-room, which has been kept open until eight or nine o'clock. But no attempt has been made to light the rest of the Museum, which has therefore been closed at dusk and on foggy days to all save readers. That which makes this new departure of special interest is not the mere introduction of the electric light, but the reason for it. At last arrangements have been made to open this very popular national museum in the evening, the only time when a large class of people can visit it. The private view really seems to mark the first step—the entering of the thin end of the wedge—in a complete revolution in this respect; and this revolution will do far more to bring about the much-talked-of elevation of the masses than all the Toynbee Halls and People's Palaces that could be set up in the east and south of London. For the latter naturally can never, in their educational value, expect to compete with nationally supported institutions, which, moreover, workmen and artisans can feel are theirs by right, and not merely by benevolence. South Kensington is already open two or three evenings in the week, but South Kensington is rather out of the way. It is true, the British Museum is convenient only for a very limited section of Londoners; but then it is hoped that the present innovation is only the initial stage towards Sunday opening of all galleries and museums. Of course, the attendance on the 28th was no test of the success of the experiment, since on such occasions the "masses" are always rigorously excluded. The large crowd collected to see how admirably the Museum treasures could be studied by the electric light was made up of the literary, artistic, and political celeb-

rities who always attend private views. But the very different crowd which fills the Museum on bank holidays, helps one to form some idea of the numbers who would always have visited it oftener had they had the chance now to be given them. It is worth recording that this evening opening of the British Museum was carried through Parliament by Mr. Bernard Molloy, one of the Irish members who are supposed to know no policy save that of obstruction, to care for no part of the United Kingdom save Ireland, and to strive to benefit no one but themselves.

—Oxford loses a man of much promise in the death of Canon Aubrey L. Moore. He has been tutor of several colleges and lecturer in ecclesiastical history as deputy for Prof. Bright. During the last year, we believe, he was appointed Dean of Divinity at Magdalen and honorary Canon of Christ Church. Outside the University he was best known through his volume of reprinted essays and reviews, 'Science and the Faith,' which was published about a year ago, and by an essay in the recent book, 'Lux Mundi.' Canon Moore belonged to what we suppose is the latest "school" in the English Church, the liberal Catholics, as perhaps they may be called. This school retains its faith in the doctrine of the Incarnation, while it accepts unhesitatingly and fully the results of late Biblical criticism and the teachings of modern science. Canon Moore died at Oxford on the 17th of January, a victim of the Russian influenza, or grip. He was about forty-one years of age.

—A triple number of the Johns Hopkins University historical publications is devoted to "Federal Government in Canada," by Dr. John G. Bourinot, the author of several works upon Canadian institutions. As we understand it, Johns Hopkins University has had nothing to do with the work except to publish it; the matter consisting of four lectures delivered at Trinity University, Toronto. Students of governmental institutions will find here a very lucid and instructive treatment of the Constitution of the Dominion of Canada, which, as a federal constitution, differs principally from our own in that powers not specifically reserved to the provinces are exercised by the general Government. The book will be found a useful complement to Prof. Bryce's 'American Commonwealth,' and will take permanent rank as a constitutional manual. The style is noticeable for its smoothness. Those who are sceptical as to "what's in a name" may peruse with profit the following anecdote, which we quote without comment:

> "We have it on the best authority that in 1866 67 the question arose, during a conference between the Canadian delegates and the Imperial authorities, what name should be given to the confederation of the provinces, and it was first proposed that it should be called 'The Kingdom of Canada'; but it is said that the Earl of Carnarvon, then Secretary of State for the Colonies, thought such a designation inadvisable, chiefly on the ground that it would be probably objectionable to the Government of the United States, which had so recently expressed its disapprobation of the attempt of the Emperor Napoleon to establish an imperial European dynasty in Mexico. . . . The Canadian delegates made due allowance for the delicacy of the sentiments of the Minister, and agreed, as a compromise, to the less ambitious title, 'Dominion of Canada' —a designation recalling that 'Old Dominion' named by Raleigh in honor of the Virgin Queen."

—Recent methods and progress in the study of palæography are illustrated in the brochure by T. W. Allen, entitled 'Notes on Abbreviations in Greek Manuscripts' (Oxford: Clarendon Press; New York: Macmillan). It contains forty pages of explanatory matter and eleven pages of facsimiles, beautifully executed by photolithography. The examples are partly the result of a tour of research in France and Italy, but are mostly selected from manuscripts in the Bodleian and the British Museum. They supplement, and, to a certain extent, correct, the works of Gardthausen and Lehmann, being based on actual study of the originals, and not upon facsimiles, from which, as Graux and Vitelli have pointed out, it is impossible to arrive at trustworthy general conclusions. Highly interesting and curious is the series of forms presented for ἄρα, γάρ, εἶναι, and ἔσται, arranged to show their chronological development. Some new and valuable types are given of παρά and κατά, not found in Lehmann or Vitelli, and full examples of syllables beginning with τ. Explanations are offered of the genesis of the symbols for εἰς, οὖν, ὑπέρ, and ὑπό. A useful summary is added of the tachygraphic usage of the Grotta Ferrata school. San Nilo, the founder of this monastery, between Frascati and San Marino, on the lower slopes of the Alban Hills, established at the close of the tenth century a style of writing which persisted till the twelfth century, and the characteristics of which may be traced in some now widely scattered manuscripts. Some notes of special study of the Biblioteca Angelica at Rome are promised by Mr. Allen in the *Classical Review*. We learn, also, that he has just been appointed by the Delegates of the Clarendon Press to examine and report on the Greek MSS. in the various libraries of Europe.

ALBERT DÜRER.

Literary Remains of Albrecht Dürer. By William Martin Conway, sometime Roscoe Professor of Art in University College, Liverpool, Victoria University. With Transcripts from the British Museum Manuscripts, and Notes upon them, by Lina Eckenstein. Cambridge: At the University Press. 1889.

This book was well worth writing. Dürer is, unquestionably, one of the dozen great artists of modern times, yet of all the great artists that ever lived he is perhaps the least specifically artistic in temper. A man who became, not merely a painter, but one of the greatest of painters, yet of whom it may be said that the painter in him was the smallest part of him, is certainly worthy of careful study as a curiosity of human nature, if for nothing else. His artistic productions have been studied again and again, and are likely to be studied while the world lasts. This book is a most thorough and conscientious study of his writings. Every scrap of them that has been preserved to us seems to have been deciphered—letters and journals and notes written upon the margins of drawings, as well as his professed treatises upon art and engineering—and the whole collated and compared with scrupulous care in the effort to throw some new light upon his nature, his ideas, and his methods of work. The result is almost altogether admirable. Barring a certain singularity of style, especially in the opening chapters, we have no fault to find with it. The bulk of the book is made up of direct translation of Dürer himself, and what little archaism is here to be found gives only a pleasant old-time flavor to the language quite in harmony with the matter. Chapters iii. to ix. inclusive are almost entirely composed of Dürer's letters and journals, which are, apparently, given in full; the four later chapters deal with his published works, of which, of course, only extracts are given, and with his preparatory notes and studies for them.

Too great praise cannot be given to the industry with which this mass of material has been studied, or to the intelligence with which it is set forth. Painstaking reference is made in all cases to the whereabouts of the original manuscript, and abundant provision made for those who desire to consult it, and the translation is in many cases supplemented by a transcription of the original. Some idea of the kind and amount of labor involved may be formed from a note on the British Museum manuscripts on p. 168, part of which we quote:

> "The leaves and bits of paper, it must be understood, are not arranged at all, either according to date, subject, or even size. The leaves which contain a single consecutive draft of one of Dürer's most interesting passages, and which should, of course, follow one another, are scattered through two volumes (iv. 68, 77, 76, and iii. 15). . . . Two other leaves, with sections of wide and narrow-angled church roofs, drawn doubtless originally on a single sheet of paper, side by side for comparison, are sundered by no fewer than a hundred leaves (iv. 147 and 45)."

This note may also serve as an instance of the scrupulous accuracy of reference which characterizes the volume. The result of it all is an aid to the study of Dürer, for the general public, second only to the engraved plates of the artist himself. And here we take leave of Mr. Conway, and devote the rest of our review to the singular genius he celebrates.

Albrecht Dürer was born on the 21st of May, 1471, and died on the 6th of April, 1528. His life therefore covered the flowering time of the Italian Renaissance, and he outlived Raphael eight years. Titian and Giorgione he may have known. On the other hand, we know that he met Quentin Matsys (who was about eleven years his senior) at Antwerp. With Holbein he represents about all there is of the Renaissance in Germany, but Holbein was his junior by twenty-four years. The mere names and dates show how slowly the Renaissance crept northward, but Dürer's work shows it better still. M. Édouard Fétis, in his Catalogue of the Royal Museum at Brussels, fixes the line of demarcation between the primitive schools and the modern more than a hundred years later in the north than in Italy, and places Holbein himself among the primitives. Whether or not he belongs in this category, Dürer certainly does, yet, in many ways, Dürer was the Renaissance incarnate.

His writings, as here arranged, show him to us successively from several points of view. First, we have the man Dürer, the burgher of Nürnberg, steady, hard-working, honest, careful of his pfennigs, sharp at a bargain, rather fretful and discontented in disposition, and a trifle vain, knowing his merit and not averse to speaking of it, a pious son, but a not particularly loving husband. His letters to Jacob Heller about the famous altar-piece he painted for him are almost comic in their insistent effort to screw an extra hundred florins from his unwilling patron. He returns to the charge again and again, tells him that he has used "none but the best colors he could get," and has "painted upon it more than twenty-four florins' worth of them." In another letter it becomes "twenty-five florins' worth of ultramarine" alone. He will never undertake such a job again for double the money, and even at the extra price he will be out of pocket by the bargain. Finally (and this is often repeated), he is already offered more for the picture than he asks, which, he goes on, "would have done very nicely for me had I not preferred to please and serve you by sending you the picture. For I value the keeping of your friendship at more than 100 florins. *I would also rather have this painting at Frankfurt than anywhere*

else in all Germany." That that was the real point with him, is shown by his saying in another letter, "It will be seen by many artists who perhaps will let you know whether it is masterly or bad." One is glad to know that he got his money.

His father and mother he speaks of always with reverence and love, but he scarce ever mentions his wife, except to record occasionally, "I dined once with my wife," in that strange journal of his famous journey to Antwerp, in which he mingles accounts of the honors showered upon him with items of "4 pf. for bread," and near the end of which he makes the characteristic statement: "In all my doings, spendings, sales, and other dealings, in all my connections with high and low, I have suffered loss in the Netherlands."

Next we have Dürer as the religious reformer, and here there are some curious contrasts to be observed. We suspect, however, that Mr. Conway makes more of them than necessary. If Dürer, while still going to confession and praying to the "Mother of God," puts Popes and Cardinals among the damned in his illustrations of the Apocalypse, he does no more than did many mediæval artists whose Catholicism has never been questioned. His placing there also the Emperor and Empress shows what he meant—that the wicked, however high placed in this world, will have due punishment meted out to them in the world to come. Mediæval art and literature are full of ridicule of the vices and abuses of the clergy long before the *doctrines* of Romanism were questioned. Later, indeed, Dürer seems to have fallen much under the influence of Luther, and to have been deeply stirred by religious thought. There are passages in his writings which may fairly be called mystical, and others that seem to come from a religious zealot. Such is his famous apostrophe to Erasmus: "Oh, Erasmus of Rotterdam, where wilt thou stop? Behold how the wicked tyranny of worldly power, the might of darkness, prevails. Hear, thou knight of Christ! Ride on by the side of the Lord Jesus. Guard the truth. Attain the martyr's crown." Yet he was no gloomy fanatic, but, like Luther himself, loved *Wein, Weib, und Gesang.* His accounts contain frequent mention of money lost at play, and he freely jests with his friends about their mistresses. In fact, in his relations to religion, as in many other things, Dürer fully and fairly represented the Germany of his day, somewhat gross and materialistic in its pleasures, yet capable of serious thought and of deep emotion; clinging to the beliefs and outward forms of its old religion, yet determined to reform abuses and to rebel against Papal despotism. He was no longer a Roman Catholic, but he was hardly a Protestant.

If in his daily life and in his religion Dürer was the representative of the Germany of his day, in his wide curiosity, his thirst for new knowledge, the range of his learning and experiment, he was the representative of the Renaissance itself. Nothing in the way of information came amiss to his inquiring mind. He took a trip to Zeeland, apparently to see a stranded whale. He has left a careful drawing of a walrus. He scrupulously recorded all prodigies that came in his way or that he could hear of through friends. He was deeply interested in geometry, architecture, and music, was an inventor in fortification, thought much upon perspective without mastering its principles, and wrote treatises upon the measurement of the human figure. It is recorded that "Melanchthon used to say of him that, though he excelled in the art of painting, it was the least of his accomplishments," and, referring to a dispute between Dürer and Pirkheimer, he confessed, with a certain naïveté, "his astonishment at the ingenuity and power manifested by a painter in arguing with a man of Pirkheimer's renown."

The comparison with Leonardo da Vinci, that great contemporary of Dürer's who, more than any other man, represented the many-sidedness of the Renaissance, is here forced upon one. Of Leonardo, also, it might have been said by a contemporary, that painting "was the least of his accomplishments," though no contemporary was likely to express surprise at his "ingenuity and power" in argument. Leonardo also was musician, architect, engineer, and author. His celebrated letter to Sforza, in which painting is placed last among the things he could do "as well as any man," is well known. Leonardo also theorized upon the proper proportions of the human figure, and one of his drawings of a nude man drawn within a circle and a square seems to have been identical in idea with a couple of Dürer's. In this instance both drew their idea from Vitruvius. The resemblances between the two men were thus manifold, and it is interesting to know that the German may have come, indirectly, under the influence of the great Italian during his stay in Italy. Between them, however, there is a difference so wide that it alone is greater than the many resemblances. Leonardo was an Italian, with the Italian love for beauty, while Dürer was a German with the German reverence for fact!

Durer's theory on the measurement of the human body was peculiar and merits some attention. It was, briefly, that as every individual varies from the typical man in a way peculiar to himself, these peculiar variations will, in an infinite series of measurements, counteract and nullify each other, and the *type* will be disengaged. His ideal man was a sort of composite photograph of all existing men—the "average man" in the literal sense. It was not man "as he ought to be," as Raphael said he painted him, but man as he *is*, individual peculiarities excepted. The result of the theory is curiously shown in his measured drawings of the foot, in which elaborate diagrams are given for ascertaining the exact inward inclination of the great toe caused by the modern shoe! He was himself aware that his own observations were insufficient in number, and proposed his canon only as an approximation to the final one. In a draught for the introduction of that comprehensive work (never written) in which he intended to "Set down all that I have learned in practice, which is likely to be of use in painting," he says: "I do not highly extol the proportions I here set down, albeit I do not believe them to be the worst. Moreover, I do not lay them down as beyond improvement, but that thou mayest search out and discover some better method by their help."

But this temper of experiment did not last. He had an almost superstitious reverence for numbers and measurements as in themselves holy and beautiful, and he had the theorizing mind which must reduce everything to some system, however arbitrary. The sketched plan for his great work is like an old sermon with its divisions and subdivisions. It was to be in three divisions; each division was to be in three parts, and each of these was to be again divided into six smaller parts. The scheme was evidently made out with little regard to the contents and for the sake of its own symmetry, and it would have strained his ingenuity to fill out the frame he had made for himself. As an instance take Division III., Part B: "The second part shows how such a wonderful artist should charge highly for his art, and that no money is too much for it, seeing that it is divine and true; in six ways"! This theorizing and systematizing spirit lays hold upon his measurements, and we soon find ourselves in a nightmarish maze of geometrical rules for modifying all the proportions in the same degree by "Words of Difference," so as to produce thin or thick, short or long figures; of men "ten heads high," and similar monstrosities. Finally, in a letter to Pirkheimer about the preface to the 'Four Books of Human Proportions' which the latter had agreed to write, he is reduced to say: "I neither will nor can give any better reason for all the proportions set down in the whole book and in the sequel—why I make them so and not otherwise—save that in fact I do so make them."

Leonardo's strong sense of beauty saved him from the disastrous effects of such vagaries. Dürer's sense of beauty was slight, and when he was not dominated by his model he fell into woful error. Of one of his Madonna figures, Mr. Conway remarks: "It is not human. It is a painted theory; a colored proposition." But let Dürer the theorizer speculate as he might, Dürer the painter was a realist with a tenacious grip on facts. When constructing an "ideal" Virgin, he failed. Let us be thankful that, for the most part, his imitative instinct got the better of his idealizing mind, and that his life was spent in drawing the portraits of the very real men and women of his time.

We have said "Dürer the painter," but a painter, in the stricter sense, he never was. To paint is to represent upon a flat surface the visual aspects of things: Dürer's idea of painting was the delineation upon such a surface of all the ascertainable facts about things. A picture was a sort of geometrical projection of nature. To him effect was unknown, and mystery would have seemed falsification, light and shade was only a means of securing roundness, and color was only known as local color—an added fact about the object painted. This man, who was working in Venice while Giorgione was painting the Fondaco de' Tedeschi, was as a painter more primitive than Jan Van Eyck, and two-thirds of the art of painting was undreamed of by him. By early training he was a goldsmith, by choice an engraver, and the qualities on which he prided himself were exceeding minuteness in detail and an engraver-like sureness of hand. He is explicit about finish. "These things," he says, "should be wrought in the work to the clearest and carefullest finish, and even the tiniest wrinkles and details should not be omitted in so far as it is possible." He adds, to be sure, "though it is useless to overdo and overload a thing"; but it is said that it was impossible for him to finish a picture to his own satisfaction. With regard to his sureness of hand, there is an anecdote in Camararius's preface to his Latin translation of the 'Books of Human Proportions,' which is worth quoting entire for the light it throws upon Dürer and his methods:

"I cannot forbear to tell, in this place, the story of what happened between him and Giovanni Bellini. Bellini had the highest reputation as a painter at Venice, and, indeed, throughout all Italy. When Albrecht was there, he easily became intimate with him, and both artists naturally began to show one another specimens of their skill. Albrecht frankly admired and made much of all Bellini's works. Bellini also candidly expressed his admiration of various features of Albrecht's skill, and particularly the fineness and delicacy with which he drew hairs. It chanced one day that they were talking about art, and when their conversation was done, Bellini said: 'Will you be so kind, Albrecht, as to gratify a friend in a small matter?' 'You shall soon see,' says Al-

brecht, 'if you will ask of me anything I can do for you.' Then says Bellini: 'I want you to make me a present of one of the brushes with which you draw hairs.' Dürer at once produced several, just like other brushes, and, in fact, of the kind Bellini himself used, and told him to choose those he liked best, or to take them all if he would. But Bellini, thinking he was misunderstood, said: 'No, I don't mean these, but the ones with which you draw several hairs with one stroke; they must be rather spread out and more divided, otherwise in a long sweep such regularity of curvature and distance could not be preserved.' 'I use no other than these,' says Albrecht, 'and to prove it, you may watch me.' Then, taking up one of the same brushes, he drew some very long wavy tresses, such as women generally wear, in the most regular order and symmetry. Bellini looked on wondering, and afterwards confessed to many that no human being could have convinced him by report of the truth of that which he had seen with his own eyes."

Dürer was by nature and by training an engraver, and it was by engraving that he expressed himself most freely and fully, and it is on his engraved work that his reputation does and must mainly rest. But even in his chosen art the art itself was secondary to him. Art is good because it "is employed in the service of the Church," because it "preserveth the likeness of men after their death," because, "by aid of delineations, the measurements of the earth, the waters, and the stars are better to be understood; and many things likewise become known unto men by them." Art is with him an aid to devotion, a vehicle of thought, or a record of fact; but art for art's sake found no favor in his eyes. Pure beauty of line moved him little more than beauty of light and shade or color, but accuracy and expressiveness were everything to him. The accessories in his plates might serve to-day as working drawings for a cabinet-maker, so carefully is the construction made out, and in his landscapes every tree in twenty miles of country is plainly drawn. And as art was to him a vehicle of thought or a record of fact, so he could never pack enough thought or enough fact into a plate. Breadth, simplicity, concentration, the eliminating of many small facts to present some great fact more clearly—the suppression of all secondary ideas that the dominant idea may be more directly expressed—these things were quite foreign to his temper. Consider his two great plates, the "Melencolia" and the "Knight and Death," and remark how every corner, every quarter-inch of space, is crammed with meanings. He had so much to say, apparently, that he could not afford to waste any room. No quiet masses, as a relief to the eye, for him: no space is so small that some object may not be crowded into it which will add to the thought or at least to the realization of facts. And all these objects must be most clearly drawn and with the utmost minuteness. All the intricate detail of a tool or a mathematical instrument must be so marked that there can be no doubt about its use and structure. Nay, what is a pebbly bank but a collection of individual pebbles, each of which has its form as sacred as that of a mountain? An engraving, so treated, becomes a vast puzzle that one may pore over for hours, still finding something new to consider, and the drawing of a wrinkled old face is as intricate as the map of a continent.

All this is very far from the true artist's temper. It is rather the endless curiosity of the man of science or the deep pondering of the man of thought. What is it, then, that has placed among the immortals of art this man who was so little of an artist, so much of everything else? We believe it is his profound sympathy with the spirit of his age. With Dürer it is not so much his art which has preserved its contents as the contents which still interest us in his art. It is not so much Dürer's language that we care for (for that is very antiquated now), as it is his thought; and that thought interests because Dürer was, in his own person, his age and country embodied. His many-sided mind embraced every interest of his many-sided epoch, and he was, more than any of his contemporaries, the *representative man*. We have said that Dürer and Holbein were together almost all there was of the German Renaissance in art, but it might almost be said that Dürer *was* the German Renaissance. The art of Holbein is rather Dutch than German, and of many of the problems of his time he seems to have been serenely innocent. He was a wonderful portrait-painting animal, and went on painting superb portraits to the end, little worried by anything else; and, though the better painter, he was the smaller man. Dürer laid hold upon his age at all points, and therefore, for us, the Germany of the Renaissance and the Reformation, the Germany of Luther, Melanchthon, and Holbein is, above all, the Germany of Albrecht Dürer.

THE SCHOOLS OF EUROPE.

European Schools; or, What I Saw in the Schools of Germany, France, Austria, and Switzerland. By L. R. Klemm, Ph.D. [International Education Series. Vol. XII.] D. Appleton & Co. 1889.

WERE not the phrase too cheap, we should commend this volume as "a *very good* book." We may at least borrow the English form of eulogium, and say, "It is not half bad." "The book is written," as the author tells us in the preface, "for the purpose of offering a 'standard of measurement' for our own schools; a statement of what is done in the schools of Europe, and how it is done." This end is accomplished, not by tables of statistics and the exposition of school curricula, but by a multitude of concrete examples of methods and devices personally observed. The author visited some of the best schools in Europe, endeavored to see what was most excellent in those schools, and in clear and vigorous language reports what he saw without adding his own speculations. Or, rather, he takes us with him into the schoolroom, and we actually see for ourselves. Whether specially interested in common schools or not, we soon catch the enthusiasm of our guide; and, although he hurries from one thing to another with little order except that determined by geographical contiguity, and in spite of rhetorical commonplaces and the occasional use of newspaper Latin, criticism is disarmed, and this pedagogical excursion becomes thoroughly interesting and inspiring.

Naturally the larger part of the book is devoted to German schools. The author has no pedantic fear of criticising German methods, yet the "standard of measurement" here offered is unquestionably high. While in some things Germany is conservative, in most educational matters she is in advance of other nations. In the large cities not only are the schools admirably equipped and manned, but it is noteworthy that even the common schools "stand in close connection and intimate relation to the management of the Art Academy, the Art Museum, the Zoölogical and Botanical Garden, the Observatory, the libraries, the gymnastic societies, and even the theatre—in fact, with every institution which in some degree may be influential in assisting the work in school." Under the very shadow of Cologne Cathedral, in a city whose history antedates the Roman colony (Colonia Agrippina), from which it took its name, Dr. Klemm found liberal ideas and modern methods in the schoolroom. And even in country villages, where the children left their wooden shoes at the door of the school-house, he found professional teachers doing excellent work.

After showing the operation of the German schools, our author does not tarry for general comparisons and pedagogical moralizing, but leaves the reader to draw his own conclusions. What he wisely refrains from doing we have no intention of attempting; but it is worth while to note what appears again and again in this book and impresses one as the supreme excellence of German teaching, namely, the basing of methods of instruction and training upon psychological principles. In the first place, thorough work is done in the German schools. The teachers are not content to get an idea into a child's mind by one of the senses. They employ different senses, and, finally, make the pupil objectify the idea in action of some kind. For example, in a botany lesson each child brings a collection of leaves to the class-room; the teacher talks about the different varieties and sketches typical forms upon the blackboard; the children do the same, and, finally, they write out an account of the lesson. Likewise in other subjects, seeing and doing, hearing and telling, go hand in hand. This makes repetition possible, while breaking the monotony of review by varying its form.

In the second place, German teachers utilize the spontaneous interests of children, and attempt less to force the memory than to train the attention. The great device for arousing interest is objective teaching. Object-lessons, however, are made a means, not an end, and this form of instruction is not carried now to an extreme in Germany. The first craze for object-teaching Dr. Klemm describes as follows:

> "There was a time in Germany when the principle of object-teaching electrified every schoolmaster from the Rhine to the Vistula, and from the Baltic to the Alps. It was thought that objective teaching was the panacea for all educational diseases. All order and system was abandoned, and objects were brought into the school-room till it looked like a pawn-broker's shop. No broken horseshoe was left lying in the street; old boots were eagerly gathered for the leather they yielded; no ant's hill was safe from the destructive hand that gathered ants' eggs; and the life of every snail innocently creeping across the road was imperilled. Everything was carried into school—animals, plants, and minerals. There the objects that would keep were neatly labelled, numbered, classified, and stored up. The children had good times then. The paper-boxes, moles' skeletons, minerals, stuffed birds, samples of wood, dried plants, and the like, went from hand to hand, and, to be sure, half a school day was often passed in contemplating the treasures of the museum; and the teacher quieted his conscience by thinking this to be an object-lesson."

To-day the fever has abated; and the reaction perhaps has gone to an extreme, for Dr. Klemm adds: "If the teacher needs a mineral, or an air-pump, or the Leyden-jars, he is obliged to give a week's notice to the janitor, so that he may search for the objects and make them presentable. . . . As the first wild craze was one extreme, this indifference is the other."

Moreover, the Herbartian principle, that "everything taught during a day, a week, a month, a year, should all be organically connected," shapes the methods in many German schools. Mr. Klemm found this well exemplified at the Francke Stiftungen, under the leadership of Dr. Frick, the distinguished exponent of Herbart's principles and Ziller's practice. In one of the grades, for example, all instruction centres about Robinson Crusoe.

His experiences furnish the material for the language lessons; geography is taught by moulding maps in the sand and tracing Robinson's journeys; manual work consists of making pots, baskets, and the like, after the fashion of Robinson; arithmetic concerns the number of his sheep and goats; and even moral instruction is derived from Robinson's trials. Mr. Klemm does not take sides in the Herbartian controversy now raging in Germany; but, from the brilliant examples he gives, it is evident that this method of teaching in the hands of a competent teacher is a good one. At all events, the principle is sound that new knowledge should be "organically connected with previous cognitions."

Among the causes of the excellent results obtained in German schools are the use of the metric system in arithmetic, ample equipment of the schools, freedom from text-book slavery, stable tenure of office, and the professional training of the teachers, together with their lack of reverence for methods as such. But, after all, the best that can be said for German teachers is that they base education upon psychology. Methods of instruction vary; but from the elaborate devices of the Francke Stiftungen to the school for dullards at Elberfeld (where bright colors are the only things that interest the children at first, and where the school-room walls are left bare and dreary that the attention of the feeble-minded pupils may not be distracted), everywhere the principle is the same—the utilization of spontaneous interests and the development of voluntary attention.

The report of French schools is not as favorable, partly because Mr. Klemm visited Germany first and did not wish to repeat what had already been illustrated, partly because the French schools are inferior to the German. Many noteworthy things, however, are described. Especially the drawing and sketching done in French schools must strike American teachers as marvellous. Here, and throughout the book, the author uses his pencil freely, and proves what he says by reproducing specimens of pupils' work in drawing. A chapter devoted to Vienna, which vies with Leipzig in manual training, and another showing first the meagre education in the Swiss "people's schools" and then the excellent work done in the schools of Alsace, complete the volume.

While the author's manuscript is not starched into rhetorical accuracy, the facts reported are most helpful and suggestive, and the general freshness, clearness, and unconventionality of his style make the book thoroughly readable. If we had authority to name a work of recent date as "prescribed reading" for American teachers, we should recommend this one—for those who have visited European schools, that they might refresh their memories and note progress; for those who intend to visit Europe, that they might know where to go and what to see; and for those who must stay at home, because it is the best substitute for such a visit.

Around and About South America. Twenty Months of Quest and Query. By Frank Vincent. D. Appleton & Co. 1890. Pp. xxiv.-473.

The three years which have passed since the close of Mr. Vincent's journeyings, recorded in this book, have made some parts of it belated. Three years mean many changes in South America, now that it has emerged from its Cathay cycles. The fulsome dedication of the work to Dom Pedro, and the rather Jenkins-like description of the Emperor in the body of the book, necessarily appear somewhat ludicrous after last November; and the author's rueful postscript to his preface, noting the great change, does not really help the matter much. What Mr. Vincent has to say about the Panama Canal (pp. 4–7, 460–462) would have to be considered pretty superficial in any case, and is made wholly valueless by the lapse of time since he wrote. Naturally, he has missed, too, the practical reconstruction of the Government of Peru, recently accomplished, so that his account of that country's political and financial outlook has lost all point. In Venezuela, also, the underpinning has fallen clean out from under the part of the book relating to that republic; the author falls in with the current adulation of that "illustrious American," Guzman Blanco, and knows nothing of the way the statues of that self-made hero have been tumbled from their pedestals, or of his complete repudiation by his country.

Passing all this by as perhaps an unavoidable misfortune connected with the preparation and publication of the book, and not insisting, as one might, not unreasonably, that it should have been brought down somewhat nearer to date, we find Mr. Vincent's work to be of considerable, though very unequal, value, and disappointing mainly because of his failure to make better use of his exceptional opportunities. He did the circumnavigation of the Southern Continent thoroughly, leaving the coast to visit the principal cities and to follow the travelled routes, and made some excursions far into the interior, which enable him to present matter of much interest and a good deal of novelty. We refer to his long trip up the Paraná to the falls of the Iguassu, and his various journeys into the heart of Brazil. The pages recording his experiences and observations while on this part of his travels are far the most valuable of the book, and, as they luckily number more than half of all, do much to redeem the rest. Even here it is not the author's method, but his material, that lends interest to his narration; throughout he follows the style of an itinerary, jotting down each day's doings by itself with the rigor of an unflinching diarist. When it is remembered that, making the large exceptions already noted, his eyes fell upon only the commoner and surface phenomena of the countries through which he hurried, it will be seen that much of his writing is of the slightest texture.

The great trouble with Mr. Vincent is that he is a mere traveller. He had no unifying aim or pursuit round which to group his scattered observations. He has not the temperament of a student; he tells us (p. 94) of a fine library containing 3,500 books and pamphlets, all about Bolivia, but not into one of them does he appear to have been tempted to peep. Not being a naturalist, an ethnologist, or a student of institutions, he is not drawn to make a thorough study of any one of the many departments of knowledge opened before him, and simply reflects the general views of the general traveller of general education. One can but contrast this method with that of the late Jules Crevaux, author of the sumptuous Hachette folio, 'Voyages dans l'Amérique du Sud.' The best of five years he gave up to exploration of the remote regions of Guiana, Venezuela, and Colombia, living with the Indians, studying their characteristics, making vocabularies of their languages, observing prodigal nature with the delight and success of a trained naturalist, always far from the ordinary routes, always laying himself close alongside the fact whose meaning he wished to extract. Beside such work as that, Mr. Vincent must seem amateurish in his steamboats, and railway cars, and diligences. Certainly he ran no risk of being killed, as Crevaux finally was, by venturing far up the Pilcomayo, into the haunts of dangerous tribes.

Several inaccuracies call for notice. Mr. Vincent gives the impression of having read various scientific books on his subject, but of having brought away confused ideas from them. On his very first page he settles a long-standing dispute off-hand, by assuring his readers that Columbus's San Salvador was Watling Island. This might be set down merely as due to the dogmatic spirit, were not the statement associated with it that Columbus beheld that part of the New World "thirty-five days from Spain." Our tourist did not go to the Galapagos Islands, but felt it incumbent to give a page or two to them, as he went steaming by eight hundred miles to the eastward. He seems to be aware of what Darwin had written about them, though he cites no authorities (nor does he anywhere in the whole book), but if so, his recollection is certainly most vague, and leads him to give a very jumbled account of what the master left perfectly clear. Some of his incidental remarks about the bearing of minor facts which fell under his observation on the great question of the Asiatic peopling of South America, equally bespeak an easy acquaintance with a very little science. It is, of course, a mistake to say that the llama is "the only native domesticated animal in South America" (p. 20). To speak of a dastardly attempt to assassinate President Caamaño of Ecuador as a "revolution" (p. 32), is doing too much honor to the score of conspirators who figured on that occasion. Making the Peruvian *sol* to be worth "about five cents" (p. 60) puts Mr. Vincent at variance with the Director of the United States Mint, who, in his report for 1888, made it 68 cents. We are still told of the United States of Colombia; since the reform of the Constitution in 1887–'88, the official title is the Republic of Colombia.

Mr. Vincent indulges in but few political reflections, and those few are enough to convince us of his wisdom in avoiding that sort of thing as a rule. It would be hard to put together in a single paragraph more mistakes in point of fact, and greater futility in point of reasoning, than may be found in the following:

> "The continued revolts and miniature revolutions of the disaffected South American States would soon become less frequent if stern and speedy retribution—such as death by hanging—should be administered to the leaders. But the authorities, instead, treat their distinguished prisoners to champagne and free them on parole. . . . The rebellions never result in any good. . . . The best remedy for these evils would be strong central governments, with sufficient power and inclination to preserve the peace and compel the observance of law and order."

Entirely baseless as well as ill-natured is the remark (p. 441), "The whole genius of the nation [Colombia] seems directed towards civil dissension and guerilla warfare." And Mr. Vincent is on decidedly dangerous ground when he speaks of "the demon of assassination always hovering over" South American Presidents. The retort open to a South American is too obvious, and Mr. Vincent would find it pretty hard to name a republic in South America where two Chief Magistrates had been assassinated within fifteen years.

We should be sorry if our dwelling upon serious defects, as they seem to us, were to result in an injustice to what is in many respects a pleasant and readable book. Its style is unusually simple and straightforward, the printing is remarkably accurate, and the two-score

or more illustrations are refreshingly original for the most part. They are mostly process-work from photographs, and are excellent examples of that class of reproductions. Considered as an old-fashioned book of travels, the volume would have to be regarded as highly successful; it is only in comparison with the better modern methods of doing such writing that it fails.

The Political Problem. By Albert Stickney, author of 'Democratic Government,' etc. Harper & Bros. 1890.

A NEW class of literature relating to this country has arisen within the last ten years. Before that, hardly any writer ventured to come down later than the formation of our Constitution, or to do more than study reverently the motives and intentions of the framers of it. Now one writer after another—James Bryce, Woodrow Wilson, Prof. von Holst, the Duc de Noailles—sets himself to examine the practical and modern working not only of our Federal, but also of our local constitutions and governments. Mr. Albert Stickney now publishes his third work on these subjects, and this is the standard which he sets up, and by which, therefore, he may fairly expect to be judged:

"But if the 'civil-service reform' could be carried out to the letter, in its full length and breadth, it would be a mere drop in the bucket. The results would be too inconsiderable to deserve serious attention. It is wholly inadequate to meet the fundamental existing evils."

"I submit, then that the so-called Australian [ballot] system is fundamentally unsound in principle, is an attempt to deal only with surface symptoms, and should be put in the category of petty political panaceas."

Referring to the plan of giving administrative heads of departments seats in the popular assembly, he says:

"As an ingenious device for wasting human time and human strength, nothing can well be conceived more efficient than this favorite of literary politicians, the asking and answering of questions on the floor of the popular assembly."

As to urging good citizens to give more time to politics, to attend primary meetings and work out reform within the party, Mr. Stickney says:

"But this has often been tried in the past, and has always failed. It will certainly and always fail in the future unless we can find some way by which ordinary men who have to earn their living, can give all their time to politics and yet give all their time to the regular occupation by which they gain their bread."

Discussing the question of longer official terms, he objects to any fixed term, and sums up: "So that a longer term loses the assumed advantages, and keeps the actual disadvantages, of a term that is short."

What, then, are the grand yet simple ideas which are to throw all these weak expedients into the shade? In the first place, Mr. Stickney lays great stress upon the public meeting. He thinks that the citizens of small districts should meet and choose delegates to a larger meeting, which should discuss all subjects intelligently. That may be true, but is it new? Is it not exactly the principle of our present primary meetings, with the resultant of city council, State Legislature, and National Congress? Mr. Stickney's *bête noire*, however, is popular elections at fixed intervals. He thinks that the people have shown themselves unfit to exercise the right, and that men who can get themselves elected are quite unfit for anything else. His idea, therefore, is that a Legislature, having been elected once for all by the people—the actual incumbents would do as well as any others—should have its tenure made permanent, being affected only by death, resignation, or the act of the body itself. It makes one stare and gasp to hear it suggested that the members, say, of the Albany Legislature, would develop into a combination of Solon and Socrates if only their tenure of office could be changed to these conditions.

Passing to the Executive, Mr. Stickney thinks that only one administrative head should be elected, and all other officials be subordinate to him. He thinks, however, that, having been first selected by a popular assembly, elected *ad hoc* (we suppose, after the fashion of Presidential electors), the Executive should hold office till he either dies, or resigns, or is turned out by a two-thirds vote of the permanent Legislature, when his successor is to be elected by another popular assembly. Apparently there is an uneasy consciousness that a permanent Legislature and a permanent Executive would at once begin a course of corrupt intrigue, and that the Legislature, instead of turning a man out and running the risk of a popular election, would use its tremendous power to bend him to its purposes; for Mr. Stickney says: "The purchase of two-thirds of the delegates does not seem very probable if we can depend on the people to select men of integrity. And if we cannot depend upon the people to that extent, then we may as well throw up our hands and abandon the contest." We venture to suggest that perhaps he had better do that now. Suppose an official were to hold for twenty years and then be suddenly ejected by a two-thirds vote; how would a generation wholly unused to such work be set to choose an electoral college? But the working arrangements by which such tremendous changes are to be carried into effect are quite beneath the attention of this writer.

Feeling, again, that the utility of his plans has been hardly demonstrated with mathematical precision, Mr. Stickney urges, with an abundance of italics, that they would at least *have a tendency* to produce good results, that the citizens would have at all events an *opportunity* of choosing good men, and that there is certainly a *possibility* that they might do so. In other words, he wants to make Constitutional changes, compared with which the work of the French Assemblies of 1789–'93 was strictly conservative and in accordance with precedent, upon a bare chance that they would work well.

Perhaps the most curious feature is the argument by which he puts a keystone into a fabric perceived to be somewhat shaky: "Our present position is, that something must be *done*. Whoever objects to what is here proposed can fairly be called on to propose something better." It is the major premise that we should object to. Rather than accept such an alternative, we should say things had much better be left as they are for an indefinite period in the future.

Carlisle. By M. Creighton. [Historic Towns, edited by E. H. Freeman and W. Hunt.] Longmans. 1889. 8vo, pp. x, 215.

THIS volume contains an excellent account of the general history of Carlisle from the earliest times down to the present day. The first ten centuries of its history may be summed up in two or three short sentences. "A few coins, a few altars, and a few pieces of pottery are all that remain to tell us of Roman civilization in the Border town" (p. 14). "About the year 875 they (the Danes) overspread the western district, sacked and burned Caerluel, and left it scarcely inhabitable. For the next two centuries the once stately town, fortress, and monastery alike were laid low" (p. 21). Prof. Creighton's remark concerning Roman remains in Carlisle is true of almost all English towns. Though Carlisle, or Lugubalia, was an important Roman city, Roman civilization exerted no more influence upon its mediæval municipal development than that of other boroughs of England.

The relations of Carlisle to Scotland in the middle ages are interesting, and are clearly stated by the author. Chapter v. is devoted to an account of Border life, for "Carlisle owes its position among English towns not so much to the peculiar features of its own civic history as to the fact that it was the capital of the Borderland, and reflected the characteristics of the Border people" (p. 80). The last chapter gives a good account of the industrial growth of Carlisle from 1747 to 1881.

The weakest portion of the book is that which deals with the municipal history of the town. This is the vulnerable part of most of the volumes in this series; their value would have been greatly enhanced if the growth of municipal government had been more carefully investigated. We are informed that "the government of Carlisle was originally in the hands of the Merchant Guild"; that "the original civic body was the Merchant Guild" (pp. 120,193). "When any corporate act had to be done by the burgesses, it was natural that the Guild brethren should do it in their behalf" (p. 40). The Gild often made itself "responsible for the amount of the town's payment," *i. e.*, the *firma burgi* (p. 40). This last statement is evidently borrowed from Stubbs's 'Constitutional History.' But it is untenable; the Gild Merchant as such had nothing to do with the payment of the fee-farm. Recent investigation has also shown that the Gild Merchant of English boroughs was not identical with the civic governing body, nor coextensive with the whole area of the civic administration. The author also speaks of a series of conflicts between this "aristocratic" Gild Merchant and the eight craft guilds of Carlisle, which resulted in a victory for the latter (pp. 90, 120, 193). The writer does not indicate his authorities for this and his other statements concerning the Gild Merchant; but they are doubtless taken from Ferguson's admirable works on Carlisle. Ferguson errs in exaggerating the influence of the Gild Merchant. This term was not commonly used in the struggle between the civic authorities and crafts of Carlisle. When used, it did not refer to the governing body of the town. The term "Gilda Mercatoria" was clearly applied to the aggregate of the eight crafts in 1681, and probably on other occasions (see Tremaine, 'Placita,' 525).

The author gives some curious data, on pp. 42, 43, concerning the *firma burgi* of Carlisle, so curious and abnormal that one feels inclined to test their correctness. The volumes of this series do not facilitate such tests; there are no footnotes giving the authorities upon which statements of fact are based. Prof. Creighton avoids the common mistake of confusing the annual fee-farm rent with a commutation of taxation or tollage. He clearly shows that *firma burgi* was the commutation of such royal dues as rents for burgage tenements, rents of mills, court perquisites, and the like.

Thiers. By Paul de Rémusat. Translated by Melville B. Anderson. Chicago: A. C. McClurg & Co. 1889. ["Great French Writers" Series].

M. DE RÉMUSAT had a great opportunity and

has entirely missed it. His book on Thiers is a disappointment: he has omitted much that his readers had a right to expect, and he has put in much that no reader will care for. The life of Thiers is a fruitful and tempting subject, and should have been intrusted to more skilful hands. Thiers is himself an interesting and picturesque figure. He was the most brilliant example of that combination of the literary man and the statesman which forms such a striking feature in modern French history. Aside from the interest which attaches to him personally, he was a prominent actor in many of the most stirring events of one of the most stirring periods in the history of the world, and his name is indissolubly connected with the peace of 1871, a transaction almost unparalleled for the enormous concessions exacted by the victor and for the dramatic catastrophe of which it constituted a fitting sequel. Here, then, we have a man who at the age of twenty-six began the publication of a book that was, in its time, regarded as a great public event; who at the age of thirty-three took a prominent part in ousting one dynasty and installing another; who at the age of seventy-four saved his country from annihilation and brought order out of chaos; who for nearly half a century led a busy life as one of the most eminent writers, orators, and statesmen of his day; and, finally, of whom no adequate and authoritative biography has as yet appeared. What greater good fortune could befall any literary man than to be asked to prepare such a biography?

How M. de Rémusat has acquitted himself of the task will sufficiently appear when it is stated that of the personal history of Thiers he gives fewer details than can be found in the most meagre encyclopædia article; Vapereau's account is far more complete. Eight lines cover all that M. de Rémusat has to say about Thiers's birth, boyhood, and education; there is not a word about his parentage or domestic surroundings; the reader can go through the whole book without finding out whether Thiers was married or not, except that, incidentally, thirteen pages from the end, his wife is just mentioned; there is no bibliographical information at all about his two great works, their reception by the public, their translation into foreign languages, their relative rank in French literature according to the opinion of competent judges; some of the books he wrote are not even mentioned by name.

M. de Rémusat's whole method foredoomed his book to be a failure. The method he should have pursued was plainly marked out by his subject. In the first place, he was writing one of a series of literary monographs, and that in itself required that he should give to the literary side of Thiers as great a prominence as the facts permitted; secondly, there are certain well-defined divisions in the life of Thiers which almost predetermined the lines on which his biography should be laid out. There was, first, his career previous to his entrance on active political life; this should have embraced an account of his youth and schooling, of his beginnings as a journalist, the publication of his 'Revolution,' and the founding of the newspaper, *Le National*, in conjunction with Mignet and Armand Carrel. The second period extends from 1830 to 1840, when he took an important part in the Government of France, holding office with frequent interruptions, and finally giving way to his rival, Guizot, and returning to his literary pursuits. The third period would embrace the composition and publication of his 'Consulat et Empire,' with occasional participation in politics, and might extend to 1870. The fourth and closing period would recount his last years, and the signal service he rendered his distracted country at a time of life when most men think themselves entitled to rest on their laurels.

Instead of pursuing this obvious course, M. de Rémusat calls his chapters The Restoration, The July Government, The Third Republic, etc., as if he were writing a history of France, with incidental reference to Thiers, and treats us to page after page of superfluous disquisitions on politics which have no interest whatever, and no more connection with the career of Thiers than the Darwinian theory. For example, there is chapter iv., on The Empire from 1851 to 1863, in which, after some particularly flat observations on Napoleon III., the author naïvely tells us that "during the first epoch of the Empire Thiers took no part in politics." He might have told us that at once and spared us all the rest. A few pages further on he says that "Thiers's best diversion during these years was the completion of his 'History of the Consulate and the Empire.'" This is his first mention of the work, although twelve volumes of it had appeared before the *Coup d'État*. The manner of the book is no more fortunate than its matter; but perhaps that is the fault of the translator. If the translator has done any wrong to his author in this respect, he is still entitled to the gratitude of the reader for his elision of several superfluous passages, and would have done well if he had taken more such liberties with the text.

Modern Horsemanship: Three Schools of Riding. Original Method of Teaching the Art by Means of Pictures from Life. By Edward L. Anderson. Illustrated by forty moment photographs. A new edition, rewritten and rearranged. Pp. 164, xiii. Edinburgh: David Douglas; New York: G. P. Putnam's Sons. 1889.

It was a happy thought of Mr. Anderson to make use of instantaneous photographs as a means of conveying to the novice in horsemanship the simple but otherwise indescribable details of that art. This task he has well accomplished in this second edition of his excellent treatise. He is equally happy in his plan of giving a large part of the instruction which he seeks to impart in the form of instruction concerning the ways in which a horse should be broken to the saddle and trained to obey the will of the rider. No horseman ever attains a full measure of skill who has not successfully essayed this task of the instructor. In no other way can he become well acquainted with the peculiar limitations of the equine mind, or gain the sympathy with his horse which is the foundation of equestrian skill.

Mr. Anderson is perhaps the first of the writers on this subject to recognize the fact that systematic gymnastic training is necessary to fit the horse to do the peculiar and essentially unnatural tasks which the burthen and the behests of the rider impose upon him. He therefore gives considerable attention to the series of movements which seem to him desirable steps towards this end. This important part of the work might have been better accomplished if the exercises had been planned on a careful study of the internal anatomy of the horse. Though purely empirical, they rest on much experience and close observation, and therefore are likely to secure the desired result. These studies in equine gymnastics have the conspicuous merit that they point the way to better work in the same direction. If our author or any of his followers will use careful measurements to determine the effects of particular exercises in increasing the muscular development of horses, or the influence of such training in affecting the quality of their movements, we may secure a firm basis on which to found a rational system of educating these creatures for saddle use.

Among the many good, because eminently practical, points of this essay, we may commend Mr. Anderson's clear statements concerning the evils which arise from allowing a horse to form the habit of getting "behind the hand," and the careful directions concerning the process of leaping over an obstacle. Attention to these points will save the young horseman from the most serious dangers he may encounter from ill-trained horses or rough cross-country riding. By far the greater part of the mischances which befall fairly good horsemen arise from the one or the other of these conditions.

This work is intended for beginners, and is calculated to be of much service to them, but it would have been far more useful to such persons if pains had been taken to define the many terms which constitute the *argot* of the horse-trainer. As it is, the novice is sure to find trouble in deriving definitions from the context. In the next edition of the work (it deserves many) there should be a glossary of such terms, or each of them should be carefully explained in a foot-note. The volume is a handsome specimen of the book-maker's art; the print is admirable, the heliotype illustrations very good. There is, however, no index, and the table of contents is insufficient.

Latin Hymn-Writers and Their Hymns. By the late Samuel W. Duffield. Edited and completed by R. E. Thompson, D.D. Funk & Wagnalls.

Hymns, as produced under the action of devotional rather than literary motives, have but a doubtful literary standing. Those who write them, and in humbler degree those who collate or study them, find their reward in the edification of the Church; and the Church is seldom severely critical. Therefore hymnology is an obscure and little regarded field. The term, indeed, is dubiously and variously defined, and (in its more exact definition) the thing has come into being within the last generation or so. The Latin hymns present a partial exception, for such light as they contain shines through the darkness of a remote past, and several of them are admitted to be poetry. In the Middle Ages, literature was nothing if not theological; human powers, when not absorbed in statecraft, found their stimulus and vent in religion. Thus hymn-making received a share of attention from the best talents as well as the finest spirits. English hymnody, though it began so late and attracted a narrower circle, is far more voluminous; in part because education was more general and the printing-press at hand, in part because the chaff has not yet had time to be thoroughly sifted from the wheat. Of this latter the materials are much greater than is usually supposed. Taking the two together, none but a bold man would attempt to be the chronicler of both.

This boldness Mr. Duffield possessed. Tempted from his true path by the supposed comparative smoothness, brevity, and popularity of one nearer at hand, he bestowed two years' leisure on a subject to which slower and less ambitious students had given their lives, and produced in 1886 a stout octavo on 'English Hymns, their Authors, and History.' As the largest and most pretentious of American publications on this topic, it was accepted by some as an authority. But it contained many blunders and little original research; it freely "con-

veyed" the labors and occasionally the language of predecessors (eminently the late Josiah Miller), who were seldom mentioned except to point out their defects and errors, real or imaginary; the tone even towards hymn-writers was in some cases needlessly carping, as when Mrs. Rowe was twice accused of having "jilted" Dr. Watts—a thing the good woman neither did nor dreamed of; there was too much assumption of being first in a field wherein Mr. Duffield was in reality a late comer, and of having mastered an array of facts with which he was but imperfectly acquainted.

This posthumous book is another affair. With the Latin writers Mr. Duffield was on ground which he had made his own; there was no need to depend on the labors of others, and then to disguise the fact. The subject-matter, being in a "dead" language, may claim a certain historic dignity; credit for some learning could be won, and the attention invited of scholars who care nothing for hymns in the vernacular. In this narrower range of more recondite and picturesque material the author had made real studies of his own, and the result is that his chapters are both pleasanter and more instructive reading than those on Watts, Wesley, and their followers. Some minor writers, the Breviaries, etc., which Mr. Duffield failed to handle, have been dealt with in a careful and competent, if less vivacious, manner, by his editor, who is responsible for full a third of the book.

The Life of Richard Steele: By George A. Aitken. 2 vols. Boston: Houghton, Mifflin & Co. 1889.

THESE two handsome volumes, with several admirable portraits, are the fruits of a long and laborious study of Steele's life, largely from original and untouched sources, and the narrative consequently gathers up all that has hitherto been known and adds much to our previous information. The author's work has been directed necessarily to detail; he has sifted and verified with untiring industry; and if to have made a full and faithful account of Steele and all his family, and to have thrown light on imperfectly known though not intrinsically important transactions, is success, he is rewarded. Steele's life has been written in the form of literary sketches, with some imaginative filling-up, several times; but there has been no attempt at a standard and complete biography like this. The principal addition to the old matter consists of some minor but interesting discoveries, such as the name of his first wife, the widow from Barbados, which was Margaret Stretch, and the clue thus afforded leads to a disentanglement of his business affairs with regard to the Barbados property; and, secondly, the thorough search which the author has made of court records, spreads before us the details of those business troubles which perpetually harassed the too generous and profuse writer. Such subjects occupy a large portion of the volumes; but the literary relations of Steele, his differences with Swift, his obligations, real or unreal, to Harley, his entire political and theatrical career, are not neglected; everything is included that could possibly come within the interest of the reader, and among the rest particularly noticeable is a better account of his acquaintance with Berkeley. The matter, however, is mainly matter of fact rather than of literature. The reputation of Steele is not really affected, as a writer, by anything in the volumes. The gain lies rather in our possession of a solid basis of fact for our estimate of the man, such as to make antiquated both Thackeray's and Macaulay's delineations of his personality. The calmer view of Forster is the one sustained by the evidence, and though Steele still appears as a much troubled man, he comes out with credit and with his old attractions of generosity, humanity, and humbleness undiminished.

HENRY HOLT & CO., Publishers, New York.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

DAVIS' DIAMOND HAMS.
CINCINNATI.
Read Circulars How to Cook Them.

WHY waste time and means in devising ways to stop fires, when it is in your power to prevent them? The terrible bereavement that has come to the household of Secretary Tracy is only another instance of the lack of prevention. Why use inflammable paints, when Pyrodene Paint, produced in all colors, can be applied at no greater cost than lead, and its covering capacity 30 per cent. more?

The awful calamity that has come upon Secretary Tracy's family moves every one to ask what is to prevent a like calamity in any household in the land. Only a few can build fire-proof houses to live in. Hardly anybody ever does build such houses. On the contrary, the fashion is to build with the greatest amount of woodwork, and oil, and varnish, so that when the flames get hold of the structure they spread with the utmost rapidity. In this case it appears that the house servants, or some of them, were about their work while the fire was licking up the polished wainscotting of the parlor and stairway, all unmindful of what was going on, and that when they perceived the fire it was too late to save the lives of those who were still sleeping. Slow-burning construction has been applied to factories without much addition to their cost. Ought not this calamity to teach the guild of architects how to apply slow-burning construction to private houses? If it does not have that effect, it will be a costly lesson that brings no return. —*The Nation, February 6.*

Pyrodene Liquid, non-poisonous and containing no deleterious substance as silicate of soda, first applied to the woodwork prevents dry rot, and then painted over with Pyrodene Paint, and the two combined render the same perfectly uninflammable. Save your property and lives from destruction by painting your houses with Pyrodene Liquid and Paint, manufactured and for sale by the American Aquol and Pyrodene Paint Co., 422, 424, 426 West 15th St., New York City, where testimonials can be obtained and tests shown to prove its efficacy. Call and examine.

Standard Books for Teachers and Students.

FRENCH CLASSICS.

Vol. I. Tableaux de la Revolution FRANÇAISE. Edited for the use of Students in French, with explanatory and critical notes, by Professor T. F. Crane, Professor of the Romance Languages in Cornell University, with an introduction by President A. D. White. 16mo, $1.50.

Vol. II. Le Romantisme Francaise. A selection from the writers of the French Romantic School—1824–1848. Edited, with introduction and notes, by T. F. Crane. 16mo, pp. xlviii. + 412. $1.50.

Vol. III. La Societe Francaise AU DIX-SEPTIÈME SIÈCLE. An Account of French Society in the XVIIth Century in its Relations to the Literature of the Period. Edited, with introduction, bibliography, and notes, by T. F. Crane.

"By publishing such books you are putting lovers of French and French literature under lasting obligation to you."—*Eugene W. Manning, Instructor in Romance Languages, Cornell University.*

"To advanced students and to thoughtful readers in general, I regard these works as specially valuable."—*Prof. T. L. Angell, Bates College.*

GERMAN CLASSICS.

Edited by JAMES MORGAN HART, LL.D.

I.—GOETHE'S HERMANN AND DOROTHEA. $1.00.

II.—SCHILLER'S DIE PICCOLOMINI. With Map. $1.00.

III.—A SELECTION FROM THE PROSE WORKS OF GOETHE. $1.00.

IV.—GOETHE'S FAUST. Part I. $1.00.

School editions of the above, bound in paper covers, per volume, 60 cents.

V.—A SELECTION FROM THE PROSE WORKS OF SCHILLER. Edited by Pauline Buchheim. $1.00.

VI.—SELECTIONS FROM THE PROSE WORKS OF LESSING. Edited by Horatio S. White. $1.00.

"The only properly edited German Texts yet issued for the use of students."—*Prof Willard Fiske, Cornell University.*

"I can speak of these volumes with unmingled praise."—*Prof. A. H. Mixer, Rochester University.*

A Reader of German Literature. Planned for Students in High Schools and Colleges. By W. H. Rosenstengel, Professor of German in the University of Wisconsin. 12mo, cloth, $1.50.

"Comes to fill a want which I have long felt. I shall use it with my higher class to illustrate my lectures on German literature, covering, as it does, the whole ground, with biographical sketches and illustrative passages."—*W. H. Appleton, Professor Greek and German, Swarthmore College, Pa.*

STORY OF THE NATIONS SERIES.

Volumes in Use as Text-Books.

Each complete in one volume, fully illustrated and beautifully printed. Price, $1.50.

The Story of Ancient Egypt. By Prof. George Rawlinson. Fully illustrated.

The Story of Greece. By Prof. Jas. A. Harrison.

The Story of Rome. By Arthur Gilman, author of 'A History of the United States.'

The Story of Carthage. By Prof. Alfred J. Church.

The Story of Chaldea. By Z. A. Ragozin. With eighty illustrations and maps.

The Story of Assyria. By Z. A. Ragozin. Fully illustrated.

The Story of Germany. By S. Baring-Gould. Profusely illustrated.

The Story of Early Britain. By Alfred J. Church.

"This series is incomparable in instructive value to students and general readers, and, in addition, is unequalled in the standard character of some of its issues."—*Boston Globe.*

"A clear, rapid, and entertaining account of the principal nations of the ancient and modern world."—*N. Y. Tribune.*

POLITICAL AND ECONOMIC SCIENCE.

The Student's History of the ENGLISH PARLIAMENT, in its transformations through a thousand years, being a popular account of the growth and development of the English Constitution from 800 to 1887. By Rudolph Gneist, Professor of Constitutional Law in the University of Berlin. For this edition an entirely new translation has been made by Prof. A. H. Keane, B.A., F.R.G.S., Vice-President of the Anthropological Institute. The work is fully indexed, and has been revised as to many important details. Octavo, pp. xxix. + 462. $3.00.

"Prof. Keane's work has been admirably done, and he has rendered a public service in giving us this valuable German work on our constitutional history in pure and vigorous English."—*Scotsman.*

Principles of Procedure in DeLIBERATIVE BODIES. By George C. Crocker, President Massachusetts Senate in 1883. 16mo, pp. vi. + 167, 75 cents.

"The simple fact that this volume was prepared by Mr. Crocker is a sufficient guarantee of its practical merits. I have looked through its pages and am more than convinced that he has a judicial mind, that he has a thorough knowledge of parliamentary laws, and that a book of this kind from his hand is well calculated to supersede all other works which treat of this subject."—*Hon. Henry B. Peirce.*

The Constitutional History of the UNITED STATES AS SEEN IN THE DEVELOPMENT OF AMERICAN LAW. Comprising a course of Lectures Delivered before the Political Science Association of the University of Michigan, with an Introduction by Prof. Henry Wade Rogers, Dean of the Law School of the University of Michigan. Octavo, cloth extra, $2.00.

Contents.—The Federal Judiciary: Its Place in the American Political System, by Thomas M. Cooley, LL.D.—Constitutional Development in the United States as Influenced by Chief-Justice Marshall, by Henry Hitchcock, LL.D.—Constitutional Development in the United States as Influenced by Chief-Justice Taney, by Geo. W. Biddle, LL.D.—Constitutional Development in the United States as Influenced by the Decisions of the Supreme Court, by Chas. A. Kent, A.M.—The State Judiciary: Its Place in the American Political System, by Daniel H. Chamberlain, LL.D.

"While entertaining and instructive to the intelligent popular readers, the work will be especially attractive to all students of constitutional history."—*Philadelphia Times.*

The Constitutional History and POLITICAL DEVELOPMENT OF THE UNITED STATES. By Simon Sterne of the New York Bar. An Analytical Study. Fourth edition, revised with additions. Pp. xx + 361. $1.25.

"A volume that will be prized by every conscientious student of political history."—*Evening Wisconsin.*

G. P. PUTNAM'S SONS, 27 and 29 West 23d St., New York.

104 and 106 Fourth Ave., New York.

Charles Scribner's Sons'

NEW BOOKS:

History of the United States.

By HENRY ADAMS. Vols. I. and II. FIRST ADMINISTRATION OF THOMAS JEFFERSON. 12mo, $4.00. Vols. III. and IV. SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"In the third and fourth volumes the admirable qualities become more and more apparent. Prominent among these is the remarkable combination of condensation with interest and vivacity. Mr. Adams's thorough and captivating work is full of nervous life. We should be inclined to call this the best book which has yet been written upon American political history. In point of literary execution Mr. Adams is easily the best of our political historians."—*N. Y. Times.*

The Poetry of Tennyson.

By Henry Van Dyke, D.D. 12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. The author's fine training in art criticism and literary scholarship have well equipped him for the work. We owe him a debt of thanks for giving us this estimate, so careful, so scholarly, so full of true devotion to poetry in its largest meaning."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

Among Cannibals.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By Carl Lumholtz. With over 100 Illustrations. 8vo, $5.00.

"His observations are interesting, and he has a very pleasant and modest style of narrative, so that the book is as agreeable as it is instructive; in short, it is one of the most complete of its kind in all respects, and a worthy record of steadfast enterprise."—*The London Spectator.*

NEW AND CHEAPER EDITION.

Down the Islands.

A VOYAGE TO THE CARIBBEES.

By William Agnew Paton. Beautifully illustrated. Square 8vo, $2.50.

"An exceedingly entertaining book of travels. Mr. Paton relates what he has seen in the Windward Islands, from St. Kitts to Trinidad, and with this he interweaves a vast amount of official and historical information. The story is highly romantic."—*Boston Beacon.*

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By N. S. Shaler, Professor of Geology at Harvard. With 100 illustrations. 8vo, $4.00.

"Few books are so well calculated to arouse interest in, and to develop intelligent observation of the world around us. Such chapters can only be written by a man who is at once a profound student and a successful teacher. Of their many merits, the chief one is their absolute clearness."—*Christian Union.*

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS.

743 745 Broadway, New York.

SCRIBNER & WELFORD'S NEW BOOKS.

NOW PUBLISHED FOR THE FIRST TIME.

The Early Diary of Frances Burney, 1768-1778.

With a selection from her Correspondence and from the Journals of her Sisters, Susan and Charlotte Burney. Edited by Annie Raine Ellis. 2 vols., demy 8vo, $12.00.

This is believed to be the only published, perhaps the only existing, record of the life of an English girl, written by herself, in a century before that which is now in its wane. Such a portrayal of a young English woman and her times would be interesting even if the girl had not been (as was this one) a born author, who lived among men and women more or less distinguished, herself became famous, and was admired by the admired, as well as praised by the common voice.

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. Seeley, author of 'Horace Walpole and his World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

In Tennyson Land:

Being a Brief Account of the Home and Early Surroundings of the Poet Laureate, and an Attempt to Identify the Scenes and Trace the Influences of Lincolnshire in his Works. By J. Cuming Walters. With 12 Illustrations by F. G. Kitton, by drawings from photographs and sketches taken especially for the author. The pictures include representations of Somersby Rectory, The Moated Grange, The Brook, The Mill, Louth Grammar School, Tennyson's Birthplace. Demy 8vo, white cloth, gilt, $1.75.

The Marriages of the Bourbons.

By Captain, the Hon. D. Bingham. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

The First of the Bourbons, 1595--1610.

By Catherine Charlotte Lady Jackson, author of 'Old Paris,' 'The Old Régime,' 'Court of Louis XVI.,' 'Court of the Tuileries,' etc. In 2 vols., crown 8vo, cloth extra, $9.00.

Baedeker's European Guide Books.

Sole Agency for the United States.

Latest Editions always on hand, and mailed to any address on receipt of price. Illustrated with numerous Maps, Plans, Panoramas, and Views. 12mo, cloth, namely:

PUBLISH THIS WEEK:

I.

Evolution of Man and Christianity.

By the Rev. HOWARD MACQUEARY. 12mo, cloth. Price $1.75.

"There can be no doubt," says Prof. Le Conte, "that we are on the eve of the greatest change in the views that has taken place since the birth of Christianity. This change means not a ready-made set of details only, but a *reconstruction of Christian theology.*" It is because I am firmly convinced of the truth of these profound words that I have written this book. Evolution is "in the air," and its fundamental tenets are being accepted (perhaps unconsciously) by all classes of minds. It behooves us, then, as religious teachers to recognize this fact, and adjust our theology accordingly.—*From the Preface.*

II.

Hygiene for Childhood.

SUGGESTIONS FOR THE CARE OF CHILDREN AFTER THE PERIOD OF INFANCY TO COMPLETION OF PUBERTY. By FRANCIS H. RANKIN, M. D., President of the Newport Medical Society. 12mo, cloth. Price, 75 cents.

III.

Robert Browning's Principal Shorter Poems.

APPLETON'S TOWN AND COUNTRY LIBRARY. 12mo, paper cover. Price, 50 cents.

Browning was so voluminous a writer that his complete works are practically inaccessible to many readers. The present collection includes everything by which he is best known, except the dramas and very long poems.

IV.

The Dominant Seventh.

A MUSICAL STORY. By KATE ELIZABETH CLARK. 12mo, half cloth. Price 50 cents.

A novelette by a young author whose first effort is marked by a charm and grace that commend it to all readers of taste.

For sale by all booksellers; or sent by mail on receipt of price.

AN IMPORTANT BOOK.

Ethical Religion.

By W. M. SALTER. 1 vol., 16mo, cloth, price $1.50.

The Breslau *Times* says: "The peculiarity and novelty of his teaching are found in his wider conception of duty, and the comprehensive manner in which the duties to our fellow-men, after those due to our own personality, the family and the State, are unfolded and enforced."

"He is a man of eloquence and earnestness, as these discourses show."—*American (Philadelphia).*

"The book furnishes new and beautiful proof that not only dollars, but ideas, are powerful in America."—*Vossische Zeitung (Berlin).*

"A truly noble book."—*John W. Chadwick, in Christian Register.*

"On its affirmative side, where it deals with civic, social, personal duty, Mr. Salter's book is consoling and inspiring."—*W. D. Howells, in Harper's Monthly.*

"As a whole, Mr. Salter's chapters evince fairness and moderation. He seems to write with conscientiousness and in a philosophic vein, and not with the dogmatic and confident air that is so common with authors of his school."—*Chicago Tribune.*

"He is so plainly desirous of finding the truth, and so free from any intentional irreverence, that conservative evangelical believers hardly will object to his spirit."—*Congregationalist.*

Sold everywhere by all booksellers and newsdealers. Mailed, post-paid, on receipt of price, by the publishers.

ROBERTS BROTHERS,
BOSTON.

The Bermuda Islands.

The Scenery, Physical History, and Zoölogy of the Somers Archipelago. By Prof. Angelo Heilprin, F.G.S.A., F.A. Geogr. Soc., etc. Large 8vo, cloth, 19 Plates. Price $3.50.

"A disciple of Darwin, Prof. Heilprin attacks the problem of the formation of the Bermudan rock; and rarely does one find so charming a combination of rhetoric and science. . . . With this volume for a field-book, one with even the rudiments of delight in the miracles of continuous crea ion could spend a happy season in this summer land."—*The Critic.*

". . . Two of the most important of scientific questions of the day are discussed in a manner charmingly clear and simple."—*Christian Union,*

". . . The whole discussion, together with the critical notices in the appendix, is full of interest."—*N. Y. Tribune.*

Sent, postpaid, on receipt of price.

ACADEMY OF NATURAL SCIENCES
of Philadelphia, or all booksellers.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

HENRY VAN KLEECK,
Successor to Bishop, Gorham & Van Kleeck,
DENVER, COLORADO.

INVESTMENTS AND LOANS.

Money loaned on real estate security, interest collected, investments made and managed for Eastern investors in Colorado and the West.

Reference—James M. McLean, Pres. Man. Life Ins. Co., New York; Edward C. Perkins, Boston; W. S. Jackson, Colorado Springs, and the Banks of Denver.

CATALOGUES ISSUED of Books in good condition. Books purchased.
E. W. JOHNSON, 1336 Broadway.

"They bristle with thought and sparkle with wit."

ORATIONS AND AFTER-DINNER SPEECHES

OF

CHAUNCEY M. DEPEW.

One octavo volume, with portrait. Price $2.50.

Edition de Luxe. Autograph Edition. Limited to one hundred (100) numbered copies, signed by the author, with two portraits, and bound in half leather. Price, $6.00.

STAR-LAND.

Being Talks about the Wonders of the Heavens. By Sir Robert S. Ball, F.R.S., Royal Astronomer of Ireland, author of 'Story of the Heavens,' etc. 12mo, cloth, very fully illustrated. Price $2.00.

104 and 106 Fourth Ave., New York.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.

NOW READY:

Thomas Jefferson's Views on PUBLIC EDUCATION. By John C. Henderson. 8vo, cloth, $1.75.

"The volume gives an idea of what, in the best and in the truest sense of the term, 'Jeffersonian principles' demand that American statesmanship shall do in respect to duly cherishing the interests of learning in all parts of the Republic of the United States."—*Extract from Author's Preface.*

The Boyhood and Youth of GOETHE. Comprising the first eleven books of his Autobiography (Truth and Poetry from my own Life). (Being No. XXVII in the Knickerbocker Nugget series.) 2 vols., $2.00.

Sesame and Lilies. By John Ruskin. (Being No. XXV in the Knickerbocker Nuggets series. $1.00.

"It abounds in some of the choicest thoughts of a master mind, inspiring and ennobling, which are fitly framed in the dainty volume at hand."—*Boston Times.*

Health Notes for Students. By Burt G. Wilder, M.D., Professor of Physiology, Cornell University and the Medical School of Maine. New edition, revised and enlarged. Paper, 20 cents.

"Its attentive perusal would prolong the life and preserve the health of many a young man, be he student or no student."—*Phila. Inquirer.*

A Far Look Ahead; or, The Diothas. 16mo, paper, 50 cents.

"The book is devoted to customs, habits, and love in the misty future, and for pure, genuine imagination most charmingly worked out, is unexcelled."—*Boston Evening Transcript.*

Six to One. By Edward Bellamy, author of 'Looking Backward,' etc. 16mo, new and revised edition, paper, 35 cents.

"Humor is not the only quality of this little gem of a story, but it is that for which the reader feels most grateful; it is so quaint, so odd, so indefinable, of a sort which is thoroughly individual and independent of opinion."—*London Spectator.*

A Midsummer Drive Through the PYRENEES. By Edwin Asa Dix, M.A., ex-Fellow in History of the College of New Jersey. 12mo, cloth extra, illustrated, gilt top, rough edges, $1.75.

"Seldom does a book of travel come to our table which is so much like a trip itself as this one is. Upon closing the last leaf we feel as if we had been with the writer."—*Public Opinion.*

The Industrial Progress of the NATION; Consumption Limited, Production Unlimited. By Edward Atkinson, author of 'The Distribution of Products,' etc. 8vo, cloth, $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

Railway Secrecy and Trusts. Their relation to Inter-State Legislation, an analysis of the chief evils of Railway Management in the United States, and influence of existing legislation upon these evils, and suggestions for their reform. By John M. Bonham, author of 'Industrial Liberty.' (No. LXI. in the "Questions of the Day Series.") Octavo, cloth, $1.00.

"A valuable contribution to the discussion of the railway problem."—*Freeport Journal.*

Liberty and a Living. How to Get Bread and Butter, Sunshine and Health, Leisure and Books, without Slaving away One's Life. By P. G. Hubert, jr. 16mo, cloth, with frontispiece, $1.00.

"It is decidedly well written, with a good deal of dry, sometimes caustic, humor and a half-satirical shrewdness of penetration."—*Chicago Times.*

*** *Putnam's List of Recent Publications will be forwarded free to any address.*

T. Y. Crowell & Co.

Have ready new editions of the following important publications:

Convenient Houses.

By Louis H. Gibson, Architect; containing a great variety of plans, photographic designs, and artistic exteriors and interiors of Ideal Homes, ranging in cost from $1,000 to $10,000. 8vo, $2.50.

This volume offers a practical solution of the vexed question of combining beauty with convenience in low-cost dwellings. It is a perfect revelation of what can be done at small expense.

Social Aspects of Christianity.

By Professor Richard T. Ely of Johns Hopkins University. 12mo, $0.90.

Professor Ely has no respect for shams; he shows what Christian socialism is, and how wide the gulf is between the professed Christianity of many churches and the Christianity of the Gospel.

Metzerott, Shoemaker.

A powerful novel, by an anonymous writer. 12mo, $1.50.

One of the brightest books yet published on the Socialistic question. It has a definite purpose; it is practical, and at the same time it is a captivating story of real life.

Jed: A Boy's Adventures in the Army of '61.

(*Sixth Thousand.*)

By Warren Lee Goss; author of "Recollections of a Private," etc. 12mo, $1.50.

This is pronounced by competent judges to be "the best war story for boys ever written." The author was present during some of the most thrilling events of the Rebellion; he was a prisoner at Andersonville, and he writes with a vividness unexcelled.

The Rollo Books.

By Jacob Abbott, "The Prince of Writers for the Young." 14 vols. in 7. $8.75.

Although written half a century ago, the "Rollo Books" still retain all their freshness and popularity, and stand in the front rank of books for the young.

T. Y. CROWELL & CO.,

13 Astor Place, New York.

$2,250

Nos. 2–7 in one order, $2.00.

Address, EDMUND J. JAMES,
University of Pennsylvania, Philadelphia.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 20, 1890.

The Week.

THE House has adopted the rules reported by the Committee, by a strict party vote. The only important changes are the bestowal on the Speaker of the power to have members put on the journal as present whom he sees in the House, for the purpose of forming a quorum, and of the power to refuse to put "dilatory motions"—that is, motions which he deems offered merely for purposes of delay. He has already shown by his behavior in the late crisis the use he is capable of making of these powers. At all events, under them he can make filibustering impossible, and the majority will have power to push through all the wild schemes which are now stewing in their brains, most of them simply undisguised attacks on the taxpayers. The consoling feature of the situation is, that there will be no difficulty in fixing the responsibility for whatever is done. Neither party has ever had the House so completely under its control as the Republicans have the present one. Changes in the procedure, with the view of facilitating the despatch of business and putting down factious obstruction, may be necessary, but all such changes as those which have been just made increasing the Speaker's powers, in order not to be dangerous, should involve also a change in the manner of filling his office. They demand his complete dissociation from party leadership and from partisanship in every form, and the surrounding of the Chair with a thoroughly judicial atmosphere. Consequently, they make the appearance in it clothed with these extraordinary powers, of a man who has made such an exhibition of violence and unscrupulousness as Mr. Reed has made during the past few weeks, an absurdity as well as an outrage. The only defence the minority has against such a Speaker, under the new rules, is the certainty that their turn will come some day, and their Speaker will then be able to pay off all scores. But the spectacle of a great deliberative body governing its procedure by the *lex talionis* is a very sorry one. The Republican notion of what constitutes fairness in such procedure was well illustrated in the debate on Friday by some remarks of Mr. Grosvenor, a prominent Republican member from Ohio, who was accused of having filibustered two years ago against the Democratic proposal to tack on an appropriation *ad hoc* to every bill granting a pension or increasing one. "Yes," said he; "but when hostility to the old veterans was rife, filibustering was patriotism." In other words, it is right to filibuster for your own purposes, but wrong for any other man to filibuster for his.

A fresh illustration of the drift towards centralization in the Republican party is furnished by the introduction in Congress of a bill forbidding any State to make any changes in the Congressional districts now existing until after the next census has been taken. The present apportionment in Ohio, made by a Republican Legislature a few years ago, enabled the Republicans in 1888 to elect sixteen out of the twenty-one Representatives in Congress from that State, although the Democrats polled nearly half the votes. The Democrats now control the Legislature, and have been talking about turning the tables by gerrymandering the State so that their party may get sixteen of the twenty-one Representatives next time, and the proposed law of Congress is intended to block this scheme. No such attempt at interference in the States has ever been made by Congress before, and it is obviously opposed to the spirit of the Constitution, even if it is permitted by its letter. We note with surprise and pleasure that the Indianapolis *Journal*, thorough-going Republican organ that it is, condemns the project as "a measure of doubtful constitutionality and wisdom." It says that "this looks like an attempt at arbitrary restriction of the right of a State to redistrict, and the more so because the Ohio Legislature is now proposing to do so. Ohio redistricts every four years, and we understand this is her regular year for doing so. It may be the regular year for several other States. For Congress to override the districting laws of these States for no other purpose, apparently, than to prevent a threatened gerrymander in one of them, would be an act of very doubtful wisdom, to say the least."

The intention of a certain number of scurvy politicians to kill the Civil-Service Law by withholding the appropriation needed by the Commissioners to carry out its provisions has been boldly announced. The amount needed to execute the law, since the Railway Mail Service has been brought under it, is about $75,000. Every vote against this appropriation or in favor of cutting it down will be the vote of a coward, like Senator Farwell of Illinois, who said that he and his kind would defeat the law in that way, as they had done once before. Meanwhile, Senators are passing bills that "have money in them" with marked liberality towards each other. On Feb. 11 Senator Allison wanted a couple of bills put through for public buildings at Sioux City and Cedar Rapids, one for $500,000 and the other for $200,000, intended undoubtedly to facilitate his own reëlection; and those bills were put through without debate, as though the Senate were issuing passes and marking them "Complimentary." That the rest of them will want passes and will get them may be inferred from the fact that Senator Stanford on the same day reported from the Committee on Public Buildings and Grounds bills for nineteen new buildings at various small towns like Sterling, Ill., Reno, Nev., Pawtucket, R. I., Hastings, Neb., Stillwater, Minn., etc., the total for which is $3,045,000. This, however, is only an instalment, a beginning, as it were. There is some danger that the industry of Mr. Stanford's committee will leave little room for the energy of the Committees on Pensions, on Rivers and Harbors, and on Steamship Subsidies.

A list of these passes issued or to be issued by the Senate to its own members will no doubt be interesting to the public. They are as follows:

Complimentary	To Senators
Oakland, Cal., Stockton, Cal., San Diego, Cal.,	Stanford.
Sterling, Ill.	Farwell.
Chester, Pa.	Cameron.
Portland, Ore., The Dalles, Ore.,	Mitchell.
Virginia City, Nev., Reno, Nev.,	Jones.
Burlington, Iowa, Sioux City, Iowa, Cedar Rapids, Iowa,	Allison.

The terms of all these Senators expire in 1891, and it is well to have their passes issued immediately. The term of Senator Aldrich of Rhode Island does not expire till 1893, but he has two compliments in the list in the way of public buildings at Pawtucket and Woonsocket.

The Union Pacific Funding Bill was defeated in the last Congress by filibustering on the part of a select body of Representatives led by two Republican members, Anderson of Kansas and Payson of Illinois. It is believed that the new rules of the House, under the keen discernment of Speaker Reed, will be effective in choking off these gentlemen and passing the bill. It is surmised by some that the new rules were designed more especially for this purpose than for the punishment of the Democratic minority. The Union Pacific Funding Bill ought to have passed last year. In its new form, as reported by Senator Frye, it is a proper and meritorious measure. But any enlargement of the Speaker's authority in the way of "counting a quorum," or of deciding what is a dilatory motion, will be equally available to pass any other bill that has "funding" of one kind or another for its motive-power. Therefore all such measures become doubly dangerous, and should be more closely scanned than ever. So far as the Union Pacific is concerned, the facts were so fully set forth in the report of the majority of the Commission appointed by President Cleveland, consisting of Messrs. E. Ellery Anderson and David T. Littler, that nothing can now be added. The recommendation was that the Government should extend the debt for a period of fifty years at 3 per cent. interest, and take a lien on all the property, including the branch lines, as security. The alternative to this would seem to be the taking of the road itself a few years hence and operating it on Government account without being able to control the branch

lines. We have not heard that anybody is in favor of that.

The sugar question, as it stands related to the tariff, is reaching an acute stage. The Republican politicians are strongly moved to repeal the duties on raw sugar, because that step would alone dispose of the Treasury surplus, and, in their opinion, would render unnecessary, if not impossible, any further reductions of the tariff. But the admission of raw sugar free would not cheapen sugar to the consumer very much unless the duty on refined were repealed also. To repeal all duties on sugar, both raw and refined, would attack the sacred principle of protection, and also violate the $100,000 bargain with the Sugar Trust, supposing such a bargain to have been made. Moreover, the beet and sorghum-growers in California and Kansas are apt to get into an ugly mood if their whack at the sugar market is disturbed. To placate them, a bounty of two cents per pound, payable out of the Treasury on certificates of production duly signed and sealed by some officer of the Government, has been proposed, but has not met with much favor among the intended beneficiaries, who fear that the bounty would not be permanent. They prefer to take their chances in the tariff rather than in the bounty. It is a great puzzle every way. The bounty, as everybody can see, would be just as available to the refiner as to the grower, and it is more than likely that some Democrat would offer an amendment that all sugar duties of every name and nature be repealed, and that the bounty be divided between the grower and the refiner in the same ratio that the tariff is now divided. Then we might have an interesting debate, going to the root of the question.

One of the drollest attacks on the surplus was made a few days ago in the House by Mr. Chipman of Michigan, who introduced a bill providing for the payment of "a just and suitable remuneration" to a Detroit physician for having discovered a cure for "sporadic pneumonia and grip." It appears the physician cannot protect his discovery by patent, and the rules of his own profession forbid his keeping it secret, so that he is in a sorry plight if he does not get a bonus from the Government. When one reads such things, one may well ask whether any people, once independent as well as free, has ever travelled so rapidly towards both paternalism and maternalism as we have done in the last twenty-five years. Under the training given us by our dear mamma, the tariff, everybody who finds his business unprofitable, or his practice unremunerative, or his credit low, bethinks him of some plan of getting help from the Treasury. If he cannot get an office, he wants a bonus, or if he cannot get a bonus, he wants a loan without security, or some kind of money which will be cheap when he receives it, but dear when he pays it out.

Philadelphia seems to be the centre of disturbance in the woollen industry at present, the failures following each other with startling rapidity. Considerable interest has, therefore, been taken in the bold if hopeless candidacy of Mr. Ayres for the seat in Congress made vacant by the death of Judge Kelley. Mr. Ayres is himself a woollen-manufacturer and a Republican, and took his stand on the platform of free raw materials. The Philadelphia *Press* is much stirred up by this revolt at the headquarters of protectionism, and it labors strenuously to show that free wool will put an end to wool-growing in the United States, and deliver the manufacturers up to the exactions of shepherds in South America, Australia, the Cape of Good Hope, Asia Minor, the East Indies, Great Britain, Canada, etc., etc. This is a terrible picture. It reminds us of the foraging soldier in the late war who was stopped on his return to camp with a dead sheep on his shoulder. "Didn't you know," asked the sentry, "that strict orders had been given against pillaging?" "I'll teach sheep to bite me," was the conclusive answer. If the *Press* is afraid that the wool-growers of the Argentine Republic, southern Russia, and other fierce countries will bite our manufacturers, its fears are not shared by Mr. Ayres and his supporters, who, it appears, include a goodly number of operatives in woollen mills as well as many who have been cast out of employment by the recent failures in that trade.

The question before the Republican party in Iowa is an ugly one. On the one hand, the prohibition element in the party, which is very strong, insists that it shall maintain the existing law, and even increase its rigors. As a correspondent of the Keokuk *Gate City* puts it, the Republicans have "put down the rebellion and freed the slaves"; now "they must put down that wicked monster, Rum"; they must "take hold of this matter and fight it with all their might until the victory is won and the monster is dead, dead, dead." The editor of the *Gate City* turns a shower-bath of fact and logic upon this sentimentalist. He tells him that "parties and government are practical matters and depend upon what you can do, not what you cannot." He says that there was practically about the same amount of intemperance under the no-liquor-law system of Territorial times in Iowa and the modified prohibition system which followed, that there has been since the cast-iron prohibition law was passed. So far as the question concerns politics, a Democratic Governor has been elected "simply because the body of the people of the State don't really care to sustain the views of the temperance people when it comes to a matter of applied law, and, after yielding to letting them apply their views, they have themselves rebelled against what they tacitly acquiesced in." As regards the Republican party, therefore, the lesson which the editor draws is, that it must drop prohibition or get beaten.

The State of New York has drifted into a new phase of unconstitutionalism, by the failure of the Governor and the Legislature to provide for the taking of an enumeration of the inhabitants for the purpose of making legislative districts according to the changes of population. By an evident mistake, the State Constitution provides that only the State enumeration shall be used for redistricting purposes. Therefore the United States census, although undoubtedly more accurate than any State census would be, cannot be used. The Legislature and the Governor being in disagreement as to the terms of the bill for taking a State enumeration, the injustice of the old apportionment of legislative districts continues, and becomes more aggravated from year to year. The Governor is technically right in holding that the Constitution provides only for an enumeration of the inhabitants. It does not provide for the taking of a census which shall include other things. He is practically wrong in withholding his assent from bills which do include other things, for if we should have a State census, that would include an enumeration of the inhabitants upon which a new apportionment could be made. Any new apportionment would be better than the present one, and probably more advantageous to the Democratic party than the present one. As the matter now stands, the Constitution provides that a certain thing *shall be done*. But the thing is not done, and there is no remedy. The same thing happened when the Legislature failed to call a constitutional convention in 1886.

A meeting was held at Cooper Institute on Monday evening chiefly to denounce Tom Platt, a private person carrying on an express business in lower Broadway. Speeches were made by Warner Miller and Chauncey M. Depew having no other purport than the exposition of Platt, not as a bad expressman, who fails to deliver packages intrusted to him with punctuality and in good order, but as an autocrat who misuses the legislative, executive, and judicial powers of government in the Empire State, and needs to be put on the right track. Strange to say, the meeting had the intended effect, for, just after Miller and Depew had finished speaking, a messenger from the expressman appeared on the scene and said that, if the by-laws of a certain committee, unknown to the Constitution and laws of the Empire State, should be changed so that a two-thirds vote should be required on any proposition for expending $10,000,000 of public funds, then the expressman would guarantee that another committee, equally unknown to the Constitution and laws, would agree that the first-mentioned Committee should have the money of the taxpayers of New York to the extent named, and should also have the right to take private property to any extent they might deem necessary for any length of time they might deem necessary for a World's Fair. While the expressman's envoy was delivering his message, the audience was hooting and hissing every mention of his name so that it was almost impossible for the ambassador to make himself heard. But when the purport of it came to be understood, the public wrath instantly turned to gratitude. Then Mr. Depew moved three

cheers for the expressman, and these were given with tremendous energy. And strong men wept, we suppose, because that is what strong men usually do when civil liberty is recovered.

In its remarkable statement of Friday, that "people here well know that Hill succeeded [in the election of 1888] only because he was able to sell a Presidency for a Governorship," the *Tribune* forgot for the moment that no man can sell unless some one else buys, and that if Hill sold the Presidency, then the Republicans bought it. The statement even goes further than that, for it amounts to an admission that the Republicans would not have elected Harrison if Hill had not given them Democratic votes for Harrison in return for Republican votes for Hill. To carry out this bargain, Hill had to betray Cleveland and the Republicans had to betray Warner Miller. The *Tribune* says directly that precisely this was done, for it declares that "Hill succeeded *only* because *he was able* to sell a Presidency for a Governorship." That means that if no such bargain had been executed, Cleveland would have been elected President and Miller would have been elected Governor. There is no other interpretation possible. That such a revelation should be made by the leading Republican organ of the country, whose editor is an appointee of Harrison, and consequently a subordinate of his Administration, and made without a sign of consciousness that it is in any way a shameful and disgracing disclosure, is astonishing.

Let us look for a moment at the elements which entered into this sale. Gov. Hill offered the Presidency, which carried with it the loss to the country of the best President it had had for many years, defeated the desire of the people for tariff reform and a reduction of taxation, and gave it instead the present Administration, which not only refuses tariff reform, but raises tariff duties and increases the burden of taxation, breaks all its most solemn reform pledges, and is giving the country the most profligate management of the various branches of the Government which has been known since President Grant's second term. In return for this service from Gov. Hill, the Republicans consented to turn the Government of the State of New York over to him for a third term, knowing that by so doing they were preventing all chance of high-license and probably of ballot-reform legislation for the next three years, and insuring during that period the continuation of a State administration which they are now denouncing daily as the worst which the State has ever seen. Their conduct in thus selling out the State for the Presidency was in accord with their conduct in running Col. Erhardt for Mayor and selling out the city in the same interest. To call a party capable of such infamies the "party of moral ideas," and to insist that it contains a larger part of the virtue and intelligence of the people, especially after its chief organ makes unblushing confession of them, are feats in audacity which ought to tax the capacities of even a muzzled journalist.

The *Tribune's* confession recalls the similar admission made in the Legislature, just about a year ago, by Mr. Ainsworth, a Republican Assemblyman, who had been chairman of a committee to investigate the ceiling scandal. That investigation had shown that the State had been robbed of about $100,000, because the Republicans had entered into a "deal" with Gov. Hill to divide the profits of the job. Mr. Ainsworth took the floor to explain the matter on February 27, and delivered a speech which closed with the following direct admission that, if the "deal" had not been arranged, Cleveland and not Harrison would have been elected President: "We ought not to have done it. We ought to have left it in the hands of Commissioner Perry, and let the politics take care of itself, and *we should have had a Democratic President instead of a Republican if we had done it.*" When that frank declaration was made, the *Tribune*, more cautious than it is now, carefully edited it into a harmless form. We tried in vain at that time to induce the *Tribune* to publish the official text of Mr. Ainsworth's speech. Now, after a year's meditation, it goes far beyond him, and declares that not only did the Republicans buy the Presidency, but they sold the Governorship to Hill as a part of the bargain. Mr. Ainsworth was refused a renomination because of his reckless exposure of party secrets, yet his offence was in every way less heinous than that of the *Tribune*, for he was not a member of the Harrison Administration, and did not speak with official authority, as the *Tribune* does.

The Young Men's Democratic Club of Boston has make a striking exhibit, based upon carefully collected figures from official sources, of the way in which civil-service reform was applied in Massachusetts during President Cleveland's Administration. There were, when that Administration began, on March 5, 1885, 2,256 employees in the Federal service of the State, distributed as follows: City post-offices, 874; town post-offices, 692; custom-houses, 483; miscellaneous, 207. Of these forces there were still in office on March 5, 1889, the following: City post-offices, 695; town post-offices, 323; custom-houses, 279; miscellaneous, 130; total, 1,427. In other words, nearly 65 per cent. of the Federal employees were allowed to remain undisturbed throughout the entire Cleveland Administration, though they were presumably nearly or quite all Republicans. The Custom-house figures emphasize the disgraceful conduct of the President in removing Collector Saltonstall before his term had expired, for they show, what is universally admitted, that Mr. Saltonstall had conducted the office in strict compliance with the Civil-Service Law, which the President had solemnly pledged himself to uphold.

Mr. Cleveland intends to have no misunderstanding concerning his attitude towards ballot reform. In a recent interview published in the Baltimore *Sun*, he says that he regards the official ballot as the "vital principle" of the reform; that to permit the use of an unofficial ballot "would leave the door as wide open as ever to bribery and corruption," and that an "official ballot only would sweep away to a very great extent, if not entirely, all excuse for campaign funds—that fruitful source of bribery and corruption; for if the State paid all the expenses of the elections, there would be little plea to levy assessments upon candidates and contributions from interested outsiders." These are the arguments which ballot-reformers have made from the outset of their movement as showing the superiority of their system over the bogus one advocated by Gov. Hill and Tammany Hall. There is one other which Mr. Cleveland did not mention, and that is, that until the adoption of the exclusive official-ballot system has removed all excuse for expenses of elections and assessments, and contributions to meet them, we cannot have an efficacious law limiting the expenditures of candidates and requiring sworn publication of all disbursements after election.

The departure of Dr. Nin, the delegate from Uruguay to the Pan-American Congress, on account of the necessity of meeting a prior engagement in England, gave him occasion to recapitulate the work of that body thus far, and to foreshadow the position of the South Americans on the main questions. He makes short work of the famous American Zollverein, saying that it could not be brought about without the cancellation of the treaties existing between South American countries and Europe, and hinting—always in courteous phrase, of course—that it is a trifle cool in the United States to dream of even proposing such a thing. On the project of a common silver coinage, also, Dr. Nin threw considerable cold water, remarking that, as far as Uruguay was concerned, there was no prospect of adopting any other than a gold standard, with silver used merely for subsidiary coins. The Argentine Republic will undoubtedly say the same thing. Some of the Central American republics, on the other hand, are much in favor of the scheme, and it is possible that they, with perhaps one or two South American countries, may make an agreement with the United States on their own account. The project as reported seems to provide for such a thing. But even so, as the foreign delegates understand perfectly, the silver question is at present such a football in our Congress that the most perfect Pan-American measure is as likely to be killed incontinently as to be endorsed. As to matters of copyright, extradition, and commercial law, Dr. Nin points out with much justice that the Montevideo Congress took the lead in all those matters for South America, and that the simplest thing for us to do is to give in our adhesion to the results there reached. As to subsidized steamships, the delegate from Uruguay expresses the willingness of his country to let us spend our whole surplus in that amusement if we are bent on it.

THE BRATTLEBORO POST-OFFICE.

THE town of Brattleboro, Vt., represents perhaps as high a type of intelligence and civic virtue as any place of its size in the country, or in the world. It has about 10,000 inhabitants, and about four-fifths of its voters are Republicans. It is the home of Col. Hooker, the Vermont member of the National Republican Committee, and formerly Secretary of said Committee. Its Postmaster is Capt. F. W. Childs, who was appointed by President Cleveland in January, 1886. As all such appointments are made for four years, and as Capt. Childs had been allowed to serve out his term, it became necessary in due course for Congressman Grout to be looking for a successor. But before any selection had been made, there was put into his hands a petition signed by about 800 Republicans of Brattleboro, and of the vicinity served by the Brattleboro Post-office, asking for the reappointment of the Democratic Postmaster, Childs. No encomiums upon Mr. Childs's management of the Post-office could add anything to this unexampled endorsement of his neighbors who were at the same time his political opponents.

When this petition was received at Washington, a hasty consultation was held by the Vermont delegation. The number and character of the petitioners were too formidable to be ignored or set aside. But the example of appointing a Democrat to an office in the gift of a Republican Administration was held to be extremely dangerous. So it was decided to refer the subject back to the Republican voters of Brattleboro, to be decided by them at a caucus to be held under the direction of the Republican Town Committee. Meanwhile Col. Hooker had procured a Republican candidate for the office, Mr. G. A. Hines, a perfectly reputable man connected with the Estey Organ Works, although Col. Estey himself was an active supporter of Mr. Childs. Col. Estey, by the way, is the President of the Vermont League of Republican Clubs.

The Republican Town Committee fixed the day for the caucus and the qualifications of voters, and appointed judges of the election. The qualifications were that the person offering to vote had voted for Harrison at the last Presidential election, or that, being a minor then, his sympathies were with the Republican party in that campaign. Women who were taxpayers and twenty-one years of age, and of Republican sympathies, were also allowed to vote. The election was very exciting, but very orderly. Party lines were drawn as tightly as they could be in a case where only one party was allowed to vote. Col. Hooker marshalled the regulars with the assistance of a Special Agent of the Treasury. The only Federal office-holder in that quarter who appeared to take no interest in the proceedings was Capt. Childs himself. From the beginning to the end he stayed inside his office and gave the strictest attention to the United States mails. The Brattleboro *Phœnix*, the Republican newspaper of the town, supported Capt. Childs with vigor, candor, and fearlessness.

When the day of election came, all the factories were closed, all business was suspended, carriages and hacks flew hither and thither to bring in the aged and infirm, the infant population was stirred as though Buffalo Bill were coming, and rival dinner parties for the ladies were given by Mrs. Hooker and Mrs. Estey. Woman suffrage appears to have won a triumph. Says the *Phœnix:*

"The novel and interesting feature of the afternoon, as expected, was the appearance of women as voters in the meeting. A contingent of ladies took seats in the gallery as spectators at the opening of the meeting, and remained during the afternoon. Early among the women voters was Mrs. Edward Crosby, who accompanied her husband to the polls to cast her vote for Mr. Childs. Shortly after three o'clock a procession of fifty women, led by Mrs. J. J. Estey and Mrs. O. A. Marshall, marched in orderly array across the street from the Brooks House and entered the hall. These were the Childs contingent. There was a pleasant ripple of sensation as they entered. The men who filled the hall made way for them, they were given seats in front, and the polling of their votes began and went on in a very matter-of-fact way. After the first, indeed, there was little to indicate that the women were not veterans at the polls. Before their votes had all been cast, Mrs. Hooker and Mrs. Jenne appeared with the Hines contingent of ten or twelve women in a body, whose votes were also cast in due time. Besides these women who voted in a body, the zealous women workers on both sides brought in a scattering of voters throughout the afternoon and evening, marching their several charges to the polls and 'voting' them in the most approved and business-like way."

There was very little challenging. No Democrats were challenged, because none offered to vote. Two or three Prohibitionists were challenged and their votes rejected because they had voted for Clinton B. Fisk for President. The result of the election was as follows: For Childs, 467; for Hines, 401. A majority of the men and also a majority of the women voted for Childs. When the result was announced, there was a tremendous cheer from the victorious side, and then the citizens dispersed to their several homes. The chairman of the caucus made a certified return of the result, and Col. Estey took it to Washington. A telegram to the Boston *Journal* says that the friends of Mr. Hines telegraphed asking a stay of proceedings until they could present their side of the case, but that the Vermont delegation telegraphed back that unless there was fraud in the management of the caucus they should abide by the decision and recommend the reappointment of Mr. Childs. That was ten days ago, since when there has been a rather ominous silence at Washington. But the New England Republican press, including the Boston *Journal* and the Rutland *Herald*, approve of the reappointment of Mr. Childs.

This case is in many respects unique, and is most gratifying and encouraging to the friends of civil-service reform. There are, perhaps, not many postmasters whose personal qualities would secure for them such a triumph over party spirit as Capt. Childs secured from the Republicans of Brattleboro. But here is a case where faithful performance of duty has been deemed by the witnesses of it the best possible title to office, and where the most strenuous efforts of one of the most skilful party managers in the country has been completely baffled and paralyzed, in his own camp, by a man of the opposite political faith who did nothing but attend to his official duties. One such example is more effective in the way of advancing the cause of reform than a thousand speeches in or out of Congress. It is unanswerable, like a victory on the field of arms.

THE PARNELL REPORT.

THE unfortunate judges who sat for a year on the London *Times* pamphlet called 'Parnellism and Crime,' have laid their report before Parliament. Most of our readers have probably forgotten by this time that what led to the formation of this extraordinary tribunal was not the disturbed state of Ireland, or the boycotting or intimidation practised in that country against landlords who evicted tenants or refused to lower rents, or against tenants who paid high rents or took farms from which other tenants had been evicted. All this was matter of what lawyers call common knowledge. Every newspaper reader was familiar with it. It was a story, in most of its features, about one hundred years old. Three or four Government commissions had investigated it and made substantially the same report, and it had, in the years 1883-'87, been abundantly illustrated in the trial of offenders in the courts all over Ireland.

What brought about the appointment of the Commission was the charge made by the *Times* in the above-mentioned pamphlet, which had an enormous sale and undoubtedly powerfully influenced English opinion on the Irish question, that certain Irish members of Parliament, about sixty in number, with Parnell at the head of them, had not only failed to condemn murder and outrage in Ireland, but had secretly instigated the murderers, and had supplied funds to enable them to carry out their designs and to escape after the commission of their crimes. It was this charge against members of the House which brought matters to a crisis. Parnell asked for a committee of the House to investigate these charges. For the granting of a committee under such circumstances there were plenty of precedents. In fact, it might be said to be the usage of the House to grant it. Such a committee has the great advantage over a court of law that it is not bound by the rules of evidence. It can summon anybody it pleases and make him tell all he knows. Parnell wanted it in order to find out where the *Times* got the letters connecting him with the Phœnix Park murders, which it attributed to him. He could hardly contest their authenticity, except by a naked denial, without knowing something of their history—that is, where the *Times* got them, and why it believed in their genuineness. The importance of this is plain at a glance. Every man who is confronted with a forged letter is entitled to know how it got into his accuser's hands.

The Government, when it refused the Committee of Inquiry, urged Parnell to bring an action against the *Times* in a court of law and offered to pay the expenses of the suit. But he declined this offer, on the ground that it would not secure him the testimony neces-

sary to his defence, and that in the then state of English opinion, powerfully influenced as it must have been by the *Times* articles, he was very unlikely to get fair play from a London jury. This position was curiously sustained very shortly afterwards by an action brought by a certain O'Donnell against the *Times* for connecting him with the murders. The Attorney-General, who appeared for the *Times*, produced the forged letters in evidence, but informed the jury that under no circumstances would he reveal the manner in which they came into his client's possession; that sooner than do so he would submit to a non-suit. All the proof of authenticity he offered was the evidence of experts as to the signatures. This showed clearly what Parnell had to expect in a court of law, if he entered it with nothing but his denial to protect him against the letters.

The outcome of the wrangle was the appointment of the Commission—an absolute novelty both in jurisprudence and politics. Parnell and the Liberals protested against it, but it promised much better results than a jury trial. In the matter of the letters, however, he would not have fared much better before it than before an ordinary court, but for the accidental discovery, made by Patrick Egan in this country, of the resemblance between certain phrases in the forged letters and in letters he had himself written to Pigott. This gave the clue which led to Pigott's breakdown. But the *Times* experts stood ready in court to prove Parnell's signature before the Commission, as they had done in the O'Donnell trial, and the Attorney-General tried to introduce them before Pigott's examination.

The only really important part of the Judges' findings, therefore, is that relating to the *direct* participation of Irish members of Parliament in the promotion or commission of crime and outrage. On this they speak with authority. On the question whether outrages were *indirectly* due to the action or teaching of the Land League, or to the speeches of certain orators, or to the articles in certain newspapers, the opinion of judges is no better than that of other men of a similar grade of intelligence, and not nearly so good as that of men in political life, familiar with recent Irish history and with the social condition of the country.

We may say, therefore, that when the Commission finds that eight Irishmen, all members of Parliament except Davitt, joined the Land League "with the intention by its means to bring about the absolute independence of Ireland," they utter a political opinion which has no peculiar value. The same thing may be said of the second finding, that these persons entered into a conspiracy "to promote an agrarian agitation for the purpose of impoverishing and expelling from the country the Irish landlords." Their acquittal on the charge of "insincerity" in denouncing crimes in public, may be estimated in the same way. The finding that the Parnell letters were forged is, however, a judicial finding, and conclusive. So is the finding that the respondents circulated the *Irish World* and other papers, inciting to sedition and other crimes. It may be said in general terms that their conclusions about matters of fact are entitled to the utmost respect; their conclusions about motives, or tendencies, or remote consequences, to none except what is due to the utterances of men of high character in an unfamiliar field. They acquit Parnell absolutely of knowing of the organization of crime by Sheridan or Boyton; of intimacy with the leading Invincibles; of assisting Frank Byrne to escape from justice—in fact, of all the charges of any moment made against him in the *Times* pamphlet. It was these charges which caused all the trouble.

The *Times* meets the conclusions of the judges, in thoroughly journalistic fashion, by saying: "If on certain points we are held not to have established our statements, the general effect of what we have said remains unshaken." It would be difficult to get more absurdity into the same number of lines. The points on which it "failed to establish its statements" were the important ones which led to the inquiry, and the proposition that this has made no difference as to the "general effect" is profoundly fatuous.

THE NEW WINE IN THE OLD GERMAN BOTTLES.

The Germans are just now receiving a new and valuable, though perhaps not very agreeable, lesson in politics. The Empire is an immense political machine, which has been in existence only twenty years, and the management of which has been thus far in the hands of one man of extraordinary ability. No experience acquired in the government of the German States before the foundation of the Empire was of much use in preparing any one to take charge of the new organization. Not only is it larger and more ponderous than any of the old governments, but it has brought into existence a new society, far busier, far more enterprising and active, and with far vaster and more complicated economic interests than anything known in Germany before. In fact, anybody who knew the old Prussia of 1850 would, if he had been out of the world since then, hardly recognize the new Prussia as the same State, and the same thing may be said of various other members of the Confederation. The difficulties and dangers of the Imperial Government have been concealed until lately by the prestige of Bismarck, and the complete acquiescence of the old Emperor in his policy. But it is now easy to see that, even before the Emperor's death, the new society which was produced by the French war was becoming something more than either or both of them was quite able to understand or manage. The Prussia in which both of them felt at home was the old military Prussia of Frederick the Great, in which there were nobles and peasants and an army, but in which there was no trouble about trade, or commerce, or manufactures, or colonization, no rich bourgeoisie, and no socialists, and no paupers who could not be kept quiet with a rattan.

Accordingly, even during the last years of the old monarch's life, the attempts of his Chancellor to grapple with the intricate social and economical problems of a modern State began to excite more or less uneasiness, which, however, was kept down by the confidence of the world in the character and attainments of the Emperor Frederick, whose accession to the throne was looked for every month during the ten years before his lamented death. He was a man of mature age, of great enlightenment, and perfectly conscious of the enormous changes in the relations of a monarch towards the community which had been wrought by the advance of science, the growth of trade, the increase of population and of facility of communication. Nothing, therefore, was feared, and much was hoped, from his inheriting the crown by his father's death. He was relied on to establish in Germany, on sure and lasting foundations, the only kind of monarchy which is possible in our modern commercial States, namely, a limited monarchy with a Ministry composed of well-known men practically, if not theoretically, responsible to Parliament and public opinion.

He has been succeeded by a young man thirty-one years of age, who has had no experience of any affairs except those of a military barrack. He would not, were he not born to the purple, be intrusted with the command of a regiment or the management of a bank, or get a professorship in a university, or more than a very subordinate place in the Government service, or be listened to with patience on any financial or economical question by any skilled audience. His claim to head a Ministry or to shape legislation would be treated with ridicule in England, and he could not in this country get a place of any responsibility in any large commercial house on any terms, or get a seat even in the Harrison Cabinet, without a very heavy contribution to the campaign funds.

There must therefore be something startling for the new Germans, who have to hold their own among states ruled by men of ripe age and long experience, to find this young soldier, who ought not to aspire to a post of any greater responsibility in the world than the command of a company of infantry, setting up as an economist, and, merely by the weight of his ill-considered and rash utterances on social questions, throwing the whole community into a ferment, and exciting among the poor and ignorant those extravagant expectations as to the possibilities of human society which will probably constitute, during the next fifty years, the greatest difficulty with which civilized government will have to deal. Probably nothing could bring out more clearly the radical defect of hereditary monarchy in the modern world. In the age when the chief business of every government was fighting, or getting ready to fight, youth and inexperience were hardly flaws in the sovereign's character. Young men are the best fighting men, and the less experience they have, the better material are they for military purposes. Consequently no great harm was done when an old king left the crown to a young heir. Nor does it much matter what the monarch's age and qualities may be

in a constitutional monarchy like England, where the King is an ornamental person without serious duties. But a young Plantagenet or Tudor reigning over modern England, claiming the right to instruct bankers how to bank, merchants how to trade, professors how to teach, and editors how to write, and ministers how to legislate, would produce a revolution in a few months; and yet this, or something like this, is what the Germans of to-day have to put up with.

INCOME AND COSTS OF LIVING.

ONE of the most familiar of financial facts, and one which has often racked painfully the pocket nerve of householders, has been the steady decline for years of the rate of interest on first-class American investments. To show justly this decline during a series of years is not quite so easy as it seems. We meet at the outset the difficulty of selecting the period with the beginning of which the comparison of the present interest rate shall be made. We cannot, with fairness, choose for this purpose either the "panic year" of 1873 or any one of the few years immediately preceding, when new railroad enterprises were ballooning, speculation was rampant, over-confidence universal, and the business of the country inflated to a bubble which was so soon and so disastrously to burst. Probably the best period to take for a contrast with the present time is February of 1875. Then the great panic of 1873 was a year and a quarter in the past, and, though times were still hard, timid investors had begun to seek the safer kinds of securities, and, partly in consequence, dividends and interest began that steady decline in proportion to the amounts invested which has continued ever since.

What has that decline been in fifteen years? To indicate it approximately we have made below comparisons of the returns paid during February of 1875 and during the present month on ten kinds of "gilt-edged" securities. In the case of the bonds the returns have been based on the interest tables; and as gold stood at 114 fifteen years ago, the premium has been added then to the interest of two securities cited that pay in gold. In every case but one the computation is made on market prices of the securities as quoted at the New York Stock Exchange in February of 1875 and during the last few days:

Securities.	Interest on investment.	
	1875.	1890.
Union Pacific 1st mortgage	7.69	3.87
Central Pacific 1st mortgage	7.25	3.87
United States currency 6s	4.65	2.75
New York Central stock	7.92	4.24
N. Y. and New Haven R. R. stock	7.50	4.00
Morris and Essex R. R. stock	7.30	4.66
Harlem 1st mortgage 7s	6.25	3.80
C., B. and Q. 1st mortgage 7s	6.87	4.35
Lake Shore 1st mortgage 7s	7.00	4.00
Loans on Eastern realty	7.00	5.00
Average rate per cent	6.94	4.05

The difference, it will be seen, in the average rate of income on the ten securities is 2.89 per cent., or a decline of about 41.6 per cent. in the income itself. Put a little more concretely, it may be stated thus: A man investing $100,000 in cash during February of 1875 in the list of securities named, and putting $10,000 in each, would have received from them (on the basis of the interest tables) an annual income of $6,940. Investing the same sum now, he obtains, by the tables, but $4,050—a decrease of $2,890, or about 41.6 per cent. of his former income, as has been stated. The reduction, of course, affects in greater or less degree everybody who has safely invested funds.

What ratio does this decrease of income bear to the fall in household costs of living during the same time? This is a far more intricate problem, involving many wide variations. In selecting the locality for the comparison, it would manifestly be irrational to choose a stagnant and remote country district, or, on the other hand, a large city, where the perturbations of rent alone might vitiate the figures. We have taken, therefore, as a mean between these two extremes a city of fair size, conservative in local temper, growing at a moderate pace, and situated at about two hours' journey from New York. In the table annexed, the rise or fall during the fifteen years of nineteen articles of cost of living to the householder is figured out in percentages, and marked with the plus or minus sign. Clothing is omitted, as it is not a branch of strictly household expense. The prices have been obtained with the utmost care from actual book accounts, often verified over and over again, and, in case of different grades of the same article, carefully averaged.

Taxes	+26.6	Pork	—14.2
Coal	—35.3	Poultry	00.0
Insurance	—14 3	Butter	—22.2
Gas	—50.0	Sugar	—33.0
Rents	00.0	Coffee	—22.2
House wages	+14.2	Potatoes	—35.0
Beef (roast)	—12.0	Flour	—35.3
Beef (sirloin)	—8.0	Fresh fish	—13.3
Mutton	—12.0	Oysters	—20.0
Ham	00.0		

If we average the fall of prices on the foregoing nineteen items, we shall find it is about 15 per cent. But, as the nineteen enter into the costs of living in greatly varying proportions, no such average can be made the basis of calculation. It is far more significant to observe that in only one case (50 per cent. reduction in gas) does the fall in price exceed the 41.6 per cent. decline in the income on investments—and as to gas we leave it to householders' experience whether the decrease in their bills is actually the 50 per cent. which we are forced to figure in the rate charged per thousand cubic feet. Taking nine of the most important branches of expense named—taxes, house wages, beef (2), coal, rents, flour, butter, and fish—the average decrease is but about 8½ per cent. The most extreme estimate will hardly place the real decline in cost of living on the nineteen items at more than 14 per cent., or about one-third of the 41.6 per cent. reduction in income.

Some causes of this great disparity between the fall of the interest rate and of the chief necessities of life will readily present themselves. In the first place, wages, salaries, the earnings of the professions, and probably the profits of thriving business, show slight reductions, if any, during the fifteen years, so that the economic influence of the immense classes represented by those industries or vocations is not exerted very actively towards a reduction of the prices of necessities. Secondly, there are the Trusts, whose work in augmenting prices can readily be traced in a number of the branches of expense that have been named. Finally, there can be little doubt of the growth, both absolute and relative, of a "surplus-income" class, saving money each year for investment, to whom good security is more important than a high rate, with its attendant dangers and vexations. Consequently, their demand forces the price of "gilt-edged" securities up and the rate of interest down. To this group belongs also the "trustee class," individual and corporative, whose large accumulations must by law seek conservative investments. Whether these three factors account fully for the great disparity between the fall of income and of cost of living may be left to the political economist, as well as the obscurer question whether the rate of interest is to turn upward or continue to run down. But, aside from these abstruser problems, the mere comparison of his reduced income with his much less reduced cost of living cannot fail to have a practical interest for every householder who owns stocks or bonds.

"THE FRUITS OF CIVILIZATION."

A LIFE-LONG friend of Count L. N. Tolstoi describes, for one of the St. Petersburg newspapers, some private theatricals at which he was present on the 30th of December (O. S.), at the Count's country-house, Yasnaya Polyana. The performance took place in the presence of about fifty guests. The comedy, entitled "The Fruits of Civilization," was furnished by Count Tolstoi; the performers were members of his family and friends. The author produced the comedy from his portfolio, where it has long lain; but in the course of the rehearsals, in which, as well as in mounting the piece, he took an active part, he made many changes, as the necessity for them became apparent. This four-act comedy is designed to ridicule spiritualism, and was carried out by twenty-seven actors. The stage scenery was prepared at home by the performers; a hairdresser from Tula had charge of the actors' make-up.

The first act opens in the vestibule of the town house of a wealthy and well-born believer in spiritualism, *Leonid Feodorovitch*, whose wife, *Anna Pavlovna*, a frivolous person, is terribly afraid of all sorts of infectious diseases, and is in constant consultation with the doctor. The daughter, *Betsy*, is a fashionable young person, engrossed in society. The son, *Vasili*, is an idle fellow who is constantly bent on borrowing money. The curtain rises on the first act. The chambermaid, *Tania*, a clever, handsome, and honest peasant girl, is courted by the lackey *Grigory*, whom she rejects, preferring a peasant named *Semyon*, who serves

in the house as assistant to the butler. *Semyon* is a handsome, healthy young fellow. Various persons pass through the vestibule, including the doctor and a young fop, *Petristcheff*, a friend of the son of the house, who is paying court to *Betsy*. The fop and *Vasili* are dressed like fashion-plates, belong to the Bicycle Club, and are trying to borrow three hundred rubles in order that they may become members of the Sporting Club. The money will, of course, be furnished by *Vasili's* mother. Three peasants make their appearance—deputies sent by the village community on *Leonid's* Kursk estate, with a written contract, to ask that their master will sell them some land which is indispensable for them, since, to quote the words of the eldest of the peasants, "They have too little land; there is no place to let their cattle or even their poultry run." This peasant has in his boot four thousand rubles, which have been collected by the village community for the purchase of the land. One of the peasants is a relative of *Tania*, another of *Semyon*. The peasants request *Tania* and the pompous major domo and valet, *Feodor Ivanovitch*, to announce their arrival. Their explanations with the major domo are extremely amusing. *Leonid Feodorovitch* comes out to speak with the peasants, but, being a man of very undecided character, he says that he cannot make up his mind to sell the land. Being a spiritualist, he considers it indispensable to take counsel of the spirits. The peasants entreat him in every possible way, but *Leonid* defers the answer for a time. But his son talks a great deal about the money which the peasants have brought, and enters into conversation with them on the profits to be got from planting mint, in the fashion of ignorant city people. At this point, the mistress, on her way to make calls, enters the vestibule, flies into a terrible passion at the peasants having been admitted there, since heaven knows what disease they may have brought with them. Her husband would like to stop her, but cannot make up his mind to do so, which fact does not escape the observant peasants, who see that their master fears his wife.

The master finally refuses to sell the land, the spirits having probably advised him not to do so. The peasants are turned out, but are accorded asylum in the kitchen, thanks to *Tania* and *Feodor*, who promise to make an effort to get them the land; and the peasants, who have borne themselves in a hostile manner towards *Tania*, because of her dainty airs, become more friendly. At the end of the act, the crafty *Tania* begs that her master will listen to what she has to say. She tells him that *Semyon* is courting her, but that she is afraid! "Of what?" She has noticed supernatural manifestations in him; thus, when he begins to eat cabbage soup, the spoon moves of itself. Her master recognizes him as a medium and advises *Tania* not to be afraid, as he will test *Semyon's* powers.

Act second takes place in the kitchen, where the three peasants are drinking tea and chatting with the cook, who is telling them about the life led by her masters, their freaks, business, riding on bicycles, costumes, balls, food, and so forth, all this being interlarded with the witty comments of the peasants, and presenting a remarkably humorous picture of manners and customs. The preparation of cutlets for the poodle amazes the peasants. While they are drinking tea, the steward, *Semyon*, and another lackey enter the kitchen, and the conversation turns upon the land, as all of them belong by birth to the same class, and hope to return to the land. *Tania* also enters, and holds out hopes to them that they will get their land; whereupon even the surliest of them approves of her. At this same time the hypnotizer, *Spüller*, is holding a séance above stairs. All at once the fop *Petristcheff* rushes into the kitchen, just as the peasants have lain down to sleep. He must hide a key for *Spüller* to find. The best place he can hit upon is the boot of the peasant who has charge of the communal money, and who, of course, is terribly alarmed, thinking that the fop is after his money. This scene is very amusing. A few minutes later, all the ladies and gentlemen enter, accompanied by *Spüller* with bandaged eyes, who finds the key, while the peasant falls on his knees and swears that he did not steal it. Here ensues a very interesting explanation between the professor and *Sakhatoff*, a sceptical landed proprietor. *Petristcheff* pays court to *Betsy*, and the mistress of the house again flies into a passion because the peasants have been admitted to the kitchen, and orders them to be driven out. The thoroughly frightened peasants wish to go, but *Tania* takes them to the steward's quarters. The second act is very lively, and contains a mass of comical scenes and confrontations. The practical sense of the peasants and their views with regard to everything which their superiors do so *queerly*, are brought out in high relief.

Act third takes place in *Leonid Feodorovitch's* drawing-room. Preparations are in progress for a séance and the evocation of spirits. Prof. *Alexiei Vladimirovitch* is conversing with *Leonid*, and in consequence of the news that a celebrated medium will not be able to come, they decide to test the powers of the butler's assistant *Semyon*, whom *Leonid* has recognized as a medium. *Tania* and *Feodor* prepare everything for the séance, and *Tania* stretches threads all across the room, which no one notices. Then she smears *Semyon's* hands with phosphorus, and instructs him how to behave, how to feign sleep, how to bear himself during the whole séance and what to do. (She had seen such séances previously.) Having thus coached *Semyon*, *Tania* places the communal contract on the table, not far from the accessories of the séance—the guitar and harmonica—and conceals herself behind the divan, being dressed in a gown which resembles the colors of the wall hangings.

The guests assemble. One fat dame talks much of herself, her nerves, and her diseases. The professor explains the theory of spiritualism, and groups all manifestations under certain laws, like a science, and tries to find scientific answers to the pressing questions put by the ever-doubting *Sakhatoff*. *Leonid* gets angry, because everything is so plain and simple that there is no necessity for chattering and losing time. The lamps and candles are extinguished, the séance begins. Some one becomes terrified, the fat dame tries to leave the room, *Petristcheff* courts *Betsy* and talks with her, while *Tania*, raising the threads which she has stretched across the room, catches with them first one and then another of the guests, which frightens them, and leads *Leonid Feodorovitch* and the professor to the undoubted conclusion that the spirit of a certain monk Nikolai is present. Then, as a consequence of the contract being on the table, the question is asked: "Ought this document to be signed?" and a spirit replies, of course by knocks (produced by *Tania*), that the document must be signed. With *Tania's* assistance the guitar and harmonica play in the dark, and the guitar raps the master of the house on the head. *Semyon*, having been put to sleep by *Spüller*, indulges in various gesticulations; in short, the séance is perfectly successful, as may be imagined. *Leonid Feodorovitch* and the professor are thoroughly convinced and content. The contract is signed then and there. The act closes with a dispute between the professor and *Sakhatoff*, who still refuses to believe, holds a bit of the thread, which he has found, in his hand, and demands explanations on every point.

The fourth and last act takes place, like the first, in the vestibule. *Leonid Feodorovitch* has been having a reception day, and the guests are departing. The lackeys again begin to discuss their masters and mistresses. A princess and a countess, with their daughters, pass through the vestibule, and chatter fashionably. At length the mistress of the house enters, and the lacky, *Grigory*, complains that *Semyon* has beaten him. His mistress grows angry, but *Feodor* explains that it is on account of *Tania*, who is an honest girl and wishes to marry *Semyon*. *Grigory*, in his wrath, tells of *Tania's* capers during the séance. *Anna Pavlovna* immediately summons her husband, and informs him with malicious pleasure that he has been deceived. But neither *Leonid Feodorovitch* nor the professor, who hurries in, is in the least abashed by these pretended discoveries. The professor even declares that if there existed a desire on the part of *Tania* to cheat, it had certainly been inspired in her by the spirits, of course! And with this the play closes.

THE PATRIMONY OF THE POOR IN ITALY.

MANTUA, January 26, 1890.

THE new "project of law" on charitable institutions (*Opere Pie*), or, as they are now styled, public institutions of beneficence, presented in February, 1889, to the Chamber of Deputies, amended by a parliamentary committee, and discussed during the month of December, was passed by 198 yeas to 96 nays, and is now in the hands of the Senate, whose members, it is pretty well known, will not introduce any fundamental modifications. Ever since Italy became a nation, statesmen, legislators, philanthropists, and social economists have devoted their attention to these 22,000 institutions, to this property of over $400,000,000, yielding an income of $27,000,000, which, despite the addition of $10,000,000 spent annually by the communes and provinces in what is called "legal charity," seems to effect little or nothing for the relief of the poverty-stricken populations or for the diminution of their number. The reform of the *Opere Pie* was one of the first reforms undertaken by the governors and dictators of the liberated provinces in 1859, the spirit of the times inspiring the reformers to concentrate the utmost powers in the hands of the new Government. After the death of Cavour and the unification of the north and the southern kingdoms, Minghetti proposed and Rattazzi amended the bill which, sanctioned in August, 1862, is still the law of the land. The guardianship of all charitable institutions was declared to devolve on local governments; the commune, the province, the "region" were to become henceforward the proprietors. The autonomy of each institution was to be maintained, and, as far as possible, the will of the original testators to be respected. In the first volume of 'L'Italia Economica,' published in 1873, this law is lauded to the skies; but a diligent examination of its effects, made chiefly by the party now in power, then in opposition, proved that the law, defective in itself, was disregarded in nine cases out of ten, and that the patrimony of the poor was in many cases appropriated by the rich, often squandered and applied to purposes quite other than those designated by the pious or remorseful

men and women of olden time, who bequeathed their substance from benevolent motives, or as atonement for their sins in the hope of making their peace with heaven.

Hence a radical reform of all charitable institutions was one of the pledges given by the Liberals while they were struggling to overthrow the Moderates; and to their credit be it said that the first Liberal Ministry (Premier Nicotera) set to work in practical earnest to redeem the pledge. On the 20th of April, 1876, Nicotera appointed a commission "to study and propose those reforms and ameliorations in the methods of public charity which, called for by the progress of civilization, should safeguard the patrimony of the poor, and promote an honest and economical application of the income." The members were all intelligent, and some were versed in the subject, such as Scotti and Pasquale Villari, then entirely devoted to social questions. Meanwhile Nicotera charged Caravaggio, Director-in-Chief of the Department of Charitable Institutions as it then existed, to draw up a project of law which be submitted to the Commissioners, and which was in reality the father of the present still more radical measure, aiming at a complete transformation of "public beneficence": alms-giving, promiscuous charity, to be abolished; only the old, the infirm, the sick, the demented, the deaf, the dumb, young orphans and children abandoned by their natural protectors, to be maintained by public charity as long—and only as long—as these latter were incapable of maintaining themselves; the surplus of lands and building funds to be "transformed"; institutions of credit, savings banks, and above all, industrial schools and colleges, to be set on foot so that the rising generation should learn to live by the sweat of their brow, and put by for their old age when they could work no more.

Naturally, this sweeping project made mincemeat of the original intentions of the testators, and paid not much more deference to their executors. The Commissioners found it too radical, and presented a less audacious yet very radical counter project. Nicotera laid his own bill before the House, but, as he resigned shortly after, it was never even reported on. Three years passed in constant recriminations on the part of the Radicals, and the press took up the matter, thoroughly exposing the shameful abuses, the scandalous malversation, of many of the charitable institutions, and in 1880 cautious Depretis presented a *leggina*—a little law, as he called it—for the correction of the most notorious abuses and the introduction of certain inevitable reforms, and meanwhile appointed a grand commission to make fresh inquiries, etc., etc.; this to prevent the Radicals from taking the bit between their teeth and returning to the propositions of Nicotera-Caravaggio. Unlike many of its predecessors, this Commission has done much good, steady, practical work. It has, as far as it has been able, "taken stock" of all existing property, and published eight volumes of results. The fifth of these volumes is very useful, containing the replies of the prefects, syndics, and local commissions to the several "catechisms" put to them by the Commissioners. The sixth contains the answers of the present administrators when they have vouchsafed any. The seventh contains the ministerial project of 1862; the eighth the report of the Director-General of Statistics (indefatigable Bodio) on the general results of the inquiry. Hence it will be perceived that Crispi and Crispi's commission found the greater part of the work done by their predecessors, the material ready to their hands, which, however, as they fully acknowledge their debt, does not diminish the merit of this most energetic of men and most audacious of premiers since Cavour in having drawn up a bill, mild in its form, but most radical in its substance, which could get itself passed within the year of its presentation. The Commission also deserves considerable praise for the modifications introduced with such tact and wisdom as to avoid violent opposition in Parliament, and obtain the adhesion, often reluctantly given, of the redoubtable Premier himself.

An analysis of the new law in all particulars is impossible, and not very profitable for foreign readers. Let us take its leading features. Is the will of the testator as to the aim of the charity to be absolutely respected? A glance at some of the titles of these will furnish the answer. Out of a list of 21,819 charitable institutions, exclusive of pawnshops, loan societies, etc., we have 2,368 exclusively dedicated to religious purposes, 3,416 to religion and charity. Other 4,213 come under the same category, whereas the general hospitals are but 1,291, special hospitals 62. In the most delicate manner the Commissioners inform the people and its representatives that "there exists no nation whose legislation does not recognize the right of the State to change the object of public charity, if the original recipient has ceased to exist or to need the boon, or if the social needs of the times render the legacy useless." Here follow examples of theories expressed and mutations effected by popes and princes, by the Church, and by many States. Then come precedents in Italy itself.

"We have never denied the right of the State, or deprived ourselves of the power of suppressing religious corporations and ecclesiastical foundations, and handing over their property to the National Treasury. Now, between suppressing certain bodies and sequestrating their possessions, and merely transferring the funds which have hitherto been devoted to one charity to another, there is a considerable difference."

This is not a happy line of argument to my mind, and of course the Papal party and many of the Moderates pierce this joint in the armor of the Commission. "State might means State right," say they. "Because you have made wholesale depredations, you use the great wrong done as a justification of the smaller wrong meditated." Better have been silent and said simply what follows: "When the necessity of suppressing, or reforming, or transforming a charitable institution is manifest, the parties interested, the local authorities and the Council of State, must be *heard*." I underline the word heard because the old law gave the Council of State the power of veto; now that august body is only asked for its "opinion."

The Commission has been very chary in enumerating the institutions which no longer respond to the wants of present times. The endowments of convents, monasteries, hermitages, and retreats, etc., come under this head. The subsidies to prisoners and condemned criminals are to be transferred to the fund for assisting the liberated prisoners until they have found work. Other legacies—for conservatories where neither education is imparted nor work enforced, retreats for pilgrims, funds left to pious orders—are to be separately considered, and the special aims to which they shall be devoted afresh decided on. The question of dowries to young girls gave rise to a warm discussion. Each separate legacy is to be revised. The legacies for religious purposes are also to be revised. If considered necessary to the wants of the population, they are to be retained; otherwise, devoted to other purposes, and in most cases the hospitals and the relief of the sick will be thus benefited. With regard to the charitable institutions of "heretics," great care has been taken to reserve their rights—an obviously just provision, as in most cases their poor are excluded from the benefit of purely Catholic charities. In 1887 it was ascertained that Jews had 141 charitable institutions, with a (gross) income of $80,300; the Protestants 12, income $14,000; the Greeks 4, income $11,000. Clearly, no idea of confiscation has been entertained by the Commission, but a cautious examination of all that now forms the patrimony of the poor is their object.

The next question is, Who are to be the future administrators? In order to show on whom are to devolve the separate or amalgamated administrations of charitable institutions, or public beneficence in general, it is necessary to refer to the new communal and provincial law under which the late general administrative elections were effected. This reform act nearly doubled the body of electors by giving the vote to all males of one and twenty who can read and write; the proof of their capacity so to do consisting merely in their making the demand for registration, and stating name, age, parentage, and domicile in the presence of a notary and three witnesses. By the same law the syndic, hitherto named "by the King," is, save in small communes, chosen by secret ballot by the executive or *giunta* previously elected by the communal counsellors. All electors are eligible save ecclesiastics, parish priests, civil servants whose office is to superintend the affairs of the commune, and their paid servants. The law, though in many points defective, leaving the municipalities still in too great dependence on the prefect (*i. e.*, on the political agent of the Government), is, on the whole, liberal, and the utmost pains have been taken to prevent bribery and corruption or the tampering with votes once recorded. The communal electors on the same day elect the provincial counsellors. As yet no great changes have been brought about, but it is not true that the reformed act has, "like mist, left things as they found them." The Italians, unlike Anglo-Saxon races, do not yet thoroughly appreciate the value of the right to vote for their representatives, political or administrative; and scarcely more than half the registered electors took the trouble to present themselves in the electoral halls and register their votes. This is a defect which time will mend. When the agricultural populations understand, as the working classes in the cities do already, that their special interests are affected by the presence of capable and honest administrators at the town hall, they will take pains to fix on these and to secure their election. Meanwhile the Government can do no more than accord their right to use or to neglect.

The question of the future administration of charitable institutions is materially affected by these considerations. For even as the entire male population who can read and write elect the counsellors of the town, so these in their turn elect the members of the Congregations of Charity, who henceforward are to become the administrators of the institutions of beneficence existing in the several communes. In the communal elections the rights of the minority are respected, as each elector can vote only for four-fifths of the total number of counsellors: if twenty are to be nominated, he can vote only for sixteen; but in the election of the members of the Congregations of Charity the vote is unlimited. The most serious discussion took place as to the admission of women as

members. It should be noted that, during the discussion of this new communal law last July, Crispi brought all the weight of his influence in the House to exclude women from the urns, although Depretis and the commissions appointed during his administration proposed to extend to them the right to vote—a proposition warmly espoused by Peruzzi. Crispi's will prevailed. On the contrary, during the present discussion he proposed that women should not be excluded from the Congregations of Charity. Of the nine members of the Commission four at least, including the reporter, Edward Luchini, exhausted every argument in favor of their admission. It was proved that, among the benevolent testators and donors, women form the majority; that in modern times they figure largely as benefactors of the poor—in the infant schools, in the assistance of the condemned who have completed their term of imprisonment, etc.; it was urged that cases of real poverty come under the eyes of women daily, etc., etc. Three times the question was put to the vote. The first time (present eight members) women were excluded; the second (also present eight), they were admitted; the third time (present all the nine) they were finally excluded. The same fate befell parish priests and parish doctors. The former protest; the latter are, on the whole, only too thankful to have one weight less cast on their overburdened shoulders.

The question remaining to be solved is how many of the members elected will accept the onerous duties which are to be performed gratuitously; nor are the Congregations to have any paid servants under them in communes where the income of the charity does not exceed $4,000 annually. Nevertheless, they are to be responsible for their separate and collective administration. Only in special cases are they allowed to demand paid servants. In communes where it is found impossible to form Congregations, or where they fail in their duty, the Government will send a royal commissioner, to be paid by the commune. In communes of not more than 5,000 inhabitants the Congregations are composed of a president and four members; for 50,000 inhabitants, eight members; above this number, twelve members. All their deliberations are subject to the approval of the communal council and to that of the provincial *giunta* or executive. They are elected every four years, and a fourth of their number is to be renewed yearly. They may be re-elected for a second term of four years, but not for a third.

The law, while professing to devolve on the communes and provinces the administration of charitable institutions, will reserve to the central Government its fair share of control. The Minister of the Interior retains the supreme direction. He, or his delegate, the prefect of the province, examines the estimates and the final budget. The efficacy of the new law can only be proved after a long trial. In Italy the sentiment of benevolence, the sense of duty on the part of those "who have" to help those "who have not," is on the increase. Between the years 1880 and 1887 643 new charitable institutions were founded; 6,715, already existing, enriched by donations and legacies of a total value of $20,000,000. In Lombardy the hospitals have received $5,000,000, the infant schools $2,000,000, the almshouses $2,000,000, orphan establishments nearly $3,000,000. In the application of the new law the utmost care will have to be taken in cases where the old foundations are to be devoted to fresh aims, otherwise wealthy people in making their wills may hesitate for fear of the "disobedience of posterity." In the present antagonism between the Church and the nation, the latter rejoices rather than otherwise when the State transfers to itself the power and the wealth monopolized by the former; but this is a two-edged sword, and as such the moderate adversaries regard it. In Italy, though many sweeping laws are passed, they are very slow in taking effect. We may be quite sure that no single charitable institution will be abolished or transformed without good substantial and demonstrable reasons. On the one hand, the old administrators, and even those who have unjustly profited by the asylum or doles, will have to be provided for. The communes, heavily taxed for the maintenance of the sick, the aged, the demented, and orphans, will keep a sharp watch for any windfalls that may transfer to them the maintenance of these sums hitherto devoted to "masses," retreats, hermitages, etc., etc. And when all is said and done, the fact that the new law gives (at least to the male population) the administrative vote, it will be the fault of "the masses" themselves if they fail to avail themselves of it.

The law, which met with small opposition in Parliament, is hotly censured by the moderate and of course the Catholic press. But one thing is certain: if it be possible to revise and reform all the charitable institutions in Italy, to introduce economy into the separate or amalgamated administrations, to devote the funds to the really poor and such as are unable to maintain themselves, to the rearing of a generation of workers, the present patrimony of the poor is sufficient for the purpose without any additional subsidies from the State, the provinces, or the communes. *Chi vivra vedrà.* J. W. M.

THE ROYAL ACADEMY'S WINTER EXHIBITION.

LONDON, January 29, 1890.

OF all the large winter exhibitions in London, that held at the Royal Academy is always one of the most interesting and important. Though, year after year, it does not vary in scope, but, as its title explains, is made up of work by the old masters, British as well as foreign, each winter its managers seek to show pictures of a certain artist or school which, either singly or collectively, have not before been exhibited to the British public. Apparently so inexhaustible are the private and royal galleries from which they borrow that this has so far been, and still is, possible. In the exhibition lately opened, Italian work, which usually occupies a conspicuous place, has been entirely dispensed with, and an effort made to gather together a representative collection of the great Spaniards; while in the British department, though there is the annual supply of Sir Joshuas, Romneys, and Gainsboroughs, interest centres in a fine series of drawings and models by Alfred Stevens.

It is difficult to really study Spanish art outside of Spain. In the national and public collections of England, Velasquez is far from being adequately represented, though in them one or two of his great portraits fortunately are to be found; Zurbaran would be sought for in vain, while the finest and most characteristic examples of Murillo are hidden away at Dulwich, where comparatively few visitors go, and the lesser masters are absolutely unknown. For this reason, the present endeavor, at the Royal Academy, to give the Spaniards prominence is particularly welcome, though it must be admitted it has not been altogether successful.

A large number of fine Velasquezes are owned in this country, but only two have found their way to Burlington House; the six other works by him, now hanging there, while they might be masterpieces for almost any other artist, do not show him at his best, when he was supreme—indeed, the genuineness of one at least can be questioned. But the two to which I refer are of the greatest value to the student, and one is of unique interest in the history of art. This is his famous "Venus and Cupid." Thanks to the Spanish Inquisition, it is almost the only study of the nude by a Spanish artist which the world possesses, and, as if to show what we have lost by the inquisitors' false ideals of purity, it is the finest the world has ever seen. Velasquez was in high favor at court, the demand for the picture came from no less a person than the Duke of Alba—reasons enough to account for the artist and his Venus escaping unharmed. But, however that may be, the fact which chiefly concerns us to-day is, that when he painted this picture, he made it a model for all time. His Venus, with her back turned, lies on a couch covered with rich white and gray drapery, her head slightly raised, and her face reflected in a mirror held by a plump little Cupid kneeling on one knee; a deep-red curtain hangs in the background. There is no attempt at cheap idealization, no attempt to make the Venus the heroine of a story, or to fill her with mythical meaning and surround her with unintelligible symbols. Fortunately there is no sign here of those gifts of the imagination which Sir Frederick Leighton, in his late lecture on Spanish art, found sadly wanting in Velasquez. To the painter, Venus was the type of female beauty; the business of the artist, to paint what he saw as well as he knew how. Therefore, with the brush of a master, he reproduced on his canvas a beautiful female model exactly as she lay before him, with the result that his Venus is a masterpiece in its fine drawing, its rendering of flesh, its superb technique; and perhaps what strikes one even more is the lovely harmony in the color and its exquisite appropriateness to the subject. His study of a beautiful woman is as rich as his dead warriors or stern statesmen are dark and sombre in tone. Striking, too, is the modernness in conception and execution: you could imagine a Manet, with the genius of Velasquez, painting just such a Venus to-day.

As great in its own way is the portrait of Mariana of Austria, the second Queen and cousin of Philip IV. That he should have made the woman inside such a costume as that in which she sat to him alive is its triumph. One has just now a chance of seeing at the Tudor Exhibition how a Zucchero, in rendering the elaborate dress of his royal patron, reduced the sovereign herself to a mere conventional figure. Not so with Velasquez, however: Mariana's black, silver-striped dress, over enormous hoops, her wide lace collar, her rows of pearls, the concentric rolls of her coiffure crowned with feathers, are all suggested with a marvellous cleverness which makes Zucchero's accuracy by contrast seem no better than the fidelity of a photograph; and yet the costume can easily be forgotten in looking at the curious face, with its full Austrian lips, its great round of rouge on both cheeks, and its very marked sullen expression, strange to find in a Queen who could laugh so heartily in the solemn, decorous Spanish court that the King at times reproved her for her levity.

If the Mariana were less masterly, probably the portrait of Adrian Pulido Pareja, with the fierce, swarthy face and the black dress relieved by its white sleeves and collar and the red cross of Santiago, would show to greater advantage. This is the Pulido, Admiral of the fleet of New Spain, whom Velasquez painted several times. Of one of these portraits the legend recorded

of the work o every great artist is told: Philip came one day into Velasquez's studio, saw, as he supposed, the Admiral still lurking there in its darkest corner, reproved him for not being on the high seas, where he should long ago have been, and then found he was addressing only paint. The special picture of the story is still, I believe, in Spain, though there is another Pulido in England besides the one exhibited.

Of Don Balthazar Carlos, Prince of Asturias, there are four portraits, one as a child of three or four, two as a little fellow somewhat older, on a black pony, the background in both of these being filled with many figures. But even in a replica Velasquez did not repeat himself. The tone of the background is different in each —in one it is quiet and gray, in the other golden and glittering; the pose of the horse is slightly changed, the subordinate figures are far from being the same. In fact, these pictures show that, though one is but a replica of the other, he set himself in each a new problem; a lesser man would have been content to make a mere copy. The fourth portrait, by far the best, is of Don Carlos as a boy of ten or twelve, in a suit of armor most marvellously rendered, with splendid color in the reds of the gold-embroidered sash, of the chair, and of the curtain looped up to the right of the picture. In all four the face of the little fellow is already strongly characterized by the peculiar features of the house of Austria which Velasquez has made so familiar to us. A portrait of a lady, in a lemon-colored silk gown and a black lace mantilla, completes the list of his works.

Sir Frederick Leighton thinks that not Velasquez but Zurbaran was the most thoroughly representative Spanish artist, in him being gathered up all the various essential characteristics of his race—" its defiant temper, its dramatic bent, its indifference to beauty, its love of fact, its imaginative force, its gloomy fervor, its poetry, in fact, its prose." Fervor and dramatic effect at least are very evident in his five saints included in the present collection. Tall and commanding, each stands alone, his boldly handled drapery falling about him in long simple lines: St. Benedict with hand upraised in blessing; St. Jerome holding an open book, his lion at his feet; St. Thomas, St. Andrew, and St. Cyril reading. In all there is a grandeur of pose and dignity of conception that make them as impressive in their way as the kings and queens who look out from the canvases of Velasquez. But of imaginative force, in the usual acceptation of the term, there is little or none: Zurbaran treated his saints, who are really but so many Spanish monks and priests among his contemporaries, with the same realism with which Velasquez rendered his royal sitters, and herein lies their power.

Murillo is but poorly represented, a fact to be regretted. It is the fashion just now to depreciate him, and to dwell only upon his commonplaceness and false sentiment. Like every other great artist, he was unequal, and some of his work is of no special value. But he was a master of technique, and in his wonderful pictures of beggar boys, like those at Dulwich, he does not rank very far below Velasquez. No one ever saw more truly than he did the picturesqueness of low life, and no one ever succeeded in portraying it more picturesquely. Here, however, are only examples of his religious art: " The Good Shepherd," too well known to need description, and a very characteristic " Virgin and Child." The one remaining picture by a Spaniard is a portrait of Mariana of Austria by Del Mazo, who married the daughter of Velasquez. In all this Spanish work nothing is more marked than the careful restraint in color and the grave simplicity of composition; indeed, by comparison many of the near Sir Joshuas and Romneys seem garish and gaudy.

Special attention has been called to these pictures by grouping them together, as well as by the fact that the opportunities to see the work of the Spanish school are few. But no less important, technically, are the fine Rembrandts scattered through two galleries. Last year the special centre was reserved for Rembrandt, and a row of his incomparable portraits hung where the Velasquezes, Murillos, and Zurbarans now are. But those included in this year's exhibition would, if placed together in the same way, make a scarcely less fine, though superficially not so imposing, display. Among them are two of the portraits he seems never to have tired painting of himself—one, done when he was in his prime, showing the handsome face, with intelligent eyes and full, somewhat sensual lips; the dress he wears in this picture evidently was borrowed from his inexhaustible wardrobe of costumes in which he and Saskia were for ever attiring themselves, with the results he so often recorded on his canvas. On his head is a velvet cap, around which gleams a golden chain, while another chain, with a medal suspended from it, is about his neck. The color in the browns of the velvet coat, in the soft yellows of the old lace of the collar, and in the glowing flesh tints, is remarkably rich. Here, too, is one of his portraits of Lieven Willemsz van Coppenol, the scribe, his friend, whom he painted three times and etched twice. Coppenol, in a black cassock and cloak, with a black skull-cap on his scant gray hair, sits at a table, his face turned towards you; the white sheet of paper in front of him, and his white collar, breaking in very effectively upon the sombre hues of his dress and of the background. The face is full of character, the technique brilliant even for Rembrandt, and the whole composition marked by that simple dignity which the Dutchmen understood no less well than the Spaniards. The others show unknown men and women of the seventeenth century, whom, however, Rembrandt has made as real for us as the most conspicuous figures in the history of the age; and in all are those great qualities which one seldom looks for in vain in his portraits—the admirable expression of character, the careful modelling of the face, whether it be old and wrinkled, young or fair, the marvellous rendering of costume—of the wide lace ruffs, the curious women's caps, the fur-trimmed robes of his day—the rich, deep color, the vigorous drawing, the masterly handling.

I have not space here to speak of these in detail, nor indeed to do more than mention, among the other pictures of old men exhibited, two portraits by Van Dyck—one, the well-known Thomas Howard, Earl of Arundel, which has been engraved several times; the other, John, Count of Nassau Dillenburg; both of which, hanging as they do by the finest Rembrandts in the collection, strike one forcibly in their marvellous rendering of character. Examples of Jan Steen, Teniers, Cuyp, Gerard Terburg, Hobbema, and Van Ostade, and a curious series of portraits by Mytens and other Dutchmen, serving as fashion-plates of the sixteenth and seventeenth centuries, add immensely to this representation of the art of the Low Countries.

Of the British work, that of Alfred Stevens claims chief attention. It is true, there is much else of interest; to the student very great is the value of two fine sketches by Constable, of the " Pier at Brighton " and the " Vale of Stour," put in in great broad simple swipes; the latter (with graceful trees, which show very plainly where Corot got his ideas of tree-drawing, and filled with rich, silvery light) being the more completely carried out of the two. Valuable also, in its revelation of the artist's methods, is a monochrome sketch, by Gainsborough, of Mrs. Graham as " The Housemaid." A portrait of Robert Williams by Turner is notable because it is so seldom one sees a portrait by him, and because it is painted in a simple, direct, and straightforward fashion, so very different from his manner in the work which Ruskin has made popular. Of the Romneys, a portrait of Mrs. Stables and two of her daughters, Harriet and Louisa, has for the last few days been much talked about for the reason that it has never been exhibited before, its existence being all but forgotten. The lady who contributed it has, according to reports, already sold it for £8,000, its purchaser having disposed of it in his turn for £2,000 more. There is no doubt that Romney at his best is very fine, but just now he is beginning to be exploited by the dealers, and has become the fashion. The most important Sir Joshuas are his very beautiful " Hope Nursing Love" and his portrait of Sir William Chambers. But, despite the distinction of these single works, priority must be given to the collected models and drawings by Alfred Stevens.

This artist is not known as he should be. But the Academy, now that he is dead, is giving him that recognition it refused him during his lifetime. His reputation will probably grow greater with every year; but unfortunately this cannot mend the fact that, though he was one of England's leading sculptors and decorators, he was but too often without commissions. Perhaps he lived just too soon. The younger sculptors, who owe so much to him, already have achieved a success, officially endorsed by the Royal Academy, to which he never attained; designers of infinite inferiority now make for themselves a personal position which he never held; for while artists and craftsmen, in their yearly exhibition, now can claim all due credit for their own work, many of the designs of Stevens but added to the fame of Hoole & Robson, Minton, and other firms which bore away the honors of the exhibitions of 1851 and 1862. On his return from Italy, where he had remained nine years, though he was given an appointment in the Government School of Design at Somerset House, his chief decorative work was done for manufacturers. The present collection at the Academy shows very thoroughly the scope of his genius, and proves what a careful workman he was in his smallest as in his most important undertakings. There are designs for plates, candlesticks, vases, stoves, fire-dogs, all carried out with the true feeling for decoration, while as working drawings they are simply models. At the Arts and Crafts exhibitions, it seems as if bad drawing were considered by the exhibitors the first requisite of a decorator; but Stevens held other views, and the perfection of his designs, unequalled by those of any living English decorator, except perhaps Thornycroft, Gilbert, and Ford, his followers, was doubtless in a great measure the result of his care and accuracy as a draughtsman. For no less good are his life studies in red chalk, and his studies of drapery, and in this connection the excellence of his copies of old pictures, in which he had the sense to try to preserve their present appearance, is worth noting.

More important in one way, since they were his most ambitious works, are his models for the Wellington Monument at St. Paul's, and the proposed monument to commemorate the

Exhibition of 1851. The latter was never set up—a fact much to be deplored, as it would have been a great ornament to Hyde Park. It is very fine in conception, with a statue of the Queen raised on a pedestal, around which is a beautiful bas-relief, and four emblematic female figures. But finer still is the Wellington Monument, so impressive as a whole, so beautiful in detail. In the model, fortunately, it can be seen in its entirety, for Stevens's design, owing to the usual inscrutable wisdom of ecclesiastical authorities, was not completely carried out; the strong, effective figure of Wellington on horseback, which he placed on the top, being omitted. There is another work by Stevens in St. Paul's. It was he who designed a decoration for the dome and substructure, and though this has not yet been carried into execution, it will not be very long before at least the four mosaics of the Prophets will decorate the spandrils. Perhaps his most familiar production is the little lion which sits up on the railings running round the British Museum; but of the thousands who yearly see it, how many have heard the name of Alfred Stevens? The Academy by this exhibition of his work will probably make it more widely known. But the neglect of so admirable an artist while he was alive is one of the many unpardonable mistakes with which that institution has to reproach itself.

The Grosvenor has been the last of the three large galleries to open, with its Sports and Arts Exhibition, of which, however, little need be said. Comparatively few sports are represented, royal rather than popular tastes being consulted; but few pictures have any great art value, Landseer dominating the show. There are one or two commonplace Rubenses and some alleged Dürers, but really, from the artistic standpoint, the show is of no importance.

Correspondence.

A QUORUM OF THE HOUSE.

To the Editor of The Nation:

Sir: The House of Representatives assembled in the first session of the first Congress on April 6, 1789. On the next day the following rule was passed: "Every member who shall be in the House when the motion is put shall give his vote unless the House shall excuse him." This same rule, with slightly modified wording, has been passed by the House in most Congresses since then, and may be found in the rules of the Forty-fourth, Forty-sixth, and Fiftieth Congresses.

A law without a penalty is of little avail, but it is a matter of surprise that, in Congress after Congress, members have seen fit to continue a rule that no one feels bound to obey, and which has been openly and defiantly broken by every filibustering member of either party. If Representatives had been ready to obey their own rules, the precedents for filibustering would have been wanting to the present Congress, and no question would ever have been raised as to what constitutes a quorum.

The House has certainly supposed in the past that some one had the means of knowing if members were present, whether answering to the roll-call or not, for the House of the Thirty-eighth Congress, on June 8, 1864, passed the following rule:

"The names of members not voting on any call of the ayes and noes shall be recorded in the journal immediately after those voting in the affirmative and negative, and the same record shall be made in the *Congressional Globe*."

This rule was adopted by subsequent Houses up to the Forty-fifth Congress at least, and the *Globe* gives, with nearly every list of members voting "by aye and no," the list of members not voting. The fear shown by a certain member of Congress that he should be held up to his constituents as neglecting his duty if the journal declared him not voting, does not seem at this earlier time to have been prevalent.

There certainly may be an honest difference of opinion as to the interpretation of the Constitution of the United States in the clause with reference to a quorum, though if the question had never been raised in practice, it seems that the intent might be clear in theory, and that, too, in opposition to the practice heretofore existing. The Constitution on this matter says as follows:

"A majority of each [house] shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members in such manner and under such penalties as each house may provide."

By a rule of the House, passed first April 17, 1789, and continued by succeeding Houses, fifteen members, including the Speaker, if there is one, may compel the attendance of absent members, officers appointed by the Sergeant-at-Arms being sent in search of them, to take them wherever found and bring them to the House. These members so compelled to appear are evidently to help to constitute a quorum, and for no other purpose could they be so arrested. When they are brought within the chamber in sufficient numbers to make the required majority of members elected, a quorum is present according to the intent of the Constitution, or else the power given to the House to compel attendance is of no avail and utterly worthless. A quorum being in the House under compulsion, there can be no possible doubt of the actual presence of the parties arrested, and business may be transacted whether such parties sit in sullen silence or take part in the deliberations. Suppose the ayes and noes are called on any question and the arrested members refuse to vote; such refusal cannot be sufficient to show the absence of a quorum against positive evidence that the members have been brought in by force and are still detained by the officials of the House under the authority of the House. The Constitution gives to each House authority to compel attendance, and surely could not intend that the absentees, when brought in, should yet have it in their power to defy the House and render useless the action permitted by law.

This is a view of this question that in no way rests on late decisions of the Speaker of the House, but has been long held. Certainly all precedent is on the other side, but it may be a precedent that has grown up in spite of the Constitution rather than under it, just as the refusal or neglect to vote is entirely opposed to the rule the House has made for itself.

Whatever side one may be disposed to take upon the question of a quorum, the scenes enacted in the House of Representatives during the present session are not at all such as to rouse the pride of the intelligent voters of the country, whatever their party affiliations, and must cause gloomy forebodings as to the future of republican institutions.

J. D. Crawford.

Champaign, Ill., February 10, 1890.

THE SALTONSTALL CASE.

To the Editor of The Nation:

Sir: In your editorial on "The Saltonstall Case," in No. 1285, while justly censuring the President for his improper removal of an efficient and faithful official, you do not touch upon another, but equally important, phase of civil-service reform—I mean that which should have governed the choice of Mr. Saltonstall's successor. Mr. John M. Fiske (of whose political opinions I know nothing) has been the *real* Collector at this port for several terms, and is undoubtedly better qualified in every way for the Collectorship than any other man in New England. If the promotion of Mr. Pearson in the New York Post-office was a fair exemplification of the proper rule in regard to appointments, the promotion of Mr. Fiske would have been equally, if not more, commendable.

Stephen H. Tyng.

Boston, February 14, 1890.

ENGLAND UNDER PROTECTION.

To the Editor of The Nation:

Sir: Your correspondent "Tariff-Reformer" effectively quoted Thomas Carlyle against the assertion of Mr. Blaine, in the *North American Review*, that "Great Britain had reason to feel supremely content" "during the last thirty years of her protective system, and especially during the twenty years from 1826 to 1846." Carlyle is by no means the only great writer who can be quoted to the like purpose. For example, in his article on Ricardo, in the 'Economic Studies,' Walter Bagehot, who may be commended to Republicans as a very successful "student of markets," says:

"For the thirty years succeeding the peace of 1815, England was always uncomfortable: trade was bad, employment scarce, and all our industry depressed, fluctuating, and out of heart. So great is the change of times that what we now call 'bad trade' would then have seemed very good trade, and what we now call 'good trade' would have been too good to be thought of—would have been deemed an inconceivable Elysian and Utopian dream."

Bagehot accounts by the condition of England during that time for the great interest then taken in political economy. When times are good, "political economy ceases to have the same popular interest."

Fielding's Jonathan Wild was not the only "great" man to whom truth has been remorselessly inconvenient.

John C. Cozens.

Amsterdam, N. Y., February 10, 1890.

THE PHOTOGRAPH NUISANCE.

To the Editor of The Nation:

Sir: The photographer of the present day, not content with the money that he receives in the ordinary course of business from his employers, frequently sells their photographs and negatives, chiefly for advertising uses, to outsiders. Not only this; often, by means of the detective camera, he photographs people entirely ignorant of his action, at such times and under such circumstances as he pleases. It is not too much to say that all this adds a new horror to life. Those who suffer directly are usually young and lovely women. But their relatives and friends suffer deeply, if indirectly. Indeed, the public too may be said to suffer, if from no other cause, from the fear of seeing the photographs of their wives, daughters, or sisters treated in like manner.

A couple of instances in point have recently come to my knowledge. Both are instances of young, lovely, modest, and unmarried women. One—pardon the phrase—moves in the best society of New York; the other in that of Boston. The former may to-day find her photograph and a description of herself—the attraction of a large advertising placard—hung certainly in one and probably in many of the most glaringly conspicuous places in New York. The other has fortunately never known

that her photograph was accidentally found adorning the rooms of a man recently arrested in Boston on a criminal charge, nor that her photograph was spoken of by him in such terms as would make the blood of any one having a spark of chivalry boil within him.

I think that it needs no argument, but simply a plain statement of facts, to prove incontestably that the whole system is an intolerable outrage, and should be immediately suppressed; and I feel confident that the public would be wholly and earnestly in sympathy with this position should they once give the matter a moment's consideration. Surely, no self-respecting man could feel other than wrathful at the sight, for instance, of a face that is dear to him wedded to the figure of a ballet-girl, and plastered thus on the covering of a bunch of cigarettes. Yet any one of us may have this happen to him. If this statement is doubted, it can easily be verified by a glance through the windows of a few tobacco-shops of the lower grade.

I am not prepared to frame offhand a statute covering all cases, but I certainly believe that a statute should be forthwith passed making every one liable, criminally and in a heavy penalty, who either sells a photograph or photograph-plate without the consent of the sitter; or publishes a photograph, without such consent, for advertising purposes. Such a statute would give the many the privacy desired, while at the same time it would permit the few who desire, for professional or other reasons, publicity, to effect that wish by special contract with photographers.

But, apart from this proposed remedy by statute, is there none at common law? I am told that eminent lawyers deny that a remedy exists. On the contrary, I believe that one does exist, and I base my belief on the legal principle applicable to the ordinary letter of correspondence. Practically every man thinks that he owns absolutely the letters that he receives, yet he is entirely mistaken. In law the writer gives the receiver the paper, ink, and other tangible parts of the letter, the right to read the letter, and the right to use the knowledge thus obtained in accordance with the purposes for which the communication is made; but he gives him nothing beyond this. In conformity with this legal principle, a recipient of letters who is on the point of publishing them in book form may be enjoined at the instance of the writer (Drone on Copyright, 127-137). So, also, a telegraph company is undoubtedly under a legal obligation to abstain from using or disclosing the messages which it contracts to communicate (Gray on Communication by Telegraph, §25). Now this same legal principle is, to my mind, applicable to portrait plates in the hands of a photographer, and *a fortiori* to photographs struck from those plates for purposes of sale to outsiders.

In applying this principle here, it is important to remember that these plates are simply a necessary incident in the process of photography. In merely sitting for his photograph, an individual impliedly, if not expressly, gives the photographer the right to use the ordinary process in taking his photograph. But he gives him nothing more than this. He does not give, nor has he the slightest intention of giving, the objectionable rights under consideration. The photographer owns the negative, but only in the restricted sense in which a telegraph company owns the message which it contracts to communicate—a message written usually on the blank form and with the ink provided by the company. Under such circumstances, if a photographer sells without consent either negative or photograph, he is liable to the sitter for a breach of implied contract; or if he is upon the point of making such sale, he may be enjoined, at the instance of the sitter, for committing a breach. M. G.

"A SIDE LIGHT ON GREEK ART."

To the Editor of The Nation:

Sir: In the *Century Magazine* for February there is an article on some newly discovered teracottas, which are supposed by the writer to throw a "side light on Greek art," and which are recommended for purchase by the American public. It cannot be too widely known that all these groups of several figures purporting to be antique figurines from Asia Minor or Greece are pronounced by the most authoritative experts to be forgeries; and I for one, having seen several of them, and knowing something of the tricks of the trade in antiquities, have no hesitation in endorsing this judgment. It is, indeed, perfectly well known where the forgeries came from. I saw one large group which was seized in the Custom-house at Peiræus; it had been imported from Smyrna, and had been broken into twenty pieces to carry out the deception better. Although, as only in transit, it could not have been seized by the Greek law if it had been reclaimed by the owner, it never was reclaimed, because the shipper wished to conceal his identity.

The trade in counterfeit figurines is so large and so prosperous that the half of those which are sold to-day, even of the single figures known as Tanagra or Myrina, or in general as Smyrna, are forgeries. A celebrated collection sold in Berlin not long since, and which was made up in Athens early in the fever for collecting them, was there well known to be about half forgeries. The forgers get their clay from the same localities which furnished that for the ancient artists, and, having the models for style before them in original work, they succeed in catching the spirit of it so well that very few experts, even in Athens, can readily detect the forgery. Often a head of original workmanship is made out as an original figure by the addition of a new body; sometimes the original is copied so closely that one can see where it was copied from, but in general the single-figure forgeries are only imitated in style. The large groups are, however, daring fabrications, and, as far as one can judge from the character of the design and without seeing the object itself, I am disposed to pronounce all the groups given as illustrations in the *Century* article to be forgeries. A prominent dealer in Athens last year sold to one of the Rothschilds some of these groups, and, the purchaser showing them in precaution to the most eminent expert in Athens, they were at once and absolutely dismissed as forgeries, and the money was returned without demur or debate. I have myself known in Athens one of the sculptors who are employed in these fabrications, an able Italian workman in poor circumstances, but quite capable of doing original work if anybody had wanted it, in default of which he was obliged to work for a few francs a day in the fabrication of these figurines.

The trade in these terracotta statuettes is now so extensive and so bold in its fictions that no one should buy one except on the authority of a first-rate expert. Some forgeries are patent to a half-trained eye, but others are so good that there are very few even among the dealers who can detect them. The worst thing about these large groups is that they create a form of art which the genuine Greek art never took, and so throw a false "light on Greek art."—Yours truly, W. J. Stillman.

Rome, February 5, 1890.

LUCKY YEARS.

To the Editor of The Nation:

Sir: The year '89 seems to be a lucky year for constitutional government. In 1689 the English Bill of Rights was passed by Parliament; in 1789 the Constitution of the United States of America went into effect, and the French States-General met which afterwards made France a constitutional monarchy; in 1889 the Japanese Constitution was promulgated, and Brazil peacefully changed from an empire to a republic. "What's in a" year?

Clem.

STEAMER DECOYS.

To the Editor of The Nation:

Sir: The great steamship lines have begun to send round their seductive decoys. These I toss at once into the waste-basket, waiting (like many others, I believe) for one with these two headings conspicuously displayed:

☞ Steamers of this line are fitted out with the latest and best appliances for the use of oil on water.

☞ This is the only company that furnishes steamer chairs gratuitously.

Very respectfully yours, G. M. L.

Cambridge, February 17, 1890.

Notes.

The uniform texts of the writings of the Fathers of the Republic which the Messrs. Putnam have undertaken, and carried out in the case of Hamilton, Franklin, and Washington, they will continue with the 'Writings of John Jay,' edited by Prof. Henry P. Johnston of the College of New York, who in respect of competence will not suffer by comparison with any of his predecessors. The work will be completed in four volumes, and will contain much unpublished matter, together with important letters from his contemporaries. Following this issue, the Writings of Jefferson will be brought out in some nine volumes.

The Historical Printing Club, 97 Clark Street, Brooklyn, N. Y., invites subscriptions to the following historical works edited by Worthington Chauncey Ford, viz., 'Trade Between Great Britain and the United States,' a "suppressed" report made by the Privy Council to the King in 1791; 'Letters of Joseph Jones, 1777–1778,' a member of the Continental Congress from Virginia; 'Washington as an Employer and Importer of Labor'; 'The Spurious Letters attributed to Washington'; and 'The Duché-Washington Letters,' containing the original of Parson Duché's letter to Gen. Washington urging him to betray the Continental cause and negotiate for peace at the head of his army. These pamphlets are uniform, small quarto, and the edition is limited in the case of the first two to 250, of the last three to 500 copies.

Dodd, Mead & Co. promise a new edition of Prof. J. D. Dana's 'Corals and Coral Islands, and a new work from the same authority on 'Characteristics of Volcanoes,' with contributions of facts and principles from the Hawaiian Islands. This house has taken over the publication of Mr. James Schouler's 'History of the United States under the Constitution,' which lacks only a fifth volume of being complete.

'Stanley's Emin Pasha Expedition,' by A. J.

Wauters; 'Recollections,' by Geo. W. Childs; 'Historic Note-Book,' by the Rev. E. Cobham Brewer; and 'How to Remember History: a Method of Memorizing Dates,' by Virginia Conser Shaffer, are in the press of J. B. Lippincott Co.

'Studies in Literature and Style,' by Prof. T. W. Hunt of Princeton, will shortly be published by A. C. Armstrong & Son.

E. P. Dutton & Co. have nearly ready 'To Europe on a Stretcher,' by Mrs. Clarkson Potter; 'The Historical Christ, the Moral Power of History,' by the Rev. David H. Geer; and 'Five Sermons,' by Bishop Whipple of Minnesota.

Anson D. F. Randolph & Co. have in press, for immediate publication, under an arrangement with the English publishers and author, 'Jesus the Messiah,' an abridged edition of the 'Life and Times of Jesus the Messiah,' by the Rev. Alfred Edersheim, D.D.; and a 'History of the Westminster Assembly of Divines,' by Prof. Wm. M. Hetherington, D.D., edited by Robert Williamson, D.D., with notes and facsimiles of title-pages of the original editions of the Confession of Faith, the Catechisms, Larger and Shorter, and the Directory of Church Government and Ordination of Ministers.

In April, Ginn & Co. will issue 'Elements of Structural and Systematic Botany,' a textbook by Prof. Douglas Houghton Campbell of the Indiana University.

Wm. M. Goldthwaite, No. 107 Nassau Street, has bought out the business of Hyde & Co., publishers of maps, atlases, and road charts.

The Montclair (N. J.) Photo-Gravure Publishing Company have acquired the remainder edition of Mr. W. I. Lincoln Adams's 'Montclair: a Series of Photo-Gravures' — memorials of a region abounding in rural views of great beauty and occasional wide prospects.

Mr. Wm. G. Kingsland will shortly publish, through J. W. Jarvis & Son, London, a revised edition of his 'Robert Browning, Chief Poet of the Age,' with a photogravure portrait.

Mr. Andrew Lang is about to follow up his 'Letters to Dead Authors' with a second attempt in epistolary parody. In 'Old Friends' (to be published here shortly by Longmans, Green & Co.) he sets forth the correspondence which might have taken place between characters in fiction who lived at the same time—M. Lecoq, for example, writing to Mr. Inspector Bucket, and Mr. Trollope's Mrs. Proudie describing to a friend how the Bishop was taken in by a self-styled Lady Crawley, formerly Miss Becky Sharp. Among these letters is one from the very British hero of Ouida's 'Under Two Flags,' narrating his surprising rescue of Miss Daisy Miller.

The *Writer* (Boston) has in hand the compilation of a 'Directory of American Writers, Editors, and Publishers,' to be published at the earliest possible day. From the current number of this periodical we learn that a new weekly journal, the *Cambridge Review*, is projected, somewhat upon the lines of the old *Harvard Register*.

It cannot be too widely known that the second (revised) edition of Mr. Bryce's 'American Commonwealth' is now deliverable by Macmillan & Co. "Sixteenth thousand," one reads upon the title-page. Marks of the indefatigable author's retouching are everywhere visible, including one *lacuna* — the chapter on the Tweed Ring now in litigation through the desperate endeavors of ex-Mayor Hall to rehabilitate in London a character hopelessly damaged in New York. Some purchasers may on this account hesitate between the second and the first edition, which, moreover, will always be highly prized as the first (not rough) draft of a work destined to maintain a living hold on our institutions of learning, and to shape the political thinking of the rising generation.

'Problems in American Society,' by Joseph Henry Crooker (Boston: George H. Ellis), is a volume of very pleasantly written essays upon such themes as the life of the student, scientific charity, religious and secular education, and the liquor traffic. The account of the origin of the science of charity, so to speak, in Hamburg, and its subsequent development there, deserves general study, and the same may be said of the author's remarks upon the worthlessness of all machinery for the relief of the poor that is not animated by human devotion. Much good sense is displayed in the discussion of the evil of intemperance, the futility of trying to suppress it merely by legislation directed against the dealers in liquor being emphasized. While the essays are in the main of a character to be more effective in oral delivery, they will be acceptable to many in their present form.

The circumstance that 'Money,' by James Platt, F.S.S., is reprinted from the nineteenth English edition, is sufficient proof that it is not a technical treatise. It is, however, a very sensibly written one, although it is extremely rambling and diffuse. So far as it deals with principles, it follows in the main the safe guidance of Bagehot's 'Lombard Street,' but it is obvious that the author has been actively engaged in business on a large scale, and the book is full of sound advice and maxims of practical wisdom. These features have probably caused the large circulation of the book in England, but there is much in it that is not applicable to our business conditions. The author misunderstands, or at all events states so that others will misunderstand, the legal-tender decision of the Supreme Court of the United States. The "elaborate judgment" referred to by him, holding that debts contracted before the greenbacks were issued were payable in dollars of the same kind as those borrowed, was unfortunately not the judgment of the court, but a dissenting opinion. The book is republished here, under arrangement with the author, by G. P. Putnam's Sons.

'American Whist Illustrated' (Houghton, Mifflin & Co.) is the title Mr. G. W. Pettes has given to the new volume in which he has combined the substance of his 'American Whist' and 'Whist Universal,' of which the former has had ten editions since 1880, and the latter four since 1887. Without accepting all the *obiter dicta* of Mr. Pettes, we may say unhesitatingly that this is the best and most logical treatise on the most advanced form of whist now obtainable. The moment the principle of the so-called "American leads" is accepted (and "Cavendish" was frank in acknowledging the great value of Mr. Trist's improvement), there is no reason why it should not be pushed to its logical conclusion, as Mr. Pettes does here in his chapter on the "New Play" (pp. 125–133). Especially to be noted is the dialogue reported by Mr. Trist (p. 127). Among the most valuable features in 'American Whist Illustrated' are the illustrative hands figured on the final seventy pages of the book. The beginner can learn not a little from the first four games, for example, in all of which the same hands are held, all four of the players being ordinary in the first game and skilful in the last, while in the other two a pair of skilful players are matched against a pair of ordinary players, at first with the better cards and then with the worse.

In our recent article on Ibsen and his translators, we had a good word for Eleanor Marx-Aveling's version of 'The Lady from the Sea' (London: T. Fisher Unwin). We might have added that the volume has the elegant appearance of the Cameo Series to which it belongs, and a characteristic portrait of the dramatist (much less well printed than the letterpress). We may remark here that, even in this era of "series," one devoted wholly to poetry indicates not a little courage; but this is what Mr. Unwin has attempted in the Cameo Series. Mr. Pennell has made a cover stamp for it, and will add illustrations if need be. It is intended to include reprints and translations as well as original verse. The volumes are seemly and shapely, with a back of vegetable parchment and a neat green-paper side. As yet, the series contains but four books, 'The Lady from the Sea,' the late Amy Levy's 'London Plane-Tree, and Other Verse,' Mr. William Watson's 'Wordsworth's Grave, and Other Poems,' Mr. T. W. Rhys-Davids's new edition of Sir William Jones's version of Kalidasa's 'Sakuntala.'

Georg Brandes's critical estimate of Ibsen is well known, and Valfrid Vesenius, who in 1879 published at Helsingfors a like critique, followed it up in 1882 with 'Henrik Ibsen, ett Skaldeporträtt' (Stockholm). But perhaps the fullest information concerning the Norwegian dramatist is contained in Henrik Jäger's 'Henrik Ibsen 1828–1888' (Copenhagen, 1888). This work has been translated into German by Heinrich Zschalig (Dresden and Leipzig, 1890), with additions and occasional annotations; the additions consisting chiefly of Halvorsen's account of a composition read by Ibsen in school at the age of fourteen, a speech made by the poet, September 10, 1874, in response to a "banner procession" of the students of Christiania, and an analysis of "The Lady of the Sea," which was not published until after the Danish original was in type. The account of Ibsen's early life and struggles for existence and recognition is interesting; but the book is likely to be found unsatisfactory to readers not already acquainted with Ibsen's works. The analyses of the dramas presuppose that the reader is familiar with the plots, and are quite unintelligible to those who are not. The arrangement is poor and there is no index. The translation is a slovenly piece of work, and the number of typographical errors is largely in excess of what is allowable, to say nothing of blunders for which neither printer's devil nor proof-reader can be held responsible. Ibsen's career furnishes ample material for a fascinating biography if only properly treated.

Two theatrical annuals demand a word of record, the '*New York Clipper* Annual for 1890,' which contains a theatrical chronology and obituary for 1889; and the '*Era* Almanack,' which is the twenty-third of the series, and contains the usual records and also a set of rather dull answers (in facsimile of the handwriting of the actors interrogated) to questions as to the favorite play of each, the most extraordinary blunder heard on the stage, etc.

The year whose physiognomy is graphically fixed in the thirty-third volume of *Harper's Weekly* can hardly be called dull. One of the earliest cartoons is of a White House reception while President Cleveland was still in office, and after that comes the series of events relating to the inauguration of his successor, the centennial commemoration in New York., etc., etc. The two congresses—the International Maritime and the Pan-American—the Johnstown disaster, and the revolution in Brazil are the other significant time-marks. The Paris Exposition receives but little notice. In this city we are reminded that in 1889 "Rheingold" was first put upon the operatic stage, and that a hopeful beginning was made of the removal of telegraph poles; but also that Tammany's

fresh hold upon the government was clearly revealed. The dead whose departure is recorded in portraiture embrace Ericsson, John Bright, Henry G. Pearson, Jefferson Davis, and Robert Browning. Mr. Howells's 'A Hazard of New Fortunes' is the chief fiction of the volume. The supplements deal as usual with American cities, chiefly Western and Far Western, but also with many miscellaneous topics—from ferry-boats to men-of-war, from stained glass to roads—concerning which specialists convey no little useful information.

For *Harper's Bazar* last year the special incident was the death of its editor, Miss Booth. Her portrait, an early one, is given in the bound volume before us. The fashions have of course a large share of the pictorial space, but considerable cognizance is taken of the Paris Salon and the English galleries, a little of the Exposition, a little of the Centennial of the Republic. Besides the French and English paintings thus reproduced, there are a noticeable number of designs by American women, as is proper. The British cathedrals are also numerously depicted. The leading serial in fiction is William Black's 'Prince Fortunatus.' Mr. T. W. Higginson continues his unflagging series of papers on "Women and Men."

Russia may be called the leading topic of Vols. 78 and 79 of *Harper's Monthly*. Theodore Child has no fewer than four papers on that country, Clarence Cook describes Russian bronzes, and Count Melchior de Vogüé deals with Russian social aspects—all with aid of profuse illustrations. Norway is treated of by Björnson. Benjamin Constant records a painter's impressions of Tangier and Morocco. C. D. Warner writes of Canada. Lockyer and Prof. Darwin contribute astronomical papers. Dr. Waldstein's long appreciation of Ruskin is accompanied by a portrait which is one of the few notable ones of the two volumes. Daguerre's is another, being from a daguerreotype; but one feels that his centenary was inadequately celebrated here and elsewhere in our literary and scientific organs. Miss Woolson's 'Jupiter Lights' is the continued story of the year.

The twelfth volume (in the new series) of the *Critic* covers the half year July–December, 1889. The disappearance of the leading article is chiefly to be remarked. "Literature" is now the standing heading at once for the book reviews and for the general complexion of this useful weekly.

Shakespeariana has enlarged its form with the new year and turned into an illustrated quarterly magazine, remaining under the editorial charge of the New York Shakspere Society, and being published by Leonard Scott & Co., 29 Park Row. The January number is quite given over to memorials of the late Halliwell-Phillipps, whose portrait is accompanied by views of Hollingbury Copse within and without.

The mutable *American Naturalist* has paused in its regular appearance, pending a change of publishers. The number for September, 1889, bears the imprint of Ferris Bros., Philadelphia, and is, typographically, a marked improvement on the old style.

With the new year the monthly *Revue Française* is revived, under the editorship of M. L. Boisse (New York: W. R. Jenkins; Boston: Carl Schoenhof). It will be original and eclectic. It is printed in clear type, on a broad page.

The *New England Notes and Queries*, just started by R. H. Tilley, Newport, R. I., is an attempt to combine antiquarian lore with genealogical interchange. The contents of the January number are interesting, but are very poorly displayed for want of taste in the typesetting.

Mr. Brander Matthews's effective writings on copyright in the magazines have just been reprinted, with the author's revision, by the American Copyright League, under the titles, 'American Authors and British Pirates' and 'Cheap Books and Good Books.'

Two recent products of the topographical survey of Massachusetts deserve mention. The first is the general map of the State, on the scale of about four miles to an inch, with contours for every hundred feet, of which a proof copy has lately been issued by the Geological Survey. It exhibits the larger topographic features of the State with great clearness; the truly plateau character of the central and western portions standing out distinctly in contrast with the broad valleys of the Connecticut and of Berkshire. The second map is on a scale of a mile to an inch, with contours every twenty feet, for a district around Boston. This is published by the Appalachian Mountain Club, and may be obtained from their sales agents, W. B. Clarke & Co., 340 Washington Street, Boston. It will be of great value in local excursions and as the basis for scientific studies of various kinds. It would serve admirably to accompany a "half-holiday guide" to the neighborhood of Boston, for which there should be a good general sale.

Mr. F. Gutekunst, No. 712 Arch Street, Philadelphia, worthily commemorates the late George H. Boker by a fine half-life-size photographic panel portrait in his best manner. The retouching has spared the lines of character, and the result is a thoroughly acceptable likeness.

—The Rembrandt Club of Brooklyn has published a large quarto pamphlet containing a summary of its proceedings from its organization in 1880 until the summer of 1889, a list of its past and present members, catalogues of its loan exhibitions, and a complete list of the papers read at its monthly meetings, which is suggestive of a great deal of delightful instruction and entertainment. The Club has no local habitation, but holds its meetings at the houses of its members, several of whom have private galleries of great excellence. Their riches are made evident by the catalogues of paintings exhibited by the Club at different times in a public manner. The membership of the Club is limited to one hundred members, and some twenty-five are generally elected in advance for admission as vacancies occur for one reason or another. The Club has, unquestionably, done a good deal to encourage the love of good pictures among its members and in Brooklyn. In 1886 it offered a prize of $600 for a competitive etching, and awarded it to Mr. Thomas Moran. It has maintained classes in drawing at the Brooklyn Institute and elsewhere. Its exhibitions have been the principal art events in Brooklyn since the Brooklyn Art Association fell asleep. There are about twenty photogravure reproductions of pictures owned by members of the Club. They are quite unequal in their execution, but some of the worst executed are suggestive of the rarest beauty. These, it would seem, did not lend themselves to reproduction as did some others. A Pelouse and Rico are very happily reproduced. The pamphlet is the work of Dr. Lewis D. Mason of the Club, and is written simply and modestly. Similar clubs may find in it some valuable suggestions.

—From week to week for the last year or two there has been appearing in the literary supplement of the Paris *Figaro* a series of sketches of French writers of fiction under the general heading of "L'Exposition Décennale du Roman Français." This series, which has been of some interest and value, although it has seemed at times to be rather lavish in its bestowal of praise, came to an end on January 11 with a sketch of J. K. Huysmans. Its author adds a postscript to say that his papers might have been almost indefinitely continued if he had chosen to take up the work of "those men of talent who have given their proofs, full of promise for to-morrow." He cites a dozen names of writers who, he prophesies, will attain high distinction within the next ten years. These are as follows: O. Mirbeau, H. Céard, Hennique, Paul Hervieu, Robert de Bonnières, H. Lavedan, Elémir Bourges, G. Guiches, P. Margueritte, J. H. Rosny, P. Adam (author of 'Sous-offs.'), and Paul Bonnetain. Mr. Lowell has laid down with scientific precision the conditions under which it is proper to put on the prophet's mantle and foretell things, and one may be permitted to doubt if these are fulfilled in the case of the critic of the *Figaro*. Not all of those whose names he gives seem certain to be, as he predicts, the masters of French romance of whom Paris will be most proud ten years hence. But it will certainly be interesting to watch the career of all of them. One of them in particular, who is as yet not very well known on this side the water, seems to be a writer of uncommon promise. M. Henri Lavedan has a clearness and concision of style, and a directness and simplicity in telling his stories, that give a strong impression that the critic will make no mistake who appoints a rendezvous with him at the end of the present decade.

—The fourth and fifth parts of the new 'Handwörterbuch der Staatswissenschaften (Jena: G. Fischer) confirm the impression that this work will contain a mass of material, statistical, bibliographical, and historical, concerning political economy that can nowhere else be found so compactly and exhaustively collected and arranged. As indicating the fulness of treatment accorded to the topics so far reached, it may be mentioned that various branches of the labor question occupy 448 large octavo, double-columned pages, and there is more to come in seven or eight other articles later in the alphabet. The subject is considered in a number of separate treatises subdivided with great system. For instance, there is such a treatise on Industrial Insurance, covering ninety-nine pages, in addition to the thirty-four pages devoted to the article on Insurance against Old Age and Disability, mentioned in our notice of a previous number. The first twenty pages contain a general view of the subject, regarded dogmatically, critically, and historically. This portion is by Schaeffle; then follow seventy-nine pages full of statistics and history, each country being separately taken up in a separate article, beginning with Germany, coming down through Austria, Switzerland, Great Britain, France, etc., and winding up with the United States. The different articles are by different writers, that on Great Britain being by Hasbach, that on this country by Prof. Edward W. Bemis. The same method is followed with all subjects that admit of it, as in the article on Strikes and Lockouts, which covers fifty-nine pages, and, after briefly discussing strikes in general, takes up one country after the other, giving an account of the various strikes in each, down to 1886. On the same plan we have an article of sixty-one pages on the wages question, the first twenty-two pages setting orth the general doctrine, after which the va-

rious countries are again, in the order already referred to, treated seriatim, from a statistical and critical point of view. The general introduction, by Schönberg, takes a conservative view, entirely free from socialistic bias, and reaches the common-sense conclusion that "attempts to establish a standard for determining fair wages have had the same results as attempts to square the circle."

— Of course, being designed primarily for German readers, this work is unusually full in the department of German legislation on economic matters, and much of what it gives in this way has but a limited practical interest for Americans. Nevertheless, it cannot fail to prove well-nigh indispensable to any one who is required to write or speak on economic subjects. Its bulk promises to be enormous. The prospectus estimates it at 5,600 pages; but as the 816 which have as yet appeared have failed to exhaust the first letter of the alphabet, the estimate will probably fall far short of the consummation. A minor point, of philological interest, to be noted is, that the word "Strikes" is here finally naturalized as a German one, being spelled "Streiks," to get the correct English pronunciation, and printed in Gothic type along with the rest of the text, instead of being set apart in Roman type, as is customary with foreign expressions.

— Schönbach's 'Ueber Lesen und Bildung,' briefly noticed in the *Nation* of April 12, 1888, has met with such favor from the German public that it has now been brought out in a third edition, greatly enlarged and printed from entirely new plates. The three essays which, aside from the book-lists, constituted the original edition, are retained, the new matter consisting of two essays, "Recent German Poetry" (*Dichtung*) and "Realism." The old book-lists have also been enlarged so as to represent more adequately the general movement of contemporary German literature, both prose and verse. In the first of the new essays Schönbach discusses the question whether Germany now has a "literature" in the sense intended when we speak of an Augustan or an Elizabethan literature—that is, a body of literary production having a definable character of its own. To get data for deciding this question he passes in review a number of the more prominent representatives of contemporary German letters, and finds in their work two distinctive marks which separate them from their predecessors. These are, first, a spirit of fidelity to facts, and, secondly, the note of national sentiment. (The obvious query whether these marks are, after all, distinctively German, is not satisfactorily answered.) Having reached the conclusion that fidelity to fact, as a reaction against romanticism, is a general characteristic of all recent German literature, he is naturally brought to a consideration of the school who make fidelity to fact their particular battle-cry and fly the flag of "realism." By this is meant such writers as Bleibtreu, Heiberg, Conrad, and Kretzer, the last-mentioned of whom the essayist regards as the most important of the group. The relation of German realism to the naturalism of Zola and to the older art of Balzac is analyzed in some detail, and analogous phenomena in English and Scandinavian literature are touched on by way of comparison. The author's views are necessarily stated with brevity, but his criticism is thoughtful and temperate. Upon the whole, novel-readers who read for culture as well as for amusement (if there are any such readers still left) will find this little volume of Schönbach's a very useful index to recent German fiction.

RAWLINSON'S PHŒNICIA.

History of Phœnicia. By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, Canon of Canterbury, Corresponding Member of the Royal Academy of Turin. Longmans, Green & Co. 8vo, pp. xxii., 583. 1889.

With this volume on Phœnicia, Canon Rawlinson retires from the Camden Professorship and closes his long and honorable career as historian. He had the good fortune to offer to the public in his larger works attractive histories of nations and periods little known, yet intensely interesting; his books on Babylonia, Assyria, and Persia, in spite of exacter researches made since they were written, continue to be the most accessible and in general the most satisfactory accounts of these countries in the English language. His wide and varied learning, his admirable historical style, and his power of popular presentation have given him deservedly high reputation as an historian. His larger works may be characterized as eminently useful. More cautious praise must be given to most of his smaller books, some of which are so colored by his peculiar religious opinions as to be historically misleading. It must be added that his scholarship is largely of the English type of two generations ago, which had small acquaintance with modern French and German scientific writings.

Rawlinson is at his best in geographical description and historical narration. His chapters on the land, the climate, and productions, and the political history of Phœnicia leave little to be desired in point of clearness and pleasantness of style. His aim has been to make the facts "readily intelligible to the ordinary English reader," and in this he has succeeded admirably. Without making an oppressive array of learning, he knows how to weave the materials of the ancient and the modern sources into an easy and agreeable narrative. There are few contested points in the history of Phœnicia. The period anterior to the eleventh century B.C. is almost a blank, and for what we know of the country after this time we are dependent almost entirely on foreign sources. No native history exists. It is to Egyptian literature, the Old Testament, the Assyrian inscriptions, the Greek and Latin writers, and Josephus that the modern historian must go for his materials. Nor has the history any interest in itself. Phœnicia developed, so far as we know, no political institutions—this was not its function in the history of civilization. Its career is in this respect strikingly similar to that of Israel—for both these peoples the civil-political constitution was merely the framework of an idea; the idea of Israel was religion, the idea of Phœnicia was commerce. Nothing could be more misleading than the assertion of Deutsch ('Literary Remains,' pp. 162, 163, quoted by Rawlinson, p. 55) that the Phœnicians "could boast of a form of government approaching to constitutionalism." The fact is, that the Phœnician government, whether in the mother country or in the colonies, in the monarchy of Sidon and Tyre or in the oligarchy of Carthage, was of a simple nature, into which the conception of a fundamental law that should control the supreme magistrates does not seem to have entered. Rawlinson does not discuss this question, but confines himself to the narration of the political fortunes of the people—a varied story, which he tells in lively and picturesque style; out of a number of passages, one might point to his summing up of Phœnician history under Assyrian rule (pp. 438, 439), and his description of the siege of Tyre by Alexander (pp. 528, 529), as admirable examples of this sort of writing.

It is perhaps due to the author's desire for brevity that he says little or nothing on various points which we should expect to find discussed. He makes a bare allusion, for example, to Phœnician colonies in Greece proper. Probably he regarded the evidence for such colonization as insufficient; yet the presence of Phœnician names and religious rites on the coast of Greece calls for some explanation. In his smaller history, 'The Story of Phœnicia' (New York, 1889), he speaks of colonies in the islands of the Ægean, and adds that it may perhaps be questioned whether the Phœnicians also occupied the Greek mainland (p. 62); in the larger work, after mentioning the islands of the Ægean, he dismisses the mainland with the remark (p. 104) that a Phœnician settlement in Bœotia was the current tradition of the Greek writers. One might expect here at least some reference to Cadmus, Melicertes, and other names which have been collected by Duncker ('History of Antiquity') and other writers. If there were only a couple of names to be dealt with, they might be accounted for by the visits of Phœnician traders to the Greek coast; but where the mass of facts is so great, they are entitled to serious discussion even in a popular history.

There is a similar lack of seriousness in Rawlinson's treatment of the arts, the language, and the religion of the Phœnicians, and of their origin. He has collected a large number of interesting facts, but his interpretation of the facts is often unsatisfactory. His account of the æsthetic arts is taken from good authorities, chiefly Renan and Perrot and Chipiez; but he gives his examples in isolated form, and hardly attempts to trace in definite outline the development of artistic work. His account of the language, naturally brief in such a work, while generally correct, contains some strange statements respecting the alphabet. He declares that there is no Phœnician letter representing the sound of the English *w*; that *sade* (which he writes *tsade*) is superfluous, since it combines the two sounds *t* and *s*; that there is "redundancy in the two forms for *k*, namely, *kaph* and *koph*, in the two for *t*, namely, *teth* and *tau*, and in the two for *s*, namely, *samech* and *shin*" (p. 379). It is difficult to see how Prof. Rawlinson could have made these statements, which contradict well-known and characteristic facts of Semitic phonetics. The *w*-sound (*waw*) was retained in the Greek digamma, and the differences between *sade* and *samek*, *kaph* and *koph*, *teth* and *taw* are as well marked as, for example, the difference between the two German sounds of *ch*.

Rawlinson's treatment of the religion is lacking in breadth and orderliness. The comparative method, now recognized as necessary in the study of all religious systems, and especially applicable in the case of the Semitic, is hardly employed by him at all—an omission which is not the result of ignorance, since other works of his show good acquaintance with the Babylonian-Assyrian pantheon, but which must be ascribed to his defective method. He has little to say of what may be called the biographical or genetic side of the cultus: he does not discuss the question how far the Phœnicians may have borrowed from the Assyrians and the Aramæans, or the Greeks from the Phœnicians. To the large literature which this latter question has recently called forth he makes no reference. Instead of asking whether Heracles and Aphrodite may have had a Phœnician origin, he has rather inclined to adopt the fashion of the Greeks, who contented themselves with a loose identification of each for-

eign deity with some one of their own. While he mentions the later Phœnician loans from the Egyptian, he persists in always identifying the Phœnician *Hamman* with the Egyptian *Ammon*. He is quite right in attaching small importance to the mythological system which Philo of Byblos pretended to have derived from the Phœnician, Sanchoniathon; but the Phœnician cosmogony deserves more serious treatment than it receives at his hands. No doubt Lenormant has pushed his interpretation of Philo beyond the bounds of discretion (in 'Les Origines de l'Histoire,' vol. i., appendix 2), but that is better than dismissing the whole subject, as Rawlinson does, with the assertion (p. 329) that "if it meant anything to the initiated, the meaning is wholly lost." He does not think it worth while to seek for ideas in the religion. His attitude towards it is not scientifically calm, but rather unfriendly. He credits the Phœnicians with religiousness, but holds that their religious ideas were low and their religious practices largely debasing. His view of the historical progression is that the Phœnicians were at first monotheists, but, through the corruption of fallen humanity, necessarily passed into polytheism. This is only a special application of his general theory of human religious history: "fallen man," he says, "when he becomes conscious to himself of sin, ceases to be able to endure the thought of one perfect infinite being, catches at anything whereby he may be relieved from the intolerable burden of such a thought" (pp. 322, 323). He adds that the imperfection of language helps the result: names, originally expressive of the supreme being's attributes, come to designate other separate beings, and many gods are substituted for one. This view of the origin of polytheism is the opposite of that which prevails among modern scientific historians of religion. The Phœnician pantheon, like all other pantheons, is doubtless a developed nature-worship, and, like all Semitic pantheons, exhibits a striving towards monotheism. The repulsive features of the Phœnician religion were human sacrifice and the licentiousness of certain forms of their worship. But even these facts must be studied not simply from the point of view of a moral catechism, but in the light of the whole national life. Such customs are of course to be deplored and condemned; but it must not be forgotten that there is no ground for believing that the social life of the Phœnicians was inferior in kindliness and purity to that of the Hebrews, the Greeks, and the Romans. The cases are not few where the ethical conduct of a community has been independent of certain prescriptions in its religious code.

Rawlinson decides (chiefly on linguistic grounds) in favor of the Semitic origin of the Phœnicians, probably explaining the statement in the tenth chapter of Genesis, that they are the descendants of Ham, as referring to a race that preceded the Semites in Phœnicia. He finds difficulty in determining their position within the Semitic group (p. 52), but this is mainly because he does not recognize a separate Canaanitic division. His estimate of their character and achievements is decidedly favorable: he credits them with industry and perseverance, audacity in enterprise, adaptability and pliability, and acuteness of intellect, and defends them against the charge of want of good faith. The picture that he gives of their courage and heroism, and of their prowess as traders, navigators, and discoverers, is an attractive one. He regards them as the inventors of the alphabet, and (following Gesenius) thinks it probable that they derived their letters not from Egyptian or Babylonian characters, but from hieroglyphics of their own. It is certainly true that the cuneiform or the Egyptian origin of the Phœnician script has not been clearly proved; of his own theory it may be said that it is quite conceivable, and that the evidence that we have is rather against than for it. The fact, adduced by him, that the names of the letters designate objects (ox, house, etc.) different from those of the Egyptian cannot be regarded as decisive, since the Phœnicians, if they had borrowed from a foreign nation, might easily (as has elsewhere occurred) have given their letters designations based on fancied resemblances to other than the original objects. On the other hand, the absence of all traces of Phœnician ideograms, and the widespread tradition of antiquity that the Phœnician letters came from Egypt, are facts decidedly unfriendly to the hypothesis of a native origin for them.

The subject is at present involved in obscurity, and the same thing must be said of the question as to the primitive home of the Phœnicians, or the point from which they came to the Mediterranean coast. Rawlinson adopts the common view (based on statements of Herodotus, Strabo, and Justin) that their original abode was on the Persian Gulf. This opinion appears to rest on a not very well authenticated Phœnician tradition, and has been called in question by various modern writers, some of whom would find the native land of the Phœnicians in Arabia, while others would identify Justin's "Syrian lake" (for so we must read in Justin 18, 3, and not "Assyrian lake") with the Dead Sea. The data do not seem sufficient at present to permit a definite answer to the question. There are, in fact, no good historical grounds for dividing the early fortunes of the Phœnicians sharply from those of other Canaanitish peoples. Over the early history of all the Semitic nations doubt still hangs; it is in Western Asia, on the Mediterranean, that we first meet Phœnicians, Amorites, and Hebrews, and beyond this point we are not able to trace them with any certainty.

AMERICAN HISTORY IN FOREIGN ARCHIVES.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773–1783. With Descriptions, Editorial Notes, Collations, References and Translations. Vol. I., Nos. 1–130; Vol. II., Nos. 131–234. Issued only to subscribers at 4 Trafalgar Square, Charing Cross, London. November, 1889, and December, 1889.

THE first two volumes of Mr. Stevens's great publication have appeared. The execution of the work is almost perfect. The facsimiles are given us on folios of heavy, hand-made paper, each document by itself. We will make but two suggestions: it would be well if, in future volumes, the exact size and shape of the manuscript that is copied were indicated by a line. More care should be taken in the translation of documents in foreign languages. French *livres* are not pounds, but francs.

A collection of correspondence gains immensely by being published in facsimile; the handwriting brings us far nearer to the writer than any type can do. And although Mr. Stevens has promised us in his prospectus that "all documents facsimiled will be of real historical value," we shall not quarrel with him for giving his promise a broad interpretation. The love affairs of Capt. Jo. Hynson are not exactly of historical importance, but they lend a human interest to that fine specimen of the blackguard; and we should be sorry to lose the letter of Ludwell Lee, whose exact age we have not been able to ascertain, to his father in America:

PARIS October 5th 1777

DEAR PAPA I have recieved both your letters which I'll assure you gave me infinite pleasure to see that you are all well in America. Your last came to hand before the first and in both I see your desire that I should apply myself to the study of Eloquence, & the law, which as far as I can I will endeavour to perform, being always ready to do all things which you command me. My Uncle is exceeding good to me in every respect, he gives me speeches to get by heart, which I repeat to him, and he corrects me when he finds me wrong. Under such happy auspices I should improve & I should think myself unpardonable indeed, & very much defective to your goodness & My Uncles, should I not do every thing in my power to do so. I am yet at the Pension studying the Mathematiques, French, & other things which are always useful; either for a soldier or any other emploiment. My Brother is at Nants, & I hear from him very often, he writes very good french, & I am told speaks it very well. I am very glad to hear that you are blessed with another daughter, & hoping to hear from you again soon that you are all well I shall finish by desiring you to give my duty to Mama & love to my sisters & all my relations, & subscribing myself your ever dutiful and affectionate Son

LUDWELL LEE

The two volumes before us are unequally divided between two different subjects. The former of these, which occupies half of the first volume and the whole of the second, is the correspondence of the British Government with its political agents and spies during the year 1777. With this are found intercepted letters and copies of letters opened in the post-office. The tampering with the mails was a regular part of Government in those days. Nor were letters sent by private hand entirely safe. For American business of this sort, the Rev. John Vardill, "an American clergyman who lives chiefly on his Majesty's bounty," was the agent employed, and he seems to have been skilful in his business. Thus we read (134): "Mr. Vardill presᵗᵉ his Compˢ to Mʳ Eden & wishes to see him much, as he has Letters from America to communicate which must be given to the Persons to whom they are directed. Wednesd." And again (137): "Sʳ — Mʳˢ *Bancroft* will leave London, for France, on Tuesday next & will probably be entrusted with Letters to her Husband, & others in Paris. There is a method of obtaining a perusal of them, if you deem it an object worth attending to. You will, if convenient, signify your pleasure — & impute this address not to a desire of meddling, but a zeal for the service & gratitude for the Patronage experienced from Govᵗ by your very humbˡ Servᵗ J Vardill." Further on, we find (138) that, perhaps in consequence of the above letter, a Mr. Hake, who had "some particular influence with Mʳˢ Bancroft," was employed to accompany her on her journey, and that he got possession of all her letters, which were carefully opened, and, without any apparent alteration, returned to her (as they did not appear to contain anything material) after copies had been taken of parts of them.

Among the persons concerned in the correspondence, some are of the highest and some of the lowest station. First we have Lord Suffolk, Secretary of State for the Northern Department, to whom many of the reports are addressed. Then there is William Eden, Esq., one of the lords of the Board of Trade and Plantations, a rising politician, with promotion in prospect and a peerage in the background. Next comes Paul Wentworth, a kinsman to the last royal Governor of New Hampshire, and a person of importance in a small way. This man had arrived in New England from the West Indies as early as 1757, and from that

time, although often absent from the province, had continued to have interests in New Hampshire. In a letter written by the Governor in 1769, Paul Wentworth is spoken of as "personally known to most of the House and Council, and extremely respected by the whole country." Not long after this letter was written, he was appointed one of his Majesty's Council for the province, and in 1774 he was acting as its agent in London. In that year, or in 1775, he seems to have retired from the agency, perhaps on account of Tory sympathies. Wentworth was a rich man, and moved in better society than most Americans in London. Although a loyalist, he kept up his acquaintance with his friends of the rebel party and enjoyed their confidence. So far were his neighbors in New Hampshire from bearing him any especial ill-will on account of his Toryism that, in 1789, Dartmouth College, of which he was a benefactor, conferred on him the honorary degree of LL.D. Yet this man, rich, prosperous, and trusted, was not only working against his friends, as he had a perfect right to do in the interests of the Government under which he was born, but was the principal agent in setting spies upon them. He abused their confidence in the most shameful manner, and was not above the commission of petty larceny on occasion. He writes from Paris on the 11th of May, 1777 (156):

"I have had a visit from Mr Lee; having heard that he lodged at the Hotel d'Angleterre, rue de Richelieu, I sent to take an apartment there, & he immediately called upon me. I returned the visit, & found his servant preparing visit cards, with one of which I made free, and send it inclosed as a curiosity. I took the same liberty with the cards from his visitors, which I have given to Lord Stormont, imagining they may lead to discoverys. I tho't too the enclosed seal may be usefull at the Post office, as it came to a Letter addressed to *The Honorble* A. L., in English under cover to M. Grand, rue monmartre, and I could gather—imperfectly—that it talked of a ship fitting out somewhere for America."

On a later occasion, Wentworth had a meeting with Silas Deane, of which he says (231) that they agreed that both were "strictly bound to secrecy and the confidence of private gentlemen wishing well to both countries." The spy proceeded to sit down as soon as the interview was over, and write out the conversation in detail for the use of the English Government. Paul Wentworth was not entirely trusted in England. King George III., as we learn from his correspondence with Lord North, had no confidence in what the agent reported, unless it were confirmed by others. "He is an avowed stock-jobber," said his Majesty, "and, therefore, though I approve of employing him, I never let that go out of my mind."

We get in these volumes the whole story of another and very subordinate traitor—to our minds, we confess, less disgusting than the prosperous merchant, Paul Wentworth. This is Capt. Joseph Hynson, above referred to, whose affairs take up a good deal of space. We should advise the reader of these papers to begin with that numbered 53, and headed "Minutes [for the King] of what has passed respecting Hynson"; without which many of those that precede it are not fully comprehensible. It appears from this document that Hynson had in former times been employed as a master of several vessels belonging to American merchants, and, being a skilful seaman, was said to have been engaged by Franklin's agents to fit out a sloop fit to carry despatches from France to Philadelphia.

"Mrs Jump, with whom Hynson lodged, & who with many other Ladies mentioned in the Packet N° 3 is much attach'd to him, had from Anxiety for his safety given the first Hint to Verdell [Vardill], who expostulated with Him & found Him disposed to be of any use that might be thought expedient. Verdell however not being authorized to arrange any Plan, Hynson set out for Dover with Nicholson a Virginia Captain engaged to command a Rebel Privateer fitting out at Nantz, & zealous for the Rebels."

Here we have Hynson, a bluff, careless, unscrupulous sailor, caring nothing for patriotism or honesty, ready to serve the King or the rebels, and to betray either to the other. We presently see him a centre of plots, with an English lieutenant-colonel dancing attendance on his movements, and with "two topsail vessels to carry about 16 guns" in readiness. We follow him in the reports of the lieutenant-colonel, and in his own correspondence with the many ladies who are much attached to him. He was kept waiting from month to month at Dover, Paris, Havre, and there was difficulty about his vessel. Lord Stormont, the British Ambassador at the Court of Versailles, had suspicions, not ill-founded, of his trustworthiness. At last the opportunity of being useful arrived. Hynson was waiting at Havre when he found that one Captain Folger had been intrusted by the American Commissioners in Paris with despatches for Congress, and was to sail with them immediately. Whereupon Hynson took an opportunity of sending Folger out on some business in the docks, while he, slipping off the string at one end of the packet, got possession of the despatches, and then, making up a paper equal in length and thickness to what he had taken out, dexterously filled the vacant place, shut up the end of the bundle, and passed the same string back again. On Folger's return the bundle was well covered, put into a bag and sealed, never again to be given out of Folger's hands (unless it were thrown overboard in case of meeting with an enemy) until it should be delivered into the hands of the authorities in America. We do not know how this ingenious trick came to be known, within a few days of its perpetration, to the Commissioners at Paris, but we are glad to learn that Deane refused Hynson's light-minded offer to act as a double traitor.

The second subject dealt with in this collection is the conciliatory bills of 1778, and the Commission sent to America to arrange terms of peace. It is pleasant to turn from the letters of such rascals as Wentworth, Hynson, and Vardill to the correspondence of an honorable man like Lord Carlisle. He went to America on a vain errand, for his mission depended for its success on active military measures, and, before he set out, the British Government had decided, without his knowledge, to carry on only a defensive warfare. When the Commissioners arrived in Philadelphia, they found Sir Henry Clinton preparing to evacuate the city. Congress would listen to no terms unless independence were first conceded, or the whole territory of the United States abandoned by the British armies. The active interference of France was daily expected. Under these circumstances, Lord Carlisle thought it best to offer at once the best terms he was authorized to give. He shortly afterwards drew up a minute of his reasons for so doing, and a paper of considerations of the advantages resulting to Great Britain and America from the terms offered. These papers, and his other writings, including a long private account of the whole work of the Commission, are fair, manly, and reasonable in tone. Lord Carlisle was a wit and an author, and had the reputation of being one of the best-dressed men in London. He was not great, but we cannot help liking him; all the better, perhaps, that he did not succeed in leading back America to the foot of the English throne.

In conclusion, we heartily recommend this collection to all serious students of the history of the Revolutionary War. That history has been so thoroughly studied that no very important fact hitherto unknown is ever likely to be discovered in it. But for the thorough understanding of minor characters and secondary events, and for side lights upon persons and things of great importance, few publications can prove more useful than Mr. Stevens's facsimiles. His enormous labor deserves the fullest support from public libraries and from private collectors.

MORE FICTION.

Chita: A Memory of Last Island. By Lafcadio Hearn. Harper & Bros.

The Light of Her Countenance. By Hjalmar Hjorth Boyesen. D. Appleton & Co.

A Sane Lunatic. By Clara Louise Burnham. Boston: Houghton, Mifflin & Co.

Memoirs of a Millionaire. By Lucia True Ames. Houghton, Mifflin & Co.

Would You Kill Him? By George Parsons Lathrop. Harper & Bros.

Miss Shafto. By W. E. Norris. Henry Holt & Co.

The Nether World. By George Gissing. Harper & Bros.

'CHITA' is the slightest possible melody set to an elaborate accompaniment. Off the coast of Louisiana lies an archipelago of islands, approached by a course through a half-drowned marsh country, and populated by a motley collection of races, where Malays, Spaniards, and Chinamen may be found. The islands themselves are now mainly known as bathing resorts. One of these, Last Island, once the most fashionable watering-place of the South, was, in 1856, torn in two by a mighty tidal wave, which concentrated into a night's work what the sea is doing for the other islands, slowly and surely, year by year.

The story of 'Chita' is laid in this island region, and has to do with the demolition of Last Island, the subject fitting itself, with a grim appropriateness, to many tragedies of the year just elapsed. A more uniquely picturesque scene for a romance, this side of the Atlantic does not afford. The romance, as already hinted, is, not less than the islands themselves (perhaps for the sake of analogy), so overwhelmed by the real subject of the book—the sea—as to be a mere incident in the great ocean spaces. Possibly it is the Greek half of Mr. Hearn's ancestry crying out, "Thalatta!" At all events, he feels the sea like a poet, and summons to its portrayal in every phase a wild, hypertropical language which is the blemish of the book. Such words as "ivorine," "gracile," and "blattering"; such phrases as "a vibrant lifting up" (of the sea), "a fluttering and scattering of rose-leaves of fire," "a jewel light as of vaporized sapphire," "the stridulous telegraphy of crickets," "scudding mockeries of ridged foam," "imageries multi-colored of mountain frondage," occur till one has a feeling of having dined on lucent syrup tinct with cinnamon. On the whole, the impression left by the book is that of an ill-treated opportunity, a rarely fine subject made tiresome by a lush style.

Mr. Boyesen has done well to name his novel 'The Light of Her Countenance,' for the woman who owns the countenance is the only (and, it must be added, slight) inducement to read the book. She is a Juno-like beauty who

moves through the pages with very expensive clothes and a much-insisted-on "personality." But personality in fiction, unlike that in real life, must be founded on something said or done. The fair Constance of Mr. Boyesen's idolatry says and does nothing of any significance, and the high hopes with which we prepare to be enslaved by her grow fainter with every chapter. When at last she retires from the scene in a costume rendered by sorrow "less aggressively stylish and voluminous" than of old, we are quite ready to part with her, so shadowy has she become. Compensation lies in the fact that when Mr. Boyesen's heroines do say or do anything (except salmon-fishing, in which they excel), it is often something detestable. There is no mean between the beautiful negation Constance, and the handsome American Delia, who goes to Europe as agent for the sale of the Emancipation Waist, on which she discourses freely to English baronets and Italian peers. Her "girlish bravado," as Mr. Boyesen playfully calls it, proves captivating to the English mind, and she becomes Lady Armitage. Anything more depressing than the would-be humor of this episode, it is difficult to imagine. The whole book bears unmistakable imprint of having been made after a prescription—so much tragedy, so much love, so much politics, landscape, and art. No leading motive holds the parts in any relationship, and the novel, obeying a law of nature, is as weak as its weakest part. The strongest part appears to us to be a chapter on Tammany election methods.

'A Sane Lunatic' is a story founded in part upon the blunders arising from the resemblance between twin brothers. The comedy of errors does not end there, however; the twin brothers themselves make as many curious mistakes as they cause others to make, the atmosphere of confusion in which they live having seemingly struck inward. The hero's taking the heroine (who is no more silly than any other well-behaved heroine) for an insane patient, is but one example of the prevalent mental astigmatism of the book. The young woman, and even the old maids and gray-haired parents, succumb to the microbes of mistake which fill the atmosphere, and act and talk at cross purposes in a very parody of comedy. The rest is chatter, chaff, and puns, and the whole, though not without a certain cheap brightness, forms a rather silly book.

To decide upon the merits of the 'Memoirs of a Millionaire' belongs rather to the philanthropist and political economist than to the critic of fiction. In this age of organized charities and of awakened altruism, no book on the mental, spiritual, or material welfare of the race can be simply a romance. It is an appeal or an argument. 'Looking Backward' creates a hundred Bellamy societies, and we can see no reason why, from the present book, there may not spring up all over the land Mildred Brewster clubs. It will be for them and not for the reviewer to test the value of Mildred Brewster's schemes. Whether unsectarian missionaries will avail for promoting the welfare of the degraded in foreign lands, for suppressing the slave-trade, and preventing the liquor traffic between civilized and barbarous nations; whether tenement-houses with co-operative cooking and berth beds will tend to the health and happiness of the poor; whether apartment-houses for the middle classes with separate back yards and windows five feet by three and a half, will solve some of the puzzles of life; whether gifts for libraries throughout the land, if given on condition of the money being duplicated by the recipients, really will make readers of the rural communities of the West, and reduce the numbers of foreign-born insane; whether women really are, "as a rule, more faithful and conscientious than men"; whether twenty-five weekly lectures, illustrated by the stereopticon, with a cornet leading a chorus of school-children, will conduce to "stimulating thought in the direction of good citizenship"; whether colored orphanages are the appointed means of grace at the South; whether social clubs for young factory girls and men (where the entertaining is done by five or six "King's Daughters," with their gentlemen escorts) will improve the morals and manners of the factory contingent; and whether buying up enough stock in Southern papers to control them is going to expel Bourbonism—these are some, but by no means all, of the problems to be tested by trial when the 'Memoirs of a Millionaire' shall have founded its family of clubs. If they do not save the world, we think there will be no need to preserve the book as a novel.

The last few pages of Mr. Lathrop's very long story explain the title. Shall a man who has committed murder suffer the death-penalty, or would it be better for him to live and "make his penance a long and purifying endurance"? The latter view is loftily and nobly urged in the few concluding pages. Yet never had lofty and noble climax so many, so prosaic, or so irrelevant approaches. The earlier chapters contain a minute and rather diverting account of the wheat market, and of the causes and progress of a wheat panic. This alone would have made a small novel and an entertaining one; but it proves to be only an incidental divertisement: there follow volumes of satire upon the superficial culture of certain New York social circles; then more upon New York elections; now an old maid's meddling between a man and his wife holds the scene for many pages, and threatens to become the leading motive of the story; next, a long diatribe upon ocean steamers is interjected; finally, on page 303, the murder is committed, and the serious business begins of discussing what is the right punishment for taking a life. Naturally, the dignity of the end is put in forlorn aspect by the chaos that goes before. In a word, construction is hopelessly lacking. The purpose, when at last reached, is strongly stated, but although we see it we are in no mood to feel it. It is said that Americans find themselves equally and only at home in the antipodal regions of hard facts and of romance. Mr. Lathrop is a striking example in point. Now he invests his steam-engines and grain-elevators with dramatic interest; again, his fancy gleams with a light akin to that ray which Hawthorne threw on land and sea; but in the novel-writers' land, which may be said to lie between the poles, he seems to us far from home.

In 'Miss Shafto,' on the contrary, what chiefly strikes the reader is the absence of the 'prentice hand. All bears the mark of the expert, so far as construction and coherence go. Mr. Norris, above all things, knows how. One is sure of a comfortable, cheerful, and especially of an English hour with him. One will neither be plunged into storm and stress, nor raised to imagination's giddy heights. Good fare is furnished, daintily prepared; the service withal is so perfect that possibly, on reflecting, we find that it misled us a little as to the quality of the cheer. It was not superfine, perhaps, after all; but will any one quarrel with this state of things? No one, surely, who can enjoy a sufficiently satisfactory story, garnished with delightful reflections upon men, women, and things, made in a mood of easy-going cynicism, which, while admitting that things are not ideal, finds that they might be much worse, and that at the darkest they will not last very long.

'The Nether World' is another effort to put the problem of the poor before us. The crowded neighborhoods of East London, with which Mr. Besant has made us familiar, appear in a different aspect, although the street corners and the trades are unchanged. The 'Nether World' is a dreadful place, where there are no happy surprises such as Mr. Besant permits his readers, where the possibility of romance slowly dissipates in the dun-colored atmosphere of economic hopelessness. In the attempt to give an outline of the story, we are struck by the inadequacy of the ordinary critical vocabulary. We cannot say that we are introduced to the characters—we fall afoul of most of them. Longer acquaintance seems only to add to the gloomy sum total of their undesirable natural endowment and its unremunerative spiritual development. The author ought in justice to be relieved of any intention of writing a pleasant story, but it may be questioned whether he meant to give so strongly the impression that in the nether world the only force that can be counted on is the tendency to sag. In the production of this impression the resources of a powerful literary method have been employed. There is little of the sketchy work with which the problems of our time are often detailed in fiction: everything here is stalwart, robust, not to be eluded, not to be whiffed away by impatient distaste, nor ignored by lofty preoccupation. There is darkness that can be felt, and crime that goes to make up statistics, and neither lends itself to a distinctively æsthetic impression. It is terribly real, terribly painful. The imagination of the reader cannot, like most of the people whose bad fortune he follows, find refuge in "the public" and a taste for drink.

A narrative method nearly as minute as that of Scott, inferences as baldly put as if by a statistical expert, produce a reaction at last. Perhaps the best result of this realism is the question left now and then in a reader's mind, Is there really any nether world? Do not Sidney Kirkwood and Jane Snowdon, with their self-denying lives and steadfast ideals, redeem it all? But even if not, one is tempted to ask whether the avowed realism of the result has not occasionally deepened the shadows of description too much. The writer of this notice happened to be in St. John's Square on the day of the great popular demonstration in Regent's Park when the crowd was gathering, and neither surroundings nor people made an impression of hopeless sordidness. The dignity of the past was not unmatched by something very like it in the present. "The people" were often deformed, oftener yet toil-worn and prematurely old, but "the people" were often sturdy and resolutely content. Three college professors from the United States found no difficulty, even at such a time, in establishing relations of intelligent sympathy with the worst-dressed and the worst-featured of the swarming crowds: a common humanity had not been buried far below the surface even by years of toil and trouble in the nether world. The place that holds all sorts and conditions of men cannot, after all, be a world apart.

But there is one effect of this realism greatly needed in the popular consideration of the questions involved. It is the steady emphasis of the fact that these are literally living troubles; that they cannot be settled by logic nor yet by the decisions of a critical moment—they must be haltingly lived out and established by slow years in bone and nerve. Moreover, this story touches upon a difficulty often unrecognized or

eluded by writers of science and fiction—the poor do not, as a matter of course, become possessed of a missionary spirit in proportion as they are more highly organized and better able to maintain themselves. They long to get out of it all, but points of departure are rarely attractive places in a logical, æsthetic, or moral sense. And when they accept the task of living in better spirit the life about them, existence is still a puzzle, still sad to them, though neither so mad nor so bad as that of their neighbors. The characters depicted in 'The Nether World' may be roughly divided into two classes—those who do as they like and are wretched, and those who do as they ought and are not happy. But, cramped as has been the outlook for all, the latter have managed to smuggle in an ideal. It is not necessary to ask for the sources of supply. In plain life, perhaps, people rarely go back of the every-day virtues, patience, charity, long-suffering. For them possession does away with the need of philosophy. The author's realism gives expression to much that is menacing in our time. It calls our attention sharply, almost roughly, to our ill-discharged brotherhood. But, however much of blunder and sin may be laid to our charge, this final victory of the ideal spares us the sight of humanity spoiled and imbruted. "Where they abode it was not all dark. Sorrow certainly awaited them, perchance defeat in even the humble aims that they had set themselves; but at least their lives would remain a protest against those brute forces of society which fill with wreck the abysses of the nether world."

Handbook of Commercial Geography. By Geo. G. Chisholm, M.A., B.Sc., Fellow of the Royal Geographical and Statistical Societies. Longmans, Green & Co. 1889.

No science bearing equally important relations to the welfare of man as affected by his physical surroundings receives so little attention in our higher institutions of learning as geography. Many of our best universities give no instruction in it, few of the students ever possess a good atlas, and most of them are destitute of any systematic knowledge of the science. In this country geography seems to be regarded as a subject like English grammar—if one only masters the elements, the rest can be absorbed by frequenting good society. The study of a range of phenomena and laws influencing most profoundly human history and development is relegated to childhood, when the mind is incapable of grasping their importance. Consequently, the man blunders along with the child's ideas, unless he is aroused by travel or by a growing sense of mortification at his ignorance. The question of trade with South America, as discussed in our papers, offers a pertinent illustration. Very little attention is given to the geographical side of it. Few probably realize that the southeastern European ports are two or three days nearer Buenos Ayres than New York is, or that New York is not two days nearer than are Liverpool and London.

The publication during the past year of three manuals of commercial geography may indicate a growing sense of the importance of the geographical element in industrial life. Such a change of view the work of Mr. Chisholm, with its succinct style and admirable method, is well fitted to promote. It has been his effort to impart an intellectual interest to the facts of geography as relating to commerce. He has kept in view three classes of readers: teachers desiring to enliven the ordinary work in geography by illustrations from commercial life; students in institutions giving especial attention to commercial education; and lastly those beginning commercial life who take an intelligent interest in making their private studies bear upon their business. He first briefly considers these subjects: climate, soil, labor, communication, the destructive action of nature; then about one-third of the book is devoted to a description of the leading commodities and of the conditions of their production. The last half of the text is a systematic review of the world by countries, discussing their natural resources, present condition, and future prospects as fields of commerce. An appendix of fifty pages contains a great variety of illustrative statistics. The most important facts are graphically represented in twenty-nine maps, while an adequate index completes what is one of the best examples of text-book workmanship it has been our pleasure to examine.

In reading the chapter on Great Britain, even one familiar with the country is vividly impressed with the contiguity of her resources: not only are the supplies of coal and iron extraordinarily rich, but they are conveniently situated, both as regards each other and as regards foreign trade. No part of the island is one hundred miles from a seaport, and there are in the United Kingdom more than twenty seaports with a depth of at least twenty-five feet at high water. The whole chapter is a most instructive picture of the influence of geography on industry, and one sees almost at a glance the wonderful natural adaptation of Great Britain for the position in the modern industrial world which an energetic people have given her. Could Aristotle or Strabo have had a presentiment of the forces of modern industrial life, and have known the hidden resources of that foggy island near the boundary of the world, they must have foreseen with absolute certainty that the people of the Mediterranean peninsulas would some time have to resign the first place in wealth and civilization to a people then the mere shadow of a name.

Another vivid impression is, that of all the new lands occupied by Europeans since the era of discovery, the eastern half of the United States is by far the best, in fact the very cream of the whole. As regards the single element of rain, the Russian meteorologist Voeikof asserts that there is "no other part of the earth with a considerable rainfall during the summer months over so great an extent of territory in middle latitudes." Neither South America, Australia, Siberia, nor Africa at present gives promise of possessing a territory at all comparable in general facilities and attractiveness to the United States east of the 100th meridian. When one realizes the dependence of our civilization upon coal and iron, it is difficult to repress a wondering apprehension as to what will happen when the supply of these precious minerals is exhausted. That that event is remote, the reader of Mr. Chisholm's pages cannot fail to conclude. Only a very small part of the known supplies have been worked. In China, "Eastern Se-chwan, and Northern Yünnan might be described as one enormous coalfield." Siberia has one coalfield which alone has an area of 16,000 square miles. A sharp contrast between ancient and modern life is pointed by the simple statement that the cost of smelting a ton of iron by the old Roman method would now be not less than $1,000! Among the countries producing charcoal pig the United States should be included. The production in the census year exceeded 400,000 tons. Among other interesting facts, Mr. Chisholm tells us that in 1887 nearly £4,000,000 worth of avowed oleomargarine was imported into Great Britain (chiefly from Holland), a value more than half that of all the English imports early in the eighteenth century. Other new articles of food are "corned whale" exported from Norway (apparently as corned beef), and dugong bacon exported from Queensland. In the account of United States fisheries, the sword-fishery ought to have been mentioned.

Mr. Chisholm states that German commerce has advanced with greater rapidity in the last twenty years than that of any other European country. The greatest element in the increase of exports is sugar. As this is a result of the bounty system, it can hardly be viewed with the same satisfaction that would be felt over a purely natural increase. An important factor in the increased exports to Spain is potato spirit, which is largely used for adulterating Spanish wines. The Germans have also shown much enterprise in producing "cheap and comparatively worthless articles," which meet the ignorant demand of the people of South America. Among the causes of the general increase in German trade, Mr. Chisholm emphasizes technical and commercial education, the construction of the Alpine tunnels, and the vast acquisition of capital through the French indemnity. We are inclined to regard this last cause as largely illusory. Nine-tenths of the indemnity was applied to war purposes. The increase of capital was indirectly produced by the rapid payment of the Government obligations. Capital thus released became extraordinarily abundant in the market, a speculative spirit was promoted, and there was a "boom" for a while, but the airy edifice collapsed, and in 1873 the financial and industrial depression in Germany was very great.

Mr. Chisholm places the invention of loaf-sugar in the fifteenth century, but an inferior form of loaf-sugar was a staple article in the Levant trade in the middle ages. On p. 384 it is stated that the Erie Canal "was the means by which wheaten bread first came into general use (in place of rye bread) in a large part of the Eastern States." The service of the Erie Canal was rather in providing an Eastern market for western New York, Pennsylvania, and Ohio products. The Middle Eastern States were great wheat-producers in the eighteenth century. But if Mr. Chisholm uses Eastern States instead of New England States, we believe he is still in error. The Erie Canal did not introduce wheat flour into New England for the first time, but exposed New England wheat-growing to a Western competition which it could not stand.

Inasmuch as Mr. Chisholm's error seems to be shared by a prominent American historian (see MacMaster, vol. i., p. 18), it may not be uninteresting to advance some evidence on the other side. In the year 1791–'2 Massachusetts exported 26,736 barrels of flour, and Rhode Island and Connecticut 6,225 and 4,411 barrels respectively. Adam Seybert, in his 'Statistical Annals,' reckons wheat flour as one of the leading exports of Vermont. Payne's Geography (N. Y., 1799) says of New England: "In many of the inland parts wheat is raised in large quantities, but on the seacoast it has never been cultivated successfully, being subject to blasts." Going back a century and a half, we find in the early records of New Haven that in November, 1644, it was voted that every one so disposed should contribute a peck of wheat for indigent students at Harvard. Accordingly, in the record of the General Court for March 16, 1645, we read: "Mr. Atwater, the present Treasurer, informed the Court that he had sent from Connecticut forty bushels of wheat for the College by Goodman

Rodman, for the last year's gift of New Haven, although he had not received so much" (Baldwin's 'Annals of Yale College,' p. 6). These references are sufficient to prove that the ancient Yankees did not live exclusively on johnnycake or Boston brown-bread. Two slight errors of the press may further be noted. On p. 369 the eastern boundary of the arid area of the United States is given as 120° instead of 100°, and on p. 109 the date of Jay's treaty is given as 1792 instead of 1794.

A Life of John Davis the Navigator, 1550-1605, discoverer of Davis Straits. By Clements R. Markham, C.B., F.R.S. Dodd, Mead & Co. 8vo, pp. viii.-301. Illustrated.

JOHN DAVIS was born at Sandridge, Devonshire, in about the year 1550. He was the son of a yeoman who owned a small freehold in the parish of Stoke Gabriel, whose worm-eaten church register contains the record of his marriage and the baptism of his children. The River Dart in this part of its course widens out, resembling a lake surrounded by wooded hills. A little lower down is the land-locked little harbor of Dartmouth, in those days much frequented and the seat of a ship-building industry of some importance. These placid waters were the nursery of a brotherhood of naval heroes. John and Humphrey Gilbert were some years older than John Davis and his brother Edward, but Adrian Gilbert, the half-brothers Carew, and Walter Raleigh were a few years younger. John Davis certainly received a classical education, but his early life is not recorded, though at the age of twenty-eight he appears on the scene as a commander of known valor and responsibility, in whom merchants and other adventurers reposed trust and confidence. He was an acquaintance and in some sort a pupil of the celebrated Dr. Dee of Mortlake, whose reputation as a philosopher, mathematician, and collector of books, charts, and aids to navigation, became, in later days, somewhat obscured by his infatuation for the occult sciences.

Through Dee's influence, Cecil and Walsingham were brought to promote explorations for a northwest passage to the Indies, to the expense of which merchants of London and Exeter contributed, and for which a charter was granted by Queen Elizabeth to Walter Raleigh, Adrian Gilbert, and John Davis. Two small vessels, the *Sunshine* of London and the *Moonshine* of Dartmouth, of fifty and thirty-five tons respectively, were fitted out, and sailed June 7, 1585, under the command of John Davis and William Bruton. This expedition rounded Cape Farewell at the south end of Greenland, discovered Davis Strait (penetrating to the Arctic circle), and noted several openings on its western shores. After their return, a second expedition of four vessels, the smallest a pinnace of ten tons, was fitted out to continue the work, and sailed in May, 1586. After coasting along the West Greenland shore, Davis crossed the strait and explored Cumberland Inlet and the coast southward to the 57th parallel. He discovered the rich codfisheries on the Labrador coast and probably reached the northern coast of Newfoundland. A third expedition in the following year attained to 72° north latitude on the West Greenland coast, coasted the "middle pack," discovered Frobisher Inlet, which the geographers of that day had located on the east coast of Greenland, and discovered the entrance of Hudson Strait, with its turbulent currents and "furious overfall." After visiting the Labrador coast, Davis returned to England.

In these voyages all the coasts not actually discovered were remapped and put on a scientific basis. To Davis we owe the most exact delineation of the Labrador coast until modern times. Cabot and the Portuguese had visited it, but their visits led to nothing intelligible in cartography. Davis converted this part of the Arctic regions from half-mythical confusion into a defined area the limits and conditions of which were known, and he clearly pointed out the work destined for his successors. He was the first to make scientific observations for latitude and the variation of the compass in this part of the world.

After his return, Davis took part in the repulse of the Spanish Armada. His next enterprise was a voyage to the Straits of Magellan as a companion of the enterprising and unscrupulous Cavendish. The expedition was unfortunate, but, in spite of the difficulties encountered, Davis made surveys in the Straits and discovered the group now known as the Falkland Islands. Davis and his vessel finally reached Ireland in 1593 in desperate plight, and with losses which practically made him a ruined man. Worse than all, evil had entered his home and left his three children worse than motherless. Davis met his misfortunes with calm fortitude, and passed the succeeding two years in composing and printing a work on navigation, in preparing accurate charts of British waters, and inventing an instrument for measuring the altitude of the heavenly bodies, which was the received instrument until the invention of Hadley's reflecting quadrant in 1731. He also published, under the title of the "Worlde's Hydrographical Description," an appeal for the continuation of the search for a Northwest Passage.

Later, he was with Essex on his expeditions to the Azores; he accompanied as pilot a Dutch expedition to the East Indies, and on his return was appointed chief pilot of the fleet to the first expedition of the East India Company. Among those who laid the foundations of British empire in India he takes an honorable place. On his second voyage, December 27, 1605, while in the Straits of Malacca, he was murdered by Japanese pirates who had been succored by his vessel and injudiciously allowed to retain their arms. Of the four boys who had been companions on the banks of the Dart, three had gone to their reward. Humphrey Gilbert had sunk beneath the Atlantic with words upon his lips which have become immortal. The more peaceful career of Adrian Gilbert had ended quietly at home. Only Raleigh survived, to meet, later, an even harder fate.

Of this life, which we have briefly sketched, Mr. Markham has made a solid yet deeply interesting little volume. Boys who have such books at hand would hardly turn to a dime novel. The publishers have done their part fairly well, though the printing of the illustrations is bad. The maps are good, and there is an excellent index.

Fencing, Boxing, Wrestling. Boston: Little, Brown & Co.

THIS latest addition to the "Badminton Library" is quite up to the standard of previous volumes, and the large number of young men who are nowadays interested in these branches of athletics will find in it the newest and most approved theories about their favorite sports. The book is admirably illustrated with intaglio plates and woodcuts after photographs, giving the beginner a very life-like idea of the positions adopted in actual practice, and there is but little to criticise in the work of the different authors. Exception may be taken to some sixty pages of fencing bibliography, doubtless exhaustive and accurate, but somewhat out of place in this volume.

Mr. Grove, in the introduction to "Fencing," tells the story of the growth of the science from the rude contests of the middle ages, which were decided by strength and endurance rather than skill, down to the days of Angelo, whose great book, published in 1763, summed up all that was known of the art at that time. The improvement was very gradual, and it remained for the "terrible" Bertrand, who flourished at the beginning of this century, to practically invent the modern science of fencing. Since his time there has been very little improvement, but whatever has been gained during the century is embodied in the chapters headed "Practical Instructions." From these chapters, with the aid of the illustrations, the beginner can learn all that it is possible for a book to teach of this most difficult and most fascinating exercise. Especially clear and accurate is the explanation of the *ripostes*, and all that relates to the guard, the lunge, the time parries, and the *remises*.

It is much to be regretted that in this important work on fencing little or nothing is said of the sabre—the weapon of both cut and thrust. It is in the improvement of sword play that we must look for the best practical result of excellence in fencing; and if there are not available experts in England, Hartl of Vienna or the celebrated masters of northern Italy should have been induced to tell of the improvements in sabre play that have resulted directly from early training with the foil. In fact, the *tireurs de sabre* in these days have adopted the closer movements and quick lunge of the foil to such an extent that no treatise on fencing can be considered complete without a full account of their remarkable progress.

Coming next to boxing, the reader is treated to an historical introduction, beginning with Virgil's estimate of Paris as the best boxer in Troy, and descending by easy stages to Jackson, who taught Byron, and Gully, who was first champion and afterwards member of Parliament. This was early in the century; and the present generation saw John Morrissey in Congress. The fortunes of the English prize ring declined rapidly from the time of the Heenan-Sayers fight in 1860, and a recent brutal exhibition would seem to show that the lowest depth of degradation has been reached. And yet Mr. Michell, in spite of the fact that his excellent illustrations are invariably of *gloved* sparrers, makes the statement that "the only true and correct style of modern boxing is that in which bare fists are used. All the rest are mere imitations—mere travesties of the original." Now this is a strange incongruity in such a book. Sparring with gloves is an admirable exercise for both mind and muscles, while fighting with bare fists cannot possibly be anything but brutal and demoralizing. The one we are glad to have our sons cultivate; the other should be suppressed by the officers of the law, as it is prohibited by the law in all civilized countries. Apart from this extraordinary statement, Mr. Michell has done his work well, and it would be hard to find elsewhere a more lucid account of the science of boxing. Particularly commendable is the importance rightly attached to the movements of the feet.

Mr. Armstrong has done as well for wrestling, especially in his historical retrospect, as his fellow-workers for their specialties. He gives an interesting and clear account of the wide contrasts that exist between the different kinds of wrestling—such as Cornwall and Devon, Lancashire, Cumberland, catch-as-

catch-can, and Græco-Roman—but he allows his national prejudices to interfere with his judgment when he speaks slightingly of the French (or Græco-Roman) style as compared with the others. As a matter of fact it is free from the brutality that he condemns in the Cornwall and Lancashire styles, while it is a much severer test of endurance, and more conducive to fertility of resource than the Cumberland style, and an impartial spectator would, we think, prefer it to all others. Outside of England it is certainly the most popular kind of wrestling at the present time, and Mr. Armstrong's contemptuous reference to it recalls the insular tone of similar passages in several of the previous volumes of the series. In spite of such blemishes, however, the book, as a whole, is a very good one, and the ever-growing congregation of athletes in this country will derive both pleasure and profit from its perusal.

Israelite and Indian. A Parallel in Planes of Culture. By Garrick Mallery. D. Appleton & Co.

In this pamphlet, the matter of which appeared first in the November and December numbers of the *Popular Science Monthly*, the author, a high authority in Indian ethnology, disclaims altogether any attempt to establish a kinship between the North American Indians and the tribes of Israel. His object is rather to show that, by a critical study of Biblical documents, we can discover the Israelites, at an early date, on the same plane of barbarism, with all its incidents of peculiar laws, beliefs, and customs, which can now be observed among the American Indians; that whatever, among the Israelites of later days, is nobler, stronger, or higher, is the result of outlying or accidental causes—that the Indians, if their development had not been interrupted, might have travelled the same road forward and upward. Col. Mallery carries his parallel through the following subjects: Religious opinions, including belief in a future state; religious practices, including shamans (in comparison with Levites), witches, dreams and divinations, pollution and purification, sacrifice, incense, the Sabbath and circumcision; parallel myths; sociology, including government, punishment, land, and marriage. He then draws his conclusion, which comes mainly to this, that the Israelites are in no sense a peculiar people.

There is undoubtedly much truth in Col. Mallery's comparisons, but also not a little overstatement and hasty generalizing. He follows in the lead of Buckle, Tylor, and other modern writers in calling the Israelites of the first commonwealth ignorant and barbarous, as compared with other nations of their own day. Undoubtedly, in mere material progress, Jerusalem and Samaria were behind Memphis and Thebes, Tyre and Damascus, Nineveh and Babylon. They were the capitals of a nation of farmers and shepherds, and had to borrow elsewhere the skill of the builder, the sculptor, the sailor. The art of writing came to the Hebrews from the conquered Canaanites; but while the remnants of Canaanite or Phœnician writings are few, and these few utterly worthless, the Hebrews employed the Phœnician alphabet for the most powerful and most lasting literature which the world has yet seen. Col. Mallery thinks that during their exile the ignorant captives received the mythology of their more advanced Babylonian masters. It is more probable that the myths of the Euphrates valley had been current among the Hebrews ever since the days when their fathers travelled westward from Haran to Gerar and Beersheba, and the talent was found among them to give to these myths a high moral significance, while the Babylonian version, as we find it in the Izdubar epos, is both gross and grotesque. A people which had produced an Isaiah, Amos, Micah, and Jeremiah had in mental and moral science nothing good to learn from Babylonian or Persian, though, unfortunately for mankind, they learned some sad lessons from the latter.

In comparing the institution of the year of jubilee, as sketched in Leviticus, with the tribal holdings of land among the Indians, Col. Mallery, it seems to us, hits very wide of the mark. On one side there is no private property in land at all; on the other side, property in land run mad. Suppose the estates of England were all held in strict settlement, as many of them are, and laws were passed to forbid the breaking of entails, we should then find what to the writer of Leviticus appeared as the ideal system of land tenure. The spirit of the system is found in Naboth, who braved death rather than sell his vineyard to the King; and in the prophets Elijah and Elisha, who avenged the blood of Naboth on the royal house of Omri. In fact, private property in land is the first necessity wherever the vine, the olive, the fig, and the palm tree furnish the most highly valued crops—for which reason no village communities were ever found in Greece any more than in Palestine.

Col. Mallery will seek in vain for clanship by the mother's side among the oldest and most barbarous Israelites. The patriarchs taught their sons to marry brides from a good (that is, from their own) family. Jacob's great merit is, that he travelled a thousand miles to find his fair cousins, Rachel and Leah, while Esau gratified his impulses by taking for wives, the first best, "daughters of Heth." This feeling is preserved among the Arabs of the desert in our days, and hardly less among the "first families" of Virginia. The son of the noble wife (*Sherifah*) is preferred to the son of the bondwoman or concubine; but Ishmael, as well as Isaac, Dan or Naphtali—as well as Reuben and Simeon—claims heirship from the father.

The people of Israel, Col. Mallery says, were naturally no more monotheistic or endowed with higher moral notions than the nations around them: it was only the prophets who pushed forward, and who finally enforced, the purer moral and religious teachings. But who were those prophets, and why did the people listen to them? The kingly power aided the prophets but seldom; in the northern kingdom, never. Foreign alliances led Solomon into idolatry; they perverted even some of the high priests of the second commonwealth. It was the mass of the people whom the prophets addressed; from these they obtained the assent to a moral code, including the marriage laws, on which all modern civilization is based. While no Israelite has ever made any notable invention in natural science, or in the useful arts, it seems that the race did, in the days of the prophets, beginning in the mists of the unhistoric past and ending with the disciples, show a talent for developing moral ideas which stamps it as peculiar. This talent is but a part of a strong mental fibre plainly to be seen in our days wherever the pressure of the Middle Ages is removed. If in the Jews of Poland and Russia the old Oriental pride and refinement have been pretty thoroughly crushed out, they still do not lack other qualities by which they rapidly come to the front wherever freedom gives them the opportunity.

Col. Mallery may be right in predicting the speedy advent of the time "when both Indian and Israelite will be absorbed in the universal man"; but then the Indian's memory will only live in the by-ways of ancient history, while the Israelite will have impressed himself on the modes of thought and on the laws of all mankind.

Altspanisches Lesebuch, mit Grammatik und Glossar. Von Dr. Adolf Keller. Leipzig: F. A. Brockhaus. 1890. 8vo, viii.–192 pp.

The number of carefully edited texts available for the study of the older stages of the Spanish language, previous to the seventeenth century, is as yet deplorably small. In fact, W. Förster's edition of Guillen de Castro's play "Las Mocedades del Cid" (Bonn, 1878) and Reinhard Stöttner's reprint of the "Amphitrion," by Fernan Perez de Oliva (Munich, 1886) are the only critical editions prepared for class use of which we know, while for the oldest period of the language, embracing the twelfth, thirteenth, and fourteenth centuries, nothing similar has as yet been done. It was therefore with no little pleasure that we noticed last summer the announcement of an 'Altspanisches Lesebuch' intended to introduce the student of Romance philology to the study of Old Spanish by offering him a selection of old texts, some of which are otherwise not easily accessible.

As it now lies before us, however, the book is somewhat disappointing. Not that the material presented is badly chosen or lacks variety: the editor has given us specimens of every class of literature cultivated in Spain during the first three centuries of its literary life. The epic poetry of the twelfth and thirteenth centuries is represented by selections from the poem of the Cid, the 'Libro de Apollonio,' the works of Gonzalo de Berceo, the 'Libro de Alexandre'; the prose, by extracts from the Fueros and other documents relating to the reign of Alfonso the Learned, while the literature of the fourteenth century is illustrated by selections from D. Juan Manoel, the poem of Alfonso XI., Juan Raiz, the 'Danza de la Muerte,' the poem of the Conde Fernan Gonzalez, the 'Rimado del Palacio,' and others. But in order to give such a variety of material within the small compass of 135 pages, the editor was obliged to make the extracts very brief, and herein consists one of the principal defects of the book. To cite only one instance, 288 lines are utterly inadequate to give one an even approximately correct idea of the spirit, the language, in short, of the character, of so important a literary document as the 'Poema del Cid.' While the extract from this poem occupies not quite eight pages, as many as twenty-eight are allotted to selections from the works of Gonzalo de Berceo, many of which might have been omitted without doing injustice to their literary or linguistic value.

Another, and far more serious, shortcoming of Keller's book is the total absence of anything like textual criticism, the editor having evidently contented himself with naming, at the head of each extract, some of the collections and works in which the several selections are either published or discussed. Now, most of the editions quoted by Keller as forming the basis of his text—and he fails to tell us what, if any, method he followed in using them—are uncritical, and hence unreliable, inasmuch as they present us not the original text, but mostly later and more or less corrupted copies, texts the faultiness of which encouraged later editors to venture upon arbitrary corrections. Such is the case, for instance, with the collection of Spanish classics known as the 'Biblioteca de Rivadeneyra,' largely used by Keller for his book. In order to furnish, as he claims to do, the student of Romance philology with a truly

useful text-book for Old Spanish, it was imperative for Keller to go back to the first editions, or, better still, to the best manuscripts wherever such were accessible, scrupulously reproducing the text as presented by them, and giving careful account of every emendation that he saw fit to make. That Keller should have neglected to do this is all the more regrettable as his residence in the capital of Spain must have offered him unusual opportunities for consulting some of the originals of these literary treasures.

Again, the texts presented by Keller contain, as every one knows, much that needs explanation, and for the elucidation of which very little has as yet been done. It was therefore incumbent upon the editor of the 'Altspanisches Lesebuch' to explain the allusions to customs and events, the obsolete phrases and difficult constructions occurring in the text, such as, for instance (p. 1), *la carneia diestra, siniestra* (p. 13), *negro dia* (p. 108), *un mur de franca barba* (p. 117), *la barba cayda;* grammatical peculiarities such as (p. 108) *la su yantar comida*, where the infinitive *yantar* is treated as a feminine, very likely owing to its frequent association with *la cena*. Here, too, Keller has failed to offer any assistance whatsoever. In the grammar and the appendix on dialectic peculiarities, we should have liked to find references to the scientific literature bearing on these subjects, such as Gessner's treatise on 'Das Altleonesische' (Berlin, 1867), Morel-Fatio's article on the 'Libro de Alexandre' (*Romania* iv.), J. Cornu's articles published in the *Romania*, and Baist's treatise on Spanish grammar in Gröber's 'Grundriss,' pp. 689–714.

The book closes with a glossary giving (or rather pretending to give) all the forms occurring in the text. Here again the want of judgment and method makes itself felt. In the first place, it was useless to mention *allega, castigo*, etc., besides *allegar, castigar*, forms like *enno* for *enlo*, etc., which are explained in the grammatical appendix. By omitting such superfluous material, the vocabulary could have been reduced to nearly one-half of its size. In the second place, the editor would have greatly added to the usefulness of the glossary by referring to at least one passage where each word or signification of a word occurs. Finally, a good many vocables or special meanings have been omitted. Suffice it to mention (p. 33) the figurative expressions for Satan: *rezin malo, draco traydor*, so common in the language of the time; (p. 36) *monge* in the sense of "hermit," not "monk" (cf. *Mod. Lang. Notes* ii., p. 59 60); (*ib.*) *adrede*, and (p. 108) *enjundias*. But numerous and serious as may be the shortcomings of Keller's attempt to give us an Old Spanish Reader, it was certainly well meant, and this may, for the present at least, be welcomed as a convenient collection of specimens of early Spanish.

Lectures on Russian Literature. By Ivan Panin. G. P. Putnam's Sons.

THESE lectures are chiefly interesting as coming from the pen of a Russian who has lived out of Russia long enough to make an independent acquaintance with English and American writers, which enables him to draw comparisons between the productions of the principal authors of his native land and those authors who are most familiar to the great mass of the English-reading public. The first lecture is particularly good; the summary of character, aims, and general preparation of his subject, including the well-chosen quotations from the writings of Turgeneff and Tolstoi, and the comparison with Dickens, are just and instructive. Much that is said of Pushkin and Gogol is also just, especially as to the difference between the humor of Gogol and of various English writers. In the lecture on Turgeneff, many points are well brought out; but Turgeneff should not have been used at the end as a "terrible example," for the moral glorification of Count Tolstoi. As a *Russian* writer, Turgeneff is distinctly the superior of Tolstoi in at least two directions. The lectures on Tolstoi form the weakest point of the book. There is too much rethreshing of a subject whose proper place is not in a volume of criticism. The little that is said of Tolstoi's methods is good, but his defects—which should have been alluded to, since it is done in the case of the other writers under discussion—are deliberately ignored. In the last lecture, what one might almost designate as flings at society and societies which are personally obnoxious to the lecturer, reduces it to the rank of a narrow local sermon, and destroys its harmony with the design of the book. Certain peculiarities of language, incident upon the fact that Mr. Panin is not writing in his native tongue, should be mentioned. They only become unpleasant when he preaches. The lectures should have been partly rewritten before being consigned to the wider publicity of a printed volume, and revised by some unprejudiced person acquainted with the subject, in order that they might be relieved of the aggressive personal element which is out of place in critical work.

Life of John Milton. By Richard Garnett, LL.D. (Great Writers Series.) London: Walter Scott. 1890.

DR. GARNETT'S task in writing a short life of Milton was not an easy one, although he falls heir to Masson's exhaustive labors, for Milton's literary position and personal character offer very trying matter to the critic; indeed, there are few authors about whom it is more dangerous to write from first impressions and superficial examination, nor has there as yet been an entirely sympathetic and intelligent narrative of his intellectual life. Dr. Garnett devotes much attention to two points. In the first place, he protests against Mark Pattison's expressed regret that Milton did not devote himself to a purely literary and scholastic career, and he has little difficulty in winning assent to his view that Milton, without interest in public affairs, would have been dwarfed and weakened in all his genius, to say nothing of the loss of the shining memory he left as a patriot. In the second place, he brings prominently forward the poetic temperament of Milton, his sensibility and impulsiveness, so antithetic to the ordinary conception of him as a stern and self-mastered man of an iron and Puritan mould. He cites in support of his view the dependence of Milton on external suggestion in writing his poems; his marriage, with its repeated precipitancy of action—first in the marriage itself, then in the composition of the book upon Divorce, and lastly in receiving his wife back; his romantic sacrifice of his eyesight in the service of the State, and several other leading facts of his life, all tending to the exhibition of "the impulsive passion" of a poet's nature. Both of these points are of prime consequence in the framing of our idea of Milton, and are to be insisted upon.

In other respects the volume repeats the familiar story of Milton's life with much grace of narrative and great carefulness in the detail, in a literary and scholarly spirit. The needful criticism appears from time to time in the proper place. It is clear, pointed, well-articulated, and covers what has been said both in praise and dispraise of Milton. It is helped by a thorough knowledge of poetic literature, and in one or two places is varied by some curious parallelisms with Calderon, where it is impossible that either poet should have known the other's work; and throughout it is supported by the author's firm and unrelaxing hold of the principles of all poetic criticism, which he will not abandon at the bidding of Milton's great fame. In some matters of detail, however, it is impossible for us to agree with him, as in the depreciation of the part of the *Elder Brother* in "Comus," and in the admiration for *Satan* (though in this Dr. Garnett has the weight of general opinion in his favor) as a really heroic figure. The discussion of the prose is admirable. Altogether this brief life seems to us to come very near to a truthful account of the poet, and certainly to exceed its few rivals in all essentials. A full bibliography and an index make it the best starting-point for a study of Milton.

BOOKS OF THE WEEK.

Adams, H. History of the United States of America during the Second Administration of Thomas Jefferson. 2 vols. Chas. Scribner's Sons. $4.
Adams, O. F. Dear Old Story-Tellers. Boston: D. Lothrop Co. $1.
Best, Susie M. The Fallen Pillar Saint, and Other Poems. G. W. Dillingham.
Blunt, W. S. A New Pilgrimage, and Other Poems. Scribner & Welford. $2.
Bonham, J. M. Railway Secrecy and Trusts. G. P. Putnam's Sons.
Brenkmann, Prof. C. Hossfeld's New Practical Method for Learning the German Language. N. Y. School-Book Clearing House.
Brooks, Rev. W. R. God in Nature and Life. A. D. F. Randolph & Co. $1.50.
Brinton, Dr. D. G. Rig Veda Americanus: Sacred Songs of the Ancient Mexicans. Philadelphia: D. G. Brinton.
Brooksmith, J. and E. J. Arithmetic for Beginners. Macmillan & Co. 50 cents.
Buck, J. D. The Nature and Aim of Theosophy. Cincinnati: Robert Clarke & Co. 75 cents.
Caine, H. The Bondman. F. F. Lovell & Co. 30 cents.
Carpenter, Rev. W. B. The Permanent Elements of Religion. Macmillan & Co. $2.
Cobban, J. MacL. Julius Courtney; or, Master of his Fate. D. Appleton & Co. 25 cents.
Colbeck, C. Cæsar's Gallic War. Book VI. Macmillan & Co. 40 cents.
Collins, F. H. Epitome of the Synthetic Philosophy. D. Appleton & Co. $2.50.
Collins, Wilkie. Blind Love. D. Appleton & Co. 50 cents.
Comstock, Prof. Geo. C. Elementary Treatise on the Method of Least Squares. Boston: Ginn & Co.
Cowan, J. Pliny's Letters. Books I, II. Macmillan & Co. $1.20.

SHORT TITLE LIST OF

THE CHANDOS CLASSICS

Of General Literature, consisting of over 130 volumes of Standard Authors: Prose and Poetry.

Well printed and strongly bound, forming a Complete Library in itself, suitable for the man of letters, the student, and the general reader. Two distinct styles of binding are kept in stock, viz.:

A neat and effective "Library" Binding, edges untrimmed, bound in smooth blue linen, boards, with white title labels, at a uniform price of

SEVENTY-FIVE CENTS PER VOLUME,

Or, in the "Roxburgh" style, cloth, leather title labels, gilt tops, trimmed edges, price ONE DOLLAR per volume.

☞ *Be sure and state distinctly whether "Library" (75 cents) or "Roxburgh (1,00) style of binding is desired. To save time the number prefixed to each title is all that is required for ordering; they can be obtained through any bookseller or newsdealer in the United States, or failing that, the publishers will deliver free, on receipt of a Post-office Money Order or Postal Note to cover number of volumes required.* *** *A detailed list free on application to the publishers.*

NEW AND ATTRACTIVE PUBLICATIONS.

HISTORY OF THE UNITED STATES.

BY
Henry Adams.
Vols. I. and II. 12mo, $4.00.
Vols. III. and IV. 12mo, $4.00.

Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON.

"Mr. Adams's thorough and captivating work is full of nervous life. Prominent among the admirable qualities is the remarkable combination of condensation with interest and vivacity. We should be inclined to call this the best book which has yet been written upon American political history. In point of literary execution Mr. Adams is easily the best of our political historians."—*N. Y. Times.*

"A memorable addition to American historical literature, which will take rank with Bancroft's and above Hildreth's, and which is likely to long remain without a rival in the field that the author has marked out for survey."—*N. Y. Sun.*

AMONG CANNIBALS.

BY
Carl Lumholtz.
Illustrated. 8vo, $5.00.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland.

"His observations are interesting, and he has a very pleasant and modest style of narrative, so that the book is as agreeable as it is instructive; in short, it is one of the most complete of its kind in all respects, and a worthy record of steadfast enterprise."—*The London Spectator.*

"His narrative is of great value and interest, describing as it does the intimate daily life, with some real glimpses into the thoughts and feelings of a race still in a most primitive condition."—*The London Athenæum.*

ASPECTS OF THE EARTH.

BY
Prof. N. S. Shaler.
Illustrated. 8vo, $4.00.

A Popular Account of Some Familiar Geological Phenomena.

"Few books are so well calculated to arouse interest in, and to develop intelligent observation of the world around us. Such chapters can only be written by a man who is at once a profound student and a successful teacher. Of their many merits, the chief one is their absolute clearness."—*Christian Union.*

"The author has sought 'to show the relation of natural forces to the fortunes of men, and thereby to secure, on the part of the reader, the interest which belongs to matters which affect the human welfare alone.' Earthquakes, volcanoes, cyclones, etc., have the strongest human interest and relations. The subjects are as interesting as the way in which they are treated."—*N. Y. Tribune.*

STRANGE TRUE STORIES OF LOUISIANA.

BY
George W. Cable.
Illustrated. 12mo, $2.00.

"What a field of romance, of color, of incident, of delicate feeling, and unique social conditions these stories show! The mechanical part of the book fits the delightful text. The illustrations greatly add to the interest of the text."—*Hartford Courant.*

"Romantic, picturesque, and fascinating, these stories have definite historical value. Altogether the book is one of very exceptional charm, interest, and value."—*Boston Advertiser.*

THE POETRY OF TENNYSON.

BY
Henry Van Dyke, D.D.
12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. We owe the author a debt of thanks for giving us this estimate, so careful, so scholarly, so full of true devotion to poetry in its largest meaning."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

"As a statement of the essence of Tennyson's poetical art, the book has no successful rival."—*Boston Beacon.*

ENGLISH LANDS, LETTERS, AND KINGS.

BY
Donald G. Mitchell
12mo, $1.50.

"These chats make a most charming verbal incursion into England's past, from the beginning of English letters to the revels of Kenilworth."—*Philadelphia Times.*

"A most charming book for lovers of the purest and best literature,"—*Hartford Post.*

"It is a bright, pleasant, chatty record, true to history, and full of useful hints and suggestions."—*Boston Saturday Evening Gazette.*

SFORZA: A STORY OF MILAN.

BY
W. W. Astor.
12mo, $1.50.

"Full of local color and fidelity to nature. The characters are vigorously sketched. Indeed, the book as a whole may be called one of the best historical novels that have recently appeared."—*Boston Saturday Evening Gazette.*

"The interest of the reader is finely sustained, and the characters are brought out with much skill and force. We seldom see so successful a revival of a remote and romantic age."—*Hartford Courant.*

**** *For sale by all Booksellers, or sent, post-paid, on receipt of price by the Publishers,*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York.

Ancient Cures, Charms, and Usages of Ireland.

Contributions to Irish Lore, by LADY WILDE, author of 'Ancient Legends of Ireland.' 12mo, cloth, $2.25.

In Tennyson Land:

Being a Brief Account of the Home and Early Surroundings of the Poet Laureate, and an Attempt to Identify the Scenes and Trace the Influences of Lincolnshire in his Works. By J. CUMING WALTERS. With 12 Illustrations by F. G. KITTON, by drawings from photographs and sketches taken especially for the author. The pictures include representations of Somersby Rectory, The Moated Grange, The Brook, The Mill, Louth Grammar School, Tennyson's Birthplace. Demy 8vo, white cloth, gilt, $1.75.

Palmistry and its Practical Uses.

To which are added chapters on Astral Influences and the Use of the Divining Rod, with 12 plates, by LOUISE COTTON. 16mo, $1.00.

Hayti; or, The Black Republic

By Sir SPENSER ST. JOHN., K.C.M.G., formerly Her Majesty's Minister-Resident and Consul-General in Hayti, now Her Majesty's Special Envoy to Mexico. New Edition. Revised, with a Map, large crown 8vo, $2.50.

Shakespeare Sonnets.

Edited, with Notes and Introduction by THOMAS TYLER of the University of London, Editor of the Facsimile Edition of Shakespeare Sonnets. 8vo, cloth, with Portraits, $3.00.

The Early Diary of Frances Burney, 1768-1778.

With a selection from her Correspondence and from the Journals of her Sisters, SUSAN AND CHARLOTTE BURNEY. Edited by ANNIE RAINE ELLIS. 2 vols., demy 8vo, $12.00.

This is believed to be the only published, perhaps the only existing, record of the life of an English girl, written by herself, in a century before that which is now in its wane. Such a portrayal of a young English woman and her times would be interesting even if the girl had not been (as was this one) a born author, who lived among men and women more or less distinguished, herself became famous, and was admired by the admired, as well as praised by the common voice.

The Marriages of the Bourbons.

By Captain, the Hon. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

**** *The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD,
743-745 Broadway, New York.

The Nation

VOL. L.—NO. 1287. THURSDAY, FEBRUARY 27, 1890. PRICE 10 CENTS.

MACMILLAN & CO.'S NEW BOOKS.

New Book by the author of 'Society in the Elizabethan Age.'

Two New Books for Children.

TALES FROM SPENSER.

Chosen from the FAERIE QUEENE. By SOPHIA H. MACLEHOSE. $1.25.

"'Tales from Spenser' is a delightful book for children; the writer narrates the fascinating legends of Una, Florimell, Pastorella, and so forth with admirable fidelity and sympathy in a style that is both simple and elegant. The book could not have been better executed had it been the work of the Lambs."—*Saturday Review.*

Second Edition of Lewis Carroll's New B...

SYLVIE AND BRUNO.

By LEWIS CARROLL, author of 'Alice's Adventures in Wonderland,' and 'Through the Looking Glass,' etc. With 50 Illustrations by HARRY FURNISS. 12mo, cloth, gilt, $1.50.

"It is a charming piece of work. The illustrations by Harry Furniss admirably supplement the text."—*New York Sun.*

"A delightful fable amply illustrated by Harry Furniss with excellent drawings."—*Philadelphia Press.*

"The book is a charming one for children. The illustrations are very happy."—*Traveller.*

New Edition, Revised and Enlarged.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

Contemporary Portrait Gallery.

Four portraits, engraved on wood in the highest style of the art, by Gustav Kruell, member of the Society of American Wood Engravers. (To be seen at the exhibition of the Society's works now open at the Grolier Club, No. 29 East 32d Street.)

I. CHARLES DARWIN, from a photograph (1854).
II. CHARLES DARWIN, from a photograph (1881).
III. WILLIAM LLOYD GARRISON, from a photograph (1874).
IV. WENDELL PHILLIPS, from a photograph (1860).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—*The Nation, January 23, 1890.*

Proofs on Japan paper, mounted.
Edition limited to 200 copies.
Size of block, 9x6 inches.
Price, Ten Dollars ($10) each, carriage prepaid.

COLLEGE NEWS

IN THE

NEW YORK EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

The Mother's Register.

In any family of children, a record of the constitutional peculiarities of each one, and the whole course of his physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. Price, post-paid, 75 cents. [The volume for Girls only—that for Boys is exhausted; but the former will serve for either.]

"By far the most practical record for the period of childhood that I have seen. . . . The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation*.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

THE FORUM.

CONTENTS FOR MARCH.

(Beginning Vol. IX.)

FRANCE IN 1789 AND 1889. FREDERIC HARRISON, the distinguished British critic.—How the French peasant, from his miserable condition in the last century, has become thrifty by his opportunity to acquire land.

WAR UNDER NEW CONDITIONS. GEN. HENRY L. ABBOT.—The improvements that have been made in fire-arms since our civil war; how they have made the methods and weapons of that time antiquated.

A YEAR OF REPUBLICAN CONTROL. SENATOR H. L. DAWES.—A review of the Harrison Administration; what it has done; the work yet before it; how it is keeping the promises of the Republican party.

THE RELATION OF ART TO TRUTH. W. H. MALLOCK.—A discussion of Zolaism in fiction; how far realism is consistent with art.

DO THE PEOPLE WISH REFORM? Prof. A. B. HART of Harvard.—Why the masses of the people are not enthusiastic about civil-service reform; the pleasure of the gambling element of politics; and a lack of appreciation of the danger of the spoils system.

THE SPECTRE OF THE MONK. Archdeacon F. W. FARRAR.—Apropos of the movement to establish Protestant brotherhoods, Archdeacon Farrar writes a review of the good and evil results of monasticism.

A PROTEST AGAINST DOGMA. AMOS K. FISKE.—An argument to show that there is a tendency in the Protestant churches that hold to dogmatic creeds to hinder the progress of religion; an appeal for a Christianity unfettered by dogma.

THE RIGHT TO VOTE. Judge ALBION W. TOURGEE.—An examination of this right under State laws with reference to the *post-bellum* amendments to the Federal Constitution; can the Southern States not disfranchise the Negro?

WESTERN MORTGAGES. Prof. JAMES WILLIS GLEED of Kansas.—An explanation in detail of the growth and operation of Western mortgage companies; how borrowed capital has developed the country; the outlook for both borrower and lender.

THE PRACTICE OF VIVISECTION. CAROLINE EARLE WHITE.—How little the progress of medicine owes to vivisection.

THE FORUM begins its ninth volume with a patronage twice as great as it had a year ago. Being sincerely devoted to the advancement of sound and safe thinking, it has never encouraged revolutionary methods, but has sought to give its readers the benefit of the thought and experience of the safest guides. It is to this fact—that THE FORUM is always constructive and never destructive in its conduct—that its success is attributed. The mass of the people who are in search of the truth, and who have not lost their bearings by being theory-stricken, have found in its conduct a constructive purpose in sympathy with their own ideas of progress; and THE FORUM has drawn to itself, for this reason more than for any other, the support of the great number of intelligent and conservative people in the country.
